## NO LATITUDE NOR LONGITUDE.

THE FOREST AND STREAM to-day enters upon the twenty-first year of publication, and the forty-first volume. With the new volume we make a change in the day of publication. Hereafter the paper will be put to press on Tuesday of each week instead of on Wednesday, as heretofore. The change, which has been prompted by the growth of our support in the West and South, is intended to give a larger circle of readers the advantage of receiving the paper in the week of publication, and may be taken as a further step in our aim to make the journal more fully than ever before national in scope, character, interest and influence.

From the beginning we have not asked nor claimed subscribers for the FOREST AND STREAM as representing any one particular section or division of the country. We have never appealed to sectional pride nor sought to batten on sectional prejudices. In our discussion of the topics of the time, in our attitude toward the questions of the day, we have never been influenced by considerations of the points of the compass, nor of latitude or longitude. Our sympathies have been continent-wide. Our ambition has been to make this in the widest, truest, most liberal sense, an American journal for American readers. The ambition has in a gratifying degree been fulfilled.

If any justification or demonstration of the wisdom of this broad editorial policy were required, it would be found in the measure of the paper's standing in those sections which have had their own particular, self-constituted, no-trespass-here organs. For instance, FOREST AND STREAM has a larger circulation, a more appreciative reading, a livelier interest, a more genuine respect and a more powerful influence in Chicago and the West, than may be credited to any other journal of its class.

In this year of celebrations of discovery and adventure and conquest, Columbus-wise we have set our caravels to the Westward. There is no near-by point nor corner most remote where the FOREST AND STREAM is not read. There is no section set off by circles and parallels where it is not destined to become still more widely known in 1893.

If all the big bears and big snakes and big fish reported by the papers to have been started for the World's Fair have reached their destination, the nations of the earth will have a chance to see what we can do in the way of bigness in fur and feathers and fish scales. The FOREST AND STREAM's exhibit shows Mrs. Stagg's record-smashing tarpon, and if it had been practicable to secure the space required we should have shown "the big fish that got away," the most interesting exhibit, it is needless to remark, of the Angling Pavilion.

## TWENTY YEARS OF BIG-GAME HUNTING.

THE history of big game hunting in the West for the past twenty years shows a constant decrease in the amount of game and a constant diminution of the area occupied by wild animals. The hammer blows that drove the spikes in the first railway across the continent knelled the extermination of wild game and wild Indians alike. This first railroad furnished a market for the flesh and hides of the game of the region which it traversed, brought in a horde of hunters, made the country possible for settlement. Great quantities of game were slaughtered for gain and from lust of blood; vast areas that had been game range became farm land. The wild beasts that were not killed were crowded out from their ancient feeding grounds.

Twenty years ago the extermination of the southern herd of buffalo had been going on for two or three years, and was well on its way toward completion, yet even at that time these animals were still often to be seen in the valley of the Platte River in Nebraska, and were abundant on the Republican in Kansas, and over much of the Indian Territory. North of the Platte they were yet found in the Loups, and from those streams north, to far beyond the British line. In that year they occurred as far east in Nebraska as the mouth of the Cedar River.

Twenty years ago elk were still to be found in Iowa though they were not very plenty there even then. But all through Dakota and Nebraska they were very abundant. In August, 1873, there were hundreds of them near the mouth of the Cedar River, a tributary of the Loup, where deer of both species were very abundant. This region has long been settled, is traversed by railroads and is a prosperous farming country. There is probably not a wild deer within one hundred miles of the place to-day, nor a wild elk within four hundred. In June, 1874, the command of Gen. G. A. Custer set out for the then unknown Black Hills of Dakota. During the expedition the only human beings seen that did not belong to the command were hostile Sioux Indians. In the Black Hills deer were most abundant. Every little open park that one entered contained a few, and they were constantly seen in the timber. It was estimated that in a single day the command killed 100 deer. On the plains from Fort Lincoln west, antelope were always in sight. On several occasions bands of them which tried to cross from one side of the command to the other ran through the marching column. When the Little Missouri was crossed many mountain sheep were seen in the Bad Lands. Elk were killed in the hills. The Black Hills is now a country of mines and farms.

Twenty years ago mountain sheep abounded on most of the rough peaks in the Western mountains, as well as on the rugged buttes and Bad Lands far out on the plains. The range of the species extended from mountains whose bases were washed by the Pacific Ocean, east through the mountain country to the plains. Outlying spurs of the Continental Divide, like the Sweetgrass Hills, Bear Paw, Little Rocky, Judith and other mountains were their favorite haunts, but perhaps nowhere were they more abundant than in the wonderful Bad Lands of the Missouri River and along the pine-clad buttes of the Yellowstone. Naturalists and hunters who were with General Sturgis's expedition of 1873, or who journeyed among the Bad Lands of the Missouri and the Little Missouri in that and subsequent years well remember their abundance and the noble pictures they presented as they watched the passing batteaux or steamboats from their lofty perches on the bluffs. To-day a man has to go far and climb high to secure a shot at a mountain sheep. It is probable that in the United States moose, caribou and white goats are nearly as abundant now as they were twenty years ago. What has been lost for the first two species in the West has been gained in the East—in Maine. Only within the last ten years have white goats begun to be hunted, and the labor attending their pursuit is so very arduous that their extermination will not be speedily accomplished.

Twenty years ago the good hunting grounds of the West extended from the Missouri River to the Pacific Ocean. Of course game was not to be found at any time all over the region, but it would be found at some time of the year almost anywhere. Even then there were a few places where it no longer ranged. In the few settlements then existing it did not occur. One did not expect to find mountain sheep or elk in the streets of Salt Lake or Denver. And there was often a belt of gameless country a

few miles back from the railroad. Yet we have seen antelope race through the streets of Cheyenne, have killed elk within half a dozen miles of Bozeman, and have had the railway train on which we were riding stopped to let the buffalo herds cross the track.

To-day the hunting grounds for big game in the West are scarcely found on the Atlantic watershed, except in the immediate vicinity of the National Park. In Montana there are a few sheep, deer and goats. In Wyoming and in Colorado some elk, sheep and deer. In the year 1877, in the bend of the North Platte River, in the Shirley Basin, Wyoming, elk were still as abundant as perhaps they have been anywhere during the last forty years. During a long day's travel on foot we have passed through continuous bands of feeding elk, which scarcely troubled themselves to move out of the way. Deer were seen as often as elk, but in smaller groups. Either species was too abundant to be counted, but a fairly good shot who wished to make a record as a butcher could easily have killed in that day 100 elk. A few years later, an English hunting party discovered the country and marked its trail by a line of rotting carcasses of cows and calves which were never touched by the knife, and served merely to fatten the bears. Later still, the ranchmen from Colorado took to coming here for their winter's meat, and in the last five years there probably have not been five elk killed in that country. They have been exterminated.

North Park, Colorado, was twenty years ago another ideal hunting ground, abounding in deer, elk, antelope, bear, mountain sheep, beaver and bison. It was one of the regions of which the old time hunters and trappers always spoke with enthusiasm, and ranked with Jackson's Hole, Brown's Hole, Estes Park and a hundred other secluded nooks in the mountains, which had then been penetrated only by a few adventurous spirits. Now cattle, mines, farms—yes even summer hotels and perhaps tennis courts—occupy the ground where the antelope fed and the beaver trapper camped.

As the great game of the West grows more scarce the rapidity of its extermination will decrease. In the roughest timbered ranges a few elk and deer will long survive. There is much hope, too, in the growth of public sentiment in favor of the protection of these species, which has been fostered by the teachings of FOREST AND STREAM. This sentiment was never so strong as it is to-day, and the seed sown by this journal has yielded an abundant harvest. To-day the land is full of men earnest for game protection, each one of whom is doing his share to influence public sentiment. True it is that the heathen are still many when compared with the elect, yet there is a generous leaven of worthy sentiment which is constantly growing. Of all the signs of the times perhaps the most hopeful that we see is the setting apart by the Government of generous forest reservations in different parts of the West. The Yellowstone Park we have always with us, and the vast increase of game within its borders in the last twenty years shows plainly enough to any comprehension what protection will do for a limited area. If the forest preserves which have been set apart within the last two or three years shall be guarded as efficiently as the National Park has been, there is no reason why any important species of America's great game should ever be absolutely exterminated. Such protection will render each one of these reservations a preserve abounding in game, whose overflow, passing beyond reservation boundaries into the adjacent country, will furnish splendid hunting for generations of rifle-bearing Americans. All that is required to bring this about is systematic and thorough protection of these forest reserves. There have been times within the past ten years when it has seemed as if the next generation could use the rifle only at the target, but the events of the last few years seem to promise better things, and it may be that the American of the future may yet be able to follow through forest and over mountain the track of the big game, and may bring it to bag with the weapon used by the pioneers of his race.

Mr. LOUIS BAGGER, the well-known rifleman and sometime contributor to this journal, has been elevated to the Knighthood of his native country, Denmark, by King Christian the Ninth, who has conferred upon him the royal Order of Dannebrog, one of the oldest and most highly-prized orders in the world. Mr. Bagger, who has for many years represented the Kingdom of Denmark as Consul at Washington, is an ardent sportsman, an expert in firearms, and the owner of one of the largest and finest private collections of guns in this country.

## DANVIS FOLKS.—VIII.

## The Paring Bee.

On the evening appointed for the entertainment the full moon was seen, but as a pale and dimly defined blotch behind the gray veil of cloud that overspread the sky and blended with the vague rim of the horizon.

There was a dull, sullen chill in the air, which was motionless in the expectancy wherewith nature so often awaits her changes. The night was jarred by the rumble of wagons jolting over the frozen roads and pierced by the merry voices of coming guests.

Some of these were occupants of the wagons, above whose rumble and clatter they strove to make each other heard between abrupt breaks of the thread of conversation when a wheel struck a stone or dropped into a rut. Some were coming across the fields on foot in couples and squads, but it was noticeable that the couples emerged from the half gloom before their voices were heard, while the gabble and laughter of the groups ran far before them to herald their coming.

Beams of light shone hospitably forth from every window of the kitchen and square room, and the heavy latch clanked and the door slammed announcement of the frequent arrivals.

The women folks came forth from the bedroom, where they had bestowed their hoods and shawls and cloaks on Huldah's bed, each with an apron shielding the front of her tidy calico or homespun woolen gown. The men hung their coats on the pegs of the kitchen wall and became comfortable in their accustomed indoor shirt sleeves.

Soon pans and knives were brought forth, bushel baskets of apples lugged in, chairs drawn into convenient groups, and the business of the evening began.

Tom Hamlin and another almost as famous an apple parer, bestrode their machines, placed on the seats of high-backed chairs, and entered upon such a strife for the championship that the clattering din of their clumsily-gearred machines was almost incessant, and the parings spurring from their knives in curved jets, were scarcely broken in the quick shifting of the apples on the forks. Presently a dozen pairs of hands were busy quartering the peeled apples, as many more were coring them, while others strung them with wire needles on long strings of pack thread for drying.

Every one except Tom Hamlin and his rival was talking, and almost every voice strove to make itself heard above every other and the deafening clatter of the machines. Some couples with heads close together utilized the uproar to say things meant for no other ears.

In the center of an interested group, Uncle Lisha, splitting apples with his shoe knife, roared like a lion concerning the wonders of the West, and to as interested a feminine audience, Aunt Jerusha quavered shrilly of the discomforts of Western life while she industriously strung the quarters of apples in her pan.

"Fifty an' a hundred acres in one field o' wheat an' the hull on 't as level as the Forge Pawnd," Uncle Lisha shouted.

"Ten miled to the highest store," shrieked his wife to her group of listeners, "an' when you got to 't, the tea an' snuff they kept wan't wuth a kerrying hum, though goodness knows they ast enough for 'em. Land sakes! how be I goin' to git a pinch of snuff, w' boths my han's in these ere apples?"

"Jest look o' Mandy Varney," cried a buxom damsel to those around her. "She haint done nothin' only chank every identicle quarter she's cored, an' listen to that Jim Putnam, sence she sod down. Wonder ef she thinks it's a sparkin' bee steady a parin' bee?"

"What s'pose the reason is, the haint none o' Cap'n Peck's folks come?" inquired another high-keyed voice, to which a middle-aged matron answered, with a backward toss of the head, while she kept her eyes rigidly fixed upon her apple and knife, "Proberly the're 'bove goin' to such common duins, naow 't he's sot in the Leegislatur. Ef 't was 'fore 'lection the'd all ha' come fast nough."

"They du say 'at on the stren'th on 't she's ben to V'gennes an' bought a hull set o' flouin' blue dishes. Clapham hadn't nothin' quite good enough for a member o' the Leegislatur's wife," cried another.

"Highly tighty," said the elder matron, "an' there be them 'at haint so turrible old that remember when the hull fam'ly eat the' puddin' an' milk aouten braown aithenware bowls, an' glad nough to get 'em." Even Danvis was not without its social jealousies.

"Suthin' ben a ketchin' Joel Bartlett's sheep," announced one of a knot of married men, who, assembled apart from their wives, were not laboring very assiduously. "Some thinks it's dawgs an' some thinks it's a aniul."

"Taint no ways likely it's a bear," another remarked, "the time o' the year's agin that. But it might be a painter."

"Wal, no, I don't favor the idee, 'cause the' was ten or a dozen sheep 't was killed aout an' aout; jest the' thrut out. A painter wouldn't ha' killed more'n one or two, an' satisfied hisself a eatin' the meat. Haint thatso, Sam-wil?' appealing to their host, who had come within call as he moved from group to group to see that each was properly provided for.

"I callate it's a wolf," he said, "from what I've hearn tell o' their duins. More 'n all that, I've consaited all the fall 'at the' was one a hangin' raound, for I've seen signs 'at I couldn't lay to no other critter. But if he don't make hisself scase 'fore many hours, I reckon we'll have a chance to find aout what he is, for if it don't snow before mornin' I miss my guess."

"I'm a goin' aout to take a look o' the weather jest fer greens," said one of the party, rising with a sigh of relief and dropping his pan in his chair. After an absence which must have enabled him to make a thorough study of the weather, he re-entered the kitchen so powdered with snow that he did not need to proclaim that "it was snowing like fun."

Many of the company needed further ocular proof of his report and hastened forth to obtain it, while others were content to cool their noses against the window panes and stare out upon the landscape grown more obscure behind the veil of falling snow, all dull and lifeless, but for the candles' weird reflections—unreal lights by which, perhaps, witches were holding carnival. Perhaps it was the hope of beholding them that so long kept some fair cheeks in close proximity to bearded ones.

"If it holds up by morning I'll take a rantomscout up back o' Joel's and see what tracks I c'n find," Sam said

and hurried away as Tom Hamlin, tossing away the last apple and kicking over the empty basket, shouted, "Fetch on your apples ef you want 'em skinned."

So with unabating zeal and unabated clamor of voices, and clatter of implements and machines, the work went on till half a dozen bushels of apples were on the strings and ready to festoon the kitchen walls and poles that hung from hooks in the ceiling, and the welcome announcement was made that the labor of the evening was over.

"Now then," said Sam, making his way with careful steps across the floor, slippery with scattered skins and cores, "we'll clear up the thickest o' this mess and then we'll see ef aour wome'n folks has saved any cold victuals for us. I believe I saw some cold 'taters in the buttry an' I do know but the's some o' Drive's johnny cake left."

But before the floor was cleaned, a dozen girls must try for their lover's initials with apple parings whirled thrice above their heads and cast over the right shoulder to the floor behind them.

"Wal, fer all the world," cried Amanda Varney, blushing as red as the apple peeling she just cast behind her, and was now regarding with surprised delight, "ef it haint a perfect P."

"It might be most anything," said Mary Ann Jones, who in the early evening had called attention to Amanda's flirtation.

"'Twould be good enough ef you'd ha' made it," said Amanda, "I'll leave it to Uncle Lisher ef 'taint a good P," as the old man drew near the circle widened to admit him.

"Yes," he said, after adjusting his spectacles and critically examining the initial. "It's julluk handwriting. But it don't stan' fer Putnam ner fer Peggs. It's tew long and lank. Guess it stands fer Peltier. Come here, Peltier."

The young man, who was moping in a corner, made his way toward them. "It 'pears to be p'inted by fortin' 'at you've got to dance 'long wi' Mandy. Naow, you be ready to take your place wi' her soon's we get suthin' to eat." Then whispering into his ear like a blast of northeast wind, "Naow du try to shake some o' the sorrow aout o' your heart when th' dancin' begins."

"Gosh, Uncle Lisher," said Pelatiah, aghast at the plan and casting a hopeless glance upon his big boots. "I can't dance no more 'n a thirty-foot ladder."

"Wal, 'f you haint got the tools, I do know who hes, an' you've got to use 'em if I hafter yard ye top o' the hot stove. Come, gals, le's get things sot to rights so 't we c'n eat an' git to the real business o' the evenin'."

Then the guests, ranged along the walls of the kitchen and square room, were amply served with Huldah's doughnuts, pies and cheese, and Sam's cider received its usual compliments.

Then the young people engaged in romping games, the Needle's Eye, wherein every one who could sing and every one who could not, sang, or tried to sing at the top of their voices:

"The needle's eye, that doth sofly the thread that runs so true,  
It has caught many a smiling lass and naow it has caught yeon!"

or with a volume and zest that would have pleased Gran'ther Hill more than the melody, "We're marching onward tow-ard Quebec." In every game the forfeits were invariably kisses, given and paid in the simplest and most direct manner, or when so decreed, in the contortions of a "double and twisted Liddy massy." The movements of another popular game were timed to the words of, "Come, Philander, le's be a marchin'." The elders looked on in amused toleration, while a few joined the young folks' games only to be reminded by grudgingly paid forfeits, that the freshness of youth had departed from their wrinkled cheeks.

"Come," at last cried Uncle Lisha, who by tacit consent assumed the office of master of ceremonies, "you young folks orter be about c'lyed wi' bussin' an' we ol' folks has eat saour grapes long nough, so les' all turn tu an' hev a leetle sensible enjoyment a dancin'. Where's thet aire leetle fiddler?"

"He haint come anigh," Sam answered. "He promised he'd come sartin sure, but I'm most afraid he's run agin a snag to Hamner's 'at he won't git clear on 'fore mornin'. It's tew tarnal bad."

"Well, that's a pretty how de do," said the old man, "but we won't be cheated aout'n aour dancin' by one drunken fiddler. Tom Hamlin, 'd ye fetch you jewsharp in your pocket? er can you dig one up, Sam-wil?' Tom 'hedn't never thought on 't," nor could Sam find the only instrument upon which he ever played.

"Wal, then, I've got to sing, which I'll make you hear me, ef I don't charm none. Chuse your pardners naow or never an' form out the floor. Come, Peltier, git Mandy and stan' up to the dough dish."

Pelatiah hung back bashfully till Amanda, seeing her rival, Mary Ann, led out by Putnam, blushing with vexation, met him more than half way, and he found his unwilling feet taking him to his place in the waiting ranks. "All ready. Naow I'm goin' tu sing," shouted Uncle Lisha, and began to roar in stentorian tones:

"Lum tiddle, lum tiddle, t'l law day,  
Lum tiddle—

"Good airth an' seas! Why don't ye start yer hommels? D' ye s'pose I'm goin' tu set an' holler all night for you tu stan' an' gawp julluk tew rows o' stancheled calves?"

Thus adjured the first couple paddled and sailed down the middle, when he again took up his wordless song and twenty-four pairs of feet, impatient for their turn, began to stamp and shuffle to its rythm:

Lum tid - dle, lum tid - dle, t'l law day,

lum tid - dle, lum tid - dle, t'l law day.

do day hum, do day hum, do day hum, t'l law day.

Antoine, sitting by Uncle Lisha, and attempting to catch the time in snatches of undertone, played an imaginary fiddle and pranced time with both feet after the Canadian fashion, evidently considering himself the chief performer.

The dancers quickly caught the inspiration of well-meant, if unmelodious, strains and whirled and capered in perfect abandonment to their influence. Even Pelatiah's bashfulness melted away in the excitement and he made wild rushes at wrong moments and in wrong directions, which involved him and his partner in bewildering entanglement with other couples.

"Turn yer pardener half way raound,  
Lum tiddle, lum tiddle, t'l law day,  
Half way raound, half way raound, do day hum, t'l law day."

Uncle Lisha sang at him vociferously, and Antoine chimed in with, "Turn yo' pahdny wrong side aout," to Pelatiah's complete bewilderment. Then young Putnam, striving to outdo his own agile steps, as he pranced down the middle with Mary Ann Jones, slipped on a fragment of apple peel and fell headlong, plowing his way along a rank of dancers and turning a furrow of them on top of himself. Uncle Lisha still sang on, his voice rising above the din of shrieks and laughter, till it dawned upon him that no one was dancing and his music was being poured forth to no purpose.

In the lull that presently succeeded the confusion the company became aware of the notes of a fiddle, whence coming no one could conjecture, faintly yet distinctly playing the familiar air of "Money Musk." While all breathlessly listened, some puzzled and some breathless, superstitiously alarmed, Solon Briggs oracularly voiced the prevailing feeling in a solemn, awe-stricken tone:

"That fiddle haint performed by no livin' han's. Watson Farmer has parishied, mis'able, in the element of the snow, and his speerit has come to fulfill his p'intment made to Samule. It's Watson Farmer's indivisible apperogation."

"Beeswax," cried John Dart, listening at the open door. "Go to thunder wi' yer speerits. It's someb'dy in the woodshed. Gimme a light an' I'll see who 't is."

Taking a candle and protecting it with his hollowed hand, he made his way to the woodshed, followed by the bolder of the company, close at his heels, the more timid crowding one another in the rear, where the light of the open door mistily illumined the falling snow. Under cover of the shed, and held high above Dart's head, the candle struggled with the gloom till it disclosed a dismally comic little figure crouched in a limp heap, with its back against a barrel, its disproportionately long legs looped over the bar of a saw horse on which it had attempted to seat itself. The snow-laden hat had fallen over the face, and the short body was hidden by the fiddle which the owner was playing with a skill that had survived inebriation, while in a thin and drunken voice he prompted the movements of a country dance.

"Firsh cou'le. Daow' er m'ile. Balansh. Daow' a rou' shide."

"Wal, I swan," Dart ejaculated, "'f 't aint speerits, arter all. Hamner's, inside o' 't Wat Farmer. Hamner 'd orter be kicked to death by cripples for a lettin' on him git so 'Wat,' taking the hat from the fiddler's face, shaking the snow from it and adjusting it in its proper place, "don't be a-wastin' your music on the wood pile. You can't get no dancin' aout on 't. Come int' the house."

But the hunchback's face, vacant of everything save its habitual expression of pain, only stared blindly into space and the merry tune went on.

"You might as well talk to a post. Take a holt o' the light, some on ye," and giving the candle into other hands, he got behind the little man, and placing his arms under the limp legs, lifted him as easily as one might a child, and in such a position the playing of the violin was not interrupted and so, preceded by the candle-bearer, bore him into the house. As they entered, Palmer's drunken fancy moved him to strike up, "The Campbells are Coming."

"The camels is comin'," cried Beau Putnam, "Don't ye see the hump?"

"Shut yer head, you blasted monkey," Dart growled so savagely that the grin faded out of Putnam's face, and the laugh that his coarse jest created died out in a suppressed titter.

"Here's your music, Lovel," Dart announced, as he deposited his light burden on a chair, "the best fiddler in Charlotte county. He's a leetle mite tired jest naow, but when he gets rested he'll set all your feet flyin' in spite of ye. Mis' Lovel, won't ye give him a cup o' tea, hot an' strong?"

When the little man had been somewhat restored to his proper self he tuned his violin and then drew from it such blithe and melodious strains that all forgot his deformity. Even he, with loving eyes fixed upon his instrument, his worn face alight with a tender emotion that softened the lines which pain and dissipation had drawn upon it, seemed for the time also to have forgotten it.

Uncle Lisha, relieved of his musical labors, abandoned himself to the pleasures of the dance with a grace and agility that filled Aunt Jerusha's heart with pride, albeit they were such as a sportive bear exhibits. Antoine was given the floor for a while, as, to a tune of his own choosing, he danced a Canadian jig. Every one was a wide-awake and active participant in the gayety except the baby and the old hound, the one sleeping, undisturbed by the noise and commotion, whereof the other was a resigned but unhappy spectator under the circumscribed shelter of the stove.

When the dance ended, and the guests, even now acknowledging no fatigue, began to depart, the morning star was shining through the breaking clouds and the day was faintly dawning upon a world whose new whiteness looked strange to eyes that last beheld it dun and gray with the dreariness of late autumn.

"Naow fetch on that leetle fiddler," John Dart commanded when he had tucked his Sarah Ann snugly in the buffalo skins. "I'm a goin' tu get him safte past Hamner's ef I hafter lock him up in his fiddle box. We wanter keep him for another apple cut. Here, Wat, cuddle in there 'twixt me an' Sary Ann, we're both on us small. Here ye be. Good night, Lovel, ef 'taint tu airy. I'll be on hand ef the's a wolf hunt. G'lang, Bob."

"It's complete trackin' snow," said Sam to a group of hunters who lingered last at his threshold, and he stooped to imprint the snowy banking with his finger, "I'll see what it's got tu tell us an' let you know. Good mornin'."

The wagons moving over the muffled roads, and the

quiet of the sleepy junketers, marked their departure with silence as noticeable as the noise of their coming.

FERRISBURGH, VT. ROWLAND E. ROBINSON.

### CAMPS ON THE MANITOWISH.—I.

THE smell of the wilderness was beginning to get into my study. The particular wilderness was 500 miles away, but that made no difference. A man with the instinct of a confirmed outer can smell the pine woods further away than that. There was only one thing to disturb my serenity as the day for departure hurried on. I had told some considerable stories on my return from an outing in the Wisconsin wilds a year before, thereby exciting the angling ambitions of some of "the boys," and they had made up a crowd to go with me this time. I believed I had told the truth. All anglers do, of course. But would the fish be as big and fight as hard this summer as they did in my stories during the winter? That was the soul-harrowing question which kept me awake o' nights. But I refrained from hedging and trusted to good fortune to keep my reputation whole.

The party consisted of Tom, Doc, Sam, Ira, Charlie, "Kansas," Mr. M. and the Parson. According to the testimony of the Parson, it would be hard to get together such another aggregation of good fellows.

We went by way of Chicago, the gateway to the finest fishing country in the nation. Leaving Chicago at 5 P.M. Monday evening, Aug. 15, we were whirled 400 miles north that night on a road which will do anything to accommodate sportsmen, the Milwaukee, Lake Shore & Western, reaching Manitowish at 6 o'clock in the morning. At one of the three or four houses we succeeded in getting breakfast. Our plan was to take boats and go down the Manitowish River. It was an unknown country for which we were making. Only one party had ever preceded us, so far as we could learn, and they had hurried down the Manitowish and up the Turtle without fishing much. Only Indians and woods cruisers had fished the waters toward which we were turning.

The Parson had tried his hand at boat building. He had brought along the result in what looked like a bundle of boards. Tom volunteered to help him set it up on the depot platform, growling some and predicting the thing would never fit together. Tom was right; after a struggle of an hour or so with the stubborn thing the remains were pitched aside and the Parson's ambitions as a boat builder were shattered. About 10 o'clock we got our stuff and ourselves, with two guides, Ed and Frank, into three boats and two birch bark canoes. The wind was dead against us, that is for the first few rods. After that it came from all directions, for the stream is as crooked as the letter S. It is not more than 15yds. wide at the railroad bridge, and sportsmen crossing on the cars can hardly guess at the sport which it yields a few miles further down.

We were eager to wet our lines and had joined our rods for a cast at the first likely spot. And right here we made a mistake; the fishing is not good above Bear Creek. Tom and I got off first and soon began to toss our frogs into the deep holes. These were so frequent that by dinner time we had made only about three miles and had caught only a half dozen fish in the whole crowd. But Sam produced a basket which his wife had filled for our first day out. There is a great deal of consolation in such a dinner as that basket turned out for the hungry crowd. "Mrs. Sam" was instantly made an honorary member of the expedition. During the afternoon the fishy looking places grew more abundant, but the frogs on which we depended for bait were scarce. The log drive two months earlier had driven them out, so the guides thought.

It was almost dark when we reached the mouth of Bear Creek, said to be ten miles from the railroad. It seemed considerably further to us. The boys were already pretty badly frazzled, and we had not accomplished one-fourth of our journey. There was a subdued air about the crowd as they climbed up to the high point of ground opposite Bear Creek and pitched one of our tents. Here loggers have camped for years and the Indians pitched their tepees time out of mind. We soon had our first camp-fire blazing and ferns out and strewn on the tent floor for a bed. This was the best stuff at hand, as there was no balsam near us. Indeed there are better things for a bed in the woods than balsam boughs according to my way of thinking. I, of course, am a heretic in this, for it is a cardinal point of faith with the ordinary outer that the balsam bed is a great luxury. I think I know how to make it as well as any man, but have never found it half so soft as the six or eight inches of moss and mold to be found covering the ground of the North Woods where no fire has swept through to destroy it. Spread a rubber coat and a blanket down on this and it beats balsam and wire mattresses. Next to it a good armful of swamp grass well dried makes a good couch for tired fisherman or weary hunter. Last of all take balsam boughs and imagine yourself comfortable.

After supper we began to feel a little more cheerful, and the incidents of the day were recounted. Only 13 fish had been caught. Seven of these had fallen victims to Tom's rod and mine, and one of them was a muscalunge, not a large one, but big enough to begin with. I had seen a young duck go sailing down the stream, and was watching, gun in hand, for it to rise and give me a shot. Tom was raising a vigorous ash breeze. My frog was twisting along a few yards from the boat, when the "lunge" made a grab for the batrachian and my reel began to sing the liveliest tune I had heard for a year. The duck was forgotten, and after a sharp but lively battle the fish was brought in. Mr. M. had caught the first fish, a wall-eyed pike. The evening was warm and the mosquitoes began to give us a cordial reception. They did not seem to remember that we were strangers and might resent the familiarity of their conduct. They pressed their attentions upon us still more warmly after we crawled into the tent. A thunderstorm came up and one terrific clap lifted every mother's son of us, except Tom, who was sleeping peacefully with his head wrapped in his blanket. Tom and the mosquitoes attended strictly to business through all the crashing of the elements. The rest of us tossed about till daylight delivered us from this purgatory.

The next morning we were off by 7 o'clock bound for the unknown. A lively skirmish along the shore now and then would yield us a few frogs—the best all-around bait for Wisconsin waters. A Skinner No. 5 spoon is about the right size for trolling, and with a half or three-quarters grown frog attached makes a killing bait. I have

long since ceased to fish these waters with a bare spoon. With the frog, or even a good-sized minnow attached, the number of strikes is largely increased.

The morning was bright and hope was high. We began to appreciate the beauty of the stream. The bottom is everywhere a golden yellow sand. The sun shining on the surface ripples covered the sandy bottom with waving masses of delicate, tangled shadows. It looked like intricate lace work done in threads of silver upon cloth of gold. In half an hour from our start the river plunged into the woods, and the wonder is that with all its twistings and turnings it does not get lost. The boats were soon scattered along the river, stopping here and there to fish a little. The guides were paddling the two canoes, and we found them about the middle of the forenoon cutting out a log jam. Ed's ax soon cut through one log which keyed the others in place and an opening was made wide enough for our boats to go through with a rush. About noon we passed the first and worst rapids. Just here Mr. M. had a fine battle with a small-mouth, a three-pounder. Tom and I watched the contest with admiration. Kansas and Mr. M. were in a boat together. They did not say much but it was manifest from their faces that they were feeling deeply. The fish never sulked for a moment but kept up a steady tug accented with plunges and darts and jumps and dives which made plenty of excitement for us all, until he lay panting in the boat. Be-

THE OLD SETTLER OF PANTHER KEY.

See "To the Ten Thousand Islands," page 16.

low the rapids, always a good place to fish on these Northern streams, we caught several bass and wall-eyed pike and then stopped for dinner, when Ed and Frank called from the bank that all was ready. The amount of creation which we moved at that meal would have impoverished the larder of a fair-sized hotel. We were beginning to find our appetites, which were among the things we had come half a thousand miles to hunt up.

As we started down stream again, Tom and I began to talk over the situation. It was evident we would not get through that night. As the afternoon wore on we resolved to push on as fast as possible and keep the boats going as late as possible. Doc, Sam and Charlie got their dander up. They thought we were trying to run a race and they spurred ahead. We kept pushing them hard, though they kept well in advance. As we stopped just before the sun dropped out of sight and selected a camping place, the crowd looked rather weary. It had been a long day, and the guides thought it was at least six miles yet to the mouth of a creek up which we had planned to go to reach a chain of lakes which had never been fished. I had expected a hard trip, but this was proving rather tougher than I had looked for. By the time we had the tents up some of the boys began to growl a little. I could not blame them much. The bloodthirsty mosquitoes were biting them, their muscles were sore, and they could not forget that sometime or other they must pull back again up that interminable stream. Supper was a solemn meal. The night grew rapidly cool. That proved fatal to our little tormentors with long bills and soprano voices. Indeed, we were little troubled with them from that time on. It was mid-August, but the nights were so cold that no man had any blankets to lend. As we gathered about the camp-fire, Doc gave us some of his army experiences, and they were vastly entertaining. A rare man he is in camp, full of good nature, making the best out of everything.

Tom and I were the last to put oars in the water, the next morning. After catching a lively 2lbs. bass and losing a good sized muscalunge in the first bend, we hurried on to find Doc, Sam and Charlie with their boat resting against a snag in mid-stream, and each of them

playing a fish. One landing net was not enough for that boat for awhile. They had struck one of the best pike holes we found on the river. These fish lurk under any logs or brush that may lie near the bottom of the stream. They dart out from these hiding places and will often strike a spoon with all the savageness of a "lunge." They are hard to hook, and after being played about for awhile will slip off. Their mouths are hard and not easily pierced with the barbed steel. They are vigorous fighters while their strength lasts, but they are soon tuckered. The boys had already forgotten the woes of the downward voyage in the joys of successful fishing.

We found the mouth of the creek was only about a mile below our camp of the previous night. But Kansas and Mr. M. had gone by it, and while we waited one of the guides hurried down the river a couple of miles to bring them back. The only consolation they had for their extra pull was the sight of a big buck and doe which came out on the river bank, not 50yds. off, and stood looking at them.

The creek was too shallow for rowing. There were not enough hip boots in the crowd to furnish one apiece, so there was nothing to do but to jump into the water and wade. We managed to get soaking wet above the knees, but no one seemed to mind that. At home such an adventure would have given us all the pneumonia, but we felt no ill effects from the wetting. The creek swarmed with frogs, and we laid in a supply of a hundred or so. Charlie got ahead with a gun and knocked down a brace of young ducks. We saw nothing but local ducks during our stay. The flight ducks from the far North begin to come into the rice beds of northern Wisconsin about Sept. 1. About a mile up the creek we came to a dam where we portaged and found ourselves at Fishhook Lake. The wind was blowing great guns as we came out on to the lake. But we worked our way over to the north shore and found a pretty camping place. That evening Sam and I took a turn around the lake after the tents were up. The water was black with tannin—unlike the clear water of the northern lakes. The dam had backed the water up among the brush, and this is probably the cause of its being so impregnated with the tannin. If there were any fish in it we did not find it out. One stray little pike ran against Sam's spoon. We concluded it was purely accident on his part. He probably didn't see the spoon in the black water in time to get away.

That night we had a royal time in camp. We built up a roaring fire and every fellow was put through his best paces as a story-teller. It developed that we had a fair quartette in the crowd, and it exhausted its repertoire over and over again as the evenings went by, even down to scraps and snatches of old half-forgotten songs.

Diligent attention was given to the rods, for the next day was to be devoted entirely to fishing. Kansas had brought a coffin-like looking chest, awkward enough to have in the boats, but a capital thing now when he began to open its trays and tills and corners, stocked with everything one could possibly need in rod mending. Several rods had been badly damaged by the big pike in the river, and Kansas looked on good-naturedly while we made a raid on his supplies for repairs.

Fishhook Lake is the most northerly of a system which forms about the only group of unfished lakes in Wisconsin. We were bent on exploring them. The next morning we were early afloat, having sent Ed back to the railroad for mail and bread—a ninety-mile trip. Frank, the Frenchman, stayed behind to row Mr. M. about, but during the day they failed to catch a fish. We pushed into Town-line Lake, trying to find Boot Lake to the south by walking through the timber. We traveled by compass, but either the map we had was wrong or we veered from the true course, for no lake could we find. When we had gone stumbling in Indian file through the almost impenetrable swamps for a long time, it fell to my lot to climb a tree, but nothing could be seen to the south but still more impenetrable swamps. Fortunately we had carefully blazed our way or we would have found it hard to get out of the woods. We stumbled our way back to the boats, and consoled ourselves over our failure by the fact that we had not gotten lost. A tenderfoot, lost in those wilds, might about as well hang himself to the first tree, for his chances of getting out would be small indeed. The morning was gone and our long laid plans seemed entirely defeated. W. H. Smith, of Fifield, Wisconsin, an old woods cruiser, had told me wonderful stories of the bass and muscalunge in Boot, Bear's Paw, Loon and Crooked lakes, and we longed to reach them. But we never could have gotten even a birch bark canoe through the woods anyway. The maps showed a little stream coming into Fishhook Lake, but not as having any connection with Boot Lake. We resolved on pushing up this. Within a hundred rods we came to brush so thick that it seemed impossible to go through. Kansas and Sam, however, were not to be turned back. Tom and I were afraid of snagging our birch bark, and Doc and Charlie "didn't believe there was any lake up that pesky little creek, anyway." Once in a while he would yell, and Sam's voice would come back fainter and fainter. Each time, as he answered, it looked as if we were being left behind, so we fought our way through the worst tangle of bushes I ever saw. After a while the creek opened out clear again. On and on we went, led forward by the delusive hope that the next open looking space ahead would prove to be the lake. But no lake appeared. We hated to give up, but finally turned back. We afterward found out that if we had gone a few rods further our eyes would have rested upon what is probably the finest lake in Wisconsin for big small-mouth bass. And Crooked Lake beyond it swarms with big-mouths. Beyond, and a little more to the east, is a chain of small lakes which, from the best information I have, are alive with hard fighting muscalunge of the largest size. Sam says we will reach them next year, and I believe we will.

We returned to camp a little crest-fallen. As explorers we were a little off color. Also a little off on our muscle. Before night fell Mr. M. and I determined not to leave the day an entire blank, went out with Frank to row and enticed three pike into the boat. They must have been lonely. It was a mercy to rescue them. I think they were the only fish in the lake.

That night the rear column, consisting of Ira and a guide, pulled into camp about an hour after dark. Ira had not been able to start with the rest of us, but by hard rowing the guide had brought him down the river in one day. On the way down, trolling, Ira had caught three fair-sized muscalunge and a small-mouth bass, not bad

for one who was not fishing but just going somewhere. It put us in the notion of going back to the river. What was the use of putting in our good elegant time looking for lost lakes when we could be catching fish? What had we come for anyway? We had blisters and sunburn and perpetually hungry stomachs. What we were pining for was fish. We had had enough to give a fishy flavor to the skillet and that was about all.

Mr. M. and Kansas said they had seen a fine spring about where the deer came out on the river bank and gazed at them. That was another inducement, for the lake water was not good to drink.

RICHARD GEAR HOBBS.

[TO BE CONCLUDED NEXT WEEK.]

## Natural History.

### SPITTING SNAKES.—II.

*Naja hamachates* of South Africa has so strongly established a reputation, not only of "spitting" venom, but of spitting it into the eye, that it is commonly spoken of as "the spitting snake." This is the *spook*, or *spook schlang* of the Dutch colonists, but I am not sure of this adjective *spook* or *spook*, as each person whom I asked spelt it differently. I can only say that it implies the act of spitting, of which no more need be said than that it is the ejection of venom by the forward dash of the serpent's head in the act of striking. These *Najas* are not very long snakes; and, like the rest of the *Etiopidae*, are slender. Those I have seen rarely exceed 5 ft. They are generally black, or with white spots or marks about them. They also expand the neck, cobra-fashion, though in a less degree. Their peculiar characteristics bring them into prominence, rendering them a very frequent, if unwelcome, topic; from the diversity of opinion regarding their manner of biting, the potency of their venom, and their breach of good manners. I allude, of course, to competent authorities and not to popular prejudice.

My paper of May 26 in *FOREST AND STREAM* last year contained an account of a ringhals (this is its popular vernacular name) "spitting" into the eye of Dr. Greathead, of Grahamstown, Cape Colony. Requesting the opinion of Mr. Trimen, of Cape Town, on this subject, he writes: "The case of Dr. Greathead is a strong one. That snake is much given to this disagreeable habit, and I have on several occasions seen it eject with great force a good deal of saliva when excited, but I have never seen any one hit in the eye. I am not clear whether the actual venom from the gland of the fang is ejected." Roland Trimen, F.R.S.F.Z.S., etc., speaks with the circumspection of a scientific man. He does not say "spit," nor does he say that pure venom is ejected. Mr. Trimen is an accomplished naturalist, the author of a splendid work on "The South African Butterflies," and as Curator of the South African Museum at Cape Town he has an extensive experience of the native fauna.

The ringhals has a small head and short fangs, and I also should doubt whether its glands could contain so much venom as the large quantity of saliva seen to fly from its mouth; but any saliva from the mouth of a snake would cause pain to so sensitive a part as the eye. The Dr. Schonland also mentioned in my former paper has kept these snakes for the purpose of studying them, and he affirms that he has never known anything to be killed by one, and thinks that either they fail to strike or that the venom is feeble. One of his ringhals caught a toad by one leg and in due time swallowed it. After several hours Dr. Schonland saw that the toad was still moving about inside the snake, proving at least that the venom had little effect on the cold-blooded amphibian.

All the authorities agree that this *Naja* is an aggressive and extremely vigilant, active serpent, evincing great ferocity, and when disturbed rearing up with expanded neck prepared to stand on the defensive, or open-mouthed to attack, its venom (or saliva) flowing and often ejected. This is Dr. Andrea Smith's character of it, and confirmed by all more recent experience. The natives dread it more than any other snake, more even than the puff-adder. So much for a vicious and defiant attitude, which would seem to stand it in place of deadly power, since one has not heard of any further harm that it did, excepting the ready spouting of its venom. A gentleman whose life on a farm afforded him ample opportunities for observing snakes, told me that on one occasion, while riding, he disturbed a ringhals which immediately reared itself up for attack, pursuing his horse and keeping up with it, striking at its hind legs, and sometimes in its fury striking the ground between the legs, and this for a long distance. The horse was not hurt, perhaps was not even conscious of the blow, which while trotting quickly could not have been very severe. My informant, an intelligent and observing man, doubted if the ringhals ever does bite, but as to the "spitting" he had no doubt whatever.

I have yet one more authority to quote, though the primary point of the subject—namely, does a snake actually and intentionally spout venom into the eye of a foe—must still be left as an unsolved question. Colonel Bowker, a well-known naturalist of Durban, in Natal, writes me: "I think there is but little doubt, if any, that the spitting snakes aim at the eye, so all who are acquainted with them say. Last week my nearest neighbor sent up to me to ask what was the best remedy, as one of his coolie boys had got a shot in the eye from an umferzie (a native name for either the ringhals or another *Naja*). In speaking of the accident to one of my own boys (coolies) he said, 'Oh, yes, I was also suffering for some time from the same cause.'"

The bite of a snake is usually directed toward the foot or leg, or a hand if near the ground, and one wonders how a serpent on the ground should so elevate or poise its head as to aim at the human eye. A serpent in a cage on a stand might be more on a level and accidentally reach an eye. But this question was fully discussed in Chap. 19, p. 351, of my work on "Snakes," and the marvel has lately been increased even to doubting point by reading in *FOREST AND STREAM* of May 18, that the poor little lizard, *Phrynosoma cornutum*, commonly known as the "horned toad," actually squirted "a stream of red fluid" from one of its eyes into a tall man's face, six feet it was estimated, reaching the man's hat. Also that another of these spiky little reptiles spurted as much as a large spoonful of blood into Mr. S. F. Denton's eye! "Between a teaspoonful and a tablespoonful." Well, one

would like to know the relative positions of man and reptile. Was the latter on a table or on a level with the face? and as for the quantity, was it collected and measured? We all know the wonderfully diffusive capacity of ink when upset on our writing table. Or a glass of water! In a moment every article is saturated; it pours on to the floor and is half across the room—we might suppose the glass had contained two quarts at least; so does a little fluid in a wrong place magnify itself. One would not suppose that the whole of the little reptile's body contained a tablespoonful of blood. Some of the *FOREST AND STREAM* correspondents doubted the fact of a *Crotalus* gland containing a teaspoonful of venom, and now the little *Phrynosoma* can eject a tablespoonful of blood from one eye. I may be pardoned for this digression as *apropos* of the subject. I have had a pet "horned toad" and many other pet lizards, and have watched "spiky" on many occasions, and shall carefully investigate the present subject, hoping duly to report to *FOREST AND STREAM*. But now to return to our snakes. The same effect which increases the water in a drinking glass to an apparent half gallon when spread inconveniently about, would seem to exaggerate a spurt of venom if even a few drops entered the eye. Supposing a charge of venom was spurted toward a face, the small portion which entered the eye would claim prior attention and would be most keenly remembered and recorded; but in relating the incident for purposes of science it would be necessary to accurately describe every detail. It is looseness of description which has led to the many myths and false impressions which have obtained in natural history books ever since natural history became a popular science. Many of the *FOREST AND STREAM*'s correspondents afford such valuable information in their contributions, that I am sure all who really desire to advance true science will pardon me for pointing out the importance of accuracy.

In concluding the subject of the ringhals, I find on referring to my note-book an account of some which were in the Zoological Gardens of London in 1877—the first I had ever seen. They were three young ones of the same brood and excited a good deal of interest. My impression of their manners then has been singularly confirmed by my more recent knowledge of them in their native country. "They were very black and very shy, and for a long while one could see nothing more of them than three little heads in a row peeping out from under their blanket, watching with their large round black eyes and vanishing like a shot at one's approach. When they did give us an opportunity of looking at them after a time we found that one was entirely black and another was speckled with white. They erected their heads and distended their necks defiantly. Whether because they were young and inexperienced or because they were naturally stupid, of all the snakes I watched none ever went to work so awkwardly in feeding. They seemed to bite the prey anywhere without much effect, sometimes retaining it in the mouth without attempting to eat it, sometimes beginning at once. A frog was ten minutes from the time it was struck until it was swallowed. The little snake began at a hind leg, then put it down and began at the side with no better result; the legs were in the way. Then the snake gave it up and let the frog go, and presently another ringhals struck the half dead thing and took five minutes to eat it. With very young sparrows the same awkwardness was observable. The bird was bitten on the tip of a wing, and the snake held it helplessly for a quarter of an hour while the bird was struggling violently. Not getting good hold the snake put it down and began again, so that the poor little sparrow was twenty minutes in being swallowed, gasping to the last, and evidently very feebly poisoned. In no other venomous snakes have I seen such prolonged suffering caused by stupidity or bungling as in those young African ringhals. Their fangs are, however, exceedingly short, as I afterward found on examining a dead one, and this may account for their slow effect."

I may add that when taking these notes I stood with my watch in hand, so that I could ascertain the time between the bite and the death of the victim. In Chap. XXX. of my work I have entered more at length into these observations.

PAIGINTON, Devonshire.

#### A Midnight Marauder.

ALLEN and William Laverly who own "Hunters' Home," six miles from Elizabethtown, N. Y., lost five sheep a week ago as the result of an onslaught of some wild animal. Their next neighbor, Chas. Coclan, also lost five the same night. Though bears are very common in this neighborhood the marauder is supposed to have been a panther, both from his tracks and from the fact that he did not attempt to eat or carry off the sheep he had killed. Each sheep was killed cleanly by a bite on the neck. But one old one managed to escape her antagonist. Deer hunting promises to be better in this section this fall than ever before.

J. B. BURNHAM.

#### "FOREST AND STREAM."

An acoustic reminiscent of tours in the Adirondacks.

Fondly I dream of the mountain and vale,  
Often in fancy o'er forest streams sail,  
Recall the bright pleasures of days gone by;  
Enter again the woods to ring high.  
Stately and grand are the noble old trees,  
The kings of the forest with crowns of leaves.

And woodlands I trail, with blaze night effaced,  
Noting a pathway oft dimly traced,  
Directing to lakes by mountains embraced.

Scenes of such beauty what art can portray?  
The gleaming and gloaming of June's perfect day,  
Rivers of grandeur, whose wild waters pour  
Enchantingly seaward through varied shore.  
Ah! what rare visions come as I dream,  
Musing o'er pages of *FOREST AND STREAM*.

OHIO.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

#### Omaha and Kansas City

Are reached most directly from either Chicago or St. Louis by the Burlington Route. Daily vestibuled trains with Pullman sleepers, chair cars (seats free) and Burlington Route dining cars.—Adv.

## Game Bag and Gun.

"Game Laws in Brief," June, 1895, revised. Game and Fish laws of all the States, Territories and Provinces. Correct, reliable, handsomely illustrated. Published by the "Forest and Stream." Sold by all dealers. Price 25 cents.

### OUR NORTH CAROLINA TRIP.

MONDAY, 3:50 P. M., Nov. 28, found us, myself and wife, also our pointer dog, an important member of our party on all our hunting trips, awaiting the arrival of the Royal Blue Line from New York at the B. & O. station in Philadelphia, due at 4:05, which would carry us to Baltimore. Our wait of a few minutes seemed ridiculously long, yet what sportsman would not understand our impatience as we sat there dreaming of the expected pleasure with gun and dog. We can already see our pointer quivering the field, the stand, or a flock of bluebills circling to our decoys, as we in our blind anxiously await the proper moment to give them a warm reception.

Finally our train came, and as usual on this elegantly equipped road, furnishing such superior service, pulled us into Canton exactly on time, where we took a transfer tug for the Norfolk boat. After a sumptuous dinner we retired to a comfortable stateroom and slept as only one can sleep with the cool air blowing in fresh from the water.

We awakened at Old Point Comfort, and by the time we dressed and breakfasted the boat was making fast at the wharf at Norfolk; here we walked across the city and took the Norfolk & Southern Railroad for Elizabeth City. Arriving there about noon, we found we would have to wait until 6 P. M. for the steamer Neuse to take us to Roanoke Island, our destination, which time we employed in looking around this old, quaint and pretty Southern town, and hunting some kind of an apology for lunch. Even this, when found, was rather of a questionable character. We, however, made good our sacrifice of lunch at the supper table on board the Neuse.

Arriving at Roanoke Island, we found Mr. Evans, the proprietor of the Tranquil House at Manteo, awaiting us with his team, as had been prearranged, and after a drive of a countryman's three miles, reached his hostelry and were glad to turn in, after a hard day's trip ending about 1 A. M., to further dream of quantities of game and wonderful shots.

The following morning, owing to our late arrival, found us rather imbued with some of the sluggish traits of our Southern brethren, and arising rather late for sportsmen, and a still later breakfast, about half past eight, we started out to view the surrounding country, and see the little village in which we proposed to make our home for a couple of weeks, while we awaited the arrival of our trunk. We found a beautiful cool crisp morning, old Sol shining in the brightest of his glory upon the white sand, which in our experience taught us we were close to the sea, and in many respects resembled our dear old summer resorts on the Jersey coast.

On making the rounds of the different stores on a "still-hunt" for the post office, which, of course, proved to be in the last visited, we were surprised to find, in this little village of a few scattered houses and a Methodist church, five general stores carrying the usual country line, everything imaginable from a paper of pins to a fisherman's gum outfit, but we afterward learned that this was the general distributing point for the whole island, where fishing is the chief and, we might say, the only industry.

We saw the fishermen come in from their different camps, a description of which we will give later, for their week's supplies on Saturday afternoons and evenings, leaving again on Monday morning from 2 o'clock on, for their bleak, meagre, but not permanent, abodes, while following their vocation.

Strolling from the little settlement into the pine forests, where the love of nature, in her wild vegetation, led us, we followed an indistinct path called a road for several miles, and wandering from it we soon came to the water's edge, where a sight greeted our eyes that would make the oldest sportsman's heart beat with a quicker, stronger throb and send the blood tingling through his veins. About a quarter of a mile out a reef runs parallel with the shore, which in calm weather is the resort of thousands of wildfowl. This particular morning it was occupied, I should say, with a hundred or so swan. With now and then a flock arriving, others departing, the flapping of their wings, their pure snow white plumage, with the sun glistening upon their beauty, gave us a never-to-be-forgotten sight of splendor. Being unarmed, our traps packed in the delayed trunk, we could but look and admire, and had I had my Winchester I very much doubt caring to spoil that wild sight of nature.

Another point of interest was the peculiar formation of what are termed "sand dunes," caused by the wind driving the sand in great banks, which frequently completely cover the tall pines; they, in fact, help create the so-called "dunes," forming a resistance to the sand as it gradually piles against their trunks and limbs, and the changing of the wind to different directions forms many unique shapes. It was a very common thing to see one of these sand piles of an immense height with the upper limbs of what would have been an enormous pine waving some four feet above its top as the tree bent to the wind.

We strayed for several hours along the water's edge,

"Listening to the music of the winds,  
Æolian strains through lofty pines,  
My soul goes forth, my being thrills,  
I love the woods, the stream, the hills,"

and were deeply thankful to be alone from all civilization.

During our explorations our trunk arrived, and with a hearty dinner of roast swan as a foundation for our afternoon's sport, we took a small sailboat, and with a brisk breeze flew to one of the many islands. We arranged our decoys for the evening flight, but the wind was in the wrong direction, so we were unable to bag anything but a few coots.

But the pleasure of lying in that blind under the bright cloudless heavens, the breeze from the water fanning our cheeks, every breath of which we could feel, giving us that strength and health that nature's medicine can only provide.

Oh, the longing for the continuance of such a life where we could constantly drink in nature as our Creator intended us to enjoy His gifts, and which in the solitude

and vastness of His work brings us nearer to Him who controls all things!

It was this afternoon that my wife shot her first duck of the season; she used a light 20-bore full choke single-barrel, which she handles at close range as quickly and accurately as many of the stronger sex do their 10s and 12s, and with as keen an enjoyment as the oldest hunter.

I wish to say here a word of advice to all sportsmen. If your wives show any interest in your pleasures in this line, encourage them, teach them the use of firearms, get them thoroughly familiar with gun and rod, and take them with you on your trips, you will enjoy your vacation a hundred times more, besides giving your wives an outing and adding untold treasures to her health and strength.

Next morning, our sportsmen desires fully aroused, found us not laggards, but we were up and had hastily swallowed an impromptu breakfast long before daylight. We had intended to have a go at the geese with Mr. Evans's live decoys, kept for that purpose, but the weather clerk still persisted in sending the wind from the north, while it was a southern breeze we were anxiously praying for. Knowing there would be no flight until the wind changed, we took our little cutter for a day with the marsh birds and meadow larks among the islands.

The first half of the morning gave us great sport among the larks on the higher and drier ground. Keeping our pointer "to heel" and using him only for retrieving purposes, as the birds were wild and flushed at the least sound, the only successful way was to work them against the wind. The latter part of the morning and early afternoon we spent in the lower end of the island for snipe and sedge hen, the former was rather scarce, the latter quite numerous but hard to raise, owing to the very thick swamp grass, making hard work for both gunner and dog. Frequently the dog Guy would stand and before we could raise the birds he would slowly draw upon them for fully 25 yds. Considering the dense cover, our score of seven snipe, ten sedge hen and a baker's dozen of larks, satisfied our desires in one way and created them in another, the question of lunch.

We were by this time a long distance from our boat, and having sent our guide after it with instructions to meet us at the life saving station, about a mile and a half above, we wandered to a near-by fishing camp in search of something to satisfy the inner man.

The camp in question proved to be a wooden shanty set up about 4 ft. from the ground on stakes, reminding one of the small boy on stilts. As we approached we noticed a number of men standing, sitting or idly lounging on the side nearest us in the sun. Seeing us coming, the captain, as the head man or owner of the camp is termed, came to meet us with that courtesy and easy manner so apparent and estimable in all the Southern people, from the most humble to the most cultured. A noticeable and most praiseworthy trait among these people to us Northerners is their wonderful hospitality. They always invite you into their homes and make you welcome to all they have, no matter how humble their abode or meager their supplies. The captain was no exception to this rule, and we were immediately made welcome into his and his men's temporary quarters, where we had our first chance to see their mode of living while attending their nets.

Entering the living room we found the floor covered with a thick mass of rushes, one end being partitioned off as the sleeping apartment, a glance into which showed us the rough bunks, one over another, reminding us in a diminutive way somewhat of the emigrants' quarters on one of our transatlantic steamers.

The captain told us that on account of rough weather they had been unable to do any fishing for several days, the surf being too high, which explained the idleness of his men. They regretted they could not offer us lunch, but on account of it being near the end of the week, and with that and the poor fishing, their supplies were nearly exhausted. The owner of the camp having been an old sea captain for many years, and visited numerous foreign ports, had many interesting stories and jokes to tell, and on leaving about an hour later, with the whole camp's good wishes, we felt as if our time had been well spent.

A tramp of a mile through the loose sand, which seemed to us as if it were two, and without a feather to be seen except the ever present gull, brought us to Uncle Sam's life-saving station. Hardly replying to the keeper's pleasant good afternoon, our question was "Can you give us a bite to eat?" In about five minutes we were making sad havoc with a large plate of the best biscuit we had ever eaten, and with excellent coffee and butter as an aid to digestion, for which our kind host, with the usual hospitality, would accept nothing but a thank you and our best wishes, which we gave him with a grateful heart, as only a hungry sportsman can fully appreciate. This station being similar to all of those places along our coast, proved of little interest to us, and after a short rest we walked to the sound side and found our boatman awaiting us; the wind had entirely died out so the oars were our only salvation, and under this slow locomotion we proceeded and finally arrived at Manteo for an 8 o'clock supper.

The next day the wind was still stubbornly holding to the north, thus upsetting our arrangements of the night before to make an early start for the geese. On going to the window the direction of the wind was soon ascertained, and crawling back into bed geese were forgotten in that last enjoyable morning snooze. A tramp for quail proved to be the programme for this day, and we were soon on the ground, with the pointer carefully quartering the field and closely hunting all likely places for this much-prized game bird. We flushed several coveys, but were not very successful, as it required almost entirely snap shooting, the fields and open country being very small, the birds getting into cover in quick order, and such cover entirely impenetrable for man and dog. As regards the hunting of this bird, it was a failure, as it always will be here until the country is considerably better cleared. We spent the morning facing these difficulties, and had overcome so few by dinner time that we concluded to let the quail rest in peace, as in reality they were doing at that time. The afternoon was lazily spent in cleaning our guns, lying in hammocks, and reading or talking of incidents of the previous day, which in that warm climate was thoroughly enjoyable.

All things come to them who wait, and on the evening of our quail hunt the wind shifted to the south. With all arrangements completed for an early start we retired. Long before daylight we were on our way across the sound, with our live geese decoys "honking," as if they

too were eager to deceive their wild brethren, who little dreamed of the reception they would encounter as they circled to their calls. Although in the warm country of the balmy South the evenings and mornings are cool and frosty at this season of the year, so with gum boots, heavy coats and thick gloves, and the pleasant sensation of the hot coffee so lately swallowed, we were in a position to enjoy the calm beauty of the full moon shining upon the rippling waters and the sparkling reflection of thousands of diamonds from the frost-covered grass of the numerous islands as the bright rays were gradually hidden by the western horizon upon the approach of the dawn of day. Our little craft dancing merrily over the mirror-like reflection before a southern breeze, seemed hardly to touch the water except for the widening trail left in the wake.

A few light streaks in the east warned us our time was growing short, and that we must hurry to get our decoys advantageously placed and ourselves snugly hidden in our blinds before the morning flight began; as we pulled our little craft a point or two nearer the wind, and shaved closer some of the islands, we heard the flapping of many wings and saw the dark forms of the fowl take flight, as our near approach disturbed them from some choice haven where they had been spending the night.

After reaching our point, and with much splashing, "honking," flapping of wings, wading and placing of decoys, and water pretty well distributed over us, we took to our blinds and made ourselves comfortable until such a time as the geese and ducks saw fit to honor us with their presence.

The manner of using live decoys may prove of some interest. The geese are genuine wild ones, taken when young, or possibly hatched and raised by the owner. The birds have the first joint of their wing taken off, making it impossible for them to fly any great distance; around the leg just above the foot they wear a leather strap, made into a slip-noose; this is never taken off; to this is tied, when using them, a rope 8 or 10 ft. long, with a stake attached. When placing these decoys we wade, using hip boots of course, to about 2 ft. of water, pushing the stake well into the bottom and placing a tuft of sod near by about 6 or 7 in. from the surface, so that they may stand on it and not become too wearied from constantly floating or swimming. It is surprising how accustomed these birds get to the gun being fired over them, it is somewhat similar to a hunting dog, they know what they are there for, do their duty, and never flinch at the report.

By the time we got ourselves comfortably fixed and a few moments to spare, day was made glorious by old Sol's full rays bursting upon us. A warning word from Mr. Evans told us that that watchful sportsman had seen something to our interest, and a minute later the "honking" of our decoys also proved that something was on the wing. Pretty soon a V-shaped flock put in an appearance, but much to our disappointment failed to decoy; a little while and another small bunch headed our way, answered our geese and swung nicely in front of us. Ah! how sure, I at least, was of a goose, if not a pair. How it happened none can tell, but a clean miss with both barrels knocked all the conceit out of me. What was it? Something the matter with the gun or ammunition surely; some excuse must be found, but I could find none, and could merely say the fault was mine and I was badly rattled. Mr. E. being in another blind had no shot, and my wife thinking the game too large at that distance for her 20-bore, refrained from shooting, so I had it all my own way and fear I breathed something more expressive than elegant as

"Playfully she turned that lie might see  
The passing smile her cheek put on;  
But when she marked how mournfully  
His eyes met hers, that smile was gone."

The next time our visitors found us at home, and yet it was not fully a success; they swung nicely, but before they were in good range they became suspicious and concluded to go further on. Mr. E. opened up and secured his bird, my left broke another's wing and down he came with a great splash. At that moment Mr. E. called the news of another flock arriving. We immediately hid in our blinds. They, however, failed to come near us, and on going to retrieve my wounded goose could not find a feather. With such luck as this I had to content myself, swearing vengeance on those next appearing for this defeat. Now for a time we had nothing to do, and hearing Mr. E.'s gun occasionally, who had moved further down and put out some wooden stools for the smaller fowl, we joined him. Here we all had good shooting for an hour or so. Sheldrake, black ducks and coots were principally the sufferers. My wife here had great sport, we of course giving her the preference on all close range shots, and I was fortunate in making a double. After this things quieted down and we returned to our former blind to lunch and nap in the warm sun on our coats and wraps and await the afternoon and evening flight.

In the afternoon we jointly secured three geese and one swan, and all in about a half hour's time. After that the flocks seemed further apart and not inclined in the least to decoy. An incident worth mentioning occurred. An unusually large flock passed over us, but out of range, answered our decoys, but went on and settled some 600 or 600 yds. beyond our birds. These also acted as decoys to all those passing within calling distance, and we learned from our host that this is always the case. The birds will invariably go to the largest bunch. We had to get them out of the way or our shooting would have been at an end for that day. By bringing a rifle into play, which we had with us, and shooting among the flock, they were finally raised, giving our birds a chance to further use persuasive powers.

The bright red glare of the sun

"Bathes in deep joy the land and sea,"

as sinking below the water's edge in the west, he bids the world farewell for the night, and warned us that it was time to take our departure. The wind had again died out; a row home and a late supper ended the day and also the week.

Sunday an unusually late nap, a late breakfast and a quiet day spent lounging about the house, reading, lying in hammocks, and a walk among the noble pines in the afternoon proved the history of that day of rest for both man and beast.

Monday was a hot, sultry day, with no breeze whatever. We started across the island thinking to get a little snooting, but found it so warm we were glad to return, and stopping at a house for a drink of water were more than

thankful for a glass of cool, home-made grape wine. In the afternoon, a breeze springing up, we packed our traps and hired a colored man to sail us to Collington, where we intended stopping with a fisherman, Tom Cronk by name, a place about ten miles from our present location and also on an island. We got off about 3 o'clock, and the air being light we made slow progress, arriving something after six.

It was to this place we were recommended through the FOREST AND STREAM by the Rev. Thos. Dixon, Jr., of New York, who while stopping at Nag's Head Hotel had Mr. Cronk as his boatman and fisherman. While we do not wish to punish Mr. Dixon too severely for recommending a stopping place he knew nothing of, we think it would be only just retribution should circumstances compel him, while on some of his fishing trips, to board a month with Mr. Cronk; we could not but help in our innermost hearts rejoicing a little as we imagine the reverend gentleman's discomfort.

From the foregoing the reader will naturally form the wrong conclusion of Tom Cronk. Tom is a whole-souled, poor, ignorant fisherman living in a little frame cabin on the island of Collington, with his wife and innumerable children; he is a good-hearted fellow and willing to do anything in his power to please you, but it is the last place on earth to board; he does not know how to do, nor has he anything to do with, which a few of our following experiences will show.

On arriving, it being after dark, our first caution was "Look out Mr. you don't fall through the pier, it is rather shaky," and indeed was this structure, termed pier, a few stakes driven into the water with boards of different thicknesses nailed crosswise running some fifty feet or so, more than shaky, and we had to use great care or the wabbling structure would have thrown us, even were we fortunate enough not to fall through. Entering a small barren room, uncarpeted, but the floor sprinkled with sand, we found a wood stove and several chairs. Our room consisted of an old bedstead with a hard mattress, a bolster, uncovered, no pillows, one sheet and an old quilt with a hole in the center as big as your head, and a rickety wooden chair completed the furniture, with a bare floor. On asking for more bed clothes we were told they had none. On the porch a tin basin, bucket and ladle, a towel hung on a nail near by, and an old brush and comb completed the toilet articles of the establishment. Add to this what they termed the "cook house," a separate building entirely, where we ate our meals, with stove in one end and table covered with oil cloth at the other, steel knives and forks and not always enough to go round, coffee, heavy hot biscuit, an apology for what we term corn pone, about as thick as an ordinary buckwheat cake, fried duck, fried bacon, fried fish, everything fried, with quantities of grease, and as a special favor an extra cup occasionally, this for breakfast, dinner and supper, and with no sanitary arrangements whatever, you have a fair idea of our quarters at Collington.

Here we stayed two days, finding the ducks anything but plentiful for shooting purposes; there were quantities of fowl, but on account of the adverse weather they were unapproachable, as they fed far out on the shoals, and the game laws of North Carolina prohibited non-residents from shooting on the water. As we saw no signs for a favorable change and our quarters being very undesirable, Tom's sloop took us to the wharf of the Neuse on Thursday afternoon, where we sat down to what there seemed to us the best home meal at the agent's house we had ever eaten of fried fresh bluefish, elegant hot biscuit, with good butter and coffee that was fit nectar for the gods.

We took the Neuse at 3:30 A. M. for home and had an uneventful trip, spending one day in Norfolk, where we got ourselves brushed up in somewhat civilized form, the writer feeling like a new man in getting rid of a two weeks' beard.

The night boat for Washington found us on board and the next morning we were in that city, where we spent Sunday with some friends, enjoying a pair of ducks on their table from the small bunch we were taking home. We left Monday morning on the five-hour New York flyer of the "Royal Blue Line," arriving home that afternoon, just two weeks from our start, better in every way for our trip, rich in experiences, and having since afforded many an evening's pleasure to both ourselves and friends as we recount each separate incident.

As I write our faithful old pointer is lying at my feet, I doubt not anxiously awaiting next fall for a similar trip to some other part of the country, which we are also looking forward to with pleasurable anticipation.

A word regarding our accommodations at Manteo. They were primitive, yet comfortable, and one must not expect to find luxurious apartments on a hunting trip as a rule, and especially in the Southern country, nor does he pay the corresponding luxurious price; but he will, or at least we did, find the most hospitable set of people it was ever our good fortune to meet, willing to do anything in their power for your comfort and amusement, and always anxious to act on any suggestion you may make. And while things are not kept in the same manner we are used to at home and the cooking entirely different, it is merely another side of life of our wonderful country. We cannot speak too highly of our host's and hostess's efforts at Manteo to make us comfortable and give us an enjoyable time; nor does this merely apply to those with whom we stopped, but to everybody with whom we came in contact on the island.

As regards shooting, there are quantities of game, and if you are fortunate in having the right kind of weather and wind in the proper direction, you can secure large bags; and then again, if unfortunate, you may wait many days without much sport to vary the monotony.

PHILADELPHIA, Pa., June 9.

C. H. CULIN.

#### Did You Hear that Quail?

NORWICH, N. Y., June 25.—The meeting with old friends after a long absence gives an unspeakable pleasure. Such was my feelings this morning as I lay half asleep to hear that old familiar call "Bob White." Could it be possible? I got up, raised my window and listened. Then from across a creek which faces my house came that old musical note. I immediately went to the next house to notify my brother-in-law, but just as I put my hand on the door knob, he opened it with the remark "Did you hear that quail?" He had never shot any, but I have given him glowing descriptions of days spent with them in the Hoosier State. A quail in Chenango county, N. Y., is something I have not heard before.

R. J. M.

## MICHIGAN, MY MICHIGAN.—I.

## Chatty Notes from the Great Wolverine State.

LANSING, June 12.—One of the oldest, most popular and most flourishing sporting clubs of Michigan is the Lansing Rod and Gun Club. Its membership is large and includes men in most every position and circumstance in life. Good management of the club affairs on the part of the club officers, and good fellowship and honesty of purpose on the part of the club membership, has laid the foundation, broad and strong, for the present and future existence of the club, and at no time during the past ten years has there been greater promise of usefulness in sporting matters than at present. In a future paper I will tell you something of its organization and of its individual membership, and try to interest you in our doings.

The club has a weekly shoot at the State Fair Grounds, but owing to a modesty on the part of its management, and a slight protest on the part of some of the members, the record of the shooting is not allowed to be published. This action is taken to prevent the outside public from getting an erroneous impression as to the shooting ability of the club members, some of whom are almost, if not quite, expert shots, while others with much less opportunity at the trap are extra good shots, but occasionally score a miss.

A few weeks ago the Michigan State tournament was held here, and a continuation of the shoot by the Lansing Rod and Gun Club was a very pleasant feature of the meeting. The club has grown in usefulness and membership very greatly in the past five years. Some of the older members have dropped out, some have died, others have moved away, and an infusion of new blood has resulted in a very great interest in sporting matters.

Years ago the meetings of the Michigan State Sportsmen's Association were often held at Lansing, and the influence of these meetings, and the healthy sentiment which their proceedings established, were productive of much good, and fostered a feeling that has been instrumental in game and fish protection, and of a higher standard of sportsmanship among those who enjoy a few days during the open season in the field or by the stream with the rod and gun.

At Pine Lake and at Park Lake, a dozen miles away, the fishing is good, better than for many years, and some extra fine strings of bass and pickerel have been taken this season. These lakes are resorted to quite largely by the members of the Lansing Rod and Gun Club, and three or four cottages have been built there by members of the club. Some day I will tell you of their jolly doings and give you in detail an inside history of the pleasant outings and of the enjoyable fish and frog breakfasts which they get up for special occasions.

This part of central Michigan, including Pine Lake, Park Lake and the Grand River region, was the home of an extensive tribe of Indians ruled over by the old chieftain Okemos. Around these lakes and for miles up and down the rivers, on either bank, one may find abundant evidence of the substantial appreciation as a fishing and hunting region in which these lakes and rivers were held by the numerous tribes of Indians, who hunted and fished here long before the white man ever visited this section. It is related that on one occasion the old chief Okemos visited the Senate chamber at Lansing, when the Senate was in session; that the old fellow wrapped his dirty old blanket around him and strode down toward the speaker's desk, and stopping at a desk then occupied by the late Senator Zach. Chandler, began to grunt out his disapproval at the way the white man treated the Indian. Senator Chandler stood the old fellow's insolence as long as he could, and then, greatly to the amusement of his fellow Senators, he took the old fellow by the neck and booted him out of the chamber, down the stairs, and way out into the street. It is quite needless to state that the aged chieftain never insulted Michigan's great Senator again. These Indian tribes have all passed away, but the early settlers are here, and they tell us interesting legends relating to the Okemos Indians and of their history and doings, in a day long before Lansing was thought of, and Michigan was in the ranks of the great unknown.

The deer, the bear and the wild turkey found a congenial home in this great primeval wilderness, and in winter large yards of deer could be found almost anywhere in the dense woods, in the lowlands around the lakes and along the rivers. There are many people now living in Lansing, and in the country about here, who remember this wilderness-like condition, and can pleasantly entertain us hour after hour with their stories of hunting and camping, and of the early-day sports which could be had almost in their own dooryard. "Michigan, my Michigan," was quite as popular then among the gun-loving people of that day as it is now with those who must be content with following the sprightly little cottontail or spending a few days in November with the quail or ruffed grouse.

Jones Lake, a couple of miles north of Lansing, is a nice little body of water, deep and cool and clear, and it is the home of some big fellows, that used to be and that have been record-breakers in their day. The islands in Grand River are quite numerous, and in extent vary from the size of a good sugar-cured ham to a few rods long and as many feet wide. The banks of the river are quite picturesque in their varied loveliness of woodland, farms and cozy villages, and the river winds around the little hills and through the pleasant valleys of central Michigan with a seeming holiday abandon, which can only be well appreciated by a canoe ride in early autumn, from the junction of the Cedar and the Grand rivers to their far-away lake terminus at Grand Haven. Every season parties of gay voyagers take this way of enjoying nature and a week of camping out, and at times the river, thus enlivened, presents a busy scene of enjoyment and pleasure, that can only be thoroughly appreciated by those who are fortunate enough to be a member of one of those gypsy-like parties. The little folks, in particular, enjoy the fun. The river is shallow, can be waded almost anywhere, and in early autumn, with good fishing, an occasional duck and with running rapids, and again dragging the boat over a shallow drift, there is again abundant opportunity for exercise of mind and body, which is long remembered as a bright spot in the journey of life. Two of the most pleasant outings, made right on this dear old river and camping on these same little islands, were the best that I ever enjoyed in my life. We boated, fished, camped, hunted and enjoyed two weeks, in early September, two years ago, in a way

that has made me ever since wish to try it again at the very first opportunity.

Years ago great flatboats, loaded with the commodities of trade and the necessities of a frontier life, were poled, pushed and dragged over this same course, and the path of this same lovely river was the only highway of commerce to the then unknown wilds of central Michigan. Every now and then one meets with a pioneer of those early days, and his interesting story of frontier home life as it then existed is listened to with much pleasure. The old settlers are rapidly passing away. The Pioneer Society of Michigan is getting together material to perpetuate the work of those heroic people, and at their yearly meetings held in Lansing the old residents delight to tell the story of their early-day experience. The proceedings of the society are published each year, and this book is the only connecting link between the pioneer life of Michigan and the people of the present day. Wild and weird are the stories of their lives and hardships while clearing the great forests away and making homes for themselves and for us. The Indian, the bear and the deer are gone; the old settler will soon follow after. Here and there up and down the Grand River little mounds mark the final resting place of some aboriginal. Occasionally these mounds are opened and they are sure to give up their story of Indian life to the ethnological student.

In the winter the woods and swamps of central Michigan are filled with hare, and our people have jolly times hunting bunny with their hounds and beagles. The great Chandler Marsh, a few miles north from our city, is the home of the fox and the hare, and when this immense swamp is frozen over, so that the hunter can get around comfortably, it is a favorite place for winter hunting.

Of our sporting men and their ways and methods, you shall be familiar; and as time and inclination presents I will acquaint you with their doings. Michigan people are sporting people; it is born in them, and they delight in camping out and in hunting and fishing. They are usually well equipped for a full enjoyment of all of these luxuries of nature, and whether in the woods or by the stream, they are in their native elements and at home. If you have cast your lot in some far-away Eastern city, and a business necessity has hemmed you in with huge walls of brick and stone, where the sunlight can seldom enter, you can little appreciate the beauties of a lavish nature as it is spread before the happy people of central Michigan. When you get a few days off, come and see us. Inquire for any member of the Lansing Rod and Gun Club and you will be cordially welcomed. Do not be afraid to come, for our people are open-hearted and they will care for you to the best of their ability. Not that we have the finest fishing and hunting in the State right at our door, but such as we have, you are welcome to enjoy equally with ourselves.

JULIAN.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Arkansas.

CHICAGO, June 10.—Mr. Jos. W. Irwin, of Little Rock, Ark., writes me as follows about the game in his country:

During my residence in Kansas near our mutual friend, Will Carney, I enjoyed some very fine shooting at waterfowl as well as chicken and quail, but aside from chicken and geese, Arkansas is the greatest all-around State I know for sport. If it should ever come in your way stop off here and I will show you some of it. Our quail are doing nicely, as well as all kinds of game. Last winter we had elegant mallard shooting here in what is known as pin oak flats, where they go to feed in large numbers, and they decoy beautifully in the open places in the woods. Our fishing has been poor up to date owing to high water, but it is going down fast now, and next week it will be fine.

Wish I could tell you about a trip with Col. Felton and his friend, Mr. Jacobs, from Buffalo last December on a deer hunt, a few miles from here. I laughed myself sick. We shot quail and ducks and shot at a number of deer, Mr. Jacobs firing six shots at one deer, and then let him get away. They were a jolly party, however, and enjoyed their stay very much.

I shall be glad to give you any points of interest from this part of the country, and shall do myself the pleasure of calling on you when in Chicago.

## They are Corkers.

My friend, Mr. C. W. Lee of the Chicago Canoe Club, sends me a letter received lately by that body from a gentleman in South Englewood, a suburb of Chicago. From the meager details given by the writer in regard to the two heads in question, they must be either autochthores or corkers. The letter is, verbatim:

## To the Club:

GENTLEMEN—I have brought to this city two (2) of the largest and finest natural specimens ever seen by white man. They are immense. I killed last fall in the far North a Moose and Caraboo. The largest and finest of their kind ever killed by white man. I had their Heads put up in good style and intended them for the World's Fair, but I find that I have to get back North at once, so that I must dispose of the Heads, and knowing that some of the clubs pride themselves on collecting the finest natural specimens they can find, I will give you a bargain as I must sell at once. They would be quite an addition to the beauty of your club room. The Moose weighed 2,000 pounds, age between 50 and 60 years old. The Caraboo 1,300 pounds, age 90 years. That will give you some idea of the size of their Antlers or Horns. They are immense size and perfect in form—to see them is to want them and to own them to feel proud. They cannot be matched in the State of Illinois. I will have the Box.

Please bring this to the notice of the sporting gent of the club and the club may be the richer for it. Hoping to hear from you by return mail.

## Wants Fur.

Mr. H. A. Pierce, of North Fairfield, O., has a great deal of confidence that I know a whole lot of things, for he writes me as follows:

Being a reader of FOREST AND STREAM, I take the liberty of addressing you for a little information, seeing your kindness to others who are after the same. Being in poor health I have made up my mind to take to the woods and put in the fall and winter trapping. Would you kindly tell me where in Michigan or Wisconsin I would be likely to find the best place for a winter camp, with fur-bearing animals reasonably abundant. I would like, if possible, to locate on a lake or chain of lakes, so as to avoid as much as possible the packing of supplies on one's back, and also get a little fishing this fall. If you do not consider this asking too much I would be pleased to hear from you.

I do not know any place in Wisconsin or Michigan which I could guarantee for a winter camp for fur, or the above conditions. If I wanted to trap I should build a cabin boat and start down the Arkansas River, say near the Kansas line, and hold up among the delta wet lands in the Mississippi bottoms. I knew of a party who made a successful trip. They found mink, otter and (at that time) beaver, also deer and turkey.

E. HOUGH.

In a pleasant, chatty letter from Mr. W. W. Titus, Waverly, Miss., one of those letters which, after it is read to the end, a fellow wishes there was more of it, I find the following in reference to quail:

"I have wondered if the present wet weather would harm the quail. I have about come to the conclusion that they are all right. Around my house I have several small patches of grain, and there are at least six pair of quail in this, a radius of 200 yds. of my house. I never go to the post-office but what I see a half-dozen old cocks or more, and it is a distance of barely a half mile to the office. I think that the quail will raise well this year if June is a dry month.

"I did not kill any birds about me last fall, consequently have abundance of old birds as breeders.

"As I sat on the back porch to-day after dinner something whirled over the palings and lit in the yard. I looked, rubbed my eyes, and looked again. Yes, there was no mistake, it was a 'sure-enough' cock quail.

"He ran with spreading tail and raised crest to where I had fed some chickens, and the 'grits' and corn they had left seemed to strike his palate about right, as he was eating busily. Not over four feet from him lay a three-and-a-half months' old puppy in the grass. It was used to chickens of that size, but this saucy cock quail struck him as a new and different kind of chicken from what he had ever seen. It slowly raised its forepaws and then remained motionless, to all appearances pointing, turning its head and looking after the quail, when he ran up to within three feet of the step I was sitting on. The cock then ran back of the puppy a few feet, flew up and lit on a picket. A moment later it and its mate, which I had not seen, flew over into the oatfield. As I write I can count from my window five different quail 'Bob White-ing.'" B. WATERS.

## Moose Easily Tamed.

NEW GLASGOW, Nova Scotia.—Near Mr. Nelson's place on Fifteen Mile Stream last yearsome young men engaged in lumbering caught three moose calves, which they took there. One of them died, one the women folks fed and raised, the other was raised near by another lad. These two were sold at six months of age to an American who took them to Massachusetts or New York State. They grew very rapidly and at six months were as large as two-year-old trotting colts and tamer than calves would be. Once before two moose calves were captured near by which were raised at Nelson's place until two years of age, when they were purchased and sent to the King of Italy. In fact, it is no trouble to get them in the spring, and little trouble to raise them. After the first few weeks they go to the bush for their living, returning home for rest early in the morning, apparently feeding only in the evening and night.

J. F.

## Small Game in New Mexico.

EDDY, New Mexico, June 23.—Our colored janitor has two kids, both of whom are also colored. He also has a young wolf. When it was brought in from the foot-hills, it was about the size of a prairie dog, but now it has grown into a long-legged, awkward, gawky, good-natured brute, and follows its partners around as any ordinary puppy would do. It has become well acquainted with some of the rest of us and whenever it comes near us will jump on us, fondle us and lick our hands and faces if it gets a chance. In fact, in all its habits and movements it is very much like its canine cousins. The group posed before my camera the other day, for a few minutes, but it was impossible to keep the wolf still for even a second. The photograph herewith shows that he moved his head a trifle, just at the critical moment, and yet the portrait is a fair one, all things considered.

G. O. SHIELDS.

## Quail in the South.

I AM happy to inform you that the quail were not exterminated by the cold weather in Virginia and North Carolina. My friends write me that plenty of them are now whistling on the fences and in the fields.

R. C. LOWRY.

## An Appeal to the Charitable.

will the one that opens this letter besur to give it to the Editor it will be a great kind to a poor fellow

Dear sir

I send you 12 cent what I want to say I have seen your grand paper and know the editor must be a true sportsman. think over some of your hunts then think yourself in this poor fellows place he can not walk a step, is very poor earns his living can seating chairs hard work and small pay think sitting all the time. he has the greatest love for fur arms and hunting of any one I ever saw. Knowing all sportsmen have kind hearts I ask will you please send FOREST AND STREAM to him for as long as you can if you could see the care he take of a few old copies he has far back as '81 and '86 he reads them over lays them away again he has but a few years to live the dr's. say any way. think of the papers you throw away every week think the pleasure it will give this poor fellow to have one every week. I think sitting day after day seeing others go hunting. Please send paper for 5 years or for life if you will. show this letter to some of your friend ask them if they have a Marlin model 1891 .22Cal. rifle that will hold 18 rifle, 20 long 25 short Cartridges in same rifle, that they can give to him he so longs for one, any kind will do but like that best a .32cal. american arms Co hammerless revolver, or Roal & Wesson, the Perfect safety hammerless, or smith & Wesson, or swift automatic safety hammerless or X.L. Bull dog folding hammer's shot Merwin, Hulbert & Co. make C, fir Columbian automatic, or Columbian safety hammer, or any other good revolver, all above are .32 center fire also a .22Cal. to take a long or long rifle cartridge, russian model handle, a X.L. Bull dog 7 shot 4 1/2 barrel folding hammer or any single or double action .32 long revolver they will send him A. Frank Wesson .22Cal. with reversible firing pin using rim or center fire Cartridges in the same rifle, then he can come time get a .32 or .38 barrel for it. have it light weight. Please ask or write some friends for a book by Greene, the gun and its development, also gunsmiths manual. Atlas of the New Jersey Coast, the pistol, and any books on hunting, fishing, shooting, Natural history, taxidermy if you only knew him as I do you would send him a whole library think the pleasure the books that are laying idle would give him, that have been read and thrown by no use to them. Please make up a box for him put in a .22cal. marlin rep. rifle, a .32 revolver, a .22 revolver, and any other rifle .32 or .32 or revolver they will, any books, papers, I will be very thankful to you as I know how he longs for them. think of him as you go fishing. send paper sure. if you will not send F. S. right along send a lot back ones. send a paper that will describe all of guns, rifles, revolvers, or some paper that has the address of makers of firearms so he could get catalogues from them. dealers do not give any description of them only some old kind S. & W. or colt he would like a marlin .32cal model 1891 using rim or center fire Cartridge in same rifle to hold 20 short cartridge if not but one send .22cal. but I hope both. think the pleasure they will give him to look at and use at target and crows, and rats. Please send something you will get your reward put in some cartridges and reloading tools for he will load his cartridges to .32 rifle and revolver making cost but little. a .25cal. Stevens rifle would be nice for him. center fire he could use 10, or 20 grains powder as he wish. do not think I ask every thing, but name what I know he likes best and you send what you can to him. If you write him send letter, not postal I will send you stamps. I send you stamps for postage on back F. & S. a lot only costs you 2 cents a pound I promise him will not sell or give away anything you send him do not forget him

# FOREST AND STREAM IN THE WORLD'S FAIR.

*As Seen by Our Staff Correspondents.*

## VII.

### The Cowboy Race.

Governor John P. Altgeld, the man who wants to abolish the State Fish Commission, was so busy this week pardoning out a lot of anarchists that he forgot to arrest the wicked cowboys who were racing from Chadron, Neb., to the World's Fair, and the winners arrived here safely June 27, registering at Buffalo Bill's plaisance at Sixty-third street. Jack Berry was winner of the race, getting in at 9:30 A. M. His time for the 1,000 miles was 13 days, 15 hours and 50 minutes. His horse was a five-year black stallion, Poison, a vigorous and compact animal which certainly looked none the worse for wear. The next rider in was Emmett Albright, who registered at 11:13 A. M. "Old Man" Gillespie was third, at 1:35 o'clock. He is 58 years old, and the feat for himself and his phenomenally well preserved gray, Billy Shaffer, is to say the least remarkable. The fourth man was C. W. Smith, on Dynamite, at 1:47. Dynamite looked anxious to do another 1,000 miles before dark.

These men can sure ride plenty easy. I used to have occasion once in a while to ride fifty or sixty miles without getting out of the saddle, and I never had a horse which, after the one day's ride, did not look worse used up than any of these horses did when I saw them at the Wild West stables, at the close of a 1,000-mile ride. Incidentally there is talk about freight cars, but I trust it will not be shown that the boys were scared by Governor Altgeld into secreting their horses in box cars, while they were marching through Altgeldom. For those interested the following is added to the record, showing names and horses of the starters:

J. Emmett Albright, Crawford, Neb.; weight, 165lbs.; horses Outlaw and Joe Bush.  
James H. Stephens, "Rattlesnake Pete," Ness City, Kas.; weight 140lbs.; horses, Gen. Grant and Nick.  
George A. Jones, Whitewood, S. D.; weight, 118lbs.; horses, George and Romeo.  
Middleton, Chadron, Neb.; weight, 165lbs.; horses, Geronimo and Jimmy.  
C. W. Smith, Hot Springs, S. D.; weight, 165lbs.; horses, Dynamite and Red Wing.  
David Douglas, Hemingford, Neb.; weight, 130lbs.; horses, Monte Cristo and Wide Awake.  
Joseph Gillespie, Turne Butte, Neb.; weight, 180lbs.; horses, Billy Mack and Billy Shaffer.  
Joseph Campbell, Denver, Col.; weight, 118lbs.; horse, Boomerang.  
R. Fisher, Chadron, Neb.; horses, Nigger Baby and Dixie.  
John Berry, Chadron, Neb.; weight, 180lbs.; horses, Poison and Sandy.

### The W. W. Greener Exhibit.

In the British section of the Manufactures Building we met Mr. Harry Greener, of the firm of W. W. Greener, Birmingham, Eng.; also Mr. H. J. Sprengle, who remains in charge of the Greener exhibit after the return of Mr. Greener. Together we went into the spacious glass-walled house which makes the firm's booth for the display. The booth itself is handsomely and expensively gotten up, and tastefully ornamented with heads of big game, etc. Outside and in it bears the mark of very thoroughgoing and tasteful work, and both it and its contents deserve the most creditable notice.

There are 130 different guns in this exhibit, and the display is by reason of its wide scope of the greatest interest to even a very amateurish lover of a gun, to say nothing of the knowing ones. Most people who take in only the common impressions believe that the Greener gun means chiefly the 12-gauge Greener pigeon gun now so common at our traps. This is only getting into the edge of the Greener product. The firm make all sorts of guns, and show here an assortment which will give you a busy hour of curiosity and surprise. You can see here a little .41-caliber shotgun, for killing small birds in collectors' work, and near by can take up a single-barrel 4-bore which throws a handful of shot 200yds. with the most destructive effect. There are all calibers, all sorts, and all prices, from \$65 to the \$600 special double twelve. Not only shotguns, but also rifles, revolvers and pistols are made by this firm, very good each in its class. The elephant rifle is practically unknown in America, and many gaze with wonder at the 17lbs. double 4-bore rifle used for this game of a foreign hemisphere. It is a tremendous arm, but wonderfully well balanced and easy of handling. I have 10-gauges which seemed as heavy.

Further in rifles the gentlemen showed us the curious oval-bore rifle, which made so distinct a sensation in the world of gunnery; also the 12-bore double rifle, another arm not known in America, but I should think a good one for bear. Still another odd gun was the combined rifle and shotgun, one with the side by side arrangement of the barrels, and one over and under. This is a favorite gun in South Africa. The gun of the lot which most attracted me for American big game work was the .50 double express rifle. This was really an admirable arm, handling nicely as the best balanced shotgun.

Still another oddity to our eyes was a four-barreled .45-caliber pistol, for use at close quarters on big and dangerous game. It is claimed that this arm with its proper cartridge gives an extraordinary penetration. Much prettier, if not so deadly, were the small caliber pocket revolvers shown. Oddest of all, and to remain odd, since its use is so infrequent, was a harpoon gun with lance boom for use in the whaling trade. This gun is of ancient model, but is standard and has been for half a century.

Mr. Harry Greener speaks very highly of the "sporting Martini" as a sportsman's rifle, and says it is a great Africa favorite. It is of simple mechanism and will take a lot of knocking about. Both this and the Lee-Speed repeating rifle are shown at the W. W. Greener exhibit in the firm product. The action of both these arms, and also of the ejecting shotguns, are made plain and simple of comprehension by the full sets of sectionals shown. The process of barrel manufacture as illustrated is especially interesting; as for instance in the sectional views of the Henry, the oval smooth bore, express and other rifle barrels of the choked portion of the shotgun barrels. Take all in all, the many curious guns, the many standard and well known ones, and the details of their construction as dis-

played, the books of W. W. Greener (in many different languages), and above all the artistic arrangement of so diverse a whole, I question whether many exhibits could contain more to please the connoisseur or entertain the curiosity seeker. Moreover the firm have done one excellent thing. They have gotten up a special descriptive catalogue of this exhibit, not touching upon any articles not shown. Any interested person can by aid of this little book obtain unassisted a perfect idea of the exhibit in all its parts. For instance, in describing the specially made 12-gauges, which alone would have made a handsome and efficient exhibit for any firm, the catalogue speaks as follows:

"The eight guns following have been specially designed and made for the Chicago exhibition, and are specimens of the finest workmanship ever produced in gunmaking. Several styles of ornamentation are exhibited, among which are guns with elaborately carved actions representing oak leaves and acorns, horns and scroll work. Gold inlaying, chasing and damascening also adds elegance to the weapons, they are all suitably engraved in keeping with the designs, and artistically finished in the very best style. Not only has the extra care and attention been expended on the external appearance, but infinite trouble has been taken to secure the best possible workmanship procurable from the selection of the iron, steel and wood which forms the foundation, and through every subsequent stage, even to the making of the screws and pins."

We may, therefore, conclude that the English firm has brought to the World's Fair the best possible specimens of its handicraft. At the Fair the American and all others may examine them. The one and the other are to be complimented and congratulated on the deed and the day.

### Other English Gun Exhibits.

Near the Greener booth in the British section are also the handsome cases of W. & C. Scott & Son and of Charles Lancaster. These handsome goods should not come all the way over here without a word of welcome, but unfortunately there was no attendant at either case at any time when I happened by, so that a later visit must be made here before we can speak as we would like.

### Lieut. Peary's Tents.

This week's dispatches tell of the departure for the far North of the intrepid young explorer, Lieut. R. E. Peary, who expects to spend two years in Arctic regions in the effort to reach the Pole. Through reading FOREST AND STREAM Lieut. Peary purchased, during his visit to the Fair, two of the compact and comfortable Protean tents, for summer use by himself and wife. One is 7x7 and one 8x8. It is a far call to the cold North Pole, but I hope the Chicago tent will get there and use the hitherto useless thing for a center pole.

### The Other Direction.

Next to this tent space is the boat exhibit of A. G. Spalding & Bros., as I have said. On the same day the tent started north one of the St. Lawrence pleasure boats started south, for San Martino, Mexico, via Vera Cruz. It was bought by Senor E. G. Gillow, and the freight was over \$70.

### Visitors.

Mr. Thos. H. Wentworth, of Bangor, Maine, Commissioner of Fisheries and Game for that State, is in the great and only city for a few weeks. I hear there are only four or five persons left back East now. They have to come to Chicago. It is like the bridge of Avignon, "Tout le monde y danse en ronde." That is French. I learned French at the Algerian village this summer.

From the other side of the continent, likewise leaving a card for FOREST AND STREAM, comes Mr. P. M. Fisher, of Oakland, California. Mr. Fisher is director of the Pacific Excursion Company.

Mr. J. M. Yorgey, steward of the Diana Shooting Club, Horicon Marsh, Wis., called this week, and paused before the big photograph showing a scene on the Horicon Marsh, which is one among the varied FOREST AND STREAM gallery of sporting views. There are many inquiries whether these pictures can be duplicated for sale, and also many inquiries for the originals in the FOREST AND STREAM amateur photography competition.

E. HOUGH.

### The Cape Colony Exhibit.

The exhibit of Cape Colony occupies a large space in the Agricultural Building. It is one of the most interesting in that department. By the way, the title of the department—that is, the Agricultural Department—is, in a way, misleading, or rather is not comprehensive enough in its meaning. Those who imagine it is devoted to threshing machines, plows and pumpkins are deceiving themselves, and denying themselves much information and pleasure if they refrain from visiting it. In it are exhibits from every clime, containing not only the agricultural implements and products peculiar to them, but the utensils of domestic life, photographic illustrations of the natives and their homes, and the flora and fauna of the country, as shown by colored pictures of the former and mounted specimens of the latter.

One will be surprised, too, at the variety and novelty of animal life. It is true that we live in an age of progress, but the greatest student cannot keep pace, in his knowledge, with the great sum of knowledge evolved by the progress of the world.

One has but to go through the Agricultural Building to realize by it, more than any other, how the world at large has advanced and developed in the last two decades.

Particularly is this true in respect to Africa. Where, twenty years ago or less, vast regions of it were in the atlases of that day marked "unexplored," or "uninhabited," or "desert region," are now large settled countries, with fixed boundary lines, permanent government and growing prosperity. Civilization is displacing and superseding barbarism. Not so much by destroying the bar-

barian as by restricting and educating him in so far as his simple nature will admit.

### Civilization.

As I gazed at the map of Cape Colony, showing boundary lines, provinces, cities and towns, a gentleman standing beside me broke out in enthusiastic speech. His accent was mildly English.

Said he: "England has done a great deal for the civilization of the world. See, where a few years ago were wildernesses and savages, now under the development and beneficence of civilization. Is it not grand?"

"Yes," said I, but reserving mentally my prerogative as a dogman to concede nothing without a kick, "yes, but it is sad to contemplate that all this civilization and beneficence was handed to the Africans on the points of bayonets. In India, out of a mortar."

He replied kindly: "You must concede that we did not make good savages as the Americans make good Indians. When they were subdued, England treated the savages kindly, and bettered their condition. Even if civilization was forced on them, was it not better than savagery?"

I was forced to admit that it was. The fact is that almost every nation has a glass house of some kind, and it does not do to throw stones too carelessly. I had forgotten that we helped ourselves to the Indians' land first, offered him civilization in an economical way second, and third, periodically prodded him into warlike activity for general results.

### Mr. Robert Lee.

This gentleman, Mr. Robert Lee, had charge of the large and valuable exhibit of Cape Colony.

I saw a number of skins spread out here and there in the exhibit, skins of strange animals, some sewn into robes, others whole by themselves. In short, there was so much which was strange, I was constrained to ask Mr. Lee for information. I found him a most affable and communicative gentleman, and thoroughly familiar with his country's resources.

In reply to my query whether there were any game birds in Cape Colony, he said:

"We have a variety of game birds. There are wild ducks, quail similar to the American quail so far as I have been able to judge by the specimens I have seen, Guinea fowl, native pheasants and partridge."

I then asked him if setters and pointers had been introduced into Cape Colony.

"Yes," he replied, "there are quite a number of them, but they are used chiefly by the military and a few of the wealthier people. Setters and pointers are not at all strange in our country."

"What are your varieties of large game?" I asked.

"There is a large variety of big game. Springbok, reib buck, bless buck. There are also leopards, elephants, lions and several kinds of the tiger species, though no tigers. The hunting is confined to certain comparatively small districts. Among the best are certain parts of British Bechuanaland. Civilization has already had its effect in exterminating big game."

Noticing no fish exhibit, I asked: "How about your game fish in Cape Colony?"

"The rivers have very few good fish in them," he said. "The summers are very dry, and then the rivers in consequence have very low water or dry up entirely. There is not, as you might imagine, a scarcity of water in summer. At a depth of 12ft. in most cases, or at 20ft. at the greatest, plenty of water is found all through the provinces. There are underground rivers. There is an abundance of fish caught on the coast. About 50 or 60 varieties of food fish are found there. There is a very large crab, resembling a lobster in a manner, which sells for one cent. A snook, weighing from 16 to 18lbs., sells from 4 to 6 cents in equivalent of American money. Cape salmon, 12 to 15lbs., about 8 cents. There is very little inland fishing."

Mr. Lee gave me much interesting information on the wild animals of the South African country. While the exhibit is a grand one it was a mistake to neglect making a full exhibit of these wild animals. Such as are exhibited are more in relation to domestic usefulness or commercial value than to them as being *feræ naturæ*.

There were a number of robes made up of skins. One was of tiger cat, and was valued at \$20. It did not approach, in beauty or quality, robes of American manufacture, made up much better and at a lower figure. Skins of the Zambesa cat were shown, and of the lynx, the latter highly valued by the natives for its supposed curative powers when worn by persons who are afflicted with rheumatic ailments. Undoubtedly good flannel would have the same curative effect.

A tawny skin of a lion was draped on the side of a table. Two holes in it showed where the bullet of the hunter snuffed out life. A lion's skin does not look very lordly when the lion is absent from it. The skull of the lion was nailed up among a lot of Zulu ornaments, utensils and weapons. If the expression of the skull, with its strong, curved fangs, large eye sockets and strong jaws is any data by which to judge the animal in life, it must have been a most petulant brute. Skins of the silver jackal did not suggest beauty. Why they are called silver jackal is difficult to understand, as they are said to be of a variety of colors. Skins of the leopard and laughing hyena were not uninteresting.

A springbok, indifferently mounted, was the single representative of the deer family. It was a tiny specimen, weighing, when alive, about 40 or 50lbs.

Two Boer goats, specimens of descendants of the wild goat, but now representing the domestic goat, were most interesting studies. They are large, strong animals, cleaner and longer of limb than our domestic goat, short coat, and in body shaped more like a six-months-old calf. The head somewhat resembles that of our domestic goat, though the horns are much smaller. The larger specimen would, in life, have weighed fully 200lbs., the smaller about 150. They were set up on an elevation about 5ft. from the floor, and, with Angora goats, fat-tailed sheep and the springbok, made an interesting group.

### The Ostrich.

Two ostriches, a male and female, were the center of constant admiration. They stood on an imitation of desert sand, out of which was an imitation growth of the small, stunted, scraggy bush, growing only one in a place, the food of the ostrich. On the ground were young ostrich chicks, about the size of common hens.

It occurred to me that ostriches might be shot over the

points of pointers and setters. I was tempted to ask Mr. Lee about it, but thought it better not to ask too much information at one time. However, I know some men who have shot a great deal, yet I firmly believe they can hit more ostriches over a dog's points than they can hit quail under like conditions. The fact that the ostrich does not fly would not make any difference in the results of the shooting. The ostrich would be a most valuable addition to our list of game birds. For a dog with a poor nose, and a man between whom and his gun there is a grievance, the ostrich would fill a long felt want. Ostriches at \$500 apiece would be prize shooting.

A pyramid of ostrich eggs had a most pleasant suggestion of custards and ice creams, but I did not learn whether ostrich eggs are good in months which have no r in them or not. There were many hung up for decorative purposes. Some were halved, had a pretty landscape painted on them, and were nicely framed or secured to panels.

By the way, it may not be out of place to mention that in Cape Colony the ostrich is now a domestic bird. The wild ostrich is no longer a factor in furnishing the beautiful feathers often seen on three-decker hats at theatres and elsewhere. As an industry, ostrich farming is one of the chief industries of Cape Colony. Previous to 1860, feathers were secured by killing the birds in the wild state. Their destruction was enormous, and if continued meant extinction. In 1866 there were only eighty domesticated birds in the Colony, yet 17,522lbs. of feathers were exported. The average yield is estimated at 1½lbs. per bird. This meant the destruction of 18,938 birds in one year. Probably many more were wounded. The pursuit was so keen and relentless that the birds sought refuge in the interior wilds of the wilderness. In 1864 a number of chicks were captured, but their domestication was not a perfect success. They were sufficiently tame to be plucked of their feathers, although this was attended with difficulty, the birds being almost unmanageable. Their progeny was wilder and more difficult to domesticate. It seemed as if the venture was a failure. However, the incubator solved the problem. In 1869 it was introduced. Birds hatched by it were raised by hand and took kindly to domestication. Their ancestral wildness did not thereafter appear. Ostrich farming then became an established industry. In 1875 there were 21,751 domesticated ostriches. That year 49,569lbs. of feathers were exported, and five years afterward the exportation of 163,065lbs. of feathers showed how the industry had increased. That exportation was valued at \$883,632lbs. In 1882, 253,954lbs. of feathers were exported at great profit, selling for £7 17s. per lb., bringing in a total of £1,993,980, but so many then engaged in the business that over-production resulted, prices fell and ruin came to many in consequence. There is always now a steady demand, notwithstanding the changes and whims of fashion, so that ostrich farming is on a firm, conservative footing.

The high prices of 1882 stimulated attempts at this industry in other countries. The exportation of birds and eggs alarmed the home government. A duty of £100 on every bird and £5 on every egg exported was imposed. This step prohibited further exportation. It is supposed in Cape Colony that that country has an exclusive monopoly of ostrich farming.

The Angora goat, from which is taken the mohair of commerce, is also cultivated.

Wool was shown in many varieties and qualities.

A large case was crowded with mounted specimens of native birds, bright in color and beautiful in form. The game birds, I regret to say, were neglected in the exhibit, not one being represented.

A most interesting collection of the native weapons and domestic utensils of the aborigines was shown. The fatal assagai of the Kaffir, bows, poisoned arrows, spears, shields made of hide—a most flimsy protection—rude knives, etc., a most primitive array of force as compared to the modern outfit of the white man when equipped for gore.

The domestic utensils were very few and simple. A gentleman, who is interested in archaeological conundrums, told me that the stone implements were precisely similar to ones he had seen on the Pacific coast, used by the aborigines of that section. The rude rock pictures were also similar. He is a student in those matters. He said that his studies had proved that primitive man throughout the world had lived in much the same manner under similar conditions.

This sketch has merely touched on the attractions of the exhibit. In its agricultural features it is most abundantly represented. Those who wish to see how people live about 6,300 miles from New York or London can do no better than to visit the Cape Colony exhibit, where they can pass a most profitable half day, and withal a pleasant one.

B. WATERS.

909 SECURITY BUILDING, Chicago.

IF YOU HAVE a friend, good and true, whom you would like to remind of his friend, fifty-two times in the year—once every week—why not ask us to see that a FOREST AND STREAM wrapper has his name on it, with your initials in the corner of the address label?

## Sea and River Fishing.

"Game Laws in Brief." June, 1893, revised. Game and Fish laws of all the States, Territories and Provinces. Correct, reliable, handsomely illustrated. Published by the "Forest and Stream." Sold by all dealers. Price 25 cents.

### ON EDMERE POINT.

WE talked it over five minutes, then it was settled. We would go fishing. Very few fish had been caught, and the chances were against us.

"A cloudy day for pike," said Brower, the business man, who has caught tarpon South, mascalonge North and everything between.

"Go anyhow, I'm a mascot," said the ingenue, who was on her vacation.

So we went.

A trifle less than fifty miles south of New York city, on the Jersey coast, lies Deal Lake, a famous spot. We took six rods and gave the actress her selection. With rare good judgment she picked out the 8oz. Prime rod—named by its makers after that veteran and thoroughbred angler, A. C. Prime. With enough lunch to last three healthy appetites for two days, and a bucket of live minnows, we spread camp—a rubber blanket—on Edgemere Point, and fished still, with six red floats popping out of the water like miniature beacons. The actress made her own cast and did well. It was 10 A.M.

"We will now prepare to take life easy," said Brower, deliberately, as he filled his pipe, "for it's a dead minnow against a pipeful of sinkers that we will not get a strike until 4 o'clock, if we get one then."

The actress was a bunch of nerves, and she regretted she had not brought field glasses the better to observe the floats.

In an east wind, with the sun shining brightly, and just as a gang of Italian laborers on the tracks of the Long Branch railroad stopped work for dinner, the red float which buoyed the actress's minnows shot obliquely downward and out of sight.

"Let him eat it up," said Brower, with a tinge of sarcasm in his voice, "and when he has the hook where his suspender buttons ought to grow, reel in and you will have caught a catfish."

I laughed, but the actress declared it was a pike. "A six-year-old call-boy would know it wasn't a miserable catfish," she said, scornfully.

She had the rod in her hand, and stood in an attitude for a picture. Her cheeks were red with excitement, and the wind made her blonde curls dance a jig. She braced herself like a feminine Rock of Gibraltar. Then we heard a welcome noise—you've all heard it, and you know how it sends the blood rioting through your veins.

"Whir-r-r-r-r," it went, while the actress said, calmly: "What did I tell you?"

In two seconds there were two men on their feet—two excited, advice-giving men who felt not only a trifle ashamed, but a trifle envious as well.

"Let him run a little!"

"Now give it to him!"

The line cut the water at an angle, but there was a firm little hand on the reel and a young woman who knew a thing or two owned the hand. Slowly she brought the unwilling fish like a mother dragging a boy home to a whipping. Once he made a rush and he was given about twenty feet, but his head was twined around again and inside of ten minutes we saw him coming slowly through the shallow water—the leopard of the lake.

"Gaff him for me, you big, strong fishermen," she said, and we lifted him in over the snags and up over the dead leaves. There were 8lbs. of him there, and he was a picture for a frame as he hung gasping from a low branch of the nearby cedar tree.

Talk about precedent—it was nowhere. What did the east wind, bright day and noon hour count for when a woman went fishing?

There were many enjoyable days ahead for us, we thought, as we trudged home astonishing the natives with the monster.

The enjoyable days amounted to one calendar week. Then a long-haired gentleman launched a big bait box, sharpened at one end like a clumsy wedge. He called it the Bonaventure.

He put in batteries and a screw, and took people in at the rate of 20 cents a head to sail around the most beautiful lake ever hedged in by natural scenery. Every time this boat makes a trip it sends volt upon volt of electricity through the water. The fish have ceased to bite, and the angler has turned his back upon his most promising ground. The Bonaventure plunges up and down, wheezes and snorts, and the long-haired man gathers in about \$1.80 a day as the result of his enterprise.

The lovers of angling have concluded to make at least one good effort to suppress the "bait box," and with Mr. Leonard Hulit at the head, it is likely something will be done.

Deal Lake has been noted for years for its pike. It holds besides a quantity of landlocked striped bass. Specimens as heavy as 14lbs. have been taken while trolling with a phantom minnow.

But now, unless something is done, *vale* fishing.

The actress proposes to pension the long-haired man.

B. A. N.

### Bass at Cape Vincent.

CAPE VINCENT, N. Y., June 28.—Bass fishing is now in its prime at Cape Vincent. The hotels are all filling up with anglers, and the catches of bass are something unprecedented. Yesterday's catch is only an every-day occurrence. Mr. Esterbrook, of New York, is in his glory with 444 bass for the last 10 days.

Mr. and Mrs. Geo. W. Weeks, of Brooklyn, brought in yesterday a string of 76lbs.—several over 2lbs. each.

Mr. Rudolph Keppler, of Wall street, New York, and his son Emil brought in over 50lbs. bass.

A. Sturo, of San Francisco, Cal., had much sport with a 3lbs. bass and 40lbs. of lesser weight.

Messrs. J. W. Ege and J. D. Bedle, Jr., of Jersey City, brought in over 60lbs. They have had that average all during the past week. Mr. E. Beadle, of New York city, caught 22 fish, weighing over 88lbs.

Many other fishermen have had equally as good sport. This is by far the best point for bass fishing on the St. Lawrence I have struck.

G. H. A.

### NEW HAMPSHIRE WATERS.

MANCHESTER, N. H., June 23.—Massabesic Lake, four miles out, is where most of the anglers of this city put in their day or two of boat fishing each year, as their business will allow. Perch, with an occasional bass or pickerel, is their only reward. Once in a while one who is well posted about the points of the business on that sheet of water will get a string of pickerel or bass, but a large catch of either, in size or number, is rare. Arthur P. Spiller, as painstaking and persevering an angler as there is in the world, showed me Wednesday evening a bass that weighed 2½lbs. and a pickerel that tipped the scales at 2lbs., which he had taken that evening from the lake. Pouts have been plentiful there this season and many hundreds have been taken, mostly small.

Lake Sunapee, the alleged home of the black bass, and Newfound Lake, where trout are said to abound, are extending less attraction to our fishermen at this time than they have in years gone by. The facts in regard to both as relating to the average fisherman are, that they have been overestimated as fish reservoirs, and like all good places easy of access, have had their full quota of fishermen. Whenever any lucky fellow makes a strike of a good sized bass or trout, the world, or the best part of it—all of the United States—hears of the occurrence through the medium of the newspapers, by the special efforts of the local hotel men, whereas the thousands who visit the "crack" fishing grounds of the Granite State with indifferent success, never have their poor luck made known by others, and content themselves by staying away thereafter. While there are good fish at all places, which can be caught at the proper time by those who know how, before one goes to either place expecting immense results, he must make allowance for the stories heard about the "big ones" others have captured, and know that fishermen are not the only liars living, as most natives, those in search of shekels in particular, around summer resorts and popular fishing grounds, can give the best disciple of Walton a pretty good tussle in spinning yarns. Dr. George H. Fowler of Bristol, an old school-mate of mine by the way, seems to have all the large fish of the Newfound Lake located; I think he watches their growth, and holds a mortgage on them, which when he thinks they are of proper size he forecloses and lands them. He takes many large ones each season, and is one among many hundreds who try and are thus rewarded.

Lake Winnepiseogee well sustains its reputation and has furnished Manchester people with many nice trout this summer. The most recent catch was by Mr. J. B. Estey and a party of four, who spent a day on its surface and captured five which weighed in the aggregate 20lbs. There seems to be no limit to the number of finny inhabitants within its depths.

Dr. J. H. Riedell and Mr. Fred H. Thurston, two thorough sportsmen and ardent fly-fishermen, returned Thursday last from an eight days' trip to northern Maine, a Mecca that all New England sportsmen visit whose business, purses, or "pull" on the railroads will sustain and allow. They were disappointed in finding the streams filled with logs and the water far too high for fly-fishing they designed to enjoy, but before returning they managed to get a day's sport on a small pond which yielded a fair string that would average 1lb. each, called by the people there "small trout." They saw two moose and a large number of deer; so numerous and so often were the latter seen that the visitors ceased to remark their presence. At one time they counted eight, and on many occasions saw from two to six at once, and they would frequently quietly feed within a couple of rods of the fishermen without fear, a condition of things that will radically change when fly time has passed and the deer hunter appears on the scene.

PAYSON.

### ADIRONDACK NOTES.

FROM information gathered on a recent trip through the southeastern portion of the Adirondacks it would seem that deer are on the increase all through this section and that the hunting has never been better of recent years than at present. Sections that a few years ago were barren of deer now furnish their quota of game, while in other sections the hunting has been wonderfully improved. This condition of affairs, so pleasing from the hunter's standpoint, is attributed to two causes: The first and most important is the improved observance of the game laws. In this part of the Adirondacks it is a rare thing to hear of deer being killed out of season, and public sentiment is decidedly in support of the law. Twenty years ago crusting was common, and the entire deer of certain wild localities were often skinned out, leaving it an unproductive wilderness till the crop was gradually recruited from the neighboring county. Crusters killed sometimes for very wantonness, or again merely to break in a hound pup. The deer were generally so poor at the time of year they could be hunted in this way that their meat was scarcely fit for food. Crusting was probably the most destructive method of hunting to which deer have ever been subjected, but there were many other ways, since rendered illegal, by which the supply was cut down.

Another cause which in certain sections has operated to largely increase the number of deer, is the establishment of private parks or reserves, in which hunting is only allowed under certain limitations. These parks furnish refuges and breeding places for the deer, and as they increase they gradually wander off into the surrounding country.

The Adirondack Reserve has not allowed hunting on its 40,000 acres of land since it came into possession, a period of some seven years, and as a result the hunting in contiguous sections has been greatly improved. Hunters living fifteen or twenty miles from the borders of the reserve ascribe a certain portion of the deer increase in their localities to its fostering influence. The land of the reserve is mostly covered by primeval woods, and in such woods there is not so much food suitable for deer, as a rule, as there is in a country that has been lumbered over. Deer are very fond of young and tender growths, such as spring up in a country that has been recently burned or lumbered over; and a certain number from the surplus of the reserve are no doubt constantly wandering away.

One of the sections that has profited most by better laws and a better observance of them is the country around Schroon Lake. It is said that last fall 50 odd deer were killed within a radius of 15 miles from the head of the lake. To a party of which Wm. Pickhardt, of New York, who owns a large stock farm near Schroon Lake, was a

## You are invited

to visit the "Forest and Stream's" exhibit in the Angling Pavilion at the entrance from the main hall of the Fisheries Building, in the World's Fair.

member, is ascribed the feat of going out six consecutive days and bringing in with them each day one or more deer. This happened two years ago.

Schroon Lake is well supplied with hotels. Among these are the Leland House, the Ondawa, the Taylor and the Watch Rock. At the lower end of the lake is the Pottersville Hotel, and at Chestertown, six miles further south, is the Chestertown Hotel, well and favorably known to sportsmen. At these places the very best accommodation may be had and first-class hunting and fishing.

In Schroon Lake and neighboring sheets of water such as Paradox, Pharaoh, Friend's, Loon and Brant lakes is fine black bass and trout fishing. In Pharaoh Lake are brook trout, and in most of the others lakere and black bass. There are also several trout brooks, and from one of these a trout was taken this spring that weighed 3lbs. Partridge shooting is, however, probably the best sport afforded by this section. There is probably no better ground for this game in the State of New York. A few years ago, when market-hunting was allowed by law, one storekeeper by his own narration shipped 300 pairs from the town of Pottersville. Since the new law, which does not allow their shipment, partridge have still further increased, and a good shot with a good dog can make a remarkably good bag.

To the northeast of Schroon Lake stretches a tract of 40,000 acres of wilderness owned under one title. This is an excellent game tract and contains many deer. Nine miles north and east of Schroon Lake is Pyramid Lake, on which is a good summer hotel owned by Orrin Harris. This lake claims the distinction of furnishing fine brook trout fishing in connection with black bass and is also in a good game country. It is one of the few places where bass and brook trout live side by side. One can fish in water up to fifteen feet deep for bass and then let out a little more line and catch trout. That is still-fishing. Whether the trout and bass fraternize on the surface and take the fly equally well I am unaware. This lake is very deep and to this fact is ascribed the unusual relationship existing between the trout and bass. Nine miles north of Schroon Lake village is Rooter's Hotel, which is a celebrated stopping place for hunters. There is also good trout fishing in this neighborhood.

Altogether this section is a very desirable one for those fond of the rod and gun. The hotel accommodations are of the best and the hunting for large and small game better than many places deeper in the woods, and celebrated alone for their game. This country is, moreover, very accessible to New York, and one can take a night train and be on the ground the following morning. B.

### TROUT IN QUEBEC WILDS.

Boston, July 1.—Many sportsmen have yet to find that there is still a glorious region in the North, almost unexplored, where trout are abundant, small game abounds, and where moose and caribou, if not the red deer, are not nearly exterminated. Take the map of the Province of Quebec and look at the numerous streams and lakes north of the St. Lawrence in the valleys of the Saguenay, the St. Maurice and the Gatineau rivers. The country, up to nearly 200 miles north of the St. Lawrence, is literally dotted with lakes and ponds, the home of the trout and the salmon, while all these lakes and ponds lead by the wildest and most picturesque of streams and rivers down into the St. Lawrence. Much of the country is broken, though no very high mountains are the result. But many of the lakes are several hundred feet, in half as many miles, above the larger streams. But sportsmen are gradually finding their way into these valleys and considerable of the land is already under the control of sporting clubs, both English and American. The Laurentian Club is one of these. It is made up of some 250 members, including many New York and Boston sportsmen. It has control of a large tract of country, including a great many lakes and streams in the valley and the water shed of the St. Maurice. Its principal lakes, ponds and streams are in the vicinity of Lake Edward, and from 50 to 70 miles north of the St. Lawrence. It has already a large number of club houses erected, with trails completed from lake to lake, and around falls and rapids to serve for canoeing.

Mr. N. N. Thayer, of Barry, Thayer & Co., of Boston, has just returned from a visit of several weeks to this region. Mrs. Thayer was with him, a lady well known as an annual visitor to the Rangeleys. In fact Mr. and Mrs. Thayer have been to the Rangeleys a great many times, and have taken some remarkably large trout. They encamped on their recent Canadian trip the most of the time within ten or fifteen miles of Grand Piles, P. Q., in the St. Maurice country. But they also visited other lakes and streams more remote. They made one excursion of some twenty miles to a lake in the north, and the wonders they saw would delight a sportsman's heart. They saw live caribou and plenty of moose signs, convincing them that big game was really plenty. They saw several beaver dams, inhabited, and got sight of Mr. Beaver at home. The journey was made by canoe and carry, a long part of the distance by carry, around rapids and waterfalls. One waterfall Mr. Thayer says is a wonder of the world. A river some 200ft. wide dashes madly down a gorge and then over a precipice, falling, he estimates, 100ft. at least. He wonders that more people do not visit this fall, and believes that the neighborhood will yet be famous with tourists.

The trouting was all that heart could wish, though they took no very large brook trout. Mr. Thayer says that the trout remind him greatly of the trout taken at Kennebecago, in point of size, and the lakes and ponds north of that famous resort. But the trout are generally far brighter in color, and the flesh is a deeper red. He accounts for this from the fact that the streams and ponds are simply beds of rock, and almost entirely destitute of muddy bottom. Some good-sized togue, or lake trout, were taken in some of the lower lakes. But the upper lakes and streams, he believes, will be forever free from any other fish than the brook trout, for the reason that no other fish can surmount the waterfalls and rapids that lead out of these upper lakes.

The greatest drawback Mr. Thayer experienced on this trip was the presence everywhere of innumerable black flies. Rangeley, in its earliest days, was never half as badly afflicted as is this region north of the St. Lawrence. Fly-casting was rendered almost a misery rather than a pleasure from the fact that the black flies must constantly be fought from the nose and the eyes, though the rest of

the flesh was well protected, either by clothing or tar and oil. Mosquito netting was a failure. The flies have learned how to manage that. They get up above it, fold up their wings and legs, make a dive downward through the meshes and they are with their victim. Mr. Thayer says that this is no fancy sketch; he actually saw them going through the mosquito netting in that way. Tarlatan too thick to breathe through will stop them.

Another drawback to the country, to the ordinary Yankee, is the fact that the guides all speak French, and it is not easy for one to make them understand unless he has a fair command of the Canadian French patois. He could make them understand well enough to get enough to eat and go about, but if they came to a beaver dam or any other curious feature of the wild region they were in it was next to impossible to get any information about it, though the guides are good woodsmen. It is a curious feature that there are few or no deer in the region visited by Mr. and Mrs. Thayer. They saw no signs of deer, though caribou and moose must be plenty. It is explained that years ago the deer were destroyed by wolves, and that they have never been seen there since. SPECIAL.

### SALMON OF THE MERRIMAC.

LAWRENCE, Mass., June 28.—*Editor Forest and Stream:* It is with pleasure that the writer has the opportunity of reporting to you the result of the untiring zeal of one of Lawrence's citizens, who had the good fortune of hooking and landing a 12lbs. salmon in the Merrimac River last Sunday evening. The particulars are given in the *Eagle*, of Monday:

In the window of Henry P. Doe's jewelry store was exhibited yesterday a very fine specimen of Merrimac River salmon. It was caught Sunday night about 6 o'clock by Patrick McCarthy, whose reputation as an angler is not confined to these parts. Mr. McCarthy cast for nearly three hours before making a strike. This salmon was struck a few feet below Lewis's scouring mill, Mr. McCarthy making his casts from the shore. When hooked, the fish ran out about 30yds. of line and then shook like a terrier, rising out of the water fully 5ft. This operation was repeated five times, until the salmon, tiring of his exertions, permitted himself to be gently drawn by the skill of the angler to a point near shore, when McCarthy handed the rod to a friend and performed the last act of the piscatorial drama with the gaff himself after a fight of about twenty minutes.

The Lowell bridge and the south bank of the river were lined with spectators during the struggle.

The fish was as gamy a specimen as ever was hooked. Not only did it jump high out of the water and shake itself many times in its endeavor to escape from the cruel hook, but the fisherman found that the salmon was one of those peculiar fish which nose down stream, for with all his skill Mr. McCarthy found it impossible to turn its head up stream.

The fly used was a patren, the feathers being green and speckled. The dimensions of the fish are: Length, 2ft. 8in.; depth, 7in.; thickness, 3in. It is the second fish of its kind taken in local waters with a fly, Mr. McCarthy having the proud distinction of landing both—the first, a much smaller fish, a year ago this time.

The Merrimac River flows through the center of Lawrence, dividing the city into two districts, known as North and South Lawrence, and upon the northern bank of the river are some of the largest textile manufacturing concerns in the world, among them the world renowned Pacific Mills, which alone employ 8,000 operators, and upon the south bank of the river are two paper mills, worsted mill, commission dyehouse, machine shop, leather board mill and a wool-dyeing mill. I mention these simply to inform your readers of the large amount of refuse that must naturally be turned into this stream and with all have salmon in the finest condition in the very heart of these large industries.

I remember five years ago when the gentleman in question, Mr. Pat McCarthy, and myself and two others were on our way to Moosehead on a trout fishing excursion, we happened to stop off at Bangor, and hearing that a salmon had been hooked and landed by Mr. Fred Ayer, it was suggested by Mr. McCarthy that we go to the pool below the dam and try our luck at salmon fishing. The result was that McCarthy hooked three salmon that afternoon and lost them all, owing to old and imperfect leader. This was too much for Mac, so we continued our journey to Moosehead, and while there decided that we should at once prepare for next season's salmon fishing at Bangor. When the season came around it found us at the pool well equipped, and to show that we were so our party hooked and landed eleven beautiful salmon, not losing any.

I forgot to say that this same gentleman caught a 10lbs. salmon last June in the same pool as the one caught yesterday, which is situated exactly opposite the Pacific Mills on the south side of the river and behind the E. Frank Lewis scouring mill. FRANK W. LEE.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Good Fishing.

CHICAGO, Ill., June 30.—The fishing season began late, but it began in earnest. The fish are biting everywhere, all over Illinois, Indiana, Michigan and Wisconsin, except where local conditions are temporarily bad. Parties back from the trout lake region, Wisconsin, including W. H. Haskell and Frank Grey, among others, report all the muscalonge and bass any one could ask. Mr. Stewart, who was at a new water, Pike Lake, is wild with enthusiasm over the sport he had. The lower Wisconsin lakes are now offering better sport than was the case a week ago. The small-mouth bass are biting well in the Kalamazoo and Grand Rivers, Michigan south peninsula. Mr. Ben. O. Bush, of Kalamazoo, writes that a few days ago a party caught thirty-five small-mouths in a little while, but then had the misfortune to break their stringer and lose the entire catch. "This," says Mr. Bush sagely, "shows that you don't always have anything safe even if you have a string to it."

#### For Grayling.

Archie Babbitt, a guide of the grayling country, south peninsula, writes as follows to Mr. J. B. Battelle, of Toledo, O., who is kind enough to hand me the letter:

Yours of May 16 came to hand. I have been very busy and am five miles from a post office and do not go out often and have so neglected a reply. I would recommend the Au Sable as a stream for your friend for fish, scenery, etc. I cannot look after any parties. My brother Walter, of Grayling, would, I think, care for your friend's party. The wages of a guide are \$2.50 per day and board. For a party of two or three no camp man would be needed, provided parties did not fish too many hours in the day.

Mr. Battelle thinks the last two weeks of August about the best of the grayling season.

#### Casters Casting.

The city press thus reports the last meeting of the Fly-Casting Club: "Excellent casting was the rule at the

fourth weekly contest of the Chicago Fly-Casting Club yesterday at the large pond of Washington Park. In the first event, a trial of long-distance fly-casting, Wilkinson, Isgrigg and Johnson were tied for first place, but in the cast for the medal Isgrigg won by a foot, casting 71ft. The score was: Johnson 67ft., Morrell 60, Wilkinson 68, Davidson 59, Babcock 60, Isgrigg 71, Clark 55. The second event, for fly-casting for distance, accuracy and delicacy, was won by Johnson, who scored 86½ points out of a possible 100. The score was: Wilkinson 65½ points, Davidson 79, Babcock 68½, Isgrigg 66½, Clark 76. The last event was a trial of skill in bait-casting, Wilkinson winning the medal by scoring 219½ points. The score was: Davidson 204½ points, Clark 182½, Wilkinson 219½. E. HOUGH.

909 SECURITY BUILDING, Chicago.

### Tropical American Fresh-Water Fishes.

We have received from the U. S. National Museum a Catalogue of the Fresh-Water Fishes of Central America and Southern Mexico, which was prepared by Prof. Carl H. Eigenmann for volume 16 of its Proceedings. The region covered by this catalogue includes the fresh waters north of the Isthmus of Panama to the Tropic of Cancer.

Among the fishes enumerated are many that would be recognized by our readers from similarity to our common fresh-water forms. A lamprey is found in Guanajuato; a blue shark in Lake Nicaragua; a bony gar in Mexico and Guatemala; a square-tailed catfish and a fork-tailed species resemble kinds familiar to us in the United States.

A carp-sucker is mentioned from Central America and a red-horse from Guanajuato. Four representatives of the minnow family are known in Mexico, and the waters swarm with the toothed-minnows, which begin to occur in our States only in Texas. A mud-shad, or gizzard-shad is found in Lake Peten. Mummichogs related to some of ours are well distributed, and there are many others unlike any in our territory. The so-called four-eyed fish is among them.

The rivers and lakes are densely populated by a family of fishes closely related to the cunner and tautog of the east coast, which furnish amusement for the angler and an important part of the food supply. The list concludes with a generous show of gobies, some of which extend northward into the Gulf States. In these the bell fins are modified into a sucking disk which enables its possessor to cling tightly to rocks and even climb out of a bucket in its efforts to escape capture.

### Four Quarts of Fingerlings.

ON JUNE 25 I was at Port Hehry, where I had been trying the waters of Lake Champlain with indifferent success. Not so, however, with a party who arrived at the Lee House at about 10 o'clock that same evening after a day's "fishing" on one of the neighboring trout streams. This catch was brought to my room for my admiration, and consisted of 100 to 150 fish in a four-quart pail. They were all trout; the largest one visible was certainly not over 6in., while the greater portion appeared to range from 3 to 5in, many of them considerably smaller than the minnows I had used on the lake for bass and pike.

I have seen and read in your paper cases of the violation of the fishing laws, but never such a wanton, hoggyish slaughter as on the occasion referred to. There was no effort at concealment; on the contrary, the approbation of those they were shown to was eagerly solicited. I sympathize with a gentleman of that same place, who, at a sacrifice of time and money, had stocked several of the streams in that vicinity, as stated by him in your issue of June 15. Presumably these fingerlings were the result of his labor. I heard of a case of dynamiting the lake at Crown Point on the same day. I consider that fish anarchist a sportsman as compared to the murderers of the trout referred to. They are well known at Port Henry and apparently fear no penalty. W. I. I.

### Onondaga and Oneida Lakes.

SYRACUSE, N. Y., June 30.—*Editor Forest and Stream:* This extract from a letter written by Game Protector Hawn speaks for itself. Great work has been done here by Chief Pond and his assistants, Hawn and Crossley. Protector Hawn writes from Cicero:

We returned from our trip Monday, captured one trap net and two plates. Nets are very scarce on Oneida Lake. Seventeen of the Oneida Club were in camp on Oneida Lake, looking after nets. If they had come out two years ago it would have been a great help to me. A world of eel files on the waters yet, still they are making great catches of pike and pickerel. I have 130 cases to get ready for court, which I shall put my immediate attention to, as ordered by the chief. Skaneateles and Otisco people are behaving themselves well. I spent sixteen nights there this season; found everything straight. Those that opposed us at the first are now helping us openly. They see the benefit of protection.

The report of Special Protector Jackson, who has been employed by the Onondaga Anglers' Association to enforce the laws, shows that within the last three months he has pulled eight fyke nets, five gill nets, three flat nets and one trap and has made five arrests. It also shows that 150,000 muscalonge, pike and trout fry have been planted in near-by waters since May 1.

Fishing has not been so good in Onondaga and Oneida Lakes within fifteen years, for pike and pickerel. I took 60lbs. of those fish in three hours from Oneida Lake last week. HENRY LOFTIE.

### A Frog's Scream.

WARREN, R. I.—The panther scream season being over, will you kindly permit me to submit a scream from a somewhat lowlier member of the animal kingdom? Last Sunday I was fishing with a friend in a reservoir here, and seeing a mammoth frog near the bank my companion angled for, hooked him and pulled him up on the bank. I grabbed his hindlegs and was about to "do him," when he uttered a yell like that of a cat in pain. He started with a moderate yowl, and increased each succeeding one until he was doing an act that a panther might be proud of. A. B.

### Lake Merrill.

MR. LOUIS B. AKIN, of Portland, Ore., has established a lodge for sportsmen at the south end of Lake Merrill, Etna, Wash., where, he tells us, the comers will find the best of trout fishing, and after Aug. 15 good hunting grounds for elk, deer and bear. The lake is reached by steamer from Portland, via Woodland.

### Sale of Trout in Close Season.

BOSTON, Mass., July 1.—The Gilbert trout matter has made another important step toward a final settlement. At the Superior Court, in Plymouth, Mass., on Thursday, June 29, in the case of Commonwealth vs. Walter L. Gilbert, the court rendered a proforma verdict of guilty of selling trout out of season, and the case was appealed to the Supreme Court. Failing to secure the enactment of his bill to permit the sale of trout Mr. Gilbert resolved to take the existing law into his own hands, and test its constitutionality. It was only one or two days to the beginning of the legal open season on trout, but this had nothing to do with Mr. Gilbert's purpose. He openly caught and sold one of his own trout to a resident of Plymouth, then he caused a complaint to be made out, had Chief of Police Manter arrest him, and appeared before Judge Davis of the third district court charged with the crime of selling trout in the close season. He was convicted, in fact he expected to be convicted, and appealed to the Superior Court, giving bonds for his appearance. Now the Superior Court has found him guilty, and the case is to be carried up to the Supreme Court, on the question of the constitutionality of the trout close time law, as affecting the owners of artificially reared trout.

A decision rendered in Mr. Gilbert's favor would affect the integrity of the entire code of fish and game protective laws in the State of Massachusetts, and other States even; but there is little danger of such a decision. Still, the question has never come before the Supreme Court of this State in just the same form, though the constitutionality of the game and fish protective laws has several times, I believe, been passed upon by that body, and their entire integrity and reasonableness been established. The question will be presented by Mr. Gilbert, through his attorney, in the form that a man has a constitutional right to take and sell his own production (raising) whenever he pleases. But Mr. Chamberlayne, for the Fish and Game Protective Association, will answer, that a man has such a right only under certain reasonable restrictions, restrictions made for the greatest good of the community. A man has no right to kill and sell infected cattle, or calves under a certain age, no matter whether raised by himself or another. Neither has he a right to take and sell trout in the breeding (the protected) season, no matter whether from his own stream or pond or that of another, or whether he may have stocked that stream with fry or not.

SPECIAL.

### The Size of the Mouth.

NYACK-ON-HUDSON, June 14.—I send the following copy of a letter I recently received from the superintendent of a club to which I belong, in answer to a letter advising him that I had shipped some bass to the club, and also asking what success some members had had in fishing a lake for small-mouthed bass. I think it might prove interesting reading for some of your subscribers. The letter is from a Long Islander, and is as follows: "June 12.—Dear Friend: I will be on lookout for the bass, and it is a very nice thing you getting them. Now about our bass trip to that lake. The fishing in the lake is good, the fish run large and seem plenty and are very good fighters. The above are facts. Every one was having a large time, until a member said they were large-mouthed bass and no good, and that said fish were like logs and he had rather catch sticks; in fact he could not think of staying in a locality where there was a lake that had them in." Well, after such a description of course no member dare enjoy catching one for fear he would not be considered a sport; and so they all made arrangements to come home as soon as possible. There was one exception, Mr. M., he reasoned this way: 'I am here at a lake where there is good fishing, the best I have found; the fish are very game, and I cannot see why the size of their mouth should spoil my pleasure in catching them.' So he remained over and had the pleasure of catching twenty-five bass weighing from 1½ to 3½ lbs.; we got one there that weighed 6½ lbs. Mr. M. took three to Dr. P., who pronounced them small-mouthed bass and took them to a friend who also pronounced them the same. I consider the fishing there very good, let the mouth be large or small." W.

### Redwood Lakes.

REDWOOD, N. Y., June 30.—A short outing through Jefferson county led me first to Edwardsville on Black Lake. This is a beautiful sheet of water twenty miles long by two to four in width and of great depth. Bass and pickerel are abundant and of large average size, giving ample scope to the angler's skill, which is usually well rewarded. From here I went to Redwood on R., W. & O. R. R. This, with its chain of six lakes, called Redwood Lakes, is my ideal of choice fishing. The lakes comprise the Butterfield, four miles long, and four others about two miles each, whose waters, connected by small streams, pass through the Butterfield and thence on to Black Lake. One clear lake, fed entirely by springs (no outlet), contains only salmon trout, and there seems to be no limit to their numbers. In all the others bass, pike and pickerel are plentiful and run large, weighing from 5 to 20 lbs. All these lakes are within two miles of Redwood station, where first-class hotel accommodations are found. One of the hotel men here makes this statement, "No fish no pay," open to all comers for the season. John Dollinger, the veteran guide, has an excellent boat livery, and in his quiet, whole-souled way, takes you to the exact spot where the fish lie, and his smile seems to have an attraction that draws them. Don't miss a visit to Redwood if coming this way.

### Pere Marquette Waters.

EAST SAGINAW, Mich., June 28.—Fishing at the Pere Marquette Club waters has been good for the last two weeks. Large trout from the Pere Marquette River have been running into the deep holes in our stream and several large fish have been taken; one rainbow trout, weighing something over 3 lbs., and several small ones, as well. The other evening I took 17 trout, weighing 13½ lbs. That is a pretty good average from a stream you can almost jump across. They were all taken on a small imitable May-fly, just at dusk. M.

A peculiar fish called the globefish has the power to inflate its body with air so as to make it assume the shape of a ball. FISHERY.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

POTTERSVILLE, N. Y., June 28.—Judge John J. Friedman, now stopping at his cottage at the foot of Schroon Lake, caught three lake trout, the largest weighing 21½ lbs., the smallest 16½ lbs. He was very much elated over the catch. Prospects very good for more of the large beauties. J. B. WILLS.

SALEM, Mass., June 30.—Capt. George P. Berry, one of our best known sportsmen, is spending a few weeks at East Wakefield, N. H., where he is taking large numbers of small-mouth black bass. Mr. Berry is owner of the famous bloodhound Berry's Bradshaw, now entered for the bench show at the World's Fair. Mr. Samuel S. Pendar, who has been a guest of Mr. Berry's for the past week, returned to-day with a fine string of bass. Mr. Berry has the reputation of being the expert fly-caster of this city and a king-pin with the landing net. H.

WAWBEEK, N. Y., June 28.—Caught in front of Hotel Wawbeek, one trout weighing 21½ lbs. Trout fishing in deep water for large fish promises to be good from this out. H. H. C.

LAKE RONKONKOMA, N. Y., June 27.—Fishing is very good. Numbers of oswego and black bass are taken out every day. The largest fish this year was caught by Mr. R. C. Wilson, of Brooklyn, the fish weighing 7½ lbs. 2oz. Mr. G. F. De Vere, the well known theatrical manager, comes next, catching a large-mouth black bass 6½ lbs. Among the many who take large strings away are Col. A. Wagstaff, Judge A. H. Camen and C. H. Mack. B.

## Fishculture.

### Statistical Review of Fishculture in Europe and North America.

BY N. BORODINE, DELEGATE OF THE RUSSIAN ASSOCIATION OF PISCICULTURE AND FISHERIES.

Read at meeting of American Fisheries Society, June 16, 1893.

INTERNATIONAL exhibitions give a good opportunity to reckon up the work done in different branches of human activity, and I thought it opportune to do the same thing with regard to the most recent industry—fishculture.

During the last two years I have made a special study of fishculture outside of my country, and visited many hatcheries of importance in Europe and North America. I was thus enabled to collect some material, which is summarized in the following short review. The figures of North America were taken from the reports of the U. S. Fish Commission, State Fish Commissions, annual reports of the Ministry of Marine and Fisheries of the Dominion of Canada, and from the report of the Superintendent of Fisheries of New Foundland. Those reports, regularly issued, are uniform, but they do not include any information about private fish hatcheries. For Europe the figures have been taken from scattered information in special literature, from official information furnished by the respective governments, and private information from the proprietors of fish hatcheries which I visited personally.

I do not consider the following figures as absolutely exact; on the contrary I am sure that one of them, for want of regular reports, are less than reality. Nevertheless I believe that a review of figures already known upon this matter may have some interest. Concluding these introductory remarks I ought to say that I do not deal in this paper with pond culture, the only object of comparison being the hatching of fish in the establishments specially constructed for that purpose.

The following table gives an idea of the number of fish hatched (in one season) in different countries of North America and Europe, indicating the date of information, the number of fish hatcheries and the expenses of the government for fishculture.

	Date of information.	Number of fish hatcheries.	Number of fish hatched, millions.	Annual appropriation for fishculture.
NORTH AMERICA.				
United States:				
State fish hatcheries.....	1882-92	46	416.	\$174,040 00

Grand total.....	1891	496	1,894.	\$406,669 00

The most of the figures relate to 1891, so that we are able to consider the grand total for this year. On the other hand, all the principal countries being included in the table, we may estimate this total as representing the figures of fishculture in the entire world. Four hundred and ninety-six fish hatcheries are registered in the record, 416 of them in Europe and 80 in this country.

The fish hatcheries of North America, included in the table, belong without exception, to the respective governments.

Most of the European fish hatcheries are private establishments, and only 82 out of 416 are controlled by their respective governments, viz., 14 in Switzerland, 1 in Germany, 5 in France, 2 in Italy, 53 in Norway, 1 in Great Britain and 1 in Russia.

The totals of fish hatched in North America (1,616,272) as compared with Europe (277,973,016) show that only about 14% are produced in Europe; among European countries, only Norway thanks to the active part taken by its government, can be considered as a serious competitor of the countries of the new world. The average production of one fish hatchery is 668 thousands in Europe and 13.4 millions in North America. Such a striking difference of the new world depends principally upon the difference in the character of the hatcheries on both continents. As before mentioned, the European fish hatcheries being private establishments, do not pursue the task of restocking public streams, but only the streams

belonging to the proprietors, and very often they produce fry for sale to other proprietors of fish ponds, etc. Another circumstance to be mentioned in connection with the small size of European establishments is that no hatcheries—or very few—exist here for hatching of *Clupeidae*, *Percidae* and salt water fish; the hatching of these kinds of fish, to be successful, ought to be carried on on a large scale. The last and the most important question is the financial one. While the Government of the United States, of different States, of the Dominion of Canada grant very considerable amounts of money for fishculture and take direct interest in this work, in Europe, with the exception of Norway, Germany and Switzerland, the respective governments do not pay much attention to it.

The Government of the United States has a very important bureau, known as the U. S. Fish Commission, with annual appropriations of \$28,000, viz.: \$150,000 for propagation of fish, \$50,000 for distribution, \$53,000 for maintaining vessels, \$5,000 compensation of Commissioner, and \$20,000 for scientific investigations and statistical work. Besides this regular budget the U. S. Fish Commission receives for extraordinary expenses, as for instance, the construction of new hatcheries, new vessels, fish cars, etc., a considerable amount of money.

The governments of separate States compete in usefulness of this work with the Federal Government, making large appropriations for building hatcheries and distributing fish. I must particularly mention the State of New York, with a yearly appropriation of \$34,000, the State of Michigan, with an appropriation of \$22,500, and the State of Pennsylvania, with a grant of \$15,000. The total amount of money granted for fishculture work by all the States is equal to \$109,040 (1891). The present appropriations are likely to be increased, because in very many reports I have examined the Fish Commissioners were asking for a larger amount of money.

The Government of the Dominion of Canada has been for a long time actively engaged in the propagation of fish. The expenditure for this work was in 1891 \$374,202, which includes \$39,496 for fish breeding and \$83,050 for fish propagation.

The New Foundland Government works also quite successfully with an appropriation of \$17,300, that is, \$6,100 for fishculture and the remainder for fish protection and fishery administration.

In Europe, Germany expends the largest amount of money for fishculture work, say \$21,815, which includes \$12,500 of subsidy to the Deutsche Fischerei Verein, the leading association of its kind in Europe, and \$9,315 for the governmental fish hatchery in Hünigsen. Many private hatcheries exist in that country, thanks to the orders for hatched fry given by the above association, which has no hatchery of its own. The Hünigsen fish hatchery—perhaps the largest on the continent—has no value from the standpoint of the modern fishculture, and with regard to the accommodation for the work, many private establishments in Germany leave far behind this big, but inconvenient, old-fashioned hatchery, which, I think, has completed its historical rôle in fishculture. Norway is now one of the leading countries in regard to the work for all kinds of improvements in fisheries. Its Government grants for this purpose an amount of \$37,788 yearly, which includes \$41,665 for fishculture in particular. One of the largest salt-water fish hatcheries in the world, at Flodevigen, near Arendal (200,000 cod fry hatched in 1891), is controlled by a local fishery association, and gets a subsidy of 9,000 kroner from the Government. Next comes Switzerland, which operates, as compared with its area, on a very large scale. The federal government of that country has an appropriation of \$2,207 for the fry planted by private men in the public waters. Besides that, almost every canton has one, two and sometimes several cantonal fish hatcheries.

France—the cradle of pisciculture, the country which has contributed toward the development of this new industry more work than any other country—now ranks far behind many European countries. The French Government does not pay much attention to fishculture in general, having an appropriation of 19,860 francs (\$3,973) to maintain five not very large governmental fish hatcheries and subsidize a private one (for shad hatching at St. Pierre les Elbeuf, on the Seine River). Only quite recently, thanks to the statements made by the Société Centrale d'Aquiculture de la France, the attention of the French Government has been called to fishculture work, and I am informed that negotiations are being made to establish a special fishculture school at the Gremaz fish hatchery, which belongs to M. Lugrin (inventor of the method of propagating artificially live food for fish fry).

Italy has only recently begun fishculture work under the control of the Government, which has appropriated 32,000 liras (\$6,500) for the construction of a large fish hatchery at Brescia, now in operation, and has opened another small one at Rome.

The Netherlands Government appropriates only 5,000 gulden (\$2,084) for the salmon fry planted in the Rhine River. No appropriation is made by the Austria-Hungary Government, the fishculture work being carried on by private initiative of landlords and associations.

The same remarks must be made in regard to Great Britain with the single exception of Scotland, the fishery board of which erected last summer a salt-water fish hatchery at Dunbar; no special appropriation was made for this purpose, the expenses having been covered by money assigned for scientific investigation (£1,800 yearly).

The Swedish Government contributes to some extent to the improvement of the fishery industries in its country, having a yearly appropriation of 47,000kr. (\$13,155), but that does not include any expense of fishculture work in particular.

And finally Russia has an appropriation of \$2,800, which is in comparison with its area, quite insignificant. That includes 3,000 roubles for maintaining one governmental fish hatchery at Nicholsk, Government of Novgorod, which was founded by the well-known Russian fishculture Mr. Vladimir Wrasky, the inventor of the so-called Russian or dry method of impregnation, and 5,000 Finnish marks of subsidy to the Fishery Society of Finland.

When we compare the total amount of money spent for fishculture work by all European countries (\$37,092.50) with the appropriations of North American countries (\$369,636.50), we shall not be surprised by the enormous difference in the work done in this line in the Old and New World. Of course that is only an explanation of the fact, but not an eulogy.

Europe has originated and developed the methods of fishculture, but it becomes from the standpoint of the government, a very important one, from the standpoint of the government, and in connection with it, here are invented and introduced in general practice, methods suitable for large operations, quite different from those used in Europe.

There is no better testimony of the importance of fishculture work than the large appropriations made by the body of representatives of the country, and only in North America is this work duly appreciated by the Government as well as by most of the population.

\* General expenses of same States for fish protection and carp culture are not included in this total.

† I can mention here the well-stocked and nicely-fitted fish hatcheries in Selzenhof, near Freiburg (5,000,000 trout eggs capacity), and in Seelessee, near Garmisch, Bavaria (3,000,000 capacity).

‡ The total of 205,040kr. is thus distributed: For scientific investigation in fisheries, 5,200kr.; subsidy to the fishery associations, 45,000kr. (that includes 8,000kr. for the hatchery at Flodevigen); maintenance of fishery schools in Bergen and Bodo, 11,500kr.; fishculture work, 7,250kr.; and the remainder for fish protection and fish administration.

The Kennel.

FIXTURES.  
DOG SHOWS.

Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.  
Sept. 19 to 22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.  
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. E. D. Adams, Sec'y, Winnipeg.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.

Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

The Type of Great Danes.

BY A. H. HEPPNER.

(Continued from page 570).

THE German breeders at one time attempted to make a division in weight and tolerate a heavy dog only in competition in a heavy class just as in pointers, and the same with a light dog, requiring of the latter, first, beauty and then size; and of the former, size and substance first and then gracefulness. But it happened that in the same litter there would be specimens for both classes, and as the limit was hard to draw it was found impracticable. The answer to the following question is in my opinion also the answer to our problem: What is easier to do, to breed from a coarse half-breed, 200lbs. block of a great Dane, a pretty typical dog of graceful carriage, with plenty of substance, in other words, breed type from substance; or to increase substance in typical dogs? The answer to this is the direction in which we must breed. I think we can always use a coarse specimen on the bitch's side to get typical specimens heavier, more readily than to take coarse specimens and touch them up with type. If we keep on breeding coarse dogs to coarse bitches we will land at the point where Germany started in 1870.

Nobody can deny that Germany has furnished all other countries with prize-winners and consequently her method of producing prize-winners I assume to be correct. Why should we embark in experimental proceedings when the experiments have been made by some other country and resulted in a success? Would it not be the proper policy to take the present standard of great Dane breeding in Germany and proceed in our own methodical way in the same direction and parallel with Germany; we would certainly have the greater advantage inasmuch as Americans are more talented breeders, have more shows, the advantage of a superior educational sporting press, and, besides this, are able and willing to put more money and labor in the work than Germany. Therefore let us unite, you fanciers of calves (!) and you, fanciers of greyhounds; let us breeders amalgamate our ideas and let us produce something like Hannibal. Do not endeavor to advertise your own dogs as the only good ones in order to gain a few dollars, but let us all try and help the cause of great Danes by producing a dog that combines the heavy but noble features of the mastiff with the make-up for speed of the greyhound, to result in a dog not as heavily built as a mastiff and yet not as light as a greyhound; not as clumsy as the former and not as swift as the latter, but able to run with a horse for many miles and to carry a shape which a trained as well as an untrained eye would acknowledge to be beautiful.

Let it be understood that if England had bred the St. Bernards unaided by other countries she would never have succeeded in obtaining a great, grand dog of tremendous height and substance, and yet with an abundance of type. As it happened, while England commenced breeding St. Bernards in 1860, with a lot of short or long-coated half-breeds, then called St. Bernards because some such dogs were kept on the Alps; Switzerland started fully 10 years later, when she began to understand the grand success the breed was making in England, to breed on her own hook. While England aimed to produce great, powerful dogs with a massive head, she frequently came back to Switzerland in order to get type for her big dogs, as the latter country was breeding in an entirely different direction, i. e., for type first and all the time, and size secondarily. I claim, with all due respect to the intelligence of English breeders, that their St. Bernards of to-day would not be the grand, typical dogs they are had not Switzerland time and again sold them grand, typical, celebrated sires with the most noble expression, though weedy in body. Germany had to rely on her own resources for breeding typical great Danes, and has always endeavored to breed first for type and let size come when type was fixed. She has always been careful not to breed type at the expense of constitution, but has managed to breed a Hannibal, the universally acknowledged climax of type, size and nobility. She has pursued a course of keeping show dogs distinctly apart from dogs for breeding. A coarse, roomy, heavily boned bitch, though lacking perhaps in fine coat, thin tail and with a big throat, is often selected as a brood bitch and used with great success to a grand, typical, truly cut dog, while a show bitch may never be used for breeding. "Where will we land in breeding for substance only?"

We will get a dog like a calf, upon which people with a taste for good form will turn their backs and exclaim that they would rather have a mastiff or St. Bernard, because they want a noble dog. Where, on the other hand, would we be if we were to take a finely-cut, houndy bitch with a snipy muzzle and greyhound makeup, with the same 120lbs. dog as aforesaid. We could get something like a pointer or a large hound, something fit to be carried as a watch charm, but not a dog intended to represent a noble, commanding, grandly formed great Dane.

Again, I say, type means beauty combined with size, and a great Dane like Wenzel as seen last by me is not such a dog. The most successful great Dane judge will pick specimens of that combination. In order to make myself more clearly understood I would like to draw as a parallel the situation in setters. Some judges will look for show form in conformity with their own conceptions of beauty as to coat and make up. Others, perhaps enthusiastic field trial men, will choose in a bench dog as their idea such forms as indicate speed and ability for practical work. Just so in great Danes. The one wants a big dog adapted for watch purposes, a dog that will paralyze a man by the expression of his face and is able to knock the bark off a tree by the wag of his tail, while the other would only appreciate a dog sufficiently pretty and diminutive to be suitable for a parlor ornament.

The successful judge in setters is the one who picks out dogs with field trial makeup, yet at the same time satisfactory in regard to beauty. The successful great Dane judge, on the other hand, will pick a dog of type and high breeding and will remember that the word "type" implies a certain height and substance. I for one do not consider a great

Dane of less than 140lbs. a first-class specimen, no matter how typically otherwise he may be. But if I have to choose between a 200lbs. so-called great Dane and a 120lbs. real great Dane as to build, then I would certainly be in favor of the lighter dog, on account of its being easier to obtain, by judiciously adding coarse stock, the desired size with type, while it is almost impossible to get from a big, common cur dog alone such a thing as type and breeding-on ability.

I should now like to submit to you the German and the so-called American standard. We all agree, as you said, on body and legs, and our differences are only type, which is mostly indicated by head qualities. Strictly speaking, we have no American standard to-day. The only one existing was originated in Chicago by gentlemen who had never seen any but their own dogs, and selected one of them, measured him and put these measurements down as the most important feature of the standard. These measurements show, compared with others, that these gentlemen did not know what a great Dane should be.

I have compared these measurements with those of a number of crack dogs and give you herewith a table representing the same:

COMPARATIVE MEASUREMENTS.	Dog.	Between Eyes.									
		Height.	Length.	Muzzle.	Forearm.	Second Thigh.	Thigh.	Loin.	Chest.	Muzzle.	Neck.
		32	34 1/2	4 3/4	10 1/2	13	17	32	38	12	26
		34 1/2	36 1/2	5 1/4	11 1/2	14 1/2	18 1/2	34 1/2	40	13 1/2	28 1/2
		36	38	6	12 1/2	16	20	36	42	14 1/2	30 1/2
		38	40	7 1/4	14 1/2	18 1/2	22 1/2	38 1/2	44	15 1/2	32 1/2
		40	42	8 1/4	16 1/2	20 1/2	24 1/2	40 1/2	46	16 1/2	34 1/2
		42	44	9 1/4	18 1/2	22 1/2	26 1/2	42 1/2	48	17 1/2	36 1/2
		44	46	10 1/4	20 1/2	24 1/2	28 1/2	44 1/2	50	18 1/2	38 1/2
		46	48	11 1/4	22 1/2	26 1/2	30 1/2	46 1/2	52	19 1/2	40 1/2
		48	50	12 1/4	24 1/2	28 1/2	32 1/2	48 1/2	54	20 1/2	42 1/2
		50	52	13 1/4	26 1/2	30 1/2	34 1/2	50 1/2	56	21 1/2	44 1/2
		52	54	14 1/4	28 1/2	32 1/2	36 1/2	52 1/2	58	22 1/2	46 1/2
		54	56	15 1/4	30 1/2	34 1/2	38 1/2	54 1/2	60	23 1/2	48 1/2
		56	58	16 1/4	32 1/2	36 1/2	40 1/2	56 1/2	62	24 1/2	50 1/2

You will see, by comparing these measurements one with the other, that the Chicago club dog would be snipy in muzzle; would be too long-coupled in body; too big in skull, with an impossibly long neck; not tucked up enough in line and too light in thigh. We all know that measurements do not amount to anything, and that a trained eye does not need their aid. The measurements of two dogs may widely differ and yet both dogs may be built symmetrically. I mention those measurements of the German Mastiff Club of Chicago, however, in order to show that the standard adopted by that club, based on these measurements, cannot be a good one, because at the time, in 1889, there was no good dog nor medium dog in Chicago nor in America from which the members of that club could have obtained an idea which enabled them to draw up a guide for others. Next week the different types of heads will be shown by illustrations.

[TO BE CONTINUED.]

American Field Trials Club's Derby Entries.

The entries for this Derby number 54, and include 32 English setters, 6 Irish setters and 16 pointers.

ENGLISH SETTERS.

MACLEOD—J. A. McLeod's (Elta Lad—Nannie B.).  
DON M.—J. A. McLeod's (Elta Lad—Nannie B.).  
JEAN M.—J. A. McLeod's (Elta Lad—Nannie B.).  
BESS OF AYONDALE—T. W. McClelland's (Gath's Hope—Gladstone's Girl).  
RODRIGO—J. T. Mayfield's (Antonio—Nellie Hope).  
NELLIE HOPE'S LADY—J. T. Mayfield's (Antonio—Nellie Hope).  
COLUMBIA—C. J. Hartmetz's (Gath's Mark—Queen Blade).  
LADY GATLEY—C. P. Mingst's (Gath's Mark—Queen Blade).  
LILLIAN B.—George E. Gray's (Gath's Hope—Gladstone's Girl).

OPAL—G. E. Gray's (Count Gladstone—Diamond).  
SAN ANTONIO—John A. Gude's, agent, (Antonio—Nellie Hope).  
REVENUE—J. M. Freeman's (Antonio—Nellie Hope).  
HOOSIER BOY—J. H. & J. A. Hunter's (Antonio—Daisy Hunter).

DAISY HUNTER II.—J. H. & J. A. Hunter's (Antonio—Daisy Hunter).  
DAKOTA BELLE—Geo. E. Gray's, agt. (Gath's Hope—Trap, Jr.).  
KENWOOD—Chas. Proctor's (Cinch—Steven's Ruby).  
HOPE'S PRIDE—W. A. Hinesley's (Gath's Hope—Lulu Hill).

LOTTIE H.—W. A. Hinesley's (Gath's Hope—Lulu Hill).  
MOLLIE—J. A. Peabody's (Rodrigo—Lillie Boxer).  
HOPE'S QUEEN—J. E. Isgrigg's (Gath's Hope—Queen Noble).  
MARK—Fred Snider's (Race Noble—Fann S.).  
DUKE OF VERAGUA—L. W. Smith's (Rodrigo—Fannette).

NANNIE—O. E. Lewis's (Elta Lad—Nannie B.).  
FAUST—Scottswood Kennels' (Pembroke's Grouse—Kate).  
PRINCE—A. C. Waddell's (Royal Prince II.—Jane H.).  
LADY K.—St. Louis Kennels' (Rock—Madge).  
FANNIE RICE—Jackson-Denmark Kennels' (Gladstone's Boy—Manitoba Peggy).

EARL PALMER—Jackson-Denmark Kennels' (Frank Whitley—Dulcinea).  
CANADIAN BELLE—T. G. Davey's (Lark—Leda).  
MONK OF FURNES LILL—T. G. Davey's (Monk of Furness—Sue of Hatchie).  
MAY WIN—S. E. Corbett's (Prince Lucifer—Lady Gladys).  
HOPE'S GLIDE—G. T. Kerr's (Gath's Hope—Lady Lit).

IRISH SETTERS.

PATSY ELCHO—Perry & Hamilton's (Claremont Patsy—Nina).  
PATSY'S RANGER—Perry & Hamilton's (Claremont Patsy—Nina).  
NINA'S ROSE—Perry & Hamilton's (Claremont Patsy—Nina).  
DICK FINGLAS—Gus Leisy's (Finglas—Ruby Glenmore).

DAKIN—Frank E. White's (Finglas—Ruby Glenmore).  
MAID OF ERIN—Frank E. White's (champion Duke Elcho—Aurora).

POINTERS.

LULU K.—G. R. Howse's, agt. (Ossian—Pearl's Pride).  
STRIDAWAY—Geo. E. Gray's (King of Kent—Pearl's Dot).  
FRED OF IDESTONE—Idestone Kennels' (Shotmaster—Pearl of Idestone).

THE FRIAR OF IDESTONE—Idestone Kennels' (Shotmaster—Pearl of Idestone).

LITTLE NED—W. N. Kerr's (Ridgeview Dazzle—Kate Claxton).

ALICE LESLIE—E. M. Beale's (King of Kent—Belle Randolph).

RHET—W. J. Wilson's (Dan—Martha).  
PRIDE OF AYONDALE—T. W. McClelland's (Rush of Lad—Graphic's Pride).

FAYETTE ALEXANDER—Joe H. Alexander's (King of Kent—Bonnie Bijou).

BEPPLO'S GENUS—Dr. J. R. Daniels's (Beppo III.—Lord Graphic's Gem).

KENT'S PET—J. F. Shepley's (King of Kent—Keswick II.).  
PLUTE—Castleman Kennels' (Fritz—Tilley).

NELLIE S.—Castleman Kennels' (Fritz—Tilley).

LEHMAN—Jackson-Denmark Kennels' (Gordon—Fanny B.).

LONDON—T. G. Davey's (Lord Graphic—Lassie Faust).  
QUEEN OF OSSIAN—A. B. Reeves's (Ossian—Hops II.).

Northwestern Field Trials Club's Derby Entries.

Editor Forest and Stream:

Below you will find entries for the Derby of the Northwestern Field Trial Club, with exception of two, all whelped in 1892. The All-Age Stake closes July 15, and for the championship tankard, presented by G. F. and I. Galt, on Aug. 15. For the latter, entrance is free, and \$5 to start, open to any dog having won a Derby or All-Age Stake. The winner takes the tankard. THOS. JOHNSON, Hon. Sec.-Treas.

ENGLISH SETTERS.

HOODOO—W. F. Ellis's black, white and tan dog (Duke of Manitoba—Corra), May 24.  
MOLLIE—J. W. Peabody's black, white and tan bitch (Rodrigo—Lilly Boxer).

LUNA—W. B. Wells's black, white and tan bitch (Cincinnati—Daphne), May 10.

MARS—W. B. Wells's black, white and tan dog (Cincinnati—Daphne), May 10.

CYNTHIA—W. B. Wells's blue belton bitch (Toledo Blade—Cambrina), May 1.

MONK OF FURNES STING—Eddy and Armstrong's orange and white dog (Monk of Furness—Sue of Hatchie), June 13.

WHALER—W. T. Hunter's black dog (Manitoba Toss—Pitti Sing), June 12.

PHOEBA—J. C. Phillips's black bitch (Manitoba Toss—Manitoba Bess), June 18.

NIGGER—J. C. Phillips's black dog (Manitoba Toss—Manitoba Bess), June 18.

MINNIE—John Wootton's black bitch (Manitoba Toss—Manitoba Patti), March 9.

BLACK PRINCE—Thos. Johnson's black dog (Manitoba Toss—Manitoba Patti), March 9.

MANITOBA SANCHE—Thos. Johnson's black dog (Manitoba Toss—Manitoba Bess), June 18.

MANITOBA PONTO—Thos. Johnson's black dog (Manitoba Toss—Pitti Sing), June 12.

CHLOE—Thos. A. Montgomery's black bitch (Manitoba Toss—Pitti Sing), June 12.

FROST IV.—Thos. A. Montgomery's black, white and tan bitch (Bruce M.—Frost III.), April 27.

SNAP—John McDonald's black, white and tan dog (Rego—Nell), September.

LETHBRIDGE LASS—Dr. L. G. De Vebre's black, white and tan bitch (Frank Simpson—Trixie), Feb. 21.

LOVSA—Chas. W. Armstrong's white and black bitch (Roy McD.—Flirt A.), April 30.

BOWDEN—Avent & Thayer Kennels' black, white and tan dog (Rodrigo—Novelist), March 23, '93.

CIGARETTE—Avent & Thayer Kennels' black, white and tan dog (Rodrigo—Norah), May 17.

HESTER PRYNNE—Avent & Thayer Kennels' black, white and tan bitch (Rodrigo—Norah II.), May 17.

TOPSY ROD—Avent & Thayer Kennels' black, white and tan dog (Rodrigo—Topsy Avent), July 4.

PHALIST—Avent & Thayer Kennels' black, white and tan bitch (Jean Val Jean—Lucy Avent), March 4.

TATE—Avent & Thayer Kennels' black and white dog (Jean Val Jean—Mamie Avent), Aug. 12.

BOWLES—Avent & Thayer Kennels' black and white dog (Chance—Hattie), April 28.

SOLITAIRE—F. R. Hitchcock's black and white dog (Roy d'Or—Toy Diamond), Jan. 5.

MONK OF FURNES LILL—T. G. Davey's blue belton bitch (Monk of Furness—Sue of Hatchie), June 13.

BRIGHTON BELLE—T. G. Davey's lemon and white bitch (Rock—Leda), March, '93.

KENWOOD—Chas. Proctor's black, white and tan dog (Cinch—Steven's Ruby), March 3.

VICTORIA—Frank Althouse's black, white and tan bitch (Rego—Nell), September.

DUKE OF VERAGUA—L. W. Smith's black, white and tan dog (Rodrigo—Fanette), June.

POINTERS.

IGHTFIELD DOGWOOD—A. P. Heywood Lonsdale's liver and white dog (Ightfield Dick—Cowslips), March.

SRLAU—Charlottesville Field Trial Kennels' liver and white bitch (Rip Rap—Dolly Dexter), March.

LITTLE NED—W. N. Kerr's liver and white dog (Ridgeview Dazzle—Kate Claxton), April.

LONDON—T. G. Davey's liver and white dog (Lord Graphic—Lassie Faust), March.

FRANKIE—A. Gales's lemon and white bitch (Lord Graphic—Bab Bab), March.

RECTOR—Thomas Johnson's black and white ticked dog (Ightfield Upton—Patsy Bang), April.

PAUL FRANCES—Thomas Johnson's black and white ticked dog (Ightfield Upton—Genevieve), February.

DON—Bennett & Lane's liver and white dog (Sam—Mona), February.

RESURRECTION—Thomas A. Montgomery's liver and white dog (Lord Graphic—Ightfield Buntly), July.

DOLLY SHAW—R. & T. Shaw's black and white ticked bitch (Ightfield Upton—Genevieve), February.

BANK—W. T. Hunter's lemon and white dog (Bankrupt—Pet), August.

A Stray Shinplaster  
Comes to us once in a while for a copy of "Game Laws in Brief," but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

## A Fair Offer.

Editor Forest and Stream:

I noticed Mr. Muss-Arnolt's article entitled "A Fair Offer" in the issue of FOREST AND STREAM, June 1. More important matters have engaged my attention up to the present time, chief of which was a visit to the Windy City and some eight or nine visits to the World's Fair, of which two days, in company with a doggy friend, were spent looking for that unfinished building in which Mr. Buchanan was to have his great dog show; but after two days' hard walking we gave it up, not being able to locate any unfinished building in the Department of Agriculture. But I trust Mr. Buchanan will be equal to the emergency, and by September find a place suitable for the great Dane and pointer judges to guess at their respective classes. Of course, should it so happen that there will be only nineteen entries at the time of closing, the building will have to be still unfinished, and those judges will be out of a job till some time in the uncertain future. Now that I have told Mr. Muss-Arnolt and other readers of FOREST AND STREAM what I have been doing with myself this last month, I hope Mr. Arnolt at least will excuse this long delay in answering his "Fair (?) Offer."

In regard to Mr. Arnolt's offer to send Melac and Wenzel on a tour to prove certain ideas of his own or disprove them, I beg to say that I am not particularly interested in proving or disproving Mr. Arnolt's personal theories. I am only interested in them in so far as they have had a direct public bearing in his capacity as a public judge. Even if all the judges were opposed to him he could still maintain that he was right, since he says of our recognized judges who have reversed his decisions: "Does Mr. Goodman honestly believe that the celebrities in dogdom he names have any more right to their views than I, because they are excellent and approved judges of a number of breeds? I beg to differ with him; to them it is their fifth wheel and they take great Danes along to judge like any other breed," etc. According to this, every breed is taken as a fifth wheel so that all our judges are therefore fifth-wheel judges. It is discouraging to argue with a gentleman who admits no exact knowledge in others.

Mr. Muss-Arnolt does me too much honor when he asserts that my "fame will be always coupled with having ruined any decent entry for the World's Fair show," etc. I fail to see what that has to do with judgeship. Mr. Arnolt is unfair in that statement. There were mismanagement, a fake list of judges, damaging delays, unjust exactions, oh, yes! and an unfinished building, etc., which did the damage. I was but one of the many who objected to such things. Had there not been a principle of right and justice on the side of those who opposed mismanagement, they would have been defeated and confounded.

One thing more and I am done. Mr. Arnolt says: "Was it Mr. Goodman's sporting sense which led him carry Mr. Hagan's Imperator in his crate from New York to Washington, never putting him on the bench, although he was always entered?"

I am pleased to see that Mr. Arnolt is so circumstantially exact. It gives one full confidence in all his other statements. There is but one circumstance, a trifling one, that is incorrect in it, and that is, I never had Imperator in charge from New York to Washington, nor did I ever have him in charge or in any crate at any other time. *Voila tout.*

HARRY L. GOODMAN.

NASHVILLE, TENN., June 30.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

I NOTE, on reading a clipping from a California paper, that Mr. W. P. Brown, recently of Chicago, but now of Santa Ana, Cal., has already made a reputation as a sportsman in his section. Following is the mention: "Mr. W. P. Brown, the gentleman who has recently purchased an interest in the Brunswick Hotel in Santa Ana; Mr. J. D. Thomas, a recent arrival from New York State, and J. 'Almost' Jones, returned yesterday from a four-days' fishing and hunting trip in the wilds of Bell Cañon, in the Santa Ana Mountains. The gentlemen's sun-blistered faces are evidence that they were exposed to the gentle rays of a California summer sun. A wagonload of fish, cotton-tails and other game amply repaid them for their exertion."

## Competitors and Judges.

CHICAGO, Ill.—I am heartily glad that there are some associations which have sufficient courage to manage their own affairs. The impertinence of some owners, in the matter of influencing the selection of judges, has been growing so much from year to year that it has come to be an abuse. Because a man owns more entries than some other man, it does not give him any right to dictate to the association, under whose auspices he competes, what it shall or shall not do.

It is an injustice to other competitors, if one or more competitors are listened to or considered in the matter of judges. It is an insult to an association for a competitor to attempt to influence it in appointing its judges. Palpably there is some advantage sought in attempting to get certain judges appointed, or there is an overwhelming egotism which craves notice regardless of propriety. The following extract from a letter received recently from Mr. Thomas Johnson, of Winnepeg, is a good one for the consideration of every field trial club in America. He says:

"Mr. — sent eight entries to Mr. Hunter for our Derby and reiterated his demand for certain judges. \* \* \* Mr. Hunter desired me to write him (Mr. —) and compromise matters, but I called a meeting of the committee of the club and wrote him as follows:

"Any of the names you mention would be quite acceptable to this club, but the stand we take is this: We cannot and will not permit any individual handler to dictate to us whom we must appoint as judges. The desire of this club is to get fair and impartial judges, and they will try to do so; but they feel that if you have no confidence in our club wanting to do right, that we have as little desire for your entries as you have to make them, and that it is only your prominence in the field trial world that has elicited a reply to what to us seems a gratuitous insult.

"Please say by return mail if the entries stand or if I shall return your check."

That letter is a good one to study. It has some sense. Nothing is more wanting in associations in general than courage enough to run their own business. Nothing is doing more to kill field trials to-day than the competitor who is, or tries to be, a manager of a trial in which he competes. This growing evil must be choked or there will be great injury to field trials. What inducement is there for a man who owns one dog, and has no voice in the appointment of judges, to enter in a competition against a competitor who owns four or eight dogs and has had such judges appointed as he approved? The smaller owner stays out. They are the very men whom the clubs should induce to stay in. Drive the amateur and small owners out, and the competition narrows down to some large kennels all the way around the circuit, and year after year. These large kennels alone can not make up a proper entry. Drive the small owners entirely out, and the field trials are ended. Nothing will drive them out quicker than to learn that a large competitor has a voice in the judging. The small owners are dropping out. The day has arrived for associations to be less timorous. A firm, manly policy is the best because it is right, and the best, too, because it is successful.

Of the same nature is the error of allowing the professional breeder and handler to be a member of an association in whose trials he competes. Such handler has a decided ad-

vantage over his fellow handler. He has a voice in the management of the club's affairs on one hand and is also a competitor for the club's prizes on the other. The management cannot be kept too distinct and apart from interest in the competition, nor can the competition be kept too distinct from the management. There is no question raised here about a handler, or breeder who is a handler, being eligible to membership as a gentleman. It is the impropriety of the matter, from questions of equity. This evil should not be tolerated, because it is improper in principle and unjust to every other handler who runs dogs in field trials.

"The effort to placate owners or influence entries by giving the largest competitors a voice in the selection of judges may help to swell the entries at one trial, but it is sure to have its ill-effects at the next or later trials. If an owner does not like the judges appointed by an association he is privileged to remain away. There is less harm done when such owner takes offense and remains away than when he appoints the judges and is pleased."

B. WATERS.

## Toronto Dog Show.

THE following judges, Mr. Stone tells us, have accepted the invitation to judge at the Toronto show, commencing September 11: Mr. C. H. Mason, New York city; Mastiffs, St. Bernards, great Danes, Newfoundlands, greyhounds, collies, bulldogs, bull-terriers, black and tan terriers, Scotch terriers, fox-terriers, poodles, pugs and all classes of toy spaniels, and the miscellaneous and selling classes. Mr. John Davidson, Monroe, Mich.; Pointers, English setters, Irish setters, Gordon setters, bloodhounds, Irish terriers, Dandie Dinmont terriers, Bedlington terriers, Airedale terriers, toy terriers and Italian greyhounds. Mr. A. Clinton Wilmerding, New York city; Field spaniels, cocker spaniels, Clumber spaniels, Irish water spaniels and retrievers. Mr. A. C. Krueger, Wrightsville, Pa.; Beagles, foxhounds, harriers, dachshunds, Scotch staghounds and Russian wolfhounds.

The entries close Aug. 31. Those who wish to show at the World's Fair the following week, according to present dates, will be provided with accommodations, so that they can stay in Toronto until ready to start for Chicago. We are pleased to learn that the litter classes which were found so objectionable last year, and which we spoke strongly about at the time, will not be *en evidence* this year. Judging will commence on Monday, Sept. 11, at 2 P. M., and dogs will have to be on hand by 1 P. M. The show closes at 2 P. M. on Friday following.

Later.—Mr. H. B. Donovan writes us:

Mr. Stone will send you official notes of the doings of the dog show committee of the Toronto Industrial exhibition; however, there may be something he has overlooked in the following items: The litter classes, which were found so objectionable last year, have been eliminated. The following changes have been made in the list: Handlers' prizes increased to \$30 and \$20; and \$10 is offered to the Canadian handler and owner making the largest number of entries, not less than ten. A silver medal, value \$20, is offered the owner of kennel showing the largest number of dogs. Deerhounds changed to read Scotch staghounds and challenge classes doubled up. English and American foxhounds must compete together for the kennel prizes, and so in the challenge classes. The class for harrier puppies has been cut out. The open classes for bull-terriers have been divided into 30lbs. or over and under 30lbs., an open class added for Airedales of \$7, \$3 and diploma, and also challenge classes of \$5 and diploma for Dandie Dinmont and Scotch terriers. The latter are also given a puppy class of \$3, \$2 and diploma. Skye terriers have a challenge class added, but the black and tan challenge class has been divided up. Classes for poodles divided into French and Russian. The whippet class and that for Clumber puppies have been cut off. The money in the challenge classes for beagles 13lb. and under, has been increased to \$10 and diploma, and in open classes to \$10, \$5 and diploma. The fox-terriers are well treated, the novice classes being divided into smooth and wire, and two challenge classes, with \$10 and diploma added in wires. Wire-haired and smooth puppies must compete together. Several other changes of minor importance have also been made.

## Spaniel Trials.

Editor Forest and Stream:

THE numerous letters on spaniels that I have recently seen in your columns have revived my old love for this ancient and invaluable breed of sporting dogs. Scarcely a day passes at the end of our partridge season, that I do not regret that I am without a good spaniel to hustle the birds out of the impossible (for pointer or setter) places, that these birds take refuge in then. In fact, at that time of year far more shot can be had over a brace of thoroughly trained spaniels than over any other kind of dog. But to be satisfactory they must be trained to perfection, and have the extraordinary energy, pluck and love of hunting that is peculiar to the breed.

As to their shape, size and so forth that is a secondary consideration in my opinion; for so long as they do their work in the right shape, there cannot be much wrong with them in these respects, nothing but a true spaniel will work like one. Of all the good ones I can recall to mind, not one of them was otherwise than handsome—though I have seen a few that were too pretty, and reminded me of what would be called in the army "fine weather soldiers."

As to the practicability of holding spaniel field trials; I can see no particular difficulty about it, a scattered covey of quail would answer the purpose for testing a dog's quality and training well enough; more desirable game is too scarce in general.

Training spaniels is a very easy matter as compared with training other shooting dogs, for all they are wanted to do is to keep within range, hustle up the game and then stop, hunt where they are ordered and retrieve. Of course, it takes time and practice to train them, but that is about all.

Shooting over a team of these dogs in a rough country is more lively work than other sport. A frosty morning, pleasant companion, with a fair amount of mixed game, ought to make any boy feel happy.

C. E. McMURDO.

CHARLOTTESVILLE, Va., June 25.

## The Bulldog.

The effects of misleading expressions on different breeds of dogs is sometimes far-reaching, and the FOREST AND STREAM would not be doing its duty if it did not by all in its power strive to counteract the misplaced antipathy to certain breeds of dogs, the bulldog in particular, that has arisen through ignorance and the vapors of the average newspaper paragraphist who persists in alluding to the bullet-headed mongrel bull-terrier as a bulldog. Even "Podgers" humorously scores the bulldog in our last week's issue, page 550, but we appeal to his sense of justice whether, even if the "bulldogs" which he speaks of were in reality thoroughbred English bulldogs, which is very doubtful, these dogs were not doing their duty when they took such a "stern" view of his case. In the comparatively limited sphere of a class journal, compared to that of a daily newspaper, it is difficult to reach the general public and so inculcate as we should wish, and as we intend, a better opinion of the bulldog. We defend the bulldog because, with the possible exception of the Newfoundland, it is the best abused dog in America. We reiterate that the bulldog is not the companion of a certain class of individuals of pugnacious instincts. The bull-terrier may be, but not the bulldog pure and simple.

## DOG CHAT.

## A Show at Newark.

The New Jersey Kennel League held a special meeting at Newark on Friday last to finally consider the advisability of giving a show there, as was suggested at the annual meeting. There were present W. O. Kuebler, vice-president, who represented the president, E. H. Radel, who at present is in Canada; Dr. L. R. Sattler, E. R. Christopher, Walter Biowe, Dr. Kitchell, Frank Link, Dr. Fred Seitz, J. N. Sirock, and others were represented by proxy. The local and sporting press were also represented. Mr. W. O. Kuebler occupied the chair, and after a general debate regarding prospects of financial success, local interest in dogs, etc., it was decided that, as about \$3,000 had been subscribed as a guarantee fund and everything was favorable, a show should be given Nov. 21 to 24, which should be undertaken by the executive committee with power to call on members for aid. The executive committee then convened, with Mr. Christopher in the chair. The committee appointed to make the inquiries preliminary to a decision was by resolution made permanent. Messrs. Browie and Link, committee on hall, were instructed to arrange for the one recommended for the week decided on. Mr. Morris was instructed to definitely claim dates Nov. 21 to 24 with the A. K. C. and make announcements. Mr. J. C. Eisele offered the club the use of his office for the bench show committee, which was accepted with thanks, and he was unanimously elected treasurer for the bench show fund. The meeting then adjourned until July 14.

## Lexington Dog Show.

The premium list of the Lexington dog show came to hand as we go to press. The show will be held Aug. 30 to Sept. 2. In the important breeds the prizes are: In challenge classes in which sexes compete together \$10, in open classes \$10 and medal, and in puppies a medal—whether silver or bronze or gold we are not told. Dandies, Skyes, Yorkshires, black and tans and toy terriers get \$5 and medal in open, and \$5 in challenge for first three named. Whippets, toy spaniels, Mexican hairless and miscellaneous the same. Pugs have novice classes with \$5 and medal, and Italian greyhounds are better treated than any, having two challenge classes with \$5 each and \$5 and medal in open classes and puppies divided. In many of the breeds kennel prizes of \$15 to \$10 are given by the Blue Grass Kennel Club. There are already a number of other specials offered, among which is \$50 for handler showing largest number of dogs entered by one exhibitor. Irish and Gordon setters get cases of whisky and there is also a \$10 special for best exhibit of dogs from Canada entered by one exhibitor, not less than four. Entries close Aug. 23, fee is \$2.50, with Roger D. Williams, George H. Hill is the superintendent. Those exhibitors who intend showing at Toronto can stay over the intervening week at a cost of \$1.25 per day.

## American Field Trials Club Derby Entries.

In sending us the entries for the American Field Trials Derby, Mr. W. J. Beck, the secretary, says that the pointer class will not by any means pay its way out. In view therefore of the seeming reluctance of pointer men to make entries, the club will have no separate All-Age for pointers, both breeds running together. We do not think that the American Field Trials Club has much to complain of, for a young club they have done well in getting twice as many entries of pointers as the much better known Eastern Field Trials Club, which offers better prizes as well. The entries for the All-Age stake at the American Field Trials will close Aug. 1, with \$5 to nominate, \$10 on Oct. 1 and \$5 to start. The prizes are \$150 to first, \$100 to second and \$50 to third.

## National Beagle Club.

It is about time the field trial committee of the N. B. C. convened and came to some definite arrangement of classes for the coming trials. The New England Club has already done so and the older club cannot afford to be at all dilatory in this matter. It is not enough to think there is plenty of time yet; beagle men want to know in good season what they must prepare for, and if suitable dogs for entry are not in their own kennels they need time to look around and purchase something that will do. The quarterly meeting of the National Beagle Club will be held at the A. K. C. rooms, 44 Broadway, New York, on Monday, July 17, at 4 P. M.

## United States Field Trials.

Mr. Madison writes us that at the urgent request of many of this club's patrons, the time of closing the entries to the Grand Junction Derby has been extended to Sept. 1. The second payment will be due Nov. 1. It is hoped this change will prove beneficial to all parties concerned. He expects to be able to announce the name of the third judge by that time. The second payment to the Bicknell Derby will be due Aug. 1, as originally announced.

## The World's Fair Judges.

We have received from Chicago a type-written sheet containing the names of the judges for the World's Fair already published in FOREST AND STREAM. It is headed: "The Executive Committee on Awards have selected the following men as judges in the Kennel Exhibit." Miss Whitney's name heads the list. The circular is not signed. Three of the judges on the list, Messrs. John Davidson, James Mortimer and E. Court-Rice, will not serve, and dogmen are inquiring how it is Dr. Twaddell's name appears as a Gordon setter judge. His specialty used to be beagles and dachshunds; perhaps it was A. C. Waddell that was meant.

## English K. C. Rules.

The new English Kennel Club rules relating to classifications at shows, are intricate enough to turn the head of the ordinary exhibitor not gifted with a mental grasp that can think of six different things at the same time. What with championship, winners, open and novice classes, confusion seems worse confounded, but it will probably all come right in the end, though disqualification will be the bitter mentor in a good many cases.

## N. E. K. C. and a Fall Show.

In March last the New England Kennel Club claimed with the A. K. C. the dates Nov. 28 to Dec. 1 for a fall show. On inquiry of Mr. Brooks as to whether a show would be held on that date, he advises us that there will be no show in the fall, but one as usual in the spring.

Spratts Patent Co. shipped to America, per steamship England, June 11, the red brindle bulldog Sheriff, for E. K. Austin, New York; a bull-terrier bitch for Wm. Tomkin, of Macedonia, Ia.; bull bitch Watch for R. D. Winthrop, New York; bulldog Damon for F. F. Dole, New Haven, Conn. This company is gradually building up a good reputation in this line among dogmen, who are never averse to paying a little extra when they know they can confidently expect good treatment.

Mr. A. B. Truman, of San Francisco, Cal., paid a visit, in company with his wife, to the Oak Grove Kennels on June 26 and purchased the Irish setter dog Clifford (A. K. C. S. B., Vol. IV., Pt. 2, No. 6,428), by champion Bruce out of

Zelda. He was broken by Mr. Stoddard, N. C., who pronounced him an excellent field dog. In addition to his good qualities as a field dog, he should, with care and attention, be able to do some winning on the bench. He is a dog of good color, possesses a good head, good legs and feet, and should make a first-class stud dog for the coast; and we, with Mr. Fowler, hope Mr. Truman will meet with every success with him.

Among the new special ads, this week we find that H. E. Peers offers pointers for sale; E. E. Beach, blue belton setters; Bellevue Kennels, Italian greyhounds; E. L. Gilmer, English setter pups; Dr. Spanogle, beagles. In the stud: Robt. Leslie places pointer King of Lynn; Dr. Spanogle, beagle Lee Dorsey; G. O. Smith, English setter Count Noble, Jr.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. R. P., Mahwah, N. J.—1. How can I register dogs, to be able to send them to a dog show, and which are not eligible to be registered in the A. K. C. stud book? 2. What taxes must be paid for a kennel? 3. How must I claim the name for a kennel? Ans. It is not necessary to register dogs in order to show them at any of the A. K. C. shows. You simply send name, breeding and date of birth (if known), together with 25 cents fee, and your dog is "listed" and becomes eligible to associate with the canine aristocracy which is registered, and which can show three generations back on each parental side, or which have won two first prizes at A. K. C. shows. 2. There are no taxes for a kennel beyond the local taxes that may be for each dog you possess. This, if you are anxious to pay you can ascertain of your village authorities. You can claim a name in the FOREST AND STREAM, and it is by courtesy allowed you, unless it conflicts with another already chosen. If, however, you wish to claim a kennel prefix or affix, which is protected by the A. K. C.—and this is the better plan—you must send in your application to the secretary of the A. K. C., 44 Broadway, New York city, accompanied by a fee of \$3, and this application will be referred, as soon as possible, to the executive or advisory committees of the A. K. C. Your application will be published in the A. K. C. Gazette, and if any other kennel owner sees fit to object to the name you have chosen, he may do so by sending his protest and reasons to the A. K. C. secretary and the evidence will be heard and the decision given for or against your application, at a future meeting of these committees. By a reference to the official list of prefixes published in the A. K. C. Gazette you will see what we mean.

J. T. N., Bear Lithia, Va.—Will you please tell me whether Ulmer dogges, great Danes and German mastiffs are the same? Also, can you tell me what it will cost to bring one over from Germany, and what will the tariff be? Ans. German mastiff is the name invented on this side of the ocean. The proper name is "Deutsche dogge" (translation impossible). Some Chicago Germans, however, made it German (Deutsche) mastiff (dogge). Any man who calls this breed in Germany to-day Ulmer dogge is a know-nothing in kynology. If he offers Ulmer dogges he has no dog answering points as established for the Deutsche dogge, called here and in England great Dane. The cost of a steamer is \$30; for box and freight to seaport \$15. Sprats will charge a little over and above actual outlay as above. Free entry for German dogs is difficult to obtain unless your dogs have pedigrees certified by Consul extending back three generations. Duty is about 25% ad valorem, but you are subjected to appraisement if value seems too low as given, and there is nothing to prevent the officer in appraising each dog up to \$250 or more.

H. S. J., Manchester, Ia.—1. Canker of the ear. Syringe ears out with warm water and apply following lotion:  
Sig. i. j. m. sub acet. 3 iv  
Acid carbolic. 3 i  
Glycerine. 3 i  
Aq. ad. 3 iv  
Mix lotio. A little to be poured into the ear twice a day. 2. One year.

F. D. B., Mt. Morris.—Please tell me through the delight of all sportsmen, FOREST AND STREAM, what to do for my pointer's eye. The hooks or hairs on the inside corner of his eye is badly inflamed and nearly covers the eye. Has grown so in two days. Ans. Foment the eye with hot water and apply following lotion frequently:  
Zinc sulph. 3 i  
Tr. opil. 3 iii  
Aq. ad. 3 vi  
Mix lotio. If enlargement continues after inflammation is allayed, have it removed.

F. D. H., Waltham, Mass.—Will you kindly state cause of death in my English setter? He was 11 years old, very fat, and until this time never had a sick day. Some ten days ago refused food, except now and then a little milk; raw meat he seemed to relish. Thirty-six hours before he would have gagged up a large lump of yellowish white slime. I treated for indigestion with little success. At times restless; at last unable to keep anything on stomach. Near the end his tongue was a deep liver color and the vomit showed considerable blood, which increased in volume. He suffered little pain. What would you call his complaint? Could he have been saved? Ans. Gastritis. Very probably had he been treated.

H. M., Paterson, N. J.—Will you please tell me what is the matter with my great Dane bitch? She had pups and afterward a large lump appeared on the milk bag. Ans. An ulcer must have formed. Apply hot fomentations and rub gently with camphorated oil. Give a dose of castor oil. If ulcer forms have it opened.

Business.

STRAWS WHICH SHOW.—New York City, June 29.—Through the ad. I put in your paper last Saturday, I have sold one pair of my English setter pups (dog and bitch) to Mr. Leop. Pavin, who is sending them by Friday's steamer to Rio de Janeiro. R. S. INCH.

Yachting.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, July 1.

The annual regatta of the New Rochelle Y. C. on July 1 just missed being a failure through the very light weather on Long Island Sound at the end of the week. The calm of Friday kept away some of the entries, but still a large fleet, thirty-eight yachts, was present in the morning in Echo Bay. The start was made at noon in a very light S.W. breeze, and race was very slow throughout, many of the yachts failing to finish, but as races go this year the club may be considered very fortunate to have made a race at all. The usual courses of the club were sailed. The official times were:

CLASS 1—CABIN SLOOPS 35 TO 58FT.		Start.	Finish.	Elapsed.	Corrected.
Anaconda.	12 07 03	6 12 05	6 05 02	6 05 02	
CLASS 2—CABIN SLOOPS 40 TO 46FT.		12 05 50	6 22 58	6 17 08	6 17 08
Moccasin.	12 05 50	6 22 58	6 17 08	6 17 08	
CLASS 3—CABIN SLOOPS 35 TO 40FT.		12 10 00	Did not finish.		
Nellie.	12 10 00	Did not finish.			
Zingara.	12 07 19	Did not finish.			
Genevieve.	12 10 00	Did not finish.			
Sasqua.	12 06 25	6 25 32	6 19 27	6 15 10	
CLASS 4—CABIN SLOOPS 30 TO 35FT.		12 10 00	Did not finish.		
Tally-Ho.	12 10 00	Did not finish.

CLASS 10—OPEN CATS, 30 TO 25FT.		12 11 37	6 23 23	6 12 43	6 12 43
Caper.	12 11 37	6 23 23	6 12 43	6 12 43	
Addis.	12 11 07	Did not finish.			
Melita.	12 11 07	Did not finish.			
CLASS 11—OPEN CATS, 23 TO 20FT.		12 11 15	6 12 16	6 01 01	6 01 01
Sirene.	12 11 15	6 12 16	6 01 01	6 01 01	
CLASS 12—OPEN CATS, 19 TO 23FT.		12 11 35	6 28 01	6 16 26	6 16 26
Typhoon.	12 11 35	6 28 01	6 16 26	6 16 26	
Punch.	12 16 59	6 30 53	6 13 54	6 10 47	
Sadie.	12 13 24	Did not finish.			
Phyllis.	12 13 42	6 21 14	6 7 31	6 04 24	
Phyllis.	12 16 26	5 51 58	5 35 23	5 32 15	
Zelica.	12 16 26	Did not finish.			

The regatta committee included Messrs. Fred Alder, W. F. Moore and J. W. Roush.

The New British Yachts.

In the last two races reported, the Royal Largs Y. C. on June 30 and the Royal Clyde on July 1, Valkyrie has been beaten by Britannia, and in the former by Satanita as well, the times being, Britannia 3:09:32, Satanita 3:12:20 and Valkyrie 3:14:37 in the former race, and in the latter Britannia 7:10:26. Prior to these races Valkyrie had repeatedly beaten the others, and it seems probable that her skipper has not yet got the hang of the boat since her alterations. There is as yet no news of her fitting out for this side, so it is unlikely that she will be seen here before the middle of August, or even later.

The official measurements of the new British yachts are as follows:		L. W. L.	Sail Area.	Rating.
Valkyrie.	58.32	10307.4	147.70	
Britannia.	57.73	10327.4	151.00	
Calluna.	51.95	9563.3	130.61	
Satanita.	97.65	9923.0	161.49	
Dragon III.	46.74	2560.5	19.94	
Deirdre.	47.07	2545.4	19.96	
Vendetta.	60.45	3967.1	39.96	
Lais.	60.35	3969.5	39.92	
Meneen.	24.22	600.0	2.42	
Gavotte.	26.54	561.0	2.48	
Gareth.	39.15	552.5	2.58	
Manx Cat.	23.44	525.7	2.49	
Modwen.	26.70	630.8	2.36	
Morvena.	18.49	324.0	0.99	
Charlissa.	22.09	285.0	0.99	
Vikendur.	22.50	263.7	0.98	
Wolfrund.	19.11	269.2	0.94	

From this table it appears that Satanita is comparatively a long craft with a small sail area. She has lately undergone important alterations, her mast being lifted out and cut off 3ft. at the heel, a lessening of 2cwt. of weight. Her boom, 15in. diameter, has been sawn in two and hollowed for 70ft., leaving about 10ft. of solid wood at each end, the diameter of the fore part being 8in. After the two halves were joined they were seized together at intervals with wire. The reduction of weight is estimated at 12cwt. Upward of 7 long tons of lead have been put in the keel, most of this being taken from inside.

Calluna has also been greatly changed, the lead keel being reduced in her case, and a new and larger spar and sail plan provided.

The two 40-raters, Lais and Vendetta, are about one foot longer than those of last year, and the fouries also show a little more length and less sail.

The measurements of the three Dragons of 1889, '90 and '93 are interesting:  
Dragon I. (Idalia)..... 45.75 2621 19.98  
Dragon II. (Molly)..... 45.72 2623 19.19  
Dragon III. .... 46.74 2560 19.94

The measurements of the two new Herreshoff boats, Meneen and Modwen, as compared with their class competitors are also interesting, showing less length and more sail. Thus for Meneen has taken second or third prize in her class on most occasions when she has missed first, while Modwen has taken a number of firsts.

Delaware River Racing.

On June 17 a race was sailed on the Delaware River from Delanco to Riverton and return, for yachts of the Corinthian, Riverton and Philadelphia yacht clubs, under the auspices of the Morelton Inn. The times were as follows:

FIRST CLASS.		Start.	Finish.	Elapsed.	Corrected.
Yvette, P. Y. C.	3 00 00	4 19 28	1 19 28	1 19 28

Pavonia Y. C. Annual Regatta.

COMMUNIPAW—NEW YORK BAY.

Monday, June 22.

The annual regatta of the Pavonia Y. C. was sailed on June 22 in a strong wind, but under otherwise unpleasant conditions, the day being cold and rainy and the water so rough that many of the guests on the club steamer Cygnus passed a very painful morning and afternoon. There was a good list of entries, the courses being:

Classes D, E and F—From a line between Oyster Island Buoy No. 13 (formerly No. 19) and a stakeboat anchored to the eastward of the buoy, to and around Perch and Ball Buoy No. 13, located to the west-

ward of Southwest Spit, leaving it on the port hand, and return over the same course; 25 nautical miles.

Classes D, 1 and 4—From the same starting point to and around Red Bell Buoy on the northwest edge of the Rorer Shoals (formerly No. 8), leaving it on port hand, and returning over the same course; 20 nautical miles.

Classes 2, 5, 8 and 8 A—From same starting point to and around Buoy No. 9 (formerly No. 15), located to eastward of Swinburne island, leaving it on port hand, thence around Fort Lafayette, leaving it on port hand, and return to starting point; 15 nautical miles.

All yachts keeping to the eastward of all west bank buoys, Nos. 7, 9 and 11 (formerly Nos. 9, 13 and 15), except in cases of rounding. The start was made on the last of the ebb, the wind being then N.E., the fleet starting before it with topmasts hauled and two reefs in. A number of mishaps occurred on the outward course, and several yachts were compelled to withdraw. The small catboat Mist of Newark, N. J., lost her mast and capsized, throwing her crew of five in the water. The boat sank, and one of the men who could not swim was in serious danger, but his comrades supported him until they were all rescued by the steamer Canonicus. The 25ft. Freyja sailed a very good race, though handicapped by the mean length measurement, being a modern boat. In spite of her clipper stem and long counter she was able to save her time over the racing boats with little or no overhang. The fact that she was:

CABIN SLOOPS AND CUTTERS, 38 TO 45FT.

## New Haven Y. C., Annual Regatta.

NEW HAVEN—LONG ISLAND SOUND.

Thursday, June 22.

The twelfth annual regatta of the New Haven Y. C. on June 22 was started in a light S.E. breeze, the wind coming in later from N.E. and quite fresh. The course was off Pardee's Bar Buoy, around the buoy at the mouth of the Housatonic River. The times were:

	Elapsed.	Corrected.
Nymph.....	5 01 41	5 01 41
Sea Belle.....	5 10 25	5 00 41
Ione.....	Not timed.	
Stranger.....	5 29 43	5 23 14
Vidette.....	Not timed.	
Venus.....	5 15 48	5 03 22
Castanea.....	5 29 10	5 28 29
Gossip.....	5 18 12	5 18 12
Nymph won the special prize of a cup in Division G for the best corrected time. In Class 3 Sea Belle won the Warner cup, which she has held for three consecutive years, and won her class prize in money. Stranger won in her class and Gossip in hers.		

The regatta committee included I. M. Goodridge, John I. Goodrich and S. D. Baker, and the judges were M. H. Bacon of New London, James Gallagher, Jr., and C. M. Peck.

## Royal Nova Scotia Yacht Squadron.

The first race of the season for the Royal Nova Scotia Y. S. was sailed on June 10, the prize being the cup presented by Lord Alexander Russell. The day was rainy and foggy, with a southerly wind. The course was from the squadron wharf to Dartmouth Cove, thence to the flag buoy, off the squadron wharf, thence to Ives's Knoll buoy, thence to Mars Rock buoy and finish off squadron wharf. The times were:

Wym.....	5 04 00	Yolla.....	5 03 20
Lenore.....	5 04 20	Mentor.....	5 47 00

Albatross did not finish.

Yolla was delayed by an accident to her rigging. The second race, for the Lord Russell cup and squadron prizes, was sailed on June 17, the course being: Starting off squadron wharf to flag buoy in Dartmouth Cove, leaving it on starboard hand, then passing it to westward of George's Island, to Point Pleasant Buoy, thence to buoy off Woodside refinery, thence to outer flag buoy off squadron wharf, leaving these marks on port hand, thence to Point Pleasant Buoy, leaving it on starboard hand, and finish off squadron wharf, 7 1/2 miles. Time limit, 4 hours. The times at the finish were:

Wym.....	4 27 25	Ethiopia.....	4 42 00
Lenore.....	4 23 00	Valkyrie.....	4 49 00

Yolla, Albatross, Mentor not timed.

## Excelsior Y. C. Annual Regatta.

SOUTH BROOKLYN—NEW YORK BAY.

Sunday, June 25.

The annual regatta of the Excelsior Y. C. of South Brooklyn was sailed in a moderate S.W. wind on June 25, the course being from off the club house down the Bay and return. The times were:

CLASS A—CABIN SLOOPS.			
Start.	Finish.	Elapsed.	Corrected.
Black Duck.....	11 14 15	2 22 00	3 07 45
The Owl.....	11 16 45	2 41 35	3 24 50
CLASS B—CABIN SLOOPS.

## Winthrop Y. C. Race.

ROUGH'S NECK—BOSTON HARBOR.

Saturday, July 1.

The race of the Winthrop Y. C. for cash prizes on July 1 was sailed in light weather, the times being:

SECOND CLASS.			
Length.	Elapsed.	Corrected.	
Eclipse, W. H. Myrick.....	1 37 32	1 10 20	
Clinax, C. H. Howes.....	Not m'd.	1 43 10	
Ermine, S. H. Cann.....	Not measured.		
THIRD CLASS.			
Magpie, C. Pike.....	20 03	1 35 50	1 09 11
Harriet, L. T. Harrington.....	22 09	1 34 35	1 10 30
Marion, Chesterton & Haney.....	22 00	42 15	1 17 17
Myth, Edward Cook.....	Not measured.		
FOURTH CLASS.			
Cadet, C. Smith.....	19 00	1 00 50	0 40 52
Florie, W. Leighton.....	18 01	1 05 10	0 42 27

The judges were Howard Gould and C. A. Haney. The winners were Eclipse, Magpie and Cadet.

## New York Y. R. A. Cruise.

ADMIRAL SUTTON has issued the following orders for the coming cruise of the New York Y. R. A.:

To the Members of the New York Yacht Racing Association:

GENTLEMEN—At the earnest request of a large majority of the clubs represented at our last meeting the regular annual cruise of the association will take place during the week of July 23-29, on Long Island Sound. Your President will assume command as Admiral of the fleet, and your Vice-President as Vice-Admiral. The hearty co-operation of every yacht owner is earnestly requested to bring out a strong representative fleet worthy of this association of yachtsmen; the largest in the world. Every enthusiastic yachtsman belonging to this association will endeavor to bring his yacht to the rendezvous. Captains having business engagements during the cruise will be excused, at any time after the rendezvous, by applying to the senior officer. Secretaries and delegates will please see that a copy of annexed order is furnished to every yacht owner in their respective clubs.

B. FRANKLIN SUTTON, President N. Y. R. A.

On Board Flagship Schooner Loyal, lying off New York, June 20, 1893. GENERAL ORDERS, No. 1, c. s.—Ex-Admiral A. J. Prime is hereby appointed fleet captain.

B. FRANKLIN SUTTON, Admiral.

GENERAL ORDERS, No. 2, c. s.

1. The annual cruise of the entire fleet of the New York Yacht Association will start on Monday morning, July 24, 1893.

2. Yachts will rendezvous in New Rochelle Harbor, Long Island

Sound, "off club house" on Saturday and Sunday, July 22 and 23, and report to the fleet captain at once, on board flagship Loyal; and remain at anchor over Sunday.

3. The fleet shall be composed of a squadron from each club in the association, and each squadron shall be commanded by the commodore or senior officer represented by the squadron, who shall receive all orders from the Admiral, and execute the same.

4. All yachts will carry the association's flag at the masthead, and the club flag at the peak; but yachts may display both flags at the masthead when at anchor.

5. Daily meetings of the commodores or senior officers of each club will be held on board the flagship to determine destination.

6. The Admiral will make such changes in the general orders or destinations (at any time) as he may deem proper to insure the comfort or safety of the fleet.

7. All changes in sailing directions will be made by signal from main masthead of flagship, with a gun calling attention to same.

8. The time of starting and destination of each day's sail will be communicated by signal and a gun from flagship, to prepare, one-half hour prior to the start.

9. The starting signal will be two guns fired within a moment of each other.

10. All yachts must remain at anchor until the two successive starting guns are fired.

11. The first yacht reaching the destination for the day will take her own time of arrival, anchor in some convenient place, hoist an ensign, and take the time of all the other yachts, all of which must pass between this yacht and the nearest shore.

12. The record of each day's run shall be delivered to the fleet captain immediately after the arrival of the last yacht.

13. Yachts desiring to leave the fleet must first obtain permission from the fleet captain.

14. The following souvenir prizes will be given: To the club reporting the greatest number of yachts (irrespective of size) at the rendezvous, a complete set of international code signal flags.

To the club reporting the second greatest number of yachts at the rendezvous, a suitably inscribed decorative flag souvenir for the club room.

To the commodore of the club reporting the third greatest number of yachts at the rendezvous, a suitably inscribed gold souvenir badge.

To the commodore of the club reporting the fourth greatest number of yachts at the rendezvous, a suitably engraved medal souvenir.

Souvenir mugs suitably engraved will be presented to yachts making the best average time in their respective classes during the cruise.

By order of the Admiral, A. J. PRIME, Fleet Captain.

## The Cup Defenders.

The second trial trip of a Cup defender took place on July 1 off Bristol, the new Vigilant being under way for the first time, with Com. Morgan, Mr. Isaac, Mr. N. G. Herreshoff, Capt. Hansen and his crew on board. The centerboard was not shipped, but will go in this trip. In company with the schooner Laska and the steam yacht Ituna she beat down to Fort Adams in a moderate breeze and ran back. The trip, so far as it went, was very satisfactory, the yacht giving good promise of power and the sails sitting well for new ones.

Colonial is about finished, but has not yet left Bristol. Through a succession of delays Vigilant was not floated from the dock until June 29, when she was towed to City Island, where the tug R. C. Veit took her hawser and started for Boston, Mr. Stewart and Capt. Sherlock being on board the yacht with the mate and two hands. She had a successful trip around Cape Cod and reached Boston on Saturday. The work of fitting out will be hurried as much as possible, and the trial trip will take place next week.

The third out of the four boats was the Paine fin-keel Jubilee, who made her first trip on Saturday, though in an incomplete condition, her headsails being old ones belonging to Volunteer, while her new blocks with aluminum sheaves in the wooden ones and the metal ones entirely of aluminum, were not ready. She was towed out of the harbor and sailed to Marblehead, and was also under sail on Sunday and Monday. The centerboard was not used, the winch not being ready. From all accounts the initial performance of the yacht is fully up to expectations.

## Larchmont Y. C. Annual Regatta.

LARCHMONT—LONG ISLAND SOUND.

Tuesday, July 1.

After the general failure of all the spring regattas from bad weather or from lack of entries there was a great surprise for all concerned to find a large fleet at anchor and a fine N.W. breeze blowing at Larchmont on Tuesday. Out of seventy entries over fifty yachts started, and with the visiting yachts of the Philadelphia Corinthian, the Brooklyn and the New Haven clubs there was at least as many more under sail, while a large fleet of steam yachts, all gaily decorated, accompanied the race.

The new boats were in goodly number, Emerald, Loyal, Dagmar (née Titania), the two Cary Smith schooners, Elsie Marie and Ariel, the new Stewart and Binney schooner Serkara, a small but stylish craft, the new yawl Audax and the Ellsworth cat Mary.

The usual club courses were sailed for classes A, B, C and 2, from Larchmont around stakeboat in Hempstead Harbor, around stakeboat at anchor off Stamford Harbor Lighthouse, around stakeboat in Hempstead Harbor again, and across the line at Larchmont; 27 nautical miles.

For classes D, E, F, G, H and 9, around the Hempstead mark, thence around a stakeboat anchored off Captain's Island Lighthouse, around the Hempstead mark and home; 30 nautical miles.

For classes 12, 13, 14, 15 and 16, from Larchmont around red spar buoy on Scotch Caps' Reef and around the Hempstead mark, around red spar buoy on Scotch Caps' Reef and across finish line; 10 nautical miles.

For classes 10 and 11, from Larchmont around the Hempstead mark, around black spar buoy off Matinecock Point, around the Hempstead mark and across finish line; 13 nautical miles.

The first leg, to Hempstead, was almost free, spinakers being carried to the start and the boats were a reach out and back, and to Captain's Island was a close reach out with sheets eased on the return to Hempstead, the last short leg home being to windward.

The race was started at 11:35 for the larger classes, Emerald leading over the line, followed by Elsie Marie. Spinakers and balloon jibtopsails were set, the fleet making a pretty picture, with smooth water, a clear blue sky, and the white sails against the green background of Long Island and the New York shore. Dauntless, Ramona and Brunhilde were classed together. The old Atlantic and the new Elsenmarie were in the next class. Laska and Dagmar failed to start leaving Emerald and Alcea in the next class. The smaller schooners were Viator, Azalea, Triton and Serkara, Loyal being under way but not starting. Katrina and Huron sailed together, Wasp was alone in her class, and the Fife 42-footer Uvira was matched against Moccasin, Choctaw not starting.

The leaders were timed at Hempstead:

Emerald.....	12 02 30	Viator.....	12 06 40
Azalea.....	12 02 00	Serkara.....	12 06 50
Dauntless.....	12 06 00	Ramona.....	12 06 52
Brunhilde.....	12 06 02	Atlantic.....	12 07 10
Alcea.....	12 06 30	Triton.....	12 08 25
Elsie Marie.....	12 06 35		

The little Azalea had made rather a late start, but had made it very smartly, and was second at the mark, Mr. Alley, who sailed her, making a very neat turn inside of the larger boats. As her foreboom went over the mark, she was the first to reach the mark, and she was at work on the cabin trunk, and threw him into the sail and thence into the drink. Seeing that he had been struck by the boom and that he did not rise quickly, the yacht's steward bravely jumped after him, and the two soon came up astern. With the fleet crowding down for the mark it was impossible to put about for them, and as both were good swimmers it was unnecessary, Mr. Fisher striking out for the mark, and the other two following him. Emerald was sailing well and gaining slightly on Alcea, and Atlantic caught and passed Elsenmarie. The times at Stamford were approximately:

Emerald.....	1 06 00	Brunhilde.....	1 16 25
Dauntless.....	1 09 00	Atlantic.....	1 19 00
Ramona.....	1 09 40	Elsie Marie.....	1 22 30
Alcea.....	1 10 00		

With the breeze to her liking Viator was leading her class, Azalea being on her lee beam, both carrying baby jibtopsails. When a couple of miles from Captain's Island Azalea lost the end of her bowsprit and was forced to withdraw.

The times at Captain's Island were approximately:

Viator.....	1 35 50	Serkara.....	1 01 30
Triton.....	1 01 30		

The race home made a fine sight, as the various divisions of the fleet came together for the Hempstead mark, the little Fife beside the big schooner, Viator did good work, especially on the windward leg across, and was first to finish. The full times were:

CLASS A—SCHOONERS OVER 90FT.				
Start.	Finish.	Elapsed.	Corrected.	
Ramona.....	11 40 49	2 56 24	3 15 35	3 13 10
Dauntless.....	11 38 40	2 58 43	3 20 03	3 20 03
Brunhilde.....	11 39 09	3 20 17	3 41 08	3 41 08
CLASS B—SCHOONERS 81FT. TO 90FT.				
Atlantic.....	11 40 10	3 12 50	3 32 31	3 32 31
Elsie Marie.....	11 56 33	Disabled.

Pyxie.....	11 59 30	2 27 41	2 28 03	2 28 02
Wahnetta.....	12 03 04	2 44 12	2 41 08	2

The Manchester (Mass.) Y. C. held its annual meeting on June 2 and elected the following officers: Commodore, E. P. Stanley; Vice-Com., A. H. Higginson; Rear-Com., Chas. Jackson; Sec'y and Treas., Chas. A. Cooley, and Meas., E. A. Carter. The club voted to accept a challenge cup offered by Vice-Com. Higginson, to be sailed for every year over an outside course. The club has a very bright future before it. It has now three challenge cups, two for the 21ft. class and one for the 25-footers. Its race for the Sunset Hill cup on June 17 was sailed in a very heavy S.E. breeze. Its fixtures for this year are so far, July 6, annual race, open; July 22, cup race; Aug. 20, 27 and Sept. 3, cup race. There may be several other races later on, the dates of which are not yet decided on. The club's headquarters are at Pulisfer's Point, Manchester, Mass., and the anchorage in West Manchester harbor is very good. The club sails under the Seawanhaka rule, 1/4 Sail area—1 waterline.

For the past two years the International Publishing Co., of New York, has had in preparation a work entitled "The Yachts and Yachtsmen of America," the first volume of which is now nearly ready. There will be two volumes, the first dealing in particular with the history of yachting and the evolution of the sailing vessel from the most primitive forms. The history and details of every American yacht club will be given, with views of the club houses and portraits of the members. The main feature of the second volume will be a treatise on steam and other motors used in vessels. The work is being prepared with great care, a special corps of photographers having been at work all last season, and it promises to be a very valuable book of reference. Dr. Henry A. Mott is the editor.

The jubilee celebration of the Royal Southern Yacht Club was quite one of the events of the year, and the fine display made by Valkyrie in the trial to windward was quite the best thing seen this season. It seems almost incredible that a vessel could be made so much superior by the wind to the other new vessels and the old craft Iverna; and the superiority is not only in the manner she can be laid on the wind, but in head-reaching also. But then one of Watson's best vessels always seems at least two seasons ahead of the others, and this year he has quite surpassed himself in producing Britannia and Valkyrie. With a northwest wind the big craft will have a good stretch of water to turn over this (Saturday) outside the Mersey. Bar, another vessel may be altered by one of the unlucky ones, but as the case at present stands Valkyrie is the first vessel of the year.—*Field*, June 24.

Dr. C. D. Miller, the designer and builder, is just completing at his yard at Poughkeepsie a steam yacht for Wm. R. Sands of New Hamburg. The new craft will be 106ft. over all, 80ft. 1. w. l., 16ft. beam and 5ft. 6in. draft, the hull of wood. The engine is 9, 14½ and 22 and 22x 14in., with a Roberts safety watertube boiler. The yacht is well arranged below and handsomely finished. Dr. Miller has also built this year a special yacht tender of his own design, 25ft. over all, 5ft. beam and 3ft. depth, with a triple compound engine which, with its pumps, weighs but 225lbs. The yacht has a light coil boiler and the hull is very lightly but strongly built, the total weight being under 2,500lbs. The engine indicates 18 H.P.

The second annual regatta of the Baltimore Y. C., on June 24, resulted as follows:

	Start.	Finish.
Albatross (schr).....	2 10 45	4 58 18
Leona (schr).....	2 10 45	5 01 28
Ibis (schr).....	2 10 45	5 09 20
Lagoda (sloop).....	2 10 45	5 10 55½
Guinevere (schr).....	2 10 45	5 12 15
Guinevere (schr).....	2 10 45	5 14 38

Nepenthe was ruled out by the judges for not rounding the buoy at the turn.

The regatta of the Rhode Island Y. C. on June 24 had but few starters. Victor winning in the first class cats and Rarus in the second.

The annual opening of the Tacoma Y. C. took place on June 17. Arrangements are being made for a sailing race open to all yachts of the different clubs and members of the International Yachting Association. It is proposed to raise by subscription about \$400 for prizes and for entertaining the visitors. It is understood that the yachts participating in the regatta of the International Association at Port Townsend on July 4 have been invited to a regatta at Seattle on the 5th, and it is the intention of the Tacoma Y. C. to hold their regatta about July 7. The races will be sailed under the rules of the International Yachting Association.

The accommodations for yachts at Tebo's Docks, Twenty-third street, South Brooklyn, are now being greatly increased, a new pier 1,000ft. long being built on the north and dredged to a depth of 14ft., while a new drydock is now under way, to be completed in September. It will be 300 by 81ft., and will take on anything up to the largest steam yachts. Tebo's has become most indispensable to New York yachtsmen, and the present improvement will still further increase its usefulness.

The old schooner yacht Countess, after many vicissitudes, will be broken up for junk. The last people who attempted to keep her in commission were some young men in Kenwood, but they soon tired of the expensive sport. After lying in an Illinois Central ship for three years, the Countess was taken to the ship yard at South Chicago the other day. It was hoped she could be fitted out for World's Fair service. The examination of her timbers shows them to be rotten and the old hull was not worth repairing. It is now being stripped of rigging and equipment preparatory to abandonment.—*Chicago Evening Journal*.

The St. Lawrence River Skiff, Canoe and Steam Launch Co. has just completed for Chas. P. Lyon of Ogdensburg a very handsome "Scarecrow," built from Mr. Stephens' design in the FOREST AND STREAM. She has a fin-keel of 600lbs, which can be hoisted by an ingenious arrangement devised by the builders. The sail plan, made for her by Mr. Stephens, has 450sq. ft. in a mainsail and jib. The boat was launched on June 23 and was under way at once, carrying her sail in a good breeze.

The thirty-fifth annual regatta of the Jersey City Y. C. on July 24 was spoiled by light winds, while the finish was so late that the proposed reception in the evening was postponed. The winners in the different classes were as follows: Class C, Forsythe, Alexander Roe; Class D, Beulah, John Collins, Jr.; Class E, Bessie, Van Horne; Class F, Knight Templar, Robert Doushka; Class G, Grete, Lyons & Ziegler; Class H, Lizzie B., G. W. Bowker; Class I, Anita, J. J. Voorhees.

The skiff sailors of Lake Ontario held a meeting on June 23 at the house of the Toronto Sailing Skiff Club, and it was decided to form an organization for the promotion of skiff sailing, to be modelled after the Lake Y. C. A. The first formal meeting was set for July 5 at the same place. It is hoped that all on the lake who are interested in sailing skiffs will unite to make the association a success.

Elsemare, the schooner designed by A. Cary Smith for Jerome B. King, of New York, and built by John P. Smith, of Nyack, was launched on June 28. The yacht is a centerboard, 90ft. over all, 70ft. 1. w. l., 21ft. 2in. beam and 8ft. 6in. draft, of the usual wooden construction. Capt. Peter Darby will be in command.

The high speed steam yacht built last summer by Wood & Son of City Island for Hugh J. Baxter is just completed, and has been named Nada. The hull was very fully described in a recent number of the FOREST AND STREAM. The dimensions are 85ft. 9in. over all, 11ft. 6in. beam. The engines, designed by C. D. Mosher, are 8, 12 and 18x21in., and she has a Mosher boiler.

The Minnetonka Y. C. sailed a race on July 1 in which Onawa did not start. Alpha beat Kite, with Apakwa third. Mr. Dyer, builder of Onawa, has completed another boat for an unknown owner. She is 27ft. over all, 22ft. 6in. 1. w. l., 8ft. beam and 2ft. 6in. depth amidship, with an iron centerboard and a sail plan of 575ft.

The steam yacht Cadet has just reached Boston after a cruise to Chicago and return, some 4,000 miles, with a party of students from the Massachusetts Institute of Technology, under the leadership of Benjamin L. Collins, instructor in mechanical engineering, who planned and managed the trip.

The cabin cat designed by Philip Ellsworth and built by Capt. Louis Tonnas at Mariners' Harbor, Staten Island, for the Ellsworths, was launched on July 1 and christened Mary. She is a large, powerful boat, of the Cape style, and has a second centerboard in her deadwood aft. She will enter the races this week.

Barracouta, steam yacht, recently purchased in England by R. Wiltoughby Weston, is now in commission in New York waters. She arrived in New York on June 30, making the passage from Coves in 15 days 6 hours, in spite of some bad weather.

The report has been generally circulated and promptly denied that Mr. James Gordon Bennett has given the order to the Cramps for a steam yacht 80ft. long to steam 33 knots and to equal the new Vanderbilt. Valiant.

Linta, cat yawl, built by Fryor for J. W. Hill from designs by the Boston Yacht Agency, has been completed and launched. Fryor is now busy with a 10ft. steam launch for Mr. Goodyear, also designed by the Boston Yacht Agency.

A new boat has been built at Newburyport by Paul J. Lowell from designs by V. D. Bacon, of Barnstable, a Cape cat with the modern bow. She is 21ft. over all, 19ft. 1. w. l., 9ft. 4in. beam and 2ft. draft, with 800lbs. of inside and 1,000lbs. of outside ballast.

On June 24 the American Y. C. gave a lawn party at the club station,

Milton Point, a large number being present. The harbor was full of yachts, while many guests drove in from different points in the neighborhood.

Capt. Wm. McKay of Newburyport has completed a racing boat of the Alpha type, named Cornet, 30ft. over all, 19ft. 1. w. l., 8ft. 6in. beam, 1ft. 6in. draft. Her hoist is 20ft., boom 28ft., gaff 18ft. and bowsprit 6ft. outboard.

The Seawanhaka Corinthian Y. C. fared very badly on July 1, the date of its annual regatta, there being no wind all day, although there was a very good fleet of racing boats in the harbor. As it was calm on the Sound as well as inside, no attempt was made to sail the race.

In the event of the training ship St. Marys being put out of commission by the city of New York, Mr. James Gordon Bennett has offered to take twelve of the boys on his steam yacht Namouna.

New Jersey, steam yacht, recently purchased by H. M. Farr, of Leon Abnett, was burned at Holyoke, Mass., on June 29. The yacht was insured for \$5,000, or some \$2,000 less than the price paid by Mr. Farr.

We have to acknowledge with thanks the receipt of year books from the Hull Y. C., the Larchmont Y. C., and the Royal Nova Scotia Yacht Squadron.

Gadabout, str., the third or fourth yacht of the name owned by E. M. Fulton, Jr., has arrived at New York from Montreal, where she was built from designs by J. C. Beaver Webb.

Dare Devil, the open boat, once owned by the late Com. Dilworth, of the New Jersey Y. C., has been completely rebuilt at New Haven, and will be raced this season.

Comanche, steam yacht, has recently been fined \$100 by the collector of Chicago for an alleged violation of the anchorage regulations at that port.

Fanita, the Ellsworth sloop, for some years owned in Boston, has just had her rig cut down, the mainsail being reduced 4ft. in hoist.

The annual challenge cup regatta of the Portland Y. C. on June 19 had but two starters, Chaos and Lelia, the former winning easily.

The annual regatta of the Schoodic Y. C., of Calais, Me., was sailed on June 22, King Fisher winning.

Wanderer, schooner, is refitting at Lawley's Basin, and in accordance with the prevailing fashion will come out in a white coat.

Clytie, schr., has recently been sold to Partelow Bros., the builders, of Marblehead and Boston, who will use her themselves.

The annual regatta of the Corinthian Mosquito Fleet will be sailed on Aug. 26 off the club station, New Rochelle.

The June number of the *Century Magazine* contains a very interesting article on yachting in Florida, by Lieut. Henn.

Norah, sloop, of Belleville, has been rebuilt about the deck and a new cabin house.

Whim, schr., has been chartered through Hughes Agency to H. C. Daniels.

Alert, schr., has been chartered by John N. Luning to Geo. W. Weld, owner of Gitana.

The fifth annual regatta of the Yonkers Corinthian Y. C. was sailed on June 17.

## Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

### FIXTURES.

JULY.
1-15. A. C. A. Meet, Clifton's Island. 15-30. W. C. A. Meet, Ballast Island.
23. Red Dragon, Delaware River. 22. Toronto, International Paddling Trophy Race.
AUGUST.
11-26. A. C. A. Meet, St. Lawrence River.
SEPTEMBER.
2. Orange An., Arlington, N. J. Holyoke, Fall, Holyoke, Mass.
4. Ianthe, An., Passaic River. 16. Red Dragon, Delaware River.

### A Canoe Trip Through Iowa.

HAVING cruised down the Des Moines River in the spring of 1892 from Humboldt to Des Moines, a distance of over 200 miles, and having had such a pleasant time, the Des Moines Canoe Club (consisting of two members) decided to finish up the river this year to the Mississippi.

The fleet and crews were as follows: Canoe Dabchick, a 14x28 Racine veneer, crew Tack Hussey, and canoe Tumisie, a 15x30 clinker-built cedar, crew, the writer. We each had our canoe tent and outfit for a week's cruise, probably about 75lbs. baggage apiece.

We had arranged to start at 8 o'clock on June 13, but it was nearly 9 before everything was stowed and the word was given to go ahead. For the first half hour we drifted about in the rapids, and then, passing through the rap, passed the nine bridges and came to the mouth of the Des Moines. The day was very hot, and being our first day out, we both suffered considerably. The country through which we passed was very pretty, but was all, or nearly all, farm lands, with a fringe of timber along the banks.

There had been heavy rains north of us some two or three days before, and the banks were raised about 5ft., and had since gone down again, leaving the banks very muddy, and when the night came we had great trouble in finding a place where we could get our canoes up on shore, but finally we found a sandy beach, up which we carried our boats, and made our first camp under the shelter of a small grove of trees. After a good supper we felt better and turned in about 9 o'clock with the whippoorwills singing us to sleep.

Any one who has camped out will know how one feels the first night out. We got started about 7 o'clock and, against the tent, both a stray mouse will get inside and run over your face, and various other minor discomforts. And how, just as you have dozed off an owl will come and perch on a tree close by and awake you with a screech that makes your blood curdle, and makes you think a band of Apaches are after you. Anyhow, I thought that first night was terribly long, and I was glad when daylight came and it was time for us to turn out.

We got started about 7 o'clock and, against the tent, both a stray mouse will get inside and run over your face, and various other minor discomforts. And how, just as you have dozed off an owl will come and perch on a tree close by and awake you with a screech that makes your blood curdle, and makes you think a band of Apaches are after you. Anyhow, I thought that first night was terribly long, and I was glad when daylight came and it was time for us to turn out. We got started about 7 o'clock and, against the tent, both a stray mouse will get inside and run over your face, and various other minor discomforts. And how, just as you have dozed off an owl will come and perch on a tree close by and awake you with a screech that makes your blood curdle, and makes you think a band of Apaches are after you. Anyhow, I thought that first night was terribly long, and I was glad when daylight came and it was time for us to turn out.

During the afternoon we had a narrow escape from what might have been a serious accident. In asking information from a man we passed, we learned that the river was about three miles by going through a cut-off just below where we were. When we reached the cut-off and wide, so we turned down. After going about 50yds, it took a sudden bend, at the same time narrowing and rushing over a riffle. We then saw our mistake, and Hussey who was in the lead called to me to go back, but we found it easier to say than to do, and we were carried down, through rocks, stumps and trees at a quicker rate than we liked, but managed, about 30yds. down, to turn into an eddy and run to the bank, grasping the overhanging branches of a tree and holding on for dear life. Just below was an uprooted tree trunk right across the stream, and if we had failed to stop when we did we would have had the pleasure of being smashed to pieces. After about a half hour's hard work we got back to the main channel and we did not try again to save distance by going through cut-offs.

Late in the day we passed another quarry at Harvey; this is in operation, but not at present doing much work.

About 6 o'clock we found a good camping place and proceeded to carry up. Just as we had everything piled up in confusion we heard a shot fired some distance up the river and saw a large flock of pelicans coming straight toward us. I had with me a very light single 12-gauge gun which I had had made specially for canoeing, but unfortunately my ammunition was covered up, and I only had one cartridge left, and as the birds were so close I fired and hit one, but he only dropped behind a little. There were sixteen more.

Along this part of the river we saw abundance of quail, which are

very tame, and in several places I almost kicked them up. We also saw lots of wood-ducks, but we could not find a squirrel or anything to shoot. Turkey buzzards, owls, hawks, eagles and other such birds were plentiful.

Thursday morning we got a good start, both feeling considerably better than the previous day, having had a better night's rest. We still had heavily timbered banks on both sides, with an occasional clearing. During the forenoon we came up to a pelican which appeared to be partially crippled, and was probably the one I hit the night before. After chasing him about two miles he got away without my getting near enough for a shot.

About two we reached the town of Eddyville, where we stopped for about an hour to get supplies. We had quite a crowd down to see the canoes, which were great curiosities to the people all along the river, the only boat which the majority had ever seen being the home-made, flat bottomed variety, which usually leaked so much that it was necessary to take along a man just to keep bailing out. The questions they asked were innumerable and very often hard to answer. A small brass boat-hook which I carried was the cause of considerable conjecture, most of them thinking it was a new kind of fish spear. They hung around till we pushed off, and even when we were half a mile down stream, we looked back, and they were still watching us from the bridge. Just below the town we came upon one of the native boats, a barefooted, flat-bottomed canoe, the crew consisting of two men, and finally declared that he'd be "g'one" if he didn't have one of them things before next spring. But after hearing the probable cost of one he was not quite so much inclined to talk.

Along in the afternoon we passed an excursion party from Ottumwa in a small stern-wheel steamboat and had pressing invitations to stop awhile, but the long delay would have been enough for us, so we excused ourselves. Good evening spent very pleasantly at Ottumwa, and it was past seven when we found one to our liking. It was on a small island, and in running in we both had narrow escapes from an upset; Hussey getting jammed on a sunken log, and I being swept by the current sideways on a rock. But we finally got camped, and after a hasty supper turned in. We were disturbed later in the evening by the excursion party mentioned above returning home. They were shooting off guns and making themselves pleasantly noisy in general. What queer ways some people have of enjoying themselves.

Next morning we paddled down to Ottumwa, about 6 miles. The river for 5 miles above the city is very pretty, being very wide, and hardly any current. It is a beautiful piece of water for boating purposes, and I am surprised that there is so little interest taken in the pastime. We found that the dam here, which is a fine one, was not to be shot safely, and that the water was very long, so we hired wagons and had our canoes hauled round, and after partaking of a square meal for a change, and transacting what business we had to do we prepared to depart.

Rather an amusing incident occurred just as we were getting ready to start. We had unloaded our canoes, etc., from the wagons close to the bridge, and were carrying them down to the water, a good-sized crowd looking on, when a policeman made his way up to me and asked me if we were the two fellows from Des Moines. I said yes, and he then said that the sheriff at Des Moines had telegraphed to stop us. I was rather surprised and somewhat annoyed, as the crowd had heard the conversation and were passing remarks freely. After a little talk we found that the policeman was a little too previous. The sheriff had given Hussey the description of an escaped prisoner who was supposed to be in hiding somewhere down the river, asking him to look out for him, and having captured him in some other direction, to send him safely to the town of Ottumwa, where he would be notified of the fact. It was about 1 o'clock when we left Ottumwa, and from there down to the town of Eldon, which we reached at 5, the country is nearly all cultivated right up to the river. Eldon, as seen from the river above us, is a very picturesque little town, built on a high bluff, surrounded by thick timber. From here on the river banks were mostly timbered. That night we camped in the corner of Davis county.

Saturday morning we passed several small villages in Van Buren county. Near the middle of this county the river takes a bend in the shape of a horseshoe, the distance round being about sixteen miles, while across from the entrance to the finish by land is only two and one-half miles. Keosauqua, the county seat, is about half way round the bend, and we reached there about 2 in the afternoon. The town is a very quiet, comfortable place, and the country around it is a great many farmers in for market day, there was no one to look out for us and get a meal, but none of the restaurants would take the trouble to cook us one at that time of day, though most of them were doing nothing, so we made our purchases of ice and supplies for Sunday and shook the water off our paddles on the place and departed.

Below Keosauqua the river grew more picturesque, one bank rising about 100 feet above the water, and the other being low, with a heavy growth of timber, occasionally interspersed with fine farm lands, showing a prosperous country. About 5 o'clock we found an ideal camping place and proceeded to make special preparations, as we intended laying up all Sunday. The place we chose was a grass-covered bluff, about 30ft. above the water, well shaded, with a high hill sloping up behind, covered with thick trees; the river was in a crescent-shaped, we in the center of the arc, giving us a view both up and down for about two miles. At the extreme point in sight, two miles below, were two villages, Bonaparte on one side and Vernon on the other, looking very pretty with the white houses and churches thereon in relief against the dark green background of a high bluff. We enjoyed a very quiet Sunday, lying in the shade and resting. In the afternoon we had quite a number of visitors from the surrounding country.

Monday early, feeling greatly refreshed with our long rest, we started about 7 o'clock, and shot the remains of a dam, no very difficult feat, but still just enough to make it interesting. A little before 9 we reached Bonaparte, where we found a high dam, around which we had to carry. At this dam there is no fishway, and we found men engaged with huge dip-nets catching an enormous quantity of fish; but the most of the catch is carp—not worth much. This day we had the fishing for all the river above, and the parties owing it should be made to put in a fish at Bonaparte. The country is quite a lively little place, the most businesslike town we found on the river.

After leaving Bonaparte we passed through a wild-looking country, rocky and heavily wooded. Farmington was reached by noon, and we stopped awhile for supplies. As usual, we had a good-sized crowd looking on, and we had to answer the usual questions. A few miles below we came to the State line between Iowa and Missouri. Some distance down we passed two villages, one, Croton, on the Iowa side, and the other, Athens, on the Missouri shore. The latter is completely deserted. At Belfast, a small station on the Iowa side, I stopped to buy some butter which we had forgotten. The first man I met was sitting on a fence whittling. I asked him if there were any stores there, and he said, "Yes, two; and asked me what I wanted. I told him, and he said, "Well, I give the fish to the store, and I will get you some." I thought that was a good way to sell goods.

That evening we had the worst luck in finding a place to camp, and it was past eight before we found one. A heavy storm was coming up and fast and things looked very bad for a while. We hustled round and made camp in a great hurry; just managed to get supper when the storm broke, but the rain was so heavy that we could not get out of camp, leaving us to sleep comfortably under the stars. Tuesday morning we paddled down the remaining fifteen miles or so of the Des Moines. The country was not at all prepossessing; flat, sandy and uncultivated. After reaching the Mississippi we had about four miles up stream to paddle to get to Keokuk, which we reached about 10:30 A. M., thus making the trip of over 300 miles in a week.

After spending the day looking around the town and the Government canal, etc., we put our canoes on board the cars and next morning found ourselves back home again in Des Moines, feeling greatly benefitted by the outing, and promising ourselves another trip in the future.

WALTER WEATHERBY.

### The W. C. A. Meet.

CHICAGO, Ill., July 1.—Messrs. O. A. Wordworth and Nat Cook, of Dayton, O.; Messrs. E. H. Holmes and W. Gregg, of Milwaukee, and others of the Western canoe men are having a little reunion in Chicago prior to their big reunion at Ballast Island a couple of weeks later. The latter two gentlemen, together with the full quota of the Mahrawaks, of Milwaukee, will start a few days in advance of the opening day of the meet, leaving Milwaukee by lake boat for Detroit. From Detroit Commodore Davis takes them on his yacht down the river and across Lake Erie to Ballast Island. In this very pleasant trip the members of the Chicago C. C. are invited to join. All things point to a large attendance at Ballast this month. E. HOUGH.

### Atlantic Division Meet.

The meet of the Atlantic Division A. C. A. is now in progress at Clifton Island, near South Norwalk. A large number of canoeists were present over July 4. Vice-Com. Lake was very unfortunate at the beginning of the camp, falling down stairs in a small farm house on the island which is used by the canoeists. The fall dislocated his shoulder but he continued in camp, the parts being set in plaster. The annual meeting of the Division for the election of officers will be held on Saturday, July 8, at 8 P. M.

### A. C. A. Prize Flags.

CONTRIBUTORS have been received since last acknowledgment, as follows: Paul Butler \$5, Brooklyn Canoe Club \$5.

### To the Ten Thousand Islands.

TARON SPRINGS, Fla.—The Spring had been busy all winter, and the winter was gone. The warm spring days made him think that a change was absolutely necessary. When the skipper of the Knapp suggested a trip to the Ten Thousand Islands, nothing loath, he consented. The Knapp and the Kingfisher were soon ready. The Knapp is a Rushton cruiser and the Kingfisher a sharpie yawl.

Stores were put aboard, water kegs filled and on a clear morning in May the fleet hauled out for the Springs. The Topsey, with Capt. C. and Com. P., escorted them to Bird Island, where with a good-bye blast of the horn we turned our bows to the southward. This is to be a happy-go-lucky cruise, as far and as long, stop where please, and start when we get ready, the prime object being health and recreation. The party consists of Mr. and Mrs. K., Mr. Henry Penniman and the Scribe.

We turn down toward Hog Island, the wind is fair, the Topsey is just disappearing around Bird Island, and now the world is all before us.

Our old stamping ground, Hog Island, looks green and cool, but we have no leaning toward it now; it is too near home. The breeze freshens, the white caps dance, the two boats speed along with started sheets and all the wind they want, and the two crews are happy as lords.

Noon finds us headed into the narrows, and 2 o'clock found us in disgrace, stuck on the flats. The night was cool and sleepful with no insects to annoy, and we made as pleasant a night as one could ask. In the morning away again, making a short stop at Indian Pass for dinner and again away. Through Boca Cuya Bay, past John's Pass, Bird Pass and Pass-a-Grille. We round Pine Key on the inside, just getting a glimpse of Dr. Edgar's Cove, and then the bay so that it opens out in all its beauty. The wind drops fast, we just manage to reach a sheltered anchorage under Mullet Key and the wind is all gone.

By the time our supper was ended, the festive mosquito had put in an appearance. However, we managed to circumvent him and made a pleasant night of it. Made an early start, but for several hours had hardly any wind; the fleet carried us well up the bay so that when about 8 A. M. the wind came out the S.W. strong, we had a nice little brush to windward to make Sarasota Bay. Getting dinner off Palmarola Bay, we pushed on making a fine run, which brought us to near Indian Beach.

In the morning made a call at the Palms, a place kept by Mr. and Mrs. Jones of the Passa. Here it was discovered that the Kingfisher had some water. A little investigation showed the leak to be a seam in centerboard case. The boat had been idle all winter and consequently the above-water parts had dried so as to let in a little wet. This was soon cured, and pushing on we made a dash for the Mangroves. Now if any future cruisers contemplate a run through the Mangroves I would say, don't. On this particular occasion Mr. K. had signified to the Scribe that he would not go through the Mangroves, so we went through. Four o'clock P. M. found us in the pretty little inlet called Little Sarasota Pass, one of the best fishing points on the Gulf of Mexico.

Next morning with light air from the east we push out and start on our twenty-six miles run down the beach to Stump Pass for dinner, after which we up anchor and run up to Johnson's. Everybody knows, or should know, where Johnson's is, so we slipped out and into Gasparilla Pass, made a fine run up the bay, and came to under some keys near Boca Grande. It blew heavy all night.

Next morning we make a call on Col. Lewis, the proprietor of a noble pinery on the east shore of Lemon Bay. The Colonel and his good wife were at home, and when, after a look at his fine pineapple ranch and a social chat, we started for the Cut-off, it was with genuine regret that our stay could not be longer. The Cut-off is another of those places that Mr. K. wanted to see, but fate was against us, or rather the tide was too low. After trying in vain to get through we turned and ran into and down Bocilla Pass. This is a small pass just below Stump, the channel runs just inside and parallel to the beach for several miles, the water is of uniform depth (about 6 ft.) and clear as crystal. The wind hauling ahead as we neared the mouth of the Pass, we decided to come to for a run on the beach, and a hunt for turtle eggs. We found two schooners at the Pass, bound for Key West, and incidentally trolling on the way. We did a little fishing and idled away the time to our mutual satisfaction.

Went on the beach next morning and met the crews of the schooners, they had been out all night and had turned three turtles. Weather looked bad, but after dinner brightened up, so we slipped out and into Gasparilla Pass, made a fine run up the bay, and came to under some keys near Boca Grande. It blew heavy all night.

Morning, still blowing heavy. Fished a little, no luck; some very heavy squalls, and toward night some rain. Took dinghy and pulled over to interview some fishermen. Prowling round in the small boat we got caught in a shower and wet through. Nothing but fresh water; won't hurt.

Cleared away some time in the night, and after breakfast we started across Boca Grande. Quite a sea on from the wind of the past twenty-four hours, but nothing to hurt.

Ran down to Mondongo, made a call on Capt. Spearing and wife, whom we found as pleasant and social as ever. We took a long walk through interior of this island, rather a pretty place, but there are many insects. Capt. Spearing took us to the place where reports say there is buried treasure as the Captain has not tried it yet. I suppose he is reserving it for a rainy day. Left Mondongo about 10 A. M. for St. James, where we arrived about 2:30 P. M. St. James, it will be remembered, is the famous tarpon headquarters, but alas! it is one of the has been, and to-day is duller than a last year's almanac. We went ashore, mailed some cards, and after a look around pushed out for Entero, some seven miles away. Made the run in grand shape and went on down the bay to Gilbert's. Went ashore in the evening and had a jolly time. The Gilberts are old friends of ours and we appreciated their kind greeting.

Here we filled some fresh water in the morning, and went on down to "Petty's," a short distance from Canlo's Pass. Here one of the early was acquainted, and as a consequence the whole place received a royal welcome. We found Mrs. McL. at her best and as cheerful and gracious as ever. Walked out to the beach with Mr. Petty, passed through some very fine hammock; there is good land here, but how any one can stand the insects is a question. Entero is quite a large island, with much good land, and will grow almost anything. Messrs. Gilbert and Petty ship large quantities of tomatoes and other garden truck.

Just inside Canlo's Pass is Mound Key, owned and occupied by a Mr. Johnson, who has some reputation as a guide for the Ten Thousand Islands.

We hardly thought best to make a stop at Mound Key, and so ran on past it and down to the lower end of Entero Bay. Here is a small passage called the Auger Hole, by which boats can go through to Surveyor's River, a fine stream and good water at the entrance, and indeed all through the Auger Hole there is plenty of the finest oysters, and although there was no R in May, we found them delicious.

The Auger Hole is very narrow, very crooked, quite deep in places, shallow in others, and owing to the overhanging bushes somewhat difficult to navigate. Still Mr. K. had signified a desire to go through, and through we went. Mr. K. made the remark afterward that although he was not sorry he went through, it did not want to try it again. From Surveyor's River one can keep down through a tangle of mud flats and mangroves and come out at Wiggin's Pass. By turning up the river one can go up into the Everglades.

There is some very fine land near the headwaters. Soon after the war a company from Alabama started a sugar ranch, put up cabins, store houses, mills and everything necessary, but in a few years had to give it up on account of the difficulty of transportation and getting labor. At this time there are only two men living on the river, one a Swede and the other a native.

After we had passed the Hole we hove off for the beach. When we came out at Little Hickory Pass, where we could see blue water and get the pure air right from the Gulf, we were happy.

At Little Hickory we found a large turtle turned on the beach and places where some one had been digging eggs. We were now away from home long enough to show some peculiarities. The captain of the Kingfisher begins to quarrel with his cook and Mr. K. develops an insane craving for angel wing shells.

During the night at Little Hickory both boats got aground. Mr. K. and the Scribe had a nice bath trying to get them aloft. Made an early start this morning. Wind S.E., very light. Once fairly outside wind howled ahead and commenced to blow. As there was very heavy swell from the S.W., this was uncomfortable, and we ran into Wiggins Pass.

Here we found two sloops, one the Lillian, of Tampa. Both were turtling and had been quite successful. It blew heavy all day. Mr. K. had a severe attack of shell fever, and captain and cook of Kingfisher at loggerheads as usual.

Blew hard all night and sunrise brought a cloudy morning. Strolled on the beach, saw the turtles at work, fished, and otherwise amused ourselves. About 5 P. M. commenced to rain. Rained at intervals all night.

Next day lightened up a little. Had frequent squalls through the day, growing lighter all the time. Comparatively quiet night, and in the morning lightened up a little. The heavy swell, but we got along. Made Little Marco at noon. Run down by Big Marco and ate dinner in the shade of the cocoanut grove. Big Marco is quite a place, one of the finest harbors on the coast, and some land as good as Florida contains.

Capt. Collier, the genius of the place, is port master, store keeper, ship builder, etc. He is an old acquaintance of the Scribe's, who has always found him square. After dinner our camera friend donned his

weapons and went on the war path. Mr. K. sat and mourned because he could find no angel wing shells and Mrs. K. and the Scribe went up hunting paw-paws, sapodillos, tamariños, etc.

Capt. Collier has a fine boat shed here; he builds many small vessels. Big Marco is about at the northern limit of the Ten Thousand Islands. Some of the islands are quite high and have small patches of very good land. There are many settlers scattered about through them who make a fair living, bird hunting, alligator hunting, raising garden truck, cutting wood for the Key West market, etc.

Capt. Collier has several schooners that make regular trips through the islands and to Key West, carrying tomatoes, fruit, wood, and whatever the people have to send to market.

After spending a pleasant day and night at Big Marco, we start through the inside passage for Coon Key. It is only twelve miles, but we have a head wind all the way, and a head tide part of the way, so that when we get there we are ready to come to for the night. There are harbors in plenty and one has not far to look.

Morning again; an uncertain look about the weather, but after breakfast we push out and lay our course for Panther Key; that is, we tried to, but the wind headed us off till it became a dead beat. However, we made it in good season, but none too early, for the weather looks badly; is looking worse all the time.

The Kingfisher, being the fastest sailer, made the island first, but as the skipper did not know the harbor he went on the wrong side of the island, but that was nothing, he only had to come back again, and we are out for sailing.

Our object in visiting Panther Key was to see the oldest man in America, John Gomez, who, with his wife, has lived here some seventeen years. He claims to have been born in 1781, and no one who knows him doubts the statement. He is hale and hearty and apparently able to take care of himself for years to come. I have met many people who have known Gomez for some forty and some fifty years, and they told me that he was Old John Gomez when they first knew him.

Old John served in the Seminole War, and also in the Civil War. He is as full of stories as an egg is of meat, and it is a treat to hear him tell of some of his adventures in the days long past. His wife is a very pleasant old lady some 70 years old. She told me one day that when she married Gomez, some 50 years ago, her friends took her to task for marrying an old man. Now she says, "My husband is tough and strong, while I am an old woman. The old man goes fishing, turtling, alligatoring, and does much work that would puzzle a younger man. The day before we came he had gone out and got four large turtles, putting them into the boat alone, and then pulling home some 7 or 8 miles.

Our photographer, Mr. Penniman, made some excellent pictures of the old couple, the house, etc., and true to the life.

We had some bad weather here, with frequent rain squalls, which decided us we had better head north again.

Had the weather continued good we should have gone further south, perhaps as far as Key West, but with rain squalls and calms it was time to think of home.

We stayed three days with the old man, and they were days that will be remembered for as long as we can remember anything.

THE GOMEZ ROOF TREE.

Made an early start on the back track, took dinner at Coon Key, and reached Marco at 4 P. M. Here we bought a few stores, and the next morning said good bye to Marco, its cocoanut groves, its sapodillos, its mangos and its millions of mosquitoes (who all urged us to stay), and bore away for home. We made a fine run to John's Pass, just below Gordon Pass, where we were stopped by bad weather. Starting the next morning with a very light wind we made a fine run past Gordon Pass, Naples on the Gulf, Hickory and Carlos Passes and anchored early in Estero. Here the mosquitoes were bad, the Scribe had sweated under his hat until midnight, and had finally got asleep the next morning. As the Scribe poses his head out he wears a sail flap, and the voice of Mr. K., "I can't stand this, I am going to sleep." "All right," says the Scribe, "I'll find you to-morrow somewhere," and crawls back in his bar.

Morning comes, mosquitoes disappear, and the Scribe crawls out as naked as he was born. A glance over the side shows the water clear, and with a splash he is in it. How good it was and what a fine bath the Scribe had for himself. Then a brisk rub with a towel, a light breakfast and the Kingfisher is poking her nose out the pass, a fair wind and a straight wake for St. James, where the Scribe expects mail. As the Kingfisher nears the wharf the Knapp is seen creeping up from under Sanibel; they meet at the wharf, and it is unanimously voted that Tarpon is the place they all want to see.

Off and away again, through fair winds, head winds and calms, they work up to Captiva, where the Scribe stops long enough to fill a sack with shells for his best girl, and away again.

Across Boca Grande and up to the Four Brothers, where they anchor for the night. Just in time. They were only fairly snug when there came a lively squall from the N.E., gradually hauling to the south, where it blew itself out and left us in peace for the rest of the night.

Morning again, and a fair wind down the bay to Little Gasparilla, the Kingfisher goes out and into Bocilla, while the Knapp holds up for the Cut-off. They soon came together again in Lemon Bay, Kingfisher going down to look at Stump Pass, so as to be able to get out early, the Knapp going over toward Col. Lewis's.

They meet in the evening for a visit to Johnson's, and early next day push out the pass.

This was a grand run. The 30 miles to Big Sarasota was covered before dinner, and the party felt as if they were 'most home. After noon the wind hauled ahead. The boats beat up to Buttonwood Harbor and came to for the night. A heavy squall at night, but fair wind in the morning, and we are away, headed for Tampa Bay. Across the bay at noon. Get dinner at Pass-a-grille and with varying wind work up by Johns Pass and come to.

Day brings a fine breeze from the southward. We go through the Narrows, get dinner in the mouth of the river, and at 3 o'clock we are home, brown as berries and happy as kings.

Go thou and do likewise. S. D. KENDALL.

### Racing Courses for Sailing Canoes.

Editor Forest and Stream:

A regatta committee is always torn with conflicting emotions, whether to lay out a sailing course for the benefit of the spectators or to so place their buoys that the best race can be had of the merits of men and boats. The usual half-mile sided triangle is a spectators' course, pure and simple. The canoes are in plain sight all the time from the starting point, and the whole fleet can be watched with ease on all points of the wind, and every sail is a part of the picture. It is very pretty and interesting to watch, but mighty unsatisfactory to take part in. The larger the fleet is the prettier the picture and the more unsatisfactory to the men. Several times I have seen a half-mile sided triangle as a course for a large fleet, such as sails in the races at the meets every year, has been shown again and again in these columns. The trophy race at last year's meet illustrated it very emphatically, when Oxholm and Butler had such a close tussle for the cup, which Butler finally won, simply because he got a slight lead at the start and his rival could never pass him, though he was next to a race's post of view.

The races at the Marine and Field Club regatta on June 25 were sailed over a course having miles; and it proved to be perfectly satisfactory in every way, from the contestants' point of view. The windward work could not be done in one tack to advantage, and therefore the men split tacks and did not interfere with each other; and not once did it occur that the man first over the line at the start won. The advantage of a good start is great in any event; but on such a course

the others have some chance of passing the one in the lead. All can not get over the line at the start first, or even together, and even the best sailors cannot get the lead every time. A large fleet can start on a mile beat dead to windward, and each man have an even chance to win without hindrance from the others.

A six mile race is better than the customary one of four and a half miles, as was shown also by the races above alluded to. The longer the course the more chance for variation in the force of the wind, and consequently the better is the test and fairer the race. Will you arrange your course for the onlookers or the racers? That is the question. The nine mile trophy race last year only took a little over an hour and a half to sail—surely a short enough time for any race to take. C. BOWEN VAUX.

### Marine and Field Club Regatta.

BATH BEACH—GRAVESEND BAY.

Saturday, June 27.

The fifth annual canoe regatta of the Marine and Field Club, held off the club house, Bath Beach, on June 27, was by far the most successful event of the season, but at the same time the racing was by no means up to previous years. While some well known men were present, there were no new canoes, and nothing specially novel in fittings and rig. The small advance of late in canoe building is shown by the fact that Mr. Butler is still sailing Wasp, an old boat, while Mr. Goddard has Bee, another old boat now, and the original Eclipse, built in 1888, is still in the racing and probably as fast as any canoe afloat. During the past winter Capt. Ruggles took her in hand and replaced the old deck and long open cockpit with a handsome new deck and bucket well, leaving the lines of the hull unaltered, but making some improvements in board and fittings and strengthening the hull to carry a sliding seat, for which it was not originally intended. As a result Eclipse was a much improved boat, and anything she could do in the two years. The only notable new boat was the Damocel, designed by Gardner for Mr. Whitlock and built by Stevens last year, but not sailed until this season. She is somewhat like her predecessor, Bubble, but has a deep keel approaching a fin in the middle, through which two centerboards drop, one forward of the other. Just before the regatta the canoe was taken to Ayers' shop and a scag of sheet brass added, to carry the fin further aft, and in consequence she required the larger sail aft. Mr. Vaux is this year sailing the bulb centerboard canoe Pioneer, built by Captain Ruggles last year for Mr. H. C. Warr, with a lead cigar pivoted on the lower corner of the centerboard so as to house when the board is raised. Mr. Howard is still sailing Aztec, but has lately made some changes, shifting the board and seat forward. The other canoes are well known to all canoeists. Quite an interesting race was looked for from the large fleet of new "Scarecrows" and other similar craft, La Gloria, La Puca, Fin-de-Siecle, Scarecrow, Viking, Goblin and the new Ruggles canoe yawl Infanta, but only three or four of the boats were in condition for racing, the others being not yet fully rigged.

The first event was the senior sailing, two rounds of the three-mile triangle in Gravesend Bay, with eleven entries, of which only seven started. Wasp, Paul Butler, Vesper, Lowell, Mass.; Bee, D. S. Goddard, Vesper, Lowell, Mass.; Torment, F. C. Ozer, Knickerbocker C. C.; Eclipse, F. L. Dunnell, Brookline, C. C.; Aztec, W. W. Howard, New York C. C.; Damocel, Wm. Whitlock, Marine and Field; Pioneer, C. B. Vaux, Marine and Field.

The day was clear and warm with a puffy N.W. wind. Pioneer had the best start but Wasp soon took the lead and held it throughout the first round and well through the second with Aztec second. On the last leg a shift of wind favored Aztec and she ran up to first place and won. Wasp was 13s. astern and Bee third.

In the cruiser's race only three boats started, La Gloria and the two new boats Goblin and Viking. These two are identical in model and rig, but Goblin was the better sailed and in better condition and won very easily.

In the club representative race all the entries turned up except Bartington of the New York C. C. and Vaux in Pioneer took his place. The course was two rounds, in a light N.W. wind with puffs at times. The order at the end of the first round was Wasp, Pioneer, Torment, Eclipse, Damocel. Wasp finally won with Torment second and Eclipse, Pioneer and Damocel in order.

The principal race for the Marine and Field Cnp. to be won twice in succession, was sailed over the same course, the wind now being quite strong at times but still N.W. The starters, out of eleven entries, were Aztec, W. W. Howard; Bee, D. S. Goddard; Eclipse, F. L. Dunnell; Pioneer, C. B. Vaux, and Torment, Schuyler Schieffelin. Bee led until the third leg of the second round, the first leg being a reach, the second a run, and the third to windward, but while Bee had a good weather berth at the last leg, the wind jumped suddenly around to S.W., blowing quite hard, and sending the fleet home free with booms alternately dragging in the water and lifting to the masthead as the little craft rolled. Most of the men had all they wanted to keep on top of their boats, but Mr. Goddard, after a preliminary capsizing and fighting with some difficulty, handled Bee beautifully, keeping her steady all the while, he had lost too much, however, and finished just a minute astern of Torment.

It was now after 6 o'clock and the water was quite rough under the freshening breeze, so the four-paddle race was postponed for a time, but was finally started just before 8 o'clock. Only two crews entered, one from the Lanthé C. C. and one from the Bayonne C. C., the former leading from the start and winning by about three lengths. When just over the half mile at the finish the Bayonne boat capsized, causing some excitement, as it was known one of the crew could not swim, but he was aided by the others until the judges' boat reached him. Taken altogether the regatta was a success and furnished a good deal of amusement to the many canoeists and ladies who were present. The officers of the day were: Referee, James R. Lake, Vice-Com. A. C. A.; Starter, J. F. O'Shea, Knickerbocker C. C.; Clerk of the course, J. C. M. Wadsworth, New York C. C.; Regatta Committee, W. S. Elliott, Chairman, Arthur Hurst, C. Bowyer Vaux.

### The Eastern Division Meet.

HADDAM ISLAND, JUNE 10-19.

The division meet of the Eastern Division of the American Canoe Association was held as per programme from June 10 to 19 at Camp Winne, Haddam Island, Connecticut. River. Canoeists were present from the various New England clubs, among them Messrs. Barney, Butler and Lawson. Mr. Winne came over from Albany, Mr. W. W. Blow, of Oakland, Cal., was present, and also Messrs. C. V. Schuyler, of Arlington, N. J., and D. B. Jaques, of Toronto. Vice-Com. Parmelee was in command, Mrs. Parmelee also being in camp with the pet cat Winne, of the last C. A. meet. Treasurer Lewis had charge of the arrangements and Mr. A. Wadsworth was signal officer. The races were held on Saturday, the results being:

Hurry scurry:		
H. D. Banks, Springfield C. A.	1	
F. J. Burrage, Newton B. C.	2	
John F. Linder, Newton B. C.	3	
Standing paddling:		
H. D. Banks, S. C. A.	1	
John F. Linder, N. B. C.	2	
Hand paddling:		
G. B. Smith, N. B. C.	1	
H. D. Banks, S. C. A.	2	
F. J. Burrage, N. B. C.	3	
Visitors' race:		
C. F. Schuster, Holyoke C. C.	1	
H. M. Smith, Middletown, Conn.	2	
One mile straightaway:		
C. A. R. Eason, S. C. A.	1	
W. S. Warren, S. C. A.	2	
A. H. Crosby, Hartford C. C.	3	
Tandem:		
Drake and Burrage, Newton B. C.	1	
Warrior and Eason, S. C. A.	2	
Cheney and Morrell, Hartford C. C.	3	
The two sailing races were won by C. F. Schuster, of Holyoke, Mass.		
At the annual meeting of the Division the following officers were elected: Vice-Com., F. H. Barney, Springfield; Rear-Com., C. F. Schuster, Holyoke; Treasurer, E. C. Knapp, Springfield; Executive Committee, Dr. G. L. Parmelee, Hartford; Paul Butler, Lowell; R. Apollonio, Winchester.		

### A. C. A. Notes.

Com. Corron has gone to the Northwest on duty and will be absent until July 5.

A great deal of enthusiasm is being manifested in Kingston over the coming meet.

The Catarqui C. C. is determined to give the A. C. A. men a royal welcome.

The regatta committee is trying to arrange a war canoe race. Montreal has five war canoes, Ottawa two, Toronto one, and as transportation from these places is easy, a race ought to be put on without much trouble.

Skiff racing is the sport on the St. Lawrence now. An effort will be made to have the St. Lawrence Skiff Racing Association put on a race during the meet. Such a race will prove an interesting feature to a great many members, who have never seen a crew of six men in a skiff, skiff carrying 500 sq. ft. of canvas.

It is hoped that the division meets in the Atlantic and Eastern divisions will not interfere with the general camp. The World's Fair is not going to prevent a successful gathering.

Mr. J. W. Sparrow has had a new canoe built in Peterborough and says he will get the record this year or know the reason why.

Mr. K. A. Cameron, of Kingston, has completed a canoe built for the most part by himself from his own designs. She is a good model and beautifully finished. Mr. Cameron had much experience in skiff racing and may prove to be a dark horse in August. The fact that he lost his right arm some years ago does not interfere with his management of a boat, nor does it prevent his accomplishing a task that would back a good many men with two hands, the building of one.

CANOE NEWS NOTES.

The territory of the Atlantic Division of the American Canoe Association, including parts of the States of New York, New Jersey, Pennsylvania and Maryland, is blessed with a variety of canoeable waters that could hardly be surpassed, including everything from the mountain brooks of the Alleghenies to the open expanses of Delaware and Chesapeake Bays, and even the great Atlantic itself. Of them all, salt and fresh, there is none that offers a greater charm to the canoeist than the Delaware River which, in its length of over 300 miles, passes through every stage of growth from the shallow mountain rill to the wide open roadstead of Delaware Bay. The lower half, from Trenton downward, is best suited for the sailing canoe or canoe yawl; but from that city to its source the river offers untold charms to the canoeist of every type. The river is so beautiful, its banks so fertile and its waters so pure, that it is not only a pleasure to sail upon it, but a pleasure to live upon it. The story of the river is a story of the river's history, its beauties and its dangers, and its many charms, is told in "Two Hundred Miles on the Delaware River," written by Mr. J. Wallace Hoff, of Park Island Canoe Association, of Trenton, N. J., and published in a neat octavo volume of some 200 pages. The cruise was made in the summer of 1891, by a party of five, one of them being Sec-Treas. Carlisle, who is well-known and highly esteemed by A. C. A. men; starting from Hancock, N. Y., and running the many riffs and falls for which the river is famous. The story will be found interesting by all cruisers, and is particularly useful as a guide to those cruising on the river. Mr. Hoff has condensed into a separate chapter a great deal of the early history of the region and its Indian inhabitants.

Canoeing, a sport which was at one time very popular hereabouts, has completely died out, and is fast being forgotten. Several years ago the Pittsburgh Canoe Club flourished, and was one of the most prominent athletic organizations in the city, but gradually the members began to lose interest, till now even its name is scarcely ever mentioned. The waters about Pittsburgh are not adapted to kill the sport, and this perhaps more than anything else has tended to kill the sport. The current is too swift and then there are too many puffing steam boats going back and forth. Still, since the building of the Davis Island Dam, a very material improvement in the water is noticeable. Another thing that was against canoeing is the great distance between Pittsburgh and other cities interested in aquatic pastimes. Taken together it was too much for the club, and like many another organization with perfectly good intentions it was compelled by force of external circumstances to pass into oblivion.—Pittsburgh Dispatch.

The canoe clubs, the Trenton, Kwonoshe and Unamus, have been ordered to move their club houses from below the upper Delaware Bridge, that the construction of the sea wall may be commenced. They have twenty days in which to move, and it is understood that when the wall is completed they can not return. The canoeists are somewhat indignant over this action. Below the bridge is the only place on the river where a club house can be built to stand all the year round, safe from freshets and storms. The canoeists claim also to have several thousand dollars worth of property stored in the houses and think it wouldn't be safe to move them to the Pennsylvania shore, the next best place without a watchman night and day, which would entail an expense greater than they care to pay.—Trenton Advertiser.

We have lately been visited by two old friends from the West, Com. Blow, of the Oakland C. C., who was at the 1887 meet; and Mr. Charles Fox Gardiner, formerly of New York, one of the handful of canoeists present at the organization of the A. C. A. at Lake George in 1880. Mr. Gardiner is now living in Colorado, where he is practicing as a physician, and still spends a part of his time in camping and hunting, the nearest approach to canoeing that is possible here. Com. Blow has been visiting the East for his health, and has been at most of the recent canoe gatherings. Last week he sailed on a short trip to Europe.

Dr. Douglas, of Canada, has brought to the exposition an invention in the shape of a canvas boat, which he will exhibit as an improvement over the present style of boat used on sea and lake-going vessels. He sailed to Chicago in it from Collingwood, a distance of 500 miles, and arrived here Sunday evening. One of the claims made by Dr. Douglas, who is an ex-army surgeon, is that it can't be sunk, and he believes it should take the place of the old style for the reason that it can be rolled up and put in a small space out of the way.—Chicago Tribune.

We have received from A. S. Comstock of Evanston, Ill., a new catalogue of tents and fittings, including the iron tent pin recently patented by him and also a very convenient carry bag. The tent pin appears to be just the thing needed, and it is reasonable in cost and indestructible. The Protean tent has been tested and generally approved by canoeists.

An English caricaturist represents Mr. Gladstone as a canoeist with a bare head and arms, seated in a decked Canadian canoe which is named Home Rule, with a shamrock on the bow. The canoe is poised on the edge of a steep fall and the motto of the picture is "And After?"

Purser Dunnell has sent out a notice giving particulars of transportation to the A. C. A. meet and requesting to be notified of canoes and duffle for which room will be needed in a special car.

Mr. C. E. Archibald, of Montreal, has this year a new "Mab," designed and built for him by N. Gilbert of Gananoque. She has an outfit of three interchangeable sails, by Hemmenway.

Rifle Range and Gallery.

Give Us a New Target.

NEWARK, N. J., June 30.—Editor Forest and Stream: I was much interested in the article published in your last issue from the pen of Mr. E. H. Lahee, of Alton, Ill. Mr. Lahee hits the nail on the head when he intimates that American riflemen should have a uniform form of target in order that accurate comparisons of scores may be made. Mr. Lahee says his club uses the old Massachusetts target for out of doors and the Zettler target for gallery shooting. In New Jersey and the northern portion of New York State the shooting on out of doors ranges is done on the American standard and the German 25 (3 in.) ring target. The former, like the Massachusetts, has an 8 in. black, while the German ring-target has a 12 in. black. At Walnut Hill range the American Standard is the only recognized target.

Under certain weather conditions, for instance when the light is a perfect gray (seldom found), the 8 in. black is perhaps a good sighting object, but that it is excessive trying to see the eyes even a shooter will admit. It was for this reason that Maj. Hinman began a few years ago to include the 7-ring in the black of the American standard target, making the black 11 in. in diameter, a poor compromise between an 8 and a 12 in. black, and the rings being too far apart to give a shooter anything like the fair value of his shots.

There is one target, however, which is but little known, but which has the fullest of size to make sure the eyes are steadied, and a trial, and with ringing sufficiently close to give each shot its true value. The target to which we refer is known as the American champion target, and was designed and patented by Mr. Wm. Hayes, the well-known Schutzen expert of this city, its first trial being at the festival of the International Sharpshooters' Union, held in the Newark Shooting Park, July, 1888. This target has a black 10 in. in diameter, the center counting 15. The 10 in. black is too large and the 15 counts in the black being 11 to 15, inclusive. This ringing is sufficiently close for all practical purposes, while the 10 in. black gives a perfect sighting object under almost any weather conditions, making a pleasing compromise between 8 and 12 in. blacks. Why would not this be a good target to recognize as "the standard" for all records?

What say the riflemen of America to a test vote to decide upon what the future shall be? The 12 in. black is too large and the 15 counts in the black too close; the 8 in. black is too small under ordinary weather conditions, besides which the ringing is too irregular, so why not compromise by adopting the "American champion"?

Let us hear from riflemen in every part of the Union, and see if with the adoption of the new target rifle shooting cannot once more be brought back to its old popularity.

Y. RATTILIN.

Zettler Club Bi-Monthly Shoot.

The shoot at Cypress Hills Park on July 2 was not as well patronized as usual, the hot weather and the visit of some of the regulars to Chicago last week will probably account for the most of the absentees.

The nine members who participated in the morning's practice set a lively pace for the markers at the butts. Fred. C. Ross distinguished himself again by making five elegant scores. They were shot consecutively and are as follows: 215, 234, 228, 225, 225; total, 1,117.

The two old veterans, C. G. and B. Zettler, were 'way out of form, and as a consequence received more or less sympathy from their more successful competitors.

Ten shots, possible 250, 200yds.:  
Fred C Ross.....25 23 24 24 29 24 21 22 25 18—228  
21 23 20 23 25 23 22 23 24 22—225

19 21 21 18 19 14 21 15 19 19—179  
Jos Guinther.....20 18 18 21 18 23 23 15 10—185  
20 20 16 20 13 22 17 19 19 17—183

New York Rifle Club.

Five of the regulars met at Wissel's Cypress Hills Park on July 1 for their weekly competition for club trophies. The most of the members are wedded to the little .25cal. and it is amazing at times to see the high scores that are made with this Liliputian cartridge. Last week Dr. Chadbourne, with his Stevens (.25-10 rimfire) rifle, with U. M. C. factory ammunition, made (off-hand) five scores of 90 to 95 on the Standard target. The scores from to-day's shoot are good, considering that the weather conditions were not favorable for brilliant shooting.

E R Chadbourne, M.D.....8 10 9 9 10 7 8 10 8 9—88  
9 10 8 9 9 9 10 9 8 6—87  
8 9 9 9 8 7 10 9 8 8—85  
M Herington.....8 8 8 9 8 9 10 10 9 8—87  
Maj Geo Shorkley.....10 9 9 8 8 7 10 6 7 8—82  
8 8 6 7 9 9 9 8 6 9—77  
L P Hansen.....9 6 7 7 6 10 8 6 8 9—76  
Thomas Lloyd.....10 9 8 8 6 10 6 7 10 7—81  
8 10 7 7 7 10 6 8 10 8—81  
F C Hamilton.....7 7 7 7 8 9 9 8 8 7—79  
8 9 6 8 7 7 8 6 10 8—77

Excelsior Rifle Club.

The weekly outdoor shoot in Armbruster's Park, Greenville, N. J., on Friday, June 30, brought out five members of the club for practice for the club medal. Ten shots, German ring target:  
John Speicher.....18 23 21 22 24 16 25 23 25 23—219  
24 21 24 25 23 23 14 23 30—217  
Wm Weber.....19 23 17 24 20 24 23 27 23—211  
L P Hansen.....25 23 20 19 20 23 21 17 23 20—211  
J C Boyce.....16 17 16 23 20 18 22 21 23 19—198  
Jas Hughes.....

Turtle Bay Rifle Club.

The weekly shoot at its headquarters, No. 142 East Forty-second street, June 29, developed a lively contest between Messrs. Ochs, Jantzer and Walter. The scores are appended; 10 shots per score, three scores to count:  
J Ochs, Jr.....246 243 245—734 J Krampert.....242 241 242—725  
G E Jantzer.....243 248 242—733 J Oberle.....232 236 240—708  
H Walter.....242 245 245—730

New Jersey Rifle Association Meeting.

The third annual prize meeting of the New Jersey State Rifle Association will be held on the State ranges at Sea Girt, twelve miles below Long Branch, on Aug. 14, 19, inclusive, and judging from present indications it will be one of the greatest military shoots ever held in America. The camp will be at its best at that time, which is also the height of the season at the various watering places within easy reach of the camp. As in former years, all competitors will be furnished by the State of New Jersey with everything requisite in the way of camp equipment, such as tents, cots, mattresses, blankets, etc., and will furnish ammunition at cost. Special rates for meals will be given at Gresson's restaurant, near the 600yds. firing points. Frig-Gen. Bird W. Spencer, Inspector General of Rifle Practice, will be the executive officer, which is equivalent to saying that the entire meeting will be run as smoothly as a well-oiled piece of machinery. Jimmy Thomas and John Hayes will again be found at the cashier's desk, so there need be no fear of delay in securing tickets or in getting any information desired. In addition to the State matches for teams and individuals, the programme will again include the Wimbledon cup match, Hilton trophy match, and the Interstate military match for merely shot at Creedmoor. The full detailed account will be published in these columns as issued.

Y. RATTILIN.

Columbian International Shooting Festival.

CHICAGO, June 27.—In the Columbian international prize shooting at Sharpshooters' Park, West Pullman, the following shooters were present on June 25 and 26: Bob Rieder, New Glasgow, Wis.; S. A. Schindler, New Glasgow, Wis.; F. Hildebrandt, Chicago; Henry Krauslich, Chicago; W. T. Stoeker, Omaha; L. Schneller, Neillsville, Wis.; T. Martin, Brooklyn; Frank Schwikert, Rochester. The Columbian medal was awarded to all. The following scores were made: Bob Rieder 11 bulls-eyes out of 100 shots, S. A. Schindler 9, I. Martin 8, L. Schneller 4. Stich target, three flags, F. Togenburger 37, T. Martin 39. People's target, L. Schneller 46, T. Martin 60. Man target, Bob Rieder 58, S. A. Schindler 75, L. Schneller 62, T. Martin 87. Columbus target, L. Schneller 46, T. Martin 63. King target, L. Schneller 159, T. Martin 210.

A. BORSE, Sec.

The Greenville Rifle Club.

The weekly gallery shoot for club trophies June 30 was highly interesting. Geo. Furkess still retains his lead for first position by a small margin, 10 shots, possible 250, distance 25yds. Scores: Furkess 244, Plaisted 242, J. Boag 238, Robidoux 237, Collins 237, C. Boag 236, Dodds 233, Gotthardt 230, Spahn 230, Chavant 225, Gussman 220. At the outdoor shoot of the club in Armbruster's Park, on Saturday, July 1, ten members participated. These weekly outings are having a beneficial effect upon all the members who have followed them up and a decided improvement in averages is the natural result. The scores are appended, 10 shots, German ring target, distance 200yds.: Chavant 219, Collins 211, Spahn 206, Robidoux 201, Furkess 200, C. Boag 198, J. Boag 192, Hill 170, Gotthardt 165, Becker 155.

Excelsior Rifle Club.

At the weekly rifle shoot of the Excelsior Rifle Club at headquarters on Tuesday night, July 5, the following appended scores were made by the members participating: C. Thomas 239, L. P. Hansen 238, J. Binns 238, J. Spicher 235, R. H. Duff 225.

Rifle Notes.

That young and enterprising club known as the Greenville Rifle Club, of Greenville, N. J., will dedicate its new club house and ranges on Sept. 4 (Labor Day), with a grand prize shoot; cash prizes on the ring target ranging from \$40 to \$2, and on the bullseye target from \$15 to \$2, will be offered for all comers.

The fall festival of the Zettler Rifle Club will be held in Wissel's Cypress Hills Park, on Sept. 10 and 11; cash prizes to the amount of \$500 will be put up for the lovers of the rifle to compete for.

The Paterson Rifle Club, of Paterson, N. J., was recently organized and it already comprises in its membership a number of the best sporting riflemen in the town. The club intend to go in for shooting on the range instead of doing the "newspaper shooting" indulged in by so many similar organizations. It now stands ready to pit a team of any number of men against teams representing any club in New York, New Jersey or elsewhere. Here is a chance to do something toward reviving an interest in this sport which is sadly in need of a boom. The Paterson Rifle Club is distinctively an outdoor shooting club and will notice no challenges for gallery matches. Here is a chance for the Zettlers, Millers, Excelsiors, Hudsons or other. Who will be the first to arrange a match?

"Rifle shooting is on the decline!" "Rifle shooting is dead!" "There is no more interest in the sport!" These and kindred exclamations are heard on all sides but no one seems to be willing to make an effort to stop the decline in interest. The sport cannot be revived by big festivals; it cannot be revived by individual contests nor will practice shoots of the various clubs go far to excite an interest except among those directly interested. But team contests between clubs, no matter whether the teams comprise five or twenty-five men each, and no matter how brilliant or otherwise the scores may be, will do a great deal toward bringing the sport back to where it was in 1888 to 1890.

Trap-Shooting.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

July 6.—Open-to-all shoot, 20 live birds, \$20 entry, at Williard's Park, Paterson, N. J.  
July 6-8.—Manufacturers' Trap-Shooting Association tournament, at St. Louis, Mo.  
July 11.—New Jersey State League and open tournament, on South Side grounds, Newark, N. J.  
July 12-13.—Interstate Manufacturers' and Dealers' fourth tournament, at East Liverpool, Ohio.  
July 14-15.—Helena (Mont.) Rod and Gun Club's annual tournament, July 19-20.—Dixie Gun Club tournament, at Pensacola, Fla.  
July 20-21.—Penberthy's trap-shooting tournament, at Massillon, O.

DRIVERS AND TWISTERS.

Ed. W. Sandys has the following in the July number of *Outing*: "No need to dwell upon the gun this month, for it has no business out of its case, save for inspection to prove the last cleaning was thorough or for an afternoon's use at the traps. Those who cannot let a gun altogether alone during the close season, may find pleasure and useful practise in smashing a few strings of inanimates. A match now and then with a friend at artificial birds can be made very pleasant, and will also keep one's hand in and keep the gun coming smoothly to one's shoulder, but only artificial targets should be used during the heated term. Live birds, excellent in season, should be suffered to breed in peace during every month without an 'r' in it. Pigeons are in good condition and feather during warm weather, and there is no glory in guessing even straight strings when the conditions are all against the birds and in favor of the man at score. Stopping clipping, cold-weather birds, and potting listless summer flyers, are vastly different performances, and the true sportsman will hardly care to face the traps when birds are not fit."

Tuesday next will be a great day for the South Side Gun Club of Newark, and for the New Jersey Trap-Shooters' League in general. It will be the occasion of the monthly team contest in the series for the State championship and in addition the South Side Club will offer an attractive programme of sweepstake events, open to all comers. The open programme will be started at 9:30 A. M. and continue until dark, the events to be at 10, 15 and 20 targets. The team shoot will begin at 2 P. M., the contest being open to club teams of five men each, at 25 bluebirds per man, rapid fire. There will be a refreshment tent on the grounds and plenty of ammunition for those who run short. A good day's sport can always be depended upon on these grounds.

All shooters who would be willing to take part in a 50-target match, \$5 entry, to be shot in Newark on Saturday, July 15, are requested to send their names and addresses to C. H. Townsend, trap editor, *FOREST AND STREAM*, 318 Broadway, New York. This event would be started at 1 P. M., and would be preceded and followed by events at 15 targets, \$2 entry. All events at known traps, unknown extras, and the targets will be thrown not less than 60yds. Targets extra in 50-target event, the other entries including the targets. Money divisions: 8 or less entries, 2 money; 9 to 12, 3 money; 13 to 17, 4 money; 18 to 24, 5 money; 25 or more entries, 6 money. Targets 3 cents each.

The mid-summer tournament of the White Plains Gun Club will be held at their grounds, White Plains, N. Y., Aug. 2 and 3. The grounds are about ten minutes' walk from the depot of the Harlem Railroad, and thirty trains run out of Grand Central Station daily, all stopping at White Plains. The grounds are splendidly situated for shooting, and we guarantee every one a pleasant time. L. C. PLATT, JR., Sec.

The Interstate Manufacturers' and Dealers' Association holds its next tournament at East Liverpool, Ohio, next Wednesday and Thursday. The tournament has been liberally boomed by the East Liverpool and other Ohio papers, and there should be a big attendance. It is likely that the entry lists will show the names of a number of well-known cracks from Cincinnati, Columbus and other places in the State. "Shorty" Bacon, the Miamisburgh tobacco-grower, who hurried the boys so at Knoxville is expected to be on hand.

The Winchester Gun Association of Winchester, Va., on the Valley Branch of the B. & O. Railroad, anticipates a big attendance at its tournament next Tuesday. The grounds of this association are splendidly situated and provided with an abundance of shade. The members of the club are all enthusiastic and can be depended upon to "stay" during all the events. The team race will be a special feature. The club adds \$100 to the day's purses.

During the 1894 shoot of the New York State Association an entire day will probably be devoted to live bird shooting. If the target men are entitled to four days the devotees of live bird shooting should certainly have one day. Inability to shoot live birds except in the Dean Richmond contest is what keeps the majority of the Long Island shooters away from the State tournaments.

One of the chief attractions in the Onondaga Club's tent at Rochester was Holloway's "Stomach Bitters," a dose of which was said to be worth 20 per cent. on a string of breaks. "Old Pepper" was not in it while the medicine held out.

Harry Thurman says the tournament of the Pier Gun Club to be held at Atlantic City on August 7 and 8, is bound to be a success. He has "promises to attend" from shooters in a dozen different places.

Jack Parker says the third international shoot to be held at Des chree-shos-ka Island, August 22, 23, 24 and 25, will be a record breaker in point of attendance. He guarantees the presence of the "Kazoo Band."

The Bismark (N. D.) Gun Club, has elected R. M. Donnelly, President; Oscar Ward, Vice-President; Claude Holly, Secretary and Treasurer; George Walcott, custodian, and Henry Yost field captain.

Harry Squires is at work getting out a new catalogue of sportsmen's goods. It will comprise over 500 pages and will cover everything in the sporting goods line.

The monthly shoot of the Newark Gun Club will take place on Erb's grounds next Thursday. The new system of shooting should draw out every member.

Louis Miller, of Dexter Park, says he is already assured of a big entry list for his 35-bird sweepstake to be held in October. He will add \$300 to the purse.

The fourth shoot of the series between the Unions, of Springfield, and Boiling Springs will be shot July 25 at Boiling Springs.

The next tournament of the Michigan State Trap-Shooters' League will be held at Muskegon, Mich., July 25 and 26.

The West Shore Gun Club of Syracuse will hereafter shoot on Saturday instead of Monday afternoons.

An extra set of traps will be used by the South Side Gun Club during the New Jersey League tournament on Tuesday.

The Rochester Herald has established a department devoted to sports of the rod and gun.

Those handy score cards of ours are just the things for club shoots. Send for a pad!

The Climax Gun Club is of "Union" instead of Marion county, as printed last week.

Rene Clayton is making a boom with his swivel front sight.

C. H. TOWNSEND.

Annun Cup Shoot.

RICHFIELD SPRINGS, N. Y., June 24.—The silver cup presented to the Richfield Gun Club by the late Ed Annan, Jr., of Brooklyn, was won by Mr. A. Barker at the eighth and last shoot last Friday afternoon. The score stood a tie between the two Barkers, but the senior proved the steadier in the final contest. The cup has to be won three times before it becomes the property of the shooter.

## MENDON TOURNAMENT.

MENDON, Mich., June 28.—Things were lively in Mendon this morning for the trap-shooters are coming into town to participate in the first tournament of the Mendon Gun Club. The grounds are finely situated near the outskirts of the village upon the farm of the four Marantette brothers, who are as widely known in Michigan shooting circles as are the famous Kleiman brothers of Chicago.

Instead of tents for awnings to screen the shooters from sun and rain there is a great grain barn with wide open doors which invites one to its shelter. The floors are strewn with sawdust, all is neat and clean within and the summers breeze drifts cool and fresh through its every nook and cranny. A well of cold water is close by, the bucket is always full, while the tin cup hanging upon a nail says, come quench your thirst and be happy. Many shooters and visitors are present, a number of ladies being interested spectators. Of the shooters present we notice N. W. Holt, the president of the League; Sam A. House, secretary of same; Oswald Von Lengerke of Chicago, Ben O. Bush, Henry Waruf, Wm. O'Byrne and Edward Kstead of Kalamazoo, J. E. Nichols and Casper Schelling of Lansing, Martin Waalkes, Gustave Neumeister, J. J. Heath, Wm. Houtcamp and J. H. Scott of Muskegon, Dallas Carpenter of Battle Creek, John Parker of Detroit, George Seales of Mason, James Neve of Indianapolis, W. L. Walton and W. O. Woodworth of Grand Rapids, E. W. Pendleton, W. B. McLaughlin and N. Stacy of Sturgis, Ed Henning and Harry Burrell of Cold Water, Greely Spicer, H. D. Baker and Fred Shulters of Vicksburg, C. A. Schutt of Leontidas and D. W. Cook of Fulton.

The shooting passed off pleasantly, there being no wrangling or kicking, as sometimes occurs at tournaments. The principal event of the day was the team race for the League trophy. This match was won by the Lansing team with the very creditable score of 70 out of a possible 75. The Mendon team, composed of F. C. Marantette, Charles Marantette and W. W. Marantette, were looked upon as sure winners of the match; but W. W. Marantette, "Doll," as the boys call him, being the genial bonifide of the Hotel Wakeman, where all the shooters stopped, had too many duties to perform, dropping five targets in consequence.

The Kalamazoo team could have won it had they had Bush shot up to his form; but the occasion is very rare when in a team of three or more that one member does not drop below his average. At the business meeting of the League it was decided to hold the next meeting and tournament in the city of Muskegon on July 25, under the auspices of the Muskegon Gun Club and the Joe Hunting Club of that city. The Muskegonites are very hospitable, and as there are four gun clubs in that city, the success of the tournament is already assured.

The last match of the day was a prize shoot, the prize consisting of fifty tickets in a raffle for a \$500 Colt's gun and supposed to be the finest ever made by Colts Patent Fire Arms Co., the same being raffled in the evening and won by a Kalamazoo syndicate. The owner of the gun held 128 of the 300 chances, but nevertheless lost the "gem of rare beauty," as he termed the gun to be. John Parker won first average to-day. Scores of the first day follow:

## The Second Day.

The weather was favorable again to-day though pretty warm, the chief event of the day's shooting being the match for the expert trophy and the semi-expert and amateur medals. These were won by F. C. Marantette, L. E. Marantette and Edgewood Desvoignes respectively, all residents of Mendon, which goes to show that although Mendon may be small in size yet she is big on the shoot. The day's matches were completed just at sundown, thus ending the most successful tournament that has been given in the name of the Michigan Trap-Shooting League. Scores of second day:

## Coney Island Athletic Club Cup.

THE sixth contest for the \$500 cup given by the Coney Island A. C. for competition by the Kings county gun clubs, took place at Woodlawn Park, Gravesend, L. I., on Tuesday, June 27. As the tournament draws to a close, the interest in the shoot seems to be dying out. Only five of the original eight clubs were represented, the Crescent, Glenmore and Northside gun clubs having withdrawn from the contest. The attendance was rather small, as the weather was miserable and the birds, a rather poor lot, were also interfered with by the rain, which came down steadily until near the close of the shoot.

The Parkways were the first to the score and they scored a total of 68, E. Helgans, L. Moeller and J. Bennett being the best scores with 14 each. The New Utrecht came next and scored 73, C. Furgueson, Jr., D. Bennett and G. E. Nostrand with 15 each were the best scores. The Coney Island team scored 71, Ike Hyde and Dr. Van Zile with 15 each, F. Paender and S. Northridge 14 each. The Atlantics were again the highest scorers with 73, F. Quimby, J. B. Voorhes, C. E. Morris and H. Balzer scoring 15 each. The Vernon Rod and Gun Club was the last of the five and scored 69; Gus Greiff and W. H. Thompson scored 15 and G. Osterhout 14.

The next and last shoot in the tournament will be held on the Atlantic Rod and Gun Club's grounds, West End, Coney Island, on Tuesday, July 25.

The Atlantics have been first in the six contests three times, with scores of 65, 68 and 73, with an aggregate total of 882. The New Utrecht team has won twice and tied once for the first place, and they have a total of 389, with a lead of 7, which will be hard to beat in one more shoot. The scores and standing of teams to date are:

## Connecticut State League.

THE fifth tournament of the Connecticut Trap-Shooters' League was held at Hartford, June 29, on the grounds of the Colt Gun Club. The scores in the team race and merchandise events are as given below. The day was a good one for trap-shooting and many fine scores were made. The Winchester rifle given by Frank Potter for the longest run of continuous breaks was won by Burbridge with a run of 30 straight without a miss. The division of prizes at this shoot was as slow as molasses in January, which caused the shooters to kick like mules, and several of the old "rounders" shot an event at 25 singles, in which there were but 10 targets missed out of the 250 shot at.

## SHOOTING IN THE COAL REGION.

The Schuylkill County Shooting Association held their second annual tournament June 28 and 29 at Mahanoy City. This city is nestled away up in the mountains of Pennsylvania between the headwaters of the Schuylkill and Mahanoy rivers, and it depends on the coal mines for its support. On all sides are high mountains, and in the sides of them, look in what direction you may, you will see either a coal breaker or large heaps of culm. The town lies in a narrow valley running north and south, and of course is a long narrow town with one principal street running the whole length of it. The grounds of the shooting association, or at least the baseball grounds, where they held their shoot, are situated at the south end of the city, and in the narrowest part of the valley, in fact the valley is hardly more than 300 yds. at this place. The grounds are about 150 yds. square and perfectly level with a high broad fence all around. The straight away birds fly right up the valley and give you an elegant sight, but the right and left quarters go toward culm banks or large heaps of coal dirt 300 or 400 ft. high, and the bluecock being black and going toward a black foreground made very hard shooting. Bluecock targets and traps were used and gave perfect satisfaction. The flight of the birds was strong, but for all this some very good scores were made.

The programme consisted of five 10-bird, two 15-bird, two 20-bird and one 25-bird race each day, and where over 8 entries purses were divided in four moneys, under 8 in three moneys; all ties were divided. The boys in this part of the country are all game and stick until their last dollar is gone, or they have the last of some one else and are true friends and will stick to a fight to the end.

The manager of this shoot is Fen Cooper, a well-known shooter in Pennsylvania who was ably assisted by Rene Clayton, one of the biggest hearted and best known live bird shots not only in this State, but all through the East. He has just patented a switched sight for a shotgun for use where matches are known angles and traps. It is a great thing, saves all calculation as how far to lead a bird. You aim right at the bird, and give you the lead. John Linton is the cashier, and of course, Mr. Peter Gorman, the proprietor of the Mansion House, although a new shooter at tar, as the boys call them around here, is shooting away in every event and making some good scores. Most of the boys from out of town are stopping at his place. In fact, on our arrival on Wednesday morning the first shooter that we saw and knew was Harry Thurman and Chas. E. Linsley, who was waiting on the hotel porch for his dinner, were taking in the afternoon shooting. After a hand shake and a wash up, dinner being announced, we went into the dining room and enjoyed ourselves for a good half an hour. Clark is shooting a new hammerless Wilkesbarre gun and the way he puts out crockery shows that their shooting qualities are all right.

On our arrival at the grounds we were very warmly greeted and introduced to those whom we did not know, and among those from a distance were some who will go on to shoot for some time, and our friends. I mean the boys from Reading. There are here from that town John Shaaber, Jim Smeek, A. Ford and Brook Harrison, and these say to-morrow will bring several more who could not get away to-day. From Hazleton are Dr. Myers and Frank Deach, who while on a fishing trip this spring caught three small black bear cubs and something over 700 trout. Now they want to sell the bears. From New York came the boys from the city, who are taking in the shoot, and it is up and tuck between Milt and his wife to know who makes wood powder the most popular; and of course we all take our hats off to a lady who takes so much interest in her husband's business that she can run it just as well as him when he is called away from home. From Philadelphia are John Tredway, who says no more sore shoulders if you use a Tredway recoil pad on your gun. Along with him are Harry Thurman and Chas. E. Linsley, who has charge of J. T. Bader & Co.'s loading department at their sporting goods house in Philadelphia, and is making a great run on his hand-loaded American wood powder shell. From Danville we find A. Spicer, spicily enough for any one to shoot against, and John Rehrig, of Weissport, shooting in good form.

The weather, although threatening rain this morning, cleared and gave us the nicest kind of a day.

## The Second Day.

opened with a bright sun shining, and when he showed his face over the mountains this morning every one knew we were going to have a hot one and we were not disappointed.

This morning brings some new shooters, most prominent among whom are John Millsaugh, president of the Williamsport Rifle and Gun Club, and F. P. Abercrombie, of the same place, and H. C. W. Matz, president of the Reading Shooting Association, and along with him are John Hitters and John Freed. From Philadelphia comes H. L. David (Lindis), who, since he has been using a Smith ejector, is shooting a great deal better.

## Peekskill Gun Club Tournament.

PEEKSKILL, N. Y., June 30.—The summer tournament of the Peekskill Gun Club came to a close yesterday, and has been a gratifying success. Among the shooters present I noticed Messrs. Quimby and Van Dyke of New York; John Baker, of Ridgewood; E. D. Miller, of Springfield; "Dutchy" Smith, of Plainfield; Eddy Collins, of West Hoboken; W. R. Hobart, of Newark; Messrs. Platt, Ed and Thomas Ward, Halpin and Valentine, of White Plains; and S. M. Lyon, of Brooklyn. The local club turned out in good numbers.

An unusual amount of interest was manifest in the team race restricted to New York State. Between Newburgh and Peekskill it was a tie for first up to the fourteenth round, when Mr. Likely for the former dropped his 14th and 15th and Mr. Everingham completing his 15 straight won the race by two birds for Peekskill.

The scores of the principal events are here given:

No. 6, 15 bluecocks, entry \$1.50:

## SAVE YOUR TROPHIES.

Write for Our Illustrated Catalogue  
**"HEADS AND HORNS."**

It gives directions for preparing and preserving  
 Skins, Antlers, etc. Also prices for Heads and  
 Rugs, Birds and Fish, and all kinds of work in Taxidermy.

WARD'S NATURAL SCIENCE ESTABLISHMENT,  
 ROCHESTER, N. Y.

## NO, JOSIAH!

I don't bother to look  
 up the law. Any season  
 I'll do me, if they're  
 bitin'. Don't catch me  
 paying no 25 cents for  
 no Game Laws in Brief.  
 I don't care anything  
 about the pretty pictures  
 in it. My own picture  
 is good enough for  
 me. See?

FROM the first issue of this paper it has been  
 used, and for nearly twenty years this particular  
 space has been occupied by

## ABBEE & IMBRIE,

who now say that they have given up advertising at least for the present.

## Notice to Fishermen! Cut Prices for 1893.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.50 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound; complete in wood form and will give satisfaction.  
 Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

### Property For Sale.

#### FOR SALE.

#### MEMBERSHIP SHARES

IN THE

#### Triton Fish and Game Club, CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 102,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 6lbs. (*Salmo fontinalis*) only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in thirty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment. Intending purchasers should carefully examine Sec. 4 of constitution, also pages 12 and 24 of by-laws about membership certificates, agents, membership cards, route and mode of payments.

For Prospectus, By-Laws, Maps, etc., and full information address

Messrs. TOWNSEND & HOWARD,  
 928 TEMPLE COURT, NEW YORK CITY,  
 AND THIS PAPER.

## FOR SALE.

### Camp Ground,

SARANAC LAKE,  
 Adirondack Mountains.

Point of land just north of Sweeney Carry and Hotel Wawbeek, well wooded, high elevation, large water front, with a superb view of the country to the north, east and south, easy of access, and one of the finest camping spots in this whole country, containing about 45 acres. Address P. O. Box 1,980, Boston, Mass., for further particulars.

## TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

## Hunting Grounds For Sale.

We offer for sale one farm, 600 acres, situated in Warren county, North Carolina, six miles from Macon, same from Littleton. Quail, deer, wild turkey, ducks, geese and old hares on and near the farm. Fine grain, cotton, tobacco and fruit farm. Fair dwelling and outhouses. Hunting privilege on adjoining farms can be bought cheap. 14 hours from New York via S. A. L. Apply to owners. Price, \$50 per acre. EGERTON BROS., Macon, N. C.

### Property For Sale.

ALBEMARLE AND PAMPLICO CRUISING AND  
 Hunting Association—Bear, Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing: Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 30. One more subscriber wanted. H. A. Weeks, 74 Murray St., N. Y.

FRUIT AND GAME FARM FOR SALE.—75 acres, nice cottage, 1,000 fruit trees, health perfect, taxes low, game plentiful. Price \$2,000. Long time privilege to shoot over 5,000 acres if desired. C. D. EPES, Crewe, Nottoway Co., Va. 28

## "I SAY, ISAAC!"

If you wish to listen to a little of that old time racket in your reel, order the following reversed wing trout flies. On receipt of \$1.00 we will send you "the chosen twelve," consisting of Coachman, Scarlet Ibis, Black Hackle, Dark Montreal, Governor, Red Hackle, Red Ant, Cow Dung, Jenny Spinner, Seth Green, Blue Professor, Oak Fly, adding the famous Little Big Horn, just for luck. Any where on your old runways, from April to July, they will be found captivating companions, worthy of your idolatry and skill. And if for solidity of construction and realistic beauty of finish they are not equal to the best on earth, we will refund your ducaats. Send for revised price list.

230 Ridge Avenue, - Evanston, Ill.

## Routes for Sportsmen.

## A BLANK DAY.

BUT IT WAS NOT ON THE

## RAILROAD.

The sportsman of the North often has a blank day.  
Indeed, no Northern shooter knows much about  
shooting until he has shot in the South, where the  
superb natural conditions have left the game in un-  
diminished plenty in the covers.

### Don't Go After Bear

to the Rockies. Go to the wide river bottoms of  
Mississippi or Louisiana and you will get one.

### Don't Go After Turkeys

to the Great West, but to the Great South, in Missis-  
sippi and Louisiana, where the unbounded wood-  
lands hold abundance of these noble birds.

### Don't Go After Ducks

in the North, and work hard for days for a dozen  
ducks. Go South, to Louisiana and Texas, and  
learn what wildfowl shooting is.

**The Quail, Woodcock and Snipe**  
shooting of the South is such as the Northern hunter  
never dreamed of. A genial climate, a pleasant  
people, a six months open season, and birds until  
you want no more.

The Illinois Central Road runs direct to all this  
country, and is the only road that does.

**A. H. HANSON,**

Gen. Pass. Agent, Illinois Central R. R., Chicago.

When planning your annual tour remember that  
this company controls over 4,100 miles of railway  
equipped in the most approved modern style, pass-  
ing through a magnificent country noted for its un-  
surpassed facilities for sport.

## A FEW OF THE PRINCIPAL RESORTS.

**ANDROSOGGIN LAKES** (via Bryant's Pond or Bethel).  
Excellent trout fishing and game, large and small, of  
every description.

**THE WHITE MOUNTAINS** (via Gorham, N. H.)—For  
trout and varieties of game.

**THE SALMON RESORTS** of Quebec, New Brunswick  
and Nova Scotia (reached via Quebec).

**LAKE ST. JOHN REGION** (via Quebec)—For quananiche  
trout, caribou, bear, moose, beaver, otter, etc.

**THE RIVER ST. LAWRENCE** (in the neighborhood of  
the line for 400 miles)—For mascalonge, pike, bass,  
whitefish, pickerel, perch.

**THE THOUSAND ISLANDS** (via Gananoque or Kingston).  
—For pickerel, black bass, mascalonge, pike.

**MUSKOGA LAKES**—The best place on the continent  
for fishing, shooting and camping. All varieties of fish  
and game.

**PARRY SOUND AND GEORGIAN BAY** (reached via  
Penetang, Midland, Collingwood, etc.) for black bass,  
pickerel, deer, partridge, bear, otter, etc.

**AKES ONTARIO, ERIE, HURON AND MICHIGAN** (via  
stations at all principal ports).

**LAKE SUPERIOR** (via Collingwood, Warton, Sarnia in  
connection with steamship lines).

The charges for hotels, guides and camping at  
many of the fishing waters named above are ex-  
tremely low. Full particulars of same are published  
in a pamphlet descriptive of the "Fishing and Hunt-  
ing Resorts of the Grand Trunk Railway," which  
will be forwarded free on application to the com-  
pany's principal agents, or to the General Passenger  
Agent at Montreal.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## GOOD GOVERNOR AND WICKED DOCTOR.

WHEN you come upon an Illinois man, living out on the prairie, whose recollections of boyhood days run back to the woods and lakes and mountains of Maine, you may be sure that in him you have found a sportsman. But if such a person, being a sportsman, professes public spirit, and undertakes to increase and protect the game supply, look out for him; he is a wicked schemer and will bear close watching. Eternal vigilance against his game protection wiles is the price of freedom for all who dwell in his neighborhood.

When you come upon the Governor of a State, of Illinois or any other, who babbles of abolishing the Fish Commission and makes a jail delivery of bomb-throwers, he, too, will bear watching, not apprehensively, but with the confiding trust that he will unveil and nip the schemes of game protection conspirators, and preserve their liberties to the people.

Dr. W. O. Blaisdell, of Illinois, was a Maine boy; and his neighbors in Macomb will tell you that he is an accomplished sportsman. He has been credited with his full share of public spirit and is known to have been interested in the introduction of foreign species of game birds and their protection. Even the FOREST AND STREAM has been led to speak with approval of Dr. Blaisdell and his game importing enterprises. But now, and none too soon, his neighbors have found out that the Doctor's public spirit has been a deceit, a sham and a fraud; now they understand that while posing as a philanthropist bent on doing good he has really been conspiring against the liberties of his fellow citizens; that under the pretense of conferring benefits upon them he has been scheming to put them in jail. And thanks to the dunder-headed stupidity of the Illinois Legislature, that is precisely where he would have landed them, had it not been for the shrewdness of Gov. Altgeld and the promptitude of his official action. The Good Governor was up to the tricks of the Wicked Doctor. He interposed his veto of the Blaisdell bill, and insured to the dwellers of Macomb county that enjoyment of freedom and security which in Illinois under the Altgeld administration is not denied the humblest Anarchist in the land.

For a conception of the cool, covert, calculating and cold-blooded character of this cunningly contrived and carefully concealed scheme to compass the incarceration of his fellow creatures, it must be told that the Wicked Doctor had been engineering it for months. He pretended that he wished to improve the shooting in Illinois. He sent in one direction to Oregon, and in the other direction thousands of miles to India, for foreign species of game birds, to stock the cornfields and brush thickets of Macomb county. The determined nature of the man is shown by the fact that all this cost money, and he footed the bills with funds out of his own pocket. The birds came, and gave promise of stocking the Macomb

covers. Then the Wicked Doctor took the next step. He sought out a friend in the Senate at Springfield, and the friend conspired with others to hoodwink the Legislature for the furtherance of the scheme. They plausibly represented that the new game birds would prove a highly desirable acquisition to the State; that their introduction was solely for the public good; that if everybody turned out after them with shotguns the first season or two none of them would survive; that a close term of several years should be provided for them; finally—and this we shall see was the true object of the whole plot—that if any one did shoot them in the close term he should be fined or in default of payment be sent to jail. The Illinois Legislature appears to have been easily gulled. Apparently it did not discover what a Wicked Doctor it was dealing with; the bill passed both branches unanimously, and was sent to the Governor.

Dr. Blaisdell is a sportsman, and all sportsmen at some time in their lives get out of bed at an unconscionably early hour in the morning; but no Wicked Doctor ever rose early enough to get ahead of a truly Good Governor—at least not ahead of Gov. Altgeld, of Illinois. When the bill reached Mr. Altgeld, he saw into it and through it at a glance. He pulled away the mask, stripped off the disguise, unveiled the horns, and the tail, and the cloven hoof. It was as clear to him as the sunlight at noonday to an Anarchist just out of jail, that the bill had in it not a shred of public spirit; that its purpose was not to increase the game supply; that it was purely a plot to put innocent persons into jail. And it is a serious mistake, declares the Good Governor, in his short-shrift veto of the Wicked Doctor's measure—

It is a serious mistake for a great and enlightened State to be carrying a jail around in every neighborhood, and trying to put somebody in it, not for committing a crime or doing anything of a criminal nature, but for doing some trivial thing which is innocent in itself, but is sought to be made a crime by unwise legislation.

There you have it. There is acumen for you, not to say the gift of second-sight. There is a Good Governor who can smell a rat. There at length is the unmasking of the whole scheme of game protection—one vast conspiracy to tote jails around to people who would never dream of going to the jails. In the wake of the Chinese pheasant, jails spring up as laundries follow Chinamen; when for the first time the Macomb county man hears the cackle of one of Dr. Blaisdell's chuckor partridges, he knows that a new jail is on the way, and the next thing he's in it. Game protection, that means caging jail-birds. So says Altgeld; and he knows.

Why was the Wicked Doctor up to such a business? Heaven knows. Perhaps when he had more Macomb county people in jail than on the outside, he was planning to run for the office of prison purveyor of pills. Nothing is too bad to believe of a man who wants to jail the community. On this point Gov. Altgeld leaves us in the dark; his second-sight appears unfortunately to have failed him here. But he tells us that the game of Illinois is almost exterminated already, and what is left is bound to go soon; the farmers' sons with their double-barreled breechloaders will dispose of it in short order; foolish to try to save it by putting the boys in jail. Perish the thought, we say, and the game along with it! Confusion upon the Wicked Doctors, who would cart around jails and try to put people into them. Preserve the liberties of the people! Long live the Good Governors to defend them!

A VISITOR to the Adirondacks sent us not long ago an impassioned plea for the protection of deer against the rapacity of sportsmen. Subsequently the friend of the deer was put under lock and key to await trial for the murder of a woman. The author of a poem extolling the self-sacrifice of a cur dog, which died to save its master, was not long thereafter electrocuted for having poisoned his wife. These are two instances of the contrarities and complexities of human nature. It would be an error to assume that their teaching was to be shy of those who have a soft place in their hearts for gentle deer and heroic dogs. The true lesson is that even in the soul of the wretch who poisons his wife there may be a redeeming spark of goodness.

The committee of the Illinois Sportsmen's Association, appointed at the late convention to provide for a national sportsmen's convention in Chicago, have determined to arrange a meeting for Sept. 21, to which sportsmen of the United States and Canada will be invited, for discussion of game protection.

## GAME IN THE NATIONAL PARK.

ALTHOUGH travel in the Yellowstone Park began more than a month ago, the snow is still very deep in many places. A party of soldiers, recently sent down Snake River to carry rations to the station there, were unable to make their way through and were obliged to leave the supplies twelve miles from the station to be carried down later on snowshoes.

Game in considerable numbers is seen by travelers through the Park, mainly deer, elk and smaller animals such as porcupines. The bears which were so numerous about the Fountain Geyser last year have not made their appearance yet this season. Recently about sixty buffalo, among which were thirteen calves, crossed the road near the Gem Geyser going from west to east. They were seen by three of the soldiers, who went among them and found them very tame, not disturbed at all by the presence of man. It is thought that they tried to cross on to the plateau southwest of the Upper Geyser Basin, but were prevented by the depth of the snow and turned back.

The roads and bridges of the Park are under charge of Major Jones, of the Engineer Corps, whose office is in St. Paul. Usually there has been an engineer officer stationed in the Park through the spring and summer to look after the care of the roads, but this year there is no Engineer officer there, and the roads are suffering from lack of attention.

It is understood that before long Secretary Hoke Smith will visit the Park. This is a cause for satisfaction, for in this way Mr. Smith will gain a personal knowledge of the reservation, which cannot fail to be of great use to him in his subsequent management of the region. Capt. Anderson, whose knowledge of the Park is so ample, and whose ideas of its needs are so just, will hardly fail to call Mr. Smith's attention to the various matters which require it.

## SNAP SHOTS.

Mr. Wm. L. Force, who died at his home in Plainfield, N. J., last Monday, was a busy man of affairs, who found time for pleasure and recreation in the sports of the field. He was active in the organization of the New Jersey Game and Fish Protective Association, and filled a large place in its work.

The mention in our Boston correspondence of a fisherman, who, though deprived of sight, still enjoys the successful use of the rod, recalls the case of the distinguished Professor Fawcett of England who when totally blind was a skillful salmon fisherman. Doubtless the list is not a short one of those, who, suffering a like misfortune, have found similar pleasure in angling. A blessed recreation indeed is that which has in it such possibilities even for the blind.

Allusion was made recently to the frequent hoaxes perpetrated by "fake" newspaper correspondents, who tell of blind men shooting birds, tracking big game and performing other impossible feats. Such stories are not only foolish, but brutal and cruel as well; and the most extraordinary thing about them is that they are occasionally published by goody-goody editors who hold up their hands in deprecation of the cruelty of field sports.

We have known men whose consuming ambition was to have a new fish named after them. Mr. R. B. Marston, the editor of the London *Fishing Gazette*, may not have been ambitious in this direction, but he would be more than human were he not gratified at the giving of his name to the new trout described by Prof. Garman in our angling columns, the name having been suggested by Mr. A. N. Cheney.

British manufacturers and dealers have taken a cue from those of this country, and are organizing an Inanimate Bird Shooting Association, to promote the sport of trap-shooting artificial targets. They have followed the lines of our own associations, and there would appear to be no reason why the sport should not become as popular in Great Britain as it is in the United States.

"Game keepers are already in charge." That is growing to be a familiar statement in the papers. The latest publication of the announcement refers to the 20,000 acres taken up by Mr. George W. Vanderbilt in Henderson and Transylvania counties, N. C. Mr. Vanderbilt, we are told, intends to make it one of the finest game preserves in the world; and "the game keepers are already in charge."

## The Sportsman Tourist.

### CAMPS ON THE MANITOWISH.—II.

[Concluded from page 1.]

NEXT morning the guides had the fire going and the coffee boiling early, and we were soon packing up to hunt a new camping place. Our carefully made balsam beds were left for the porcupines, if they wanted them. The handy table, with its big piece of green hemlock bark stretched over its rude framework (the quickest way to make a smooth camp table), with log so conveniently beside it, finer to sit on than any Turkish couch you ever saw, the pretty view of the placid lake (fraud of a lake), were soon left behind.

With a portage over the dam, a struggle among the rocks and through the grass and mud of the creek, we were back once more in the river and trying to get further away from civilization. Ira, Sam, Doc and Charlie were ahead. When the rest of us rounded a bend a mile down we found them perched on a big mass of granite boulders at the water's edge. Their faces were each six inches shorter than when they left us an hour before. The reels were singing, and as we drew near we could hear the flap of a big tail as the big bass and pike they had already caught floundered about in the bottoms of their boats. Tom and I pushed the nose of our boat between two boulders and proceeded to take a hand, or a couple of them, in the furious fun. And here I pause or hurry to relate a curious though not altogether novel experience. Tom and I were using the same kind of rods, the same size and color of line, hooks just alike, frogs which looked like twins. Sometimes he would cast in above me and sometimes I would cast in above him. In a very little while I had an even dozen of good big lusty wall-eyed pike stowed away under the thwarts, and Tom did not have a fin, tail or scale, and Tom knows how to fish. Later in the day, at another place, we had the same experience, only that we changed records, the fish all going Tom's way. For some reason or other Tom seemed more cheerful and seemed to take a brighter and more hopeful view of life in the latter part of the day than he did before dinner.

Dropping down stream another mile we found Mr. M. and Frank with a camping place selected where the bank was low but dry. Frank had made an excellent dock by staking a 6in. sapling just at the water's edge and shoveling some dirt in behind it; simple enough but a great convenience in getting in and out of the boats.

The first thing done was to stretch a rope between two trees with the catch of the morning strung on it; the Kodak was unlimbered and several shots taken at the string of beauties. I mean the fish, of course, when I say beauties, and do not refer to the boys who lined up behind the string to "have their pictures took." It was an hour's catch only, but the half hundred pike and small-mouths weighed over a hundred pounds. It began to look a little as if we were in a fish country. When dinner was at its height, and Doc asked his favorite question, "Where are we at?" I think the crowd agreed that we were somewhere in the neighborhood of where we wanted to be.

The tents were pitched after dinner. We had two, a small A tent and a big shanty tent. We strung both of them on the same stout rope stretched between two trees. This is certainly the quickest and least troublesome way to make a camp which is liable to be shifted every few days. Fortunately there was no balsam near by for our beds. While we stayed in that camp we had no "balsam feather" stems to dig us in the back or get between us and the "soft-as-downy-pillows-are" moss-covered breast of old mother earth. Nothing better than this elastic, mossy deposit and growth of centuries to walk on as a carpet or sleep on as a mattress.

In the afternoon we fished down the river with good success. Only one thing marred our contentment—we had seen very little as yet of *Esoc nobilior*, the wolf of the waters, though we were certainly in his country.

That night it rained—nothing remarkable about that; but there was something remarkable about the way it poured down into the big tent. Tom and I had taken pains with the A tent, stretching it carefully and ditching it well, and it shed water beautifully, though the material is the lightest of duck. The way a tent is put up has more to do with its being waterproof than has the material it is made of. In our eagerness to get to fishing the other tent was put up loosely, and now each fellow found out with what remarkable precision a stream of water from a leaky tent can always strike a man squarely between the back of his neck and his shirt collar. If the FOREST AND STREAM had offered its prize in photography for the most pathetic picture, and we could have gotten a successful shot at the group of discouraged figures perched on heaps of wet bedding, we would have taken the prize sure.

The next day was the Sabbath. Fishing was not in order, but some of the boys felt in an exploring mood; we still hankered for lake fishing. One of the maps showed a sheet of water near us and Sam and Kansas proposed to find it in the afternoon. They were successful and discovered one of the prettiest little lakes one could see. As a reward for their great personal bravery in entering the unknown wilds without a commissary department, and in return for the illustrious service which they had rendered to the Consolidated Association of Amalgamated Fishing Cranks, we named the lake after them, calling it King-Sims Lake. We respectfully request that all future visitors to that region give the lake that name in tender memory of our hardy explorers.

Next morning, when the sun was giving the tree tops his first kiss, we started for King-Sims Lake with high hopes. The boys in the first boat called out to me that there was a duck close in by the shore, and to shoot it, for I had brought my shotgun along from camp. I saw the duck, it looked like a young teal and seemed not to know enough to fly. It was but a few yards away, I lifted my gun to shoot it as it sat there, but it seemed like murder to throw a big charge of shot at the innocent little thing. If I had thought it a full-grown bird the trigger would have been pressed quickly enough. Sam, in the next boat, saw the situation and whipping out his revolver shot the bird squarely through the neck. A few yards further on a sandpiper was running along the shore, and he bored a hole through it with another bullet. No one after that seemed disposed to seriously question anything

which Sam had to say. A man who could shoot like that was entitled to a certain amount of respect. And we afterward found that those shots were not exceptional for him. We left the river a rod above the rocks where we fished on Saturday morning. We had to push and pull our boats up a little winding, 5ft. wide creek for a hundred yards, and there was the lake. We shuddered to think of the perils Sam and Kansas had braved in making this voyage alone the day before. The lake was as clear as crystal and unmarred by a ripple. It covers, perhaps, 400 acres with many coves and points. Mr. M., with Frank to paddle, was creeping along the farther shore. The other boats were just in advance of us. But Tom and I had barely dropped our spoons in the water when I had a strike. It was a prime fighter—a two-pounder big-mouth, fighting every inch of the way to the boat, and leaping again and again clear of the water. The big-mouth doesn't fight? You have never fished in the right place for him if you say so. A few yards further on I hooked a muscullunge. Now, a muscullunge strikes like a wild broncho on a lariat. He is all there, surges against the hooks with his full weight and is likely to be well hooked. Sometimes he will permit himself to be reeled up to the boat without a struggle, but look out when you go to gaff him. He will be off like a flash. He has tremendous strength. If under half a dozen pounds he is apt not to make a long fight. But a fish weighing from 12 to 30lbs. will keep a man's muscle and skill in play until both are weary. Our method on getting them near the boat was to shoot them. This is the best way to get them ready to be taken in out of the wet. There is something terrific in the struggles of a muscullunge just as he is lifted from the water, unless he has first been stunned.

That day on King-Sims Lake was a magnificent one. We took 102 splendid fish. They would average at least 2½lbs. There were 14 muscullunge, 41 bass and 47 pike. Mr. M. was high line for the day, having 21 noble fish packed in the bow of the birch canoe, among them five muscullunge ranging from 6 to 10lbs. As he tenderly lifted the ferns from them to give us younger fellows a glimpse of what the senior member of the party could do his smile beamed out along the lake shore like an electric search light.

That afternoon it clouded up and rained, and the fish lost their interest in the glittering frauds we were dragging behind our boats. We saw a queer sight. A pouring rain played upon one half the lake, while the other half, where we were fishing, was untouched by the shower, which for a quarter of an hour struck millions of liquid notes into a harmony of sweet sound.

When we pulled up at camp and spread out the day's catch it was very evident that Ed. would have to start early the next morning for the railroad. We had sent him on one trip already with fish for the poor folks at home whom we wanted to make sorry that they did not come along. By bringing ice down in each boat as it returned we succeeded in sending out all our fish in good condition. There was not a man in the crowd with so little conscience that he could have enjoyed the sport of catching these beautiful game fish, if we could not have made proper use of them. The hog who goes out to catch fish only to throw them out on the shore to die, ought to be shot and buried under the rotten heap which he leaves to defile the untainted breezes of the wilderness.

The boys certainly got one on Doc that day at King-Sims Lake. They were still-fishing near some floating logs.

"Look at that frog," said Sam.

"Where?" said Doc.

"Over on that log," said Sam, "he has been there for half an hour. Let's catch him for bait."

Whereupon it was discovered that it was Doc's frog which had grown tired waiting for a bite, and had crawled out on the log to sun himself. Doc had wondered "why the pesky fish had stopped biting." The boys spent the rest of the day explaining the matter to him.

The next day was not spent in very vigorous fishing. There was at least one exciting event, however. Doc and Charlie were within a stone's throw of camp, when the latter had a heavy strike in very shallow water. It was a big lunge, not far from a 20-pounder, for the boys had a number of good views of him. Like most of the river muscullunge he had been lying in the shallows just above a deep pool. He started with a full head of steam on for the deep hole. He ran under a log that was just below the surface of the water, dragging out, perhaps, a hundred feet of line, and there he hung. Neither rod nor line would stand the strain of reeling him in, with the line under the log. The big fish swished about like a boy in a "swimmin' hole" while Charlie yelled for the boys at the camp to come with another boat and a gun. But the shooting-iron arrived too late. The big fish shook the barbed wire out of his jaws at last and was off.

Next morning Charlie, Ira and Mr. M., a royal trio to camp with, started with two of the guides for the railroad and civilization.

The rest of us delayed twenty-four hours, and then struck tents, and said good-bye to the lower camp. Friday night was spent on a high point about half a dozen miles below Bear Creek. Tom and I took a fancy to the place and stayed there till Monday.

As usual, we lost our biggest fish. It was in the river, and our boat was drifting at the edge of some weeds. Tom's line was snarled, and he was trying to untangle it. Three feet of it, perhaps, was hanging in the water, when suddenly it began to run out. We could look down into the clear water of the river and see a muscullunge with frog, spoon and all in his mouth. A slight tug and the hooks were firmly set in his jaws, but that alarmed him. The line was kinked and would not run through the guide rings. With one flit of his tail and one toss of his head, the huge fish broke the strong line as though it had been a bit of cotton thread, and went away to pick the hooks out of his mouth and meditate on the evils of an unbridled appetite. We could have touched him with an oar when we first saw him. He would have weighed at least 20lbs. There were two mourners in our boat for an hour or two, with Tom acting as chief. Then we found consolation. Just above the mouth of Bear Creek, perhaps 20yds., for half an hour we had great luck with the small-mouths. Our rods were bending most of the time with these splendid fighters tugging to break them. The heaviest of the lot weighed 4½lbs. and fell to Tom's rod, while none were under 3lbs. The big one made a terrific fight. Rod, reel, line and fisherman were all tested in that battle. But the leaps into the air, the struggle for the weeds, the dives for

the bottom and all the tricks of a wily and powerful fish were in vain. He was finally mastered and lay panting in the bottom of the boat, a handsome prize.

The Manitowish is certainly a beautiful stream. No finer canoe trip could be planned than a paddle down this narrow, twisting, clear-as-crystal stream. The maples and birches crowd out on the high ridges, which run down to the stream, and along these the deer make their highways to the water. The soft soil on the grass-grown or sandy margins was printed thick with their hoof marks. On a sandy point here and there, where a sharp turn was made by the water, it looked as if the deer might have taken a waltz, so thick were the cuttings of their feet. Every few yards, in the bend of each elbow, the water is from three to ten feet deep. The bushes hang down into the water. Drift catches and piles up against them, and here the big bass lurk. Not big-mouths, but big small-mouths, that will put up such a fight as will astonish a tenderfoot.

The last Sunday in camp was one of the rare days. Tom and I went to bed on Saturday about 10, well tired out, and slept the clock around. The sun was high in the sky when we turned out, and breakfast was a leisurely affair. We felt the solitude of the place. The unbroken wilderness was about us. The sweet solitude was undisturbed by man's enterprise. Its silence was unbroken save by the cry and chirp and twitter of the wild things that inhabit the solitary places. There was the high note of the squirrel singing up in the pine tops. At long intervals through the day a bird note would be heard. But the sounds were few save the song of the pines, that weird, unwearied song, which is the same under the summer's sun or the winter's clouds. The breeze, untainted with the vile odors of human communities, came to us laden with the sweet smell of balsam and pine. To breathe it was to drink great draughts of delight. The day was spent in reading and a little talking. Not much talking, though, for the river sweeping by without a whisper, the soft and mellow sunshine, the utter absence of any human sounds save those we made, invited to quiet thought rather than the clack of tongues. The wind died at sunset. The unwearied pines were still. A solitary bird uttered a plaintive note in the woods across the river. A squirrel scolded, perhaps because the day was gone, or going. Silence reigned in the wilderness, falling like a benediction upon the quiet camp, and looking up through the pines we could see the old familiar stars, which look down with the same eternal calmness upon pines and plains and peaks and seas.

Some one had been riving out hemlock shingles, perhaps for the old logging camps further down the river. The rejected ones were lying in heaps a little way from the tent. We brought a quantity of these for our campfire. They made the flames leap high and dance like living things. Stretched on our backs full length on the ground, we had a splendid light for reading. We were absorbed in a couple of books and did not notice the increasing illumination until I happened to look around. The extra pile of shingles was ablaze. The fire had spread into a heap of old treetops lying near by. It was running swiftly out into the woods. We saw at a glance how a forest fire might start and thought we had one on our hands. We instantly organized a small but vigorous fire department. Tom dashed down the bank for water. I got the axe and rushed in front of the red fiend to clear away the brush and logs. The flames were already leaping up several tree trunks. The deep moss on the ground was burning. But by an hour of hard work we got the conflagration under control. The quiet day had ended with commotion. Tired out, we went to bed, but first unanimously adopted a resolution to keep a closer eye on the fire thereafter.

By the time we got our heavily loaded boat up to Bear Creek on Monday it was getting cloudy, and we pitched our tent on the spot first occupied on the down trip. A cold rain set in, which lasted thirty-six hours. Provisions were running low, and worst of all, we suddenly discovered that a piece of bacon, all the meat we had left, save fish, had been left lying on a stump at the last camp. A pall of gloom settled upon the duet. How could we cook fish without grease of any kind? But I succeeded in broiling a pike on a stick split and spread like a hand, with strips of birch woven in between, and our lives were prolonged.

Our worst experience was in going up to the railroad on Wednesday. We started early in the morning, but did not finish the 10 (?) miles until 5 o'clock, though using four oars and pulling steadily all day. The dam, 14 miles above the railroad, had been opened, and the river current was like a mill race. Before the long pull was over we felt the loneliness and wildness of the vast wilderness so oppressively that to have seen an Indian, we agreed, would have seemed like civilization. At last we finished the long pull and were greeted by Joe Odgers, who had furnished us our guides and boats. And I will say right here that no one can do better than by putting himself under Joe's direction if he wants to fish or hunt in the neighborhood of Manitowish. Larson, the section boss, a whole-souled fellow, took us to his house and gave us a good supper. So ended a glorious trip. We heartily hope to see it like again, though perhaps we will never make as good a score again, for we took 460 big fish—among them 52 muscullunge. We fished about six days altogether, and that, too, in wholly unfamiliar waters. We were not ashamed of our score. It was neither too large nor too small.

RICHARD GEAR HOBBS.

### The Epitaph of Bush.

SOWERBY, Ontario.—*Editor Forest and Stream:* I send you the epitaph over my dog's grave, referred to by "King-fisher" in his account of Big Basswood Lake. Mr. Hickman, you will remember, wrote that he had mislaid his copy:

In memoir of a true friend, pure and honest, an example to humanity, more honorable than the Star or Garter, a simple canine whose remains are interred at the root of this maple tree, by its owner, G. F. Dyer.

Here lies a dog that was almost a man, murdered by a man who was almost a brute. This faithful dog

"Hath borne his faculties so meek, hath been

"So clear to his that his virtues

Will plead like angels, trumpet-tongued, against

The deep damnation of his taking off."

His name is Bush, a dutiful companion of his owner, murdered by a friend.

July 26th, 1893.

The Dog was superior to its Assassin. It had a Pedigree.

G. F. D.

## Natural History.

### ANIMALS IN CAGES.

TACOMA, Mich., June.—Some time ago I read in your paper that the wolverine was very difficult to keep in captivity, could not be tamed, etc. Edwards Bros. of this city, have one caged which has been in their possession for several months. I went to their place a few days ago. The wolverine was curled up in some hay in an iron lined box, some 3ft. wide by 5ft. in length, and 4ft. high, with bars in front. Edwards, Sr., poked him with a stick at which he growled and got up in rather a slow and lazy manner. He did not show fight or offer to bite at the stick, and when left alone immediately resumed his form. The old man said he expected him to get very tame. The animal I should judge to be about half-grown. While looking at the various cages of small mammals, Edwards pulled aside a screen and asked me to name a fierce-looking creature which stared and blinked at us in a very feline manner. It was a lynx, but no bob cat like the kind so abundant here, nor was it like the gray species of Canada and northern New England. It was gray but had tufts on its ears and its feet were different. I called it a Canada lynx but Edwards said it was not, and that it was called "the link cat," whether meaning "connecting link" or lynx cat, I know not. He told me it was "roped" in the Palouse country by some cowboys, that it was a new species; that the Crescent Creamery of this city has got one and had it mounted and sent to the World's Fair; that it was found in California and Oregon and rarely in Washington. The creature was savage and met any advances half way with a vicious dig.

Among other animals an anteater from South America evinced a desire to cultivate a close acquaintance with every dog that came near its cage; although a small creature, its formidable claws boded no good to the unhappy canine that came within its reach, and Edwards said it had used up several dogs.

I read with pleasure the arrival of the capercaillie, this is the country for him.

WALTER B. SAVARY.

Five wolverines, one living and four dead, have been brought into Tacoma since Feb. 20. The dead ones were killed in the valleys and foothills of the Cascades, adjacent to Tacoma. The living specimen fell a victim to the wiles of a sly old Willapa trapper, and now lies curled up in the corner of a metal-lined box at the office of taxidermist Fred Edwards. His faculty for gnawing out necessitated the fine-lined box. The woolly old sportsman who captured him, did the trick with a No. 1½ steel trap, and brought his prize out of the brush inextricably mixed up in blankets and old grain sacks. The animal is full grown, uneducated to the refinements of public society, and weighs 40 to 50 pounds. The wolverine is probably the unregenerate customer which his biographers agree in portraying him. I offer nothing in defense of his character, nor in extenuation of his face when he smiles. In repose he displays no ivory, but wrinkles his nose with the promptness and grace of a social snob upon the approach of a person who does not belong to his set. Seen in front his face looks like that of the bear. In profile the strong likeness to the weasel family is seen in his snout, his flat head and low set ears. His beady, glittering, restless eyes complete the resemblance. His feet seem plantigrade, his tail and carriage remind one of a skunk.

We have a "what is it?" here in the cat line. An enormous gray cat, barred black, exactly after the pattern of any old domestic Tommy, pointed ears, big, honest round head, yellow eyes, and all the well known characteristics of the house cat, except an abbreviated tail. He is more than twice the size of the "bob-cat" (or lynx), with which we are all so familiar, and does not resemble that animal. He weighs 75 to 80 pounds, and would crowd a big mastiff for height and square build. He was lariatied by a cowboy near Ellensburg, and brought to Tacoma in good health and spirits.

Speaking of bears, by way of a change, Tom Dean killed a large black one 4½ miles west of the city, and 1½ miles south of the electric car tracks, April 30; and Wm. Meers, Dr. J. S. Wintermute and Tom Dean killed another in the same place May 6. Dean's hounds are beagles; Meers put three deerhounds into the pack, and the doctor contributed one small harrier. Willock, of Kitsap, hunts bear with two hounds and a setter, and says the setter is the best of the lot.

Henry Spence hunts bear with deerhounds. Last fall, while Henry and I were deer hunting up on the Nisqually with old Cruse alone, the hound nosed a big black bear out of his nest under a fire-hollowed log, and by cutting off his retreat toward a near-by bottom, we captured him in ten minutes after the dog first gave tongue.

There are no regularly bred bear dogs here. All our hunters require of a dog is nose, courage and ability to stay in a hot chase through rough country.

J. A. BEEBE, M.D.

### SPITTING SNAKES.

MISS HOPELEY's article in *FOREST AND STREAM* of June 29 is interesting and valuable. Incidentally she refers to my criticism of Prof. Cope. I think she does not quite understand me. I understood Prof. Cope to say that it was a common or invariable natural habit of the rattlesnake to hold his mouth open with erect fangs dribbling poison into the open mouth, which by violent blowing the enraged reptile threw upon his enemy keeping beyond the reach of his fangs. This I thought scarcely compatible with the proverbial wisdom of serpents. Why should nature bestow a deadly armament and then impose a foolish and useless habit of self-disarmament? Prof. Cope explained that he was describing what he observed in a specimen he had teased for an hour and a half on a very hot day. Miss Hopeley explains that "a snake can no more control the excitement or stimulus of its salivary apparatus than we ourselves can." She concludes that the snake's poison is only a modified saliva. And so also Prof. Cope said in his rejoinder to me. I am aware that from the standpoint of the comparative anatomist the term "modified" covers everything. Man, for example, is a "modified" monkey, in individual cases perhaps not much "modified."

Now snakes, venomous and non-venomous, have sal-

vary glands and true saliva, which is a lubricant assisting deglutition and a digestive fluid doing important work in the digestive process. Let us agree, then, that the poison gland is a "modified" salivary gland and its secretion a "modified" saliva; it is not a salivary gland and its secretion is not saliva. Does Miss Hopeley contend that we possess any evidence that the secretion of venom is stimulated or increased by the efforts of deglutition, or by the effects of rage or excitement, or even the act of biting? On the contrary, the evidence seems to be that the contents of the gland are nearly exhausted by the act of biting, quickly repeated a few times, and are not replaced until after the lapse of a considerable interval, during which the snake is comparatively harmless. Therefore I say the snake would not be that wise creature it is held to be if it spat away its terrible armament at an enemy out of reach, in impotent rage. The reputation of Prof. Cope is very high, the charm of Miss Hopeley's writings very great, but I fail to be convinced. I admitted that a venomous snake striking with intent to use its poison fangs, yet missing its mark, would forcibly eject its venom and spurt it into the air several feet. I stated that I had seen the copperhead do this repeatedly, but I have never seen the rattlesnake do it. I have no doubt he does do it under the same circumstances. I have no doubt that some of the stuff seen frothing in the mouth and blown at the enemy by snakes sometimes happens to be saliva, and not poison; spit, so to speak, and not venom, or "modified" saliva.

Most important and most interesting are Miss Hopeley's remarks on the striking power of snakes. She seems to confirm an opinion I have always held that they can strike from any position in any direction; and that the "killing circle" occupies the full sweep of a radius equal to the length of the snake; and in exceptional cases reaching even beyond it.

I have no doubt from what I have seen them actually do, that a full-sized diamond rattler could strike a man of full stature between the eyes while standing erect. To strike at a reptile so active, so powerful and so frightfully armed, from a position within possible reach of its fangs, is a thing most foolhardy and perilous. Those who believe that the rattlesnakes are sluggish in all their movements have repeatedly lost their lives in this very way, sometimes laying down a loaded shotgun to attack one of these dreadful creatures with a short slight stick or buggy whip, only to be fatally bitten. The extraordinary skill, precision and suddenness with which one of these deadly and powerful reptiles will dodge a blow aimed at them with a stick, and strike back at the assailant, can not be imagined by one who never saw them do it. The rule should be invariable—shoot them on the spot or keep without the deadly circle.

M. G. ELIZEY, M.D.

### A Black Snake and his Prey.

BOSTON, July 3.—*Editor Forest and Stream:* Recently while tramping through the country, observing the birds and their nests, I was somewhat startled by a buzzing noise in the grass at my feet, and leaned over to investigate, finding the commotion was caused by the tail of a large black snake rattling among the leaves. We were mutually surprised; he (or she) reared its head very high, and with mouth open and tongue darting north and south, eyes set steadily upon me, body squirming or contracting, my specimen looked formidable. Blood was in his eye, he wanted fight, but being unarmed, I hesitated. I did not want to look for a stick, being afraid of losing him. I called to my companion telling him to bring on the clubs, as they were to be trumps pretty soon. I was forcibly impressed by the almost human manner and peculiarly cunning motion the head and eyes presented while turning from one to the other of us.

A blow below the belt finally stopped that look in his eye; we cautiously tied a handkerchief about his neck and brought him home, feeling real proud. He was 4ft. 7in. long and 6in. in thickest part of the body. Took him to the taxidermist, who pulled a snake about 15in. long out of his mouth. I presume it was his supper from the night previous.

The taxidermist was greatly surprised, he never knew of a like case before. Perhaps some of our observers of snakes can enlighten us on this habit.

I have wondered if this species of snake were poisonous, but have been unable to ascertain.

I am looking forward to September with pleasure, not that I expect to bring home great bags of grouse or quail, because they are things of the past, but for the sense of freedom one feels when tramping about through thicket and upland.

My shooting partner dropped a fine great horned owl last fall, measuring 25½in. from horn to tail. He is at present looking at me from on top of my book case.

While out through the Blue Hills yesterday we found partridge or ruffed grouse fairly plentiful; young ones fine and strong. The quail were merrily whistling on either side of us, so that we may hope for a jolly day occasionally this coming fall.

I like the idea of "our paper" going to press earlier, for you cannot get it here too soon to suit us lovers of *FOREST AND STREAM*.

J. P. W.

[The black snake is not venomous.]

### Chuckor Partridges in Illinois.

MACOMB, Ill., July 7.—*Editor Forest and Stream:* I am very sorry to inform the readers of the *FOREST AND STREAM* that the Governor of our State vetoed the bill that passed both branches of our Legislature without opposition, protecting our foreign game birds. You will see by his veto message, he has no use for law and jails. It is quite discouraging to try to introduce birds without laws to protect them.

The caccubis chuckor partridge I imported from India last winter are doing nicely. One of them has laid forty-seven eggs and is still laying, and shows no symptoms of sitting yet. We set the eggs under bantams. One bantam hatched out ten little spotted beauties a few days ago. They are very smart and could fly when only one day old. We have two more bantams sitting on ten eggs each and have about twenty more eggs to set. It now looks as if we shall make a grand success in importing these beautiful game birds, and the whole country has become interested in their introduction into America.

W. O. BLAISDELL,

## Camp-Fire Flickerings.

### ADVENTURES IN THE FOG.

I HAD been mining all summer on the Columbia River, running a grizzly (not a bear, but a machine for saving fine gold); had made my last clean-up for the season, piled up my boxes, covered up my grizzly, dried and put away my burlaps, and had gone down to the post; sold my dust, bought my winter's grub, except meat, and for that article I substituted a few boxes of cartridges. I had my provisions hauled to the opposite side of the river, and ferried them across in my skiff, having plenty, such as it was, and good enough, what there was of it.

On the 24th of November it snowed a very little, and on the night of the 25th the snow fell six inches. I got up early, shouldered my little rifle, and started to the high mountain for meat. The fog was very thick up above me.

After a while, following the alarm bark of my dog, Frank, I came to where three big bears had gone along. They were either very large bears, or had very large feet.

It was nearly a mile to the top of the mountain, and the probability was that the fog was half a mile thick now. If I could come out of the fog only a little way behind them, I would have the best of it. I kept on. In less than fifty yards the fog got so thick I could not see the ground. I was compelled to stoop down, and then I could discern a tunnel which the bears had made. The fog got so dense that I could not leave the tunnel. I was in hopes that every step I would emerge from my prison, as it were, to open daylight. The mountain was very steep, and I was compelled to imitate the bear by crawling. I had gone but a short distance when I bumped my head against an obstruction. I put my hand forward, and there was a bear sure. I poked my rifle through the fog until I could tell it touched the back of his head, and fired. As soon as I was satisfied that it was dead, I cut away the fog sufficiently to allow me to get past. I had crawled not more than ten feet when the tunnel was blocked. This proved to be the second bear, which in like manner I killed. That done, the air in the tunnel was not of the very purest. I concluded I would crawl back. I cut away the fog sufficiently to allow me to turn around. But my rifle being like the panther's handspike tail, refused to be turned around. I had to take it along breech foremost. When I got back to my first bear, there was Frank. He was afraid to crawl over the dead bear, and the fog was so thick he could not turn around. I had some difficulty in passing him, but when I got past, I took him by the tail and dragged him back through the tunnel, and soon had the satisfaction of coming from midnight darkness to open daylight. Being very well satisfied with my day's work, I kept on down the mountain toward home, which I reached at 3 o'clock, tired and hungry.

That evening I began figuring out the profits of the day's hunt. The bear skins, should they prove to be grizzlies, would be worth \$25 each. The gall of the last one I sold to the Chinamen for \$4.50. The oil should turn out four gallons, worth \$1.75; the skulls \$1.50 to the Smithsonian Institution; the deer skin 75 cents; making \$69. The price might go down a little. Say all was worth \$60. Very good for a piece of a day's hunt, with one day thrown in bringing in the game.

The next morning early I saddled my horse, and with a light heart was on my way for the game. On the way I saw a coyote on a little mound distant about 250 yards. I raised the rear sight on my rifle, and fired. I had good aim, but had undergessed the distance. The ball struck just under his forefeet, and it was laughable to see him scamper up the mountain. Then I started for my bear. I had no difficulty in following the tracks in the snow, for the fog had lifted. I soon came to the end of the track. There was blood and the entrails of the two bears I had killed, but where were the bears? After looking all around, and not being able to account for their mysterious disappearance, I looked up at the bottom of the fog. There were my bears in the grip of that fog, and not more than ten feet from where the second one was, hung the third one by the ears. It was kicking and pawing the fog all to no purpose. The fog hung on to that bear's ears like death to a dead duck. I raised my rifle, and fired at the head. Down came the bear. I thought that this was pretty good; one bear out of three without a scratch or having to climb a tree. I could not see the ground where it struck. I securely tied my horse, and walked over very cautiously to the spot. There was no bear in sight.

I went back disgusted to where the entrails of the two bears lay, and cleaned off the grease, and started for home, which I reached quiet early. While meditating on my bad luck, I heard the clatter of a horse's hoofs, and upon looking up, saw an Indian coming as fast as his horse could carry him.

There had been a time when I should have run for my rifle, and hidden behind a tree or stump, and fired as soon as he got in range; but being at peace with the Indians and the rest of mankind, I let him come up. It was Indian Pete. "I want you to come up to my house," said he; "I want to show you some thing." A little while ago Christine was playing out doors, and was leading that little dog, when a dead grizzly bear fell down from the cloud and killed the dog. She screamed like a panther, and her mother ran out, and just then another bear fell, and came near striking her. She ran back into the house, scared nearly to death. I went out, and two bear's ears fell down right by my feet." Peter had picked them up, put them in his pocket, and brought them down to show to me. I examined them. There was a bullet hole in each. Then I knew how I had lost that third bear. When I shot at the coyote I had raised my sight, and had forgotten to turn it down, and when I shot at the bear's head I had shot a little too high. I told Peter about my hunt, and showed him in proof the sack of grease.

"Well," said he, "come; go up; you can have one bear, and I will take one, for if it had not been for me, you would have lost both."

I went up; and when he told his wife she was much pleased, yet she sympathized with Christine in the loss of her pet dog.

After stretching my bear skin and eating my supper, I revised my memorandum by knocking 50 and 10 per cent. off the estimated profits.

Taken all in all, this was one of the most memorable hunts I've had since 1877.

LEW. WILMOT.

## VIII.

### The Transportation Building.

THE Transportation Building is not behind any other of the great storehouses of wonders which make up the Columbian Exposition. Indeed, in respect to its exhibits, I think it is in the lead of most of them, for while all show us more or less of the productions of the world, the treasures of the Transportation Building, besides exhibiting the great object lessons of present development, carry us far back into unknown ages, to a time when the things we now call crude beginnings were the most finished productions of human skill.

The building itself, as compared to some of its fellows, is not so vast or so ornamental, although, if placed elsewhere, it would be vast. The dimensions of the main building are 250 by 960 ft. The main floor and galleries have a little more than nine acres of area. The annex, in which are the railways, railway plant and equipment, is 425 by 900 ft., and has a floor area of 9.2 acres. Thus a little over 18½ acres of flooring are available for transportation exhibits.

The main feature of the exterior is the great single arch of the main entrance, called the "Golden Door," from its profuse ornamentation in gold leaf. It also has a great number of carving and bas relief ornamentation.

Notwithstanding the liberal floor space, many of the departments are pressed for room, the railroad exhibits in particular filling their allotted space most thoroughly. Two of the most beautiful vestibule trains, one of them the Empire Express, have been placed alongside the annex and awnings built over them.

Barring the broomsticks on which witches took their nightly rides, there is hardly a kind of transportation which was not represented either by model or original. The vehicles of primitive man and the modern record breakers by sea and land are present in endless variety, thus the countries of the world and the centuries since man became inventive are brought together. The old order of things are not the least wonderful. The majestic engine, No. 999, with a record of one mile in 32 seconds, or at the rate of 112.5 miles per hour, made while drawing the Empire State Express, from New York to Chicago for exhibition, is no more wonderful than its neighbor engine, the De Witt Clinton, the latter a rough, feeble, uncouth infant as compared to its 200-ton brother. Small and inelegant though it be, the De Witt Clinton is a creation made from chaotic data, while No. 999 is but an improvement. The Transportation Building, in a general way, has three divisions, namely, railways, vessels and vehicles.

### The Railway Exhibits.

In the railway exhibits, the evolution of the locomotive and railway equipment are most completely shown. Dozens of the most grotesque rudimentary engines, far below the beauty and dignity of a common steam thrasher, represent an era in travel yet within the memory of man. There are all kinds representing the immediate degree of development. Many of the engines are historical, and also mark important epochs in the development of the nation. There is in the nine or more acres of railroad exhibits more history than could ever be written. The exhibits are not without their suggestions for the future. Such short intervals mark such great improvements that the modern locomotive, with all its beauty, size, power and speed, may be a crude mechanism a few years hence.

The vehicles representing transportation by land, are in profusion of models and makes. There are all kinds, from the lightest bicycle to the heaviest drays and freight wagons. The variety of wheelbarrows, carts, pleasure and business carriages, omnibuses and racing vehicles, are endless. There are grades and kinds to suit rich or poor, and for those who are well, or sick, or dead. Harnesses resplendent in the glitter of gold and silver mountings and high polish, made a complementary exhibit to the vehicles.

There were baby carriages worked cunningly in elegant designs and richly furnished in silk, lace and satins, made for single or double occupants. One model was particularly noticeable in that it was collapsable. By giving a twist and a shove, it became instantly as flat as a board. It could be then packed in a trunk and taken along on a journey. Thus do all the comforts of a home continually thrust themselves on people who do not want any home. Fleeing to the wilderness for peace and rest will soon avail naught.

Probably the sedan chair and palanquin embody the simplest idea of a vehicle. Some of them are made highly ornamental, yet the principle is the same as that employed by two fishermen who tie their fish to the middle of a pole or oar, each places an end on his shoulder and walks blithesomely homeward. That is the principle when they have the fish; but no fish, no principle.

The works of primitive man and modern man were in many contrasts. An ox-cart made and used by the Indians of Pueblo, of Acoma, N. M., was about the crudest and coarsest in construction of any. It was made entirely of wood. The two wheels had three pieces each. The middle piece, in which was the hub, was made out of a log. A cross section of the log had been left for the hub, which thus was cross-grained, and the rest had been worked down to about 3 in., the ends forming part of the circumference of the wheel. Two rough pieces, one set on each side of the middle pieces and pinned to it, made a rickety wheel with a lumpy circumference. Neither wheel was true on its axle. A rough tongue, set in the middle of the axle, formed the means of traction. What untold tortures the oxen must have suffered when drawing such a burden for the noble Red Man, the Child of the Forest. The idea, however, is an advance over tying the lodge poles to a pony, piling the family belongings on the dragging end, while the Light of the Home rides astride pony and poles, with a few papposes hung about miscellaneously wherever there is a place to fasten them.

A bullock cart from the Maderia Islands presented at sight a very strong claim to worthlessness. It was simply a sled with iron-shod plank runners, with a cheaply-made

coach body set on side springs. It was marked "Carro Des Bois or Bullock Cart," and the inquirer was informed that no wheels are used in that country.

A Turkish country carriage, resplendent in gilt and white, yet inelegantly designed, was shown to be drawn by oxen, two mounted specimens illustrating the manner.

But to go into a description of the different kinds of wheeled vehicles and saddles of domestic and foreign countries would fill volumes.

### Water Transportation.

The means of transportation on lake, river and ocean was most elaborately exhibited. From the light canoe, worked in elegant design and finish and weighing but a few pounds, to vessels, large and small, deep and shallow, wide and narrow, were shown either by originals or models. The great ocean steamship companies illustrated their leviathan craft by fine models, some quite large. Nor were the vessels confined to the peaceful ways of life. There were dozens of models of warships, terrible destroyers, mounting heavy guns to batter down and destroy all protection to the enemy, and many machine guns tristing out of every unoccupied corner, ready to slaughter men in job lots. There were models of torpedo boats, dredging boats, ferry boats—vessels of all kinds, propelled by sails, steam or electricity, for pleasure, business or war. There, too, were many models which have sad, pathetic, tragic or sentimental associations. Probably the most intense interest, because of the recent calamity, is that shown in connection with the model of the sadly unfortunate Victoria. The model of this vessel, so recently the just pride of Great Britain, is set up not far from the "Golden Door." It is large and worked out in elegant detail. A raised platform, brass railed, runs along about 12 ft. parallel in front of it for spectators, and an aged seaman has charge. The heavy black draping on it suggests its fate.

It is the constant center of a small crowd which though constantly changing never seems to diminish in size the whole day long. The old salt in charge tells, in endless repetition, the story of the Camperdown's ram cutting deep into the hull of the Victoria, the consequent foundering, and therewith the destruction wrought by swiftly revolving screw blades, hot water and steam and the deep sea. The model, built on a large scale, represents a noble modern battleship, floating on a calm sea, with torpedo nets set—a giant at rest. The half model is set against a mirror, which, by reflection, makes a complete whole.

Only a few yards away from the Victoria is a roughly made large row boat, protected from vandals or relic hunters by a stout framework. On its bows it bears the name Grace Darling. It attracts the constant attention of the sightseers and divides honors and interest with the Victoria in holding the attention of the public, though the story of Grace Darling is over a half century old and is a simple story of noble effort. A type-written piece of paper above the boat tells briefly the well-known story as follows:

#### THE GRACE DARLING.

In this boat on the morning of September 7, 1838, Grace Darling, then twenty-two years of age with her father, rescued nine people from the wreck of the Forfarshire, at Longstone, on the Farne Islands.

There were large models of the Pinta, the Nina and the Santa Maria, the latter being specially honored by several models, each one different from the other. Yet that is not remarkable, as the different portraits of Columbus differ. Heretofore, I have always considered Columbus's crew as a cowardly, craven lot for talking back to Columbus, and wanting to go home when the mighty Columbus had made up his mind to discover India on its outside and thereby make himself rich and famous. That America happened to be in the way and stopped him from going to India, I never thought detracted from his merits as a discoverer. But, since I have seen those models, my mind is changed about the crew. I believe that they had good sense in objecting to prowling around an endless ocean so far from home in the Santa Maria, whose quarterdeck, two or three stories high, was up near the main top, whose steersman stood in the hold, and whose tublike hull and poor rigging suggested slowness, inefficiency and discomfort. That crew had sense.

A dugout, from Central Africa, was made out of a crooked log, a segment of a circle. A man would need a wheel in his head to row it straight.

One of the most interesting crafts was a Bimba or canoe, from Benguela, Africa. It was made of round poles, 3 to 4 in. in diameter, tied together and made in shape something like an ordinary boat, though much deeper and without any sheer. It was about 12 ft. long, 3 wide and 2 ft. deep. A couple of roughly-squared timbers, about 4×5 in., placed across and fastened at the ends, made two rude seats. There was nothing placed between the poles to keep the water out. It was free to come in or go out as it pleased. Nothing could be grander than the sight of an African king, dressed in his kingly raiment, seated in the royal Bimba with the queen, and gently floating down the Kuango River. In the Dahomey village on the Midway Plaisance the king each day drinks much of the fire beer of the white man, and while his eyes look ugly, and he makes many useless and aimless motions, he does everything with such decorous dignity and gravity that no monkey could show more seriousness. His subjects appear to respect him if not to love him.

A model of a boat used on the Sea of Gallilee, the same as used in the time of Christ, is a marvel in its way. It is about 6 ft. long, 3 ft. beam, and seemed to have been modeled after a half watermelon, a bit sharpened at the ends. In the exact center was the place for a mast. It was truly going to sea in a tub. The Gallilee sailors were brave men if they went down to the sea in such crafts, though the Sea of Gallilee is not very large.

A model of an ancient canoe-shaped craft, the original of which was found in the marshes of the Baltic Sea, in length 75 ft., in width 10 ft. 6 in., 15 oars on each side, was a curiosity.

In walking about, one runs across gigantic implements. A great trip hammer, said to be the largest in the world,

towers high above the other exhibits. The hammer and foundations weigh 2,400 tons. The weight of the falling parts weigh 125 tons, and they have a stroke of 16 ft.; yet this enormous weight can be used with more precision and delicacy than a man can use a tack hammer. Traveling cranes, which can pick up tons of weight with ease, are in many models.

In fact, most modern wonders are tons in weight. A 12 in. breechloading rifled cannon, 36 ft. long, 3 ft. 9 in. in largest diameter, powder charge 425 lbs., is not a small mass of iron, yet it is small compared to the great Krupp gun. Near it lay a cylinder of cast steel, 15 ft. long, 4 ft. 6 in. in diameter, which weighed 108,190 lbs.

A section of a barrette, one of thirteen, a monster sheet of iron, 12 ft. in. high, 8 ft. 4 in. wide and 17 in. thick, weight 69,798 lbs., stood on edge in lordly majesty. Large as it is, it is none too large for protection from the modern gun, as various other plates, all thick and heavy, showed the destructive powers of the modern rifled cannon. Some plates were pierced clear through or were shattered where the shot impinged. These numerous plates also showed the development and resisting force of armor as improved since 1863 to 1892.

But all these will not be so interesting as a mention of what concerns the needs of the present day and where the exhibits of manufacturers can be found.

### Mr. J. H. Rushton's Exhibit.

In the gallery, Section E, near columns 31, 32, near the large entrance called the Golden Door, is the exhibit of Mr. J. H. Rushton, Canton, N. Y., who is famous as a manufacturer of pleasure boats and canoes. In great contrast to his finished productions with their graceful lines and elegant finish are some rude crafts in an adjoining exhibit. One of them, a straw Balsa from Lake Titicaca, Peru, thick, almost flat, and more like a mammoth straw horse collar sewn together, hung over a red cedar Haida canoe, from Queen Charlotte's Islands. For neighbors they had an ungraceful canoe from Colon, U. S. of Colombia, a spruce Tingit canoe, Upper Yukon River. This canoe was very narrow. A bark canoe made from one piece of bark, a half cylinder in shape, is tied at the ends with tough strips of bark in the same manner that sacks of grain are tied. It was a most primitive vessel. Indeed, it seemed to be only one remove from the raft. This was from Lake Tyers, Gippsland, Australia.

Mr. Richard Allen, in charge of Mr. Rushton's exhibit, very kindly showed me through it and explained the special features of the productions. There were ten boats on exhibition. There was an Adirondack or Sarnac Lake boat, 16 ft., smoothskin. A two-man cruiser. A Rushton cruiser. A racing sailer, 16 by 20. A racing paddler. A beautiful pleasure boat, with awning and elegant furnishings. All the boats are made in different grades. Several beautiful canoes made up the rest of the boat exhibit. Two figures of men with canoes resting bottom up on their shoulders showed the manner of transportation in the wilderness, or where other transportation is not available.

Specimen oars, spoon and straight blades, double and single blade paddles, of exquisite handmake and finish, were part of the exhibit. All kinds of canoe and boat furnishings were displayed.

### Mr. George B. Carpenter & Co.'s Exhibit.

This exhibit is in the eastern gallery, near column 42. It is roomy and contains a most elaborate display of different varieties and designs of blocks, oars, binnacles, compasses, cordage, sail cloth, lanterns, yacht anchors, steers and furnishings. In short, the display covered the larger part of a vessel's rigging, besides a variety of marine goods. A colored canopy over the exhibit added much to its attractiveness. The firm makes a specialty of making sails and flags.

The exhibitors who have space in the galleries are most unfortunate in not being on the main floor, simply because the galleries are sadly neglected by the sight-seeing public. In fact, the galleries are comparatively deserted. That is not strange. The Exposition is so vast and the sightseer soon becomes so fatigued that he or she does not care to climb stairs, easy though they be. Moreover, there are endless wonders at every hand to distract or engage the attention of visitors. But a small percentage of visitors know that there are galleries, although there are notices stuck up here and there informing the public of the fact. While the main floors are thronged with thousands, the galleries thus receive little attention.

### Gas Engine and Power Co.'s Exhibit.

This company was fortunate in being on the main floor of the building, which undoubtedly was due to the fact that it manufactures heavy craft. The light boats were placed in the gallery. The company had six boats on exhibition, elegant specimens of their workmanship. They were placed to show to good advantage. They were Pinta, 30 ft., six-horse power; Nina, 25 ft., four-horse power; Santa Maria, ten-horse power; Isabella, 18 ft., two-horse power; Ferdinand, 21 ft., two-horse power, and a small boat named Me Too. The display is most artistic and elegant.

### Thomas Kane & Co.'s Exhibit.

This exhibit was in charge of Mr. J. W. Shaw, who informed me that the company had eight boats in the Fisheries Department besides those in the Transportation Department, which were one 25 ft. steam launch, three-horse power, burning either coal or wood, three steam yachts, one cruising canoe, one cutter model of 1893, one catboat, skimming dish model, and three mahogany row-boats. This company furnished twenty-five of the electric launches used on the lagoon. The boats were nicely finished and fitted.

### The Detroit Boat Works' Exhibit.

The exhibit of this company is on the main floor, near column 22. Mr. W. J. Partridge, a practical boat builder himself, has charge. Nine boats comprise the exhibit. The largest and most conspicuous is a finely finished electric launch, similar to ones furnished the officials of the fair by this company for conveyance on the lagoon. One double catboat, two canoes, and five row and sail boats all elegantly modeled and finished, make an interesting exhibit, though representing but a fraction of the scope of the company's business. A life raft was shown as part of this company's manufactures.

### B. N. Morris's Exhibit.

In the eastern gallery, near column 45, is the exhibit of Mr. B. N. Morris. There were only six boats, but they

were models of elegance and fine finish. There was one Canadian paddling canoe, one sailing canoe, one paddling cruiser, one Penobscot River skiff, one Indian model paddling canoe and one yacht tender.

The Seamless Steel Boat.

A pressed seamless steel boat excited much interest. It was made on beautiful lines. It was quite a large row-boat. The process of manufacture is said to be very simple. Each half is stamped out of a sheet of steel; the two sides are then soldered or fused together by heat.

909 SECURITY BUILDING, Chicago. B. WATERS.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., June 30.—Mr. E. A. Carroll, of Little Rock, Ark., writes me as follows:

"Mr. Lacy Tilghman, while out exercising his dogs a few days ago, found a quail's nest containing twenty-four eggs. Yesterday he happened to be in the vicinity of the nest and thought he would take a look at it. Imagine his surprise at finding the nest occupied by a kingsnake and the eggs gone. He killed the snake and found that it had swallowed the whole two dozen eggs. Thus another coye passes on to the golden whence, without hearing the crack of a gun or being honored and flattered by the earnest attention of a dog."

It do seem like the life of a Bob White is a continuous Scylla and Charybdis. I never heard of so pronounced a case of quail omelet as this kingsnake evidently had in mind.

Shot Do Ball.

An esteemed contemporary published at Chicago has within the last few years published about 17,500,387 columns of unique matter under the intensely interesting heading "Do Shot Ball?" In the meantime everybody knows shot do ball, but the stereotyped head goes on its thrilling journalistic career. Well, this isn't what I was going to say, though I might add that the inventor of the above catastrophe-head might satisfy himself in his mind and give case to his readers by making a little trip down to the Wild West and having a talk with Mr. Frank Butler, the manager of Miss Annie Oakley. From the head of the arena where Miss Oakley stands while doing her beautiful and almost unbelievable feats with the shotgun it is perhaps 125 to 150 yds. to the big canvas screen which surrounds the artificial Rocky Mountains at the back of open space. This canvas is well riddled with shot, but that isn't what I was going to say. The other day, while Miss Oakley was doing her turn, a gob of shot became solidified in the discharge, which, I take it, is equivalent to saying that they balled, and the resultant mass of lead, or balled shot, cut a clean, round hole as big as a half dollar through the Rocky Mountains, passed across the alley-way at the stables, went through an inch upright board screen which surmounted one of the buildings, crossed the street beyond the inclosure and struck the front of the mission church which stands on the other side of the street, about 200 yds. in all from the firing point. The mass of lead did not enter the board front of the church, but left its mark and fell to the ground. May we hope that this will, peradventure, give ease to the eagerly questioning journalistic mind which seeks to tear away the mask and to wrest from Truth the information whether or not shot do ever ball? Will this suffice to take down the haunting question mark? To gaze too long upon an infinitude of the same question mark is dangerous, damaging and dizzying. It causes us to cast the mind free upon the brink of an abyssal doubt, there to hang, shuddering and unstead, uncomfited of human hand. Let us away with this. Let us settle the question and go on house-keeping. Do shot ball—oh! do they ball? They do, they do. You can see the holes. Gladly and exultantly I announce it. They do! They do! Now let the agitated country go back to peace and to its calmer associations.

A Pleasant Reception.

I was speaking of Miss Annie Oakley. It is a pleasure to speak of a celebrity whose vanity has never grown and whose head has never been turned. The recipient of princely and royal favors, as testified by gold and gems, and petted the world over, this American girl has always remained the same, simple, unaffected and frank as a child. She shoots so easily and naturally that it is a question whether she values her own skill. At any rate, there isn't a shooter in America who wouldn't fight for her. And yet, although known in all corners of Europe and America, in her own native State of Ohio she is most nearly without honor. This week Gen. A. M. Anderson, a member of Congress and State representative of Ohio at the World's Fair, wandered into the home-like tent where Miss Oakley receives. He learned that Miss Oakley was an Ohio girl (from Darke county, one of the northern woods districts), and he was so pleased at his "discovery" that he resolved to do something in memory of the occasion. He accordingly decreed a State reception in honor of the State's representative at the gun, and Wednesday, June 28, 11 till 1 o'clock, was Annie Oakley day at the Ohio building at the World's Fair. I am glad of this, and I know all the boys will also be glad to know of it, for this honest and simple little woman is a favorite all over the shooting world.

Odd Names.

In the North we have deep water ducks and "marsh ducks." In the South the latter are called "puddle ducks." The bluebills of the North are called "gray-backs" in Texas, and are also called "do-greens." I couldn't figure out that last name for a while, till it occurred to me that it meant "dos gris"—Galveston French for "gray back." The latter seems the general Southern or Texas name for the bluebill.

Even more puzzling was the term "pull—does," which I found was the common name for our mud hens in the South. Yet when you think of the French "poule d'eau," or "water hen," the rest is easy.

The Speed of Canvasbacks.

One reads much of the estimated speed of flight of wild ducks under full headway. Mr. Percy Stone, of this city, tells me of an interesting way in which he once estimated the speed of canvasbacks. The birds were flying down the Fox River, over Grass Lake to Fox Lake. There was a blind at the old bridge, and a shooter in the blind. From the bridge down stream to the fence at which Mr. Stone had his blind was a distance of exactly one mile,

as the section lines were marked by the road at the bridge and the fence at which Mr. Stone was located. When a bunch of canvas passed the bridge a puff of smoke from the shooter's gun there was the signal for "Go!" on their mile run. Taking the time at the puff of smoke for the start, and again timing the same birds as they passed over his fence, Mr. Stone found by a simple and very accurate calculation that they were going at a rate of 90 to 110 miles an hour. The redheads and blue-bills did not fly quite so fast. This is the most accurate method of timing the flight of wildfowl of which I ever heard, and the results would seem practically conclusive.

It Means Indians Also.

Mr. Thos. Johnson writes me from Winnipeg, Manitoba, June 9 as follows:

"You will note from the inclosed clipping from to-day's Winnipeg Free Press that the sportsmen of the Northwest are getting in their work. The Indians did more harm to game by shooting them at all times, in season or out, summer and winter—than even your snipe shooting spring shooters."

The clipping reads:

"The Indian Department issues notice that on and after the first day of January, 1894, the laws respecting game in force in the North-West Territories shall apply to the following Indians:

Band.	Reserve.	Band.	Reserve.
Enoch.	Birdtail Creek	One Arrow.	Batoche

Ring-Necked Pheasants for Nova Scotia.

The introduction by the Game Society of the English pheasant into Nova Scotia, is an important and interesting step in relation to future sport in this province.

For some time a number of gentlemen, foreseeing the gradual decrease of our partridge, have been urging the introduction of this most prolific game bird; but only last winter did a circumstance arise which induced the society to give this bird to the public of Nova Scotia. Mr. Price, of Kentville, who in England had much experience of pheasants, last year raised a few of these birds at his place in the outskirts of that town. They were put out in the woods to take care of themselves. Some of the chickens were killed by various accidents, but out of the lot three cocks and one hen spent last winter in the open. Though one of the severest winters in living recollection these birds all turned up in the spring in capital condition. They had been seen at times during the severest weather of the winter apparently not in the least distressed by the cold. They fed themselves, and in their own persons demonstrated the proposition that the pheasant can thrive in a Nova Scotian winter.

Mr. Price communicated this result to the Game Society, and that body immediately ordered from England fifteen hens and three cocks. They arrived in May, in splendid order. They are the "ring-necked" variety, the very best now in England. After being taken to the residence of Mr. Piers, the secretary of the society, at Dutch Village, that gentleman has distributed them in favorable places. Four hens were sent to Kentville, to furnish mates for the cocks there under Mr. Price's care. A quartette was set free in the rear of the Dutch Village, another on the Margaret's Bay road and another at Green Head, a secluded spot on the Nine Mile River. In each case the birds have been placed under the care of a person near whose place they were put, and who, taking an interest in them, will use every exertion for their protection. As the cost of the birds was large, the society preferred to have them all where they will be under the eye and care of its own officers. If they succeed and increase they will next year be distributed all over the province. Since their being set free they have several times been heard from. The cocks in particular have been seen in various clearings, and the hens are supposed to be setting, as they have not shown themselves often.

Of course the law forbids the killing of these birds, and also prohibits, under heavy penalties, having them in possession.

The society relies on the aid of all citizens in protecting these birds and aiding the society in giving to the people of this province the most prolific and estimable of English game birds. No trouble or expense will be spared to give them every chance. The society also contemplates introducing other game into the province—principally the Newfoundland grouse, and the red deer. Arrangements are now being made with the government of New Brunswick, to permit a herd of the latter to be caught and exported to this province. There seems no reason why these beautiful animals should not thrive here, and, with our fast increasing moose, help to make our forests the paradise for profitable hunting, which it was in days of yore. The New Brunswick government has consented to the exportation of the deer upon receiving the assurance of our government, that they will be taken care of by some public society and kept for the public good. This has been given and the animals will be sent over as the conditions are favorable. One of the pheasant hens was seen yesterday afternoon with a large brood of chickens.—Halifax (N. S.) Mail.

Hanging up a Deer.

THIS is my way of hanging up a deer out of the reach of coyotes and other vermin: After I have taken out the entrails and cut off the windpipe and swallow from the root of the tongue, I insert the pole in the ground about 3 ft. from a tree; then place the other end in the deer's neck between the jaws; then up-end the deer and let it lean against the tree.

LEW WILMOT.

GRAY FOXES IN CONNECTICUT.

DERBY, Conn., July 2.—Editor Forest and Stream: It has been truly said that no New England valley affords more material for bird shooting and fox hunting than that of the picturesque Naugatuck.

At a point some ten miles from its source, the rolling, tumbling Naugatuck River joins the smooth and stately Housatonic. The town of Derby is at this junction and it was near here that the following incident took place:

The tale was told to me by Mr. Joseph M. Hoadley, a fox hunter, resident in this place for some forty years. Mr. Hoadley has hunted through this State in quest of birds and foxes for nearly fifty years, and no man knows more about the woodcraft of Connecticut, nor has any one hunted over more ground in our State, than he. The stories he can tell of his days in the fields and woods are both interesting and instructive, even to non-hunters.

In December of '92, accompanied by Mr. Peck, another fox hunter on whom the hand of time shows its work, Mr. Hoadley went to Turkey Hill, some three miles below Derby, taking three hounds, Hector and Jim owned by Mr. Hoadley, and Drive by Mr. Peck.

The honor of starting the fox fell to Jim, but soon all three were in full chase. The fox, a gray one, ran around in rather a small space, so that the hounds were always within hearing, and to make things more interesting two rabbit hunters were in the woods with their three dogs. As the foxhounds swept by with their blood-curdling yelp which only fox hunters know how to fully appreciate, the three rabbit hounds joined the chorus and the six dogs filled the woods with their music. After running about fifteen minutes the fox, in his circuit, passed where Mr. Peck was lying in wait, but for some reason when he fired at the fox he only succeeded in wounding it. Close in the fox's wake came the six dogs in full cry, but soon they stopped and began to bark.

Mr. Hoadley was the first to arrive at the scene of the disturbance, and there found the six dogs in a circle around an elm tree. Looking up, he saw to his surprise the fox in the lowest branches of this tree, some thirty feet from the ground. There was only one way for him to get there. That was to climb, as there were no trees near, and the tree in question had a smooth trunk. The tree was some ten inches in diameter at its base.

Mr. Hoadley did not shoot, but whooped to Mr. Peck, who soon came up. He had previously said that foxes had never been known to climb trees, and that he would not believe it possible until he had seen it. He now found it not only possible, but an actual fact.

All six dogs were barking at the foot of the tree in wild excitement, and they had to be tied up, when Mr. Peck shot the fox, in order to keep them from tearing each other to pieces. Mr. Hoadley says that in all his thirty-five years' fox hunting he never witnessed anything so exciting as this chase.

While the reader has the gray fox in mind it may be well to add a few words, giving Mr. Hoadley's opinion of its habits, size and mode of living.

The gray fox, or wood gray as it is sometimes called, is a recent arrival in Connecticut. Twenty-five years ago they were unknown in these parts but now seem to be very numerous in the southern New England States. They are found in nearly all of the ledges, and, unlike our common red fox, they do not lie in the swamps. When chased by the hounds the gray fox seldom leaves the vicinity of his burrow, which is almost always in some ledge.

The grays are much less afraid of the dogs than the red, and often run not more than twenty or thirty feet ahead of the hounds. They run in circuits, which affords more sport to the hunter. Still it is much more difficult for the hounds to keep the track of these foxes as they do not leave a strong scent. Whether their endurance is less or their attachment for home greater than the red I am unable to say, but they do not run on an average more than an hour at a time. At times they will run two, three and even five hours.

In some respects their habits resemble those of the coon. They are very fond of apples and some vegetables, and like the red are not averse to carrion. They have all the cunning of the red fox with some of the coon climbing ability. It is Mr. Hoadley's opinion after his intimacy with them that they whip the red fox.

One peculiar feature is their sensitiveness to cold, for in very cold weather they do not leave their burrows.

In form the gray is in many respects different from the red. He has a shorter head, legs, flag, and a much smaller foot, but the body is larger.

C. H.

[The gray fox (*Vulpes (Urocyon) cinereo-argentatus*) is a common species and is noted for its tree-climbing powers. It appears to be somewhat more abundant in the South than in the North, yet some of the books say that it is distributed over the whole United States. It is not to be confounded with the cross fox, a color variety of the red, which is also gray in color.]

A Story of "Sters."

If every man makes a new "ster" out of something, I am beginning to fear that we shall shortly see stories like the following, in our favorite paper: Once upon a time there was a famous gunster and rodster. He had a couple of friends who were also great devotees of the rod and gun. One was also a noted dogster. These three good friends had been chums ever since they were youngsters, and were now well seasoned campsters, canoester and pun(t)sters. These three jolly comrades kept clear of all tricksters, and never allowed a shyster near their camp. After due talk and smoke (they were all yarnsters and smokesters), they decided to go for an outing, of a week or ten days duration. Before setting out they had to buy provisions for the trip. They bought bread and biscuits from a bakerster, beer, etc., from a brewster. They went to a hookster for fishing lines, hooks, etc., and also visited a porkster for ham and bacon, and last of all a cowster for butter and cheese. They preferred to be flysters, but they also took a good sized can from the wormsters. They engaged a cookster and canoester, but the start was scarcely made when the wind turned to a nor'easter. Soon they were all in a fluster, and being such coinsters and punsters, the canoe sank and they were all drowned.

VON I.

It Becomes a Necessity.

LANCASTER, N. Y., June 17.—I have been a subscriber for FOREST AND STREAM since the commencement of its third volume, and although I've had to give up a good many things in the past few months, I can't give up my FOREST AND STREAM.

### MULE DEER HEADS.

THE male mule deer, often erroneously called blacktailed deer, has been blessed by nature with a very prolific growth of horns, and while many are very symmetrical and perfect, a great many strange shapes and freaks are often found. The two heads illustrated here are as good specimens of their kind as I have ever had the good fortune to secure, and a brief description of where they were secured and of the bucks that wore them may be interesting.

The one on page 29 came from near the Trinity Lakes, Elmore county, Idaho. These lakes, sixteen or more in number, and ranging in size from a mere pool up to a body of water making a respectable lake, are situated in the valleys or more properly depressions made by the surrounding high peaks of a very rugged and high detached chain of mountains, lying northwest of the South Boise River, about fifty miles from Mountain Home station on the Oregon Short Line Division of the Union Pacific Railway, and reached by stage line to Pine Grove, or Rocky Bar, thence by a very rough and little traveled trail. In fact so few travel this route that it can hardly be called a trail. The larger lakes are teeming with the genuine mountain trout, and to catch fifty or sixty of the beautiful little fish in an hour's fishing is comparatively easy. The water in most of the lakes is as clear as crystal, being fed by springs and the melting snows from off the granite peaks. All about the lakes are high rolling mountains and hills; and deer, a few elk and bear are to be found, while on the roughest peaks the white goats make their home.

Late one November, after the first snows of winter had fallen on the upper mountains, driving the game down toward the river, our party of two made a short trip toward Trinity Lakes, and the noble buck that wore the magnificent head of horns shown here was one of the trophies brought out. It was late one evening when one of the party was trudging toward camp. The snow was falling fast and partly obscured the landscape, but the trained eye of the hardy mountaineer caught a glimpse of a dark object slowly moving along, 200 yds. away. Is it a deer? Yes. See, he stops, throws up his head and shakes the fast falling snow from off his lordly crest; he snorts and stamps his foot; he breathes the evening air with mighty whiffs; he has heard a sound of cracking stick, or rolling stone, or rustling bush; but where he knows not, for the wind bears to him no taint of human presence. The hunter silently drops on one knee, the "Centennial" Winchester is raised, a steady sight and a loud report followed by the sharp spat of the leaden missile, and with a bound the buck is off. But not far does he speed. He staggers, and headlong plunges down the mountain side, shot through the heart, and "Uncle" pats himself on the back as he wends his way to where the fallen monarch lies, with, "By the Almighty, that was a good shot." When dressed and ready for the pack horse it was found that the buck made as large a load as any of the ponies could pack in, and no doubt in weight was over 250 lbs.

To the south of the Trinity Lake range lies another small chain of detached mountains called locally the "Dog Creek Mountains." They are really the same range, but as the Trinity, a dashing mountain stream, and Dog Creek, another stream, head on the opposite sides of a divide, the two names are used locally to designate the lay of the country. The Dog Creek mountains are not so high as the Trinity range, and are nearer the South Boise River. There are more bears in the rough country round about, but not as many deer until in the fall of the year.

The buck that wore the above odd set of horns was over 300 lbs. in weight, and was killed in September before every vestige of the "velvet" had been worn off or disappeared. The weight of the animal was so great that it broke a pack saddle, and proved too much of a load for the jack that we used for a pack animal, and it took the assistance of one of the horses to get the carcass down to the river. Although the body of this buck and its antlers were enormous, its head seemed small in proportion. The horns had a great spread, and the beams were thick and massive. The photograph gives but a poor idea of the size and oddity of this specimen.

This head was purchased from me by a Detroit gentleman to present to a New York athletic club, and it may be that some of the readers of FOREST AND STREAM have seen it. It does not compare with No. 1 for beauty, but is one that might never be matched by a hunter in a lifetime.

F. F. FRISBIE.

### Another Notable Shot.

THE other fellows must not have all the say. I once made a notable shot myself. It was when I was a boy of 10. My weapon was an old brass pistol barrel, mounted on a block, cannon fashion. The load consisted of a handful of powder, several wads of grass, well rammed, and a pint or less of gravel stones, with a number of buckshot mixed in, for luck. I had in intent the slaying of a regiment of wooden soldiers, whittled from shingles and painted red to imitate the Britishers whom my ancestor had mowed down at Bunker Hill.

"Fizz!" said the fuse. "Boom!" the gun. The smoke went out to settle over the arena of conflict, which was the public square of my village. Had any soldiers fallen? No, not one. I had aimed too high, so I would try it again. I was on my knees in the act of reloading. Then from out the ether at my rear, taking a base advantage, shot

the foot of a human catapult. There were stars above, around, below me. My ascension was too high for measurement by any instrument of earthly make. Then the hand of the catapult followed the foot. More stars. I sought the earth, but there was no repose. In a twinkling the catapult had become a wool carder which would not card, and then it was a catapult again. I was beyond the region of the stars, and space was claiming me for her own. But why recall the things of that ancient exaltation? For it was only my neighbor preparing me that I might be led by the ear to view the result of my notable shot.

One "Bill" had been sufficiently footed. The other read:

4 lights plate glass @ \$2.50.....	\$10.00
2 chandelier globes @ .60.....	1.20
Damage to lace curtains.....	8.00
Repairs of wall.....	1.50

Total.....\$20.70

EL PASO DE RABLES, CAL.

### BRUIN IN THE BUTTERY.

WE had been camping far up on the headwaters of one of the noble rivers of northern New England and were on our return journey toward the settlements. In the morning, at an hour when the majority of city people are fast asleep, we had eaten our breakfast, struck camp, loaded the canoes and started down stream. All the forenoon we plied our paddles steadily, for the sky was overcast with threatening clouds and there was every indication of a severe storm.

HEAD OF MULE DEER.

DOG CREEK, IDAHO.

PHOTO BY F. F. FRISBIE

We hoped to avoid the drenching which seemed imminent by reaching a camp a number of miles below, but between us and our destination was a series of falls and rapids, where we would have to make several portages and carry the canoes, instead of being borne by them. We glanced often at the sky, and the light canoes sped onward as if they shared our feeling of haste.

Mid after mile was covered between banks clothed to the water's edge with unbroken forest, which appeared unusually grim and gloomy under the forbidding sky. Once, as we rounded a bend, two deer, a buck and a doe, which were standing in the edge of the water, gave us a startled glance, and then leaped up the bank and disappeared in the woods. In due time we landed at the head of the first pitch, and the rain had not yet commenced to fall. One of the canoes was turned bottom up and the supplies and various camp utensils were placed beneath it for protection. My companion and myself each shouldered as large a load as we could care for, the guides took the other canoe, and we started across the carry. The path around the fall was a mere trail which could hardly be distinguished from the surrounding forest, and our way was strewn with rocks, fallen trees and logs, which made the trip anything but a pleasure stroll. The trees were so thick that the light was dim, and the ground was so soft and spongy with damp moss that our footsteps made little noise. There was no wind, and the woods were so still that one might have thought we were the only living things in the vicinity; but the occasional hoof-print of a deer or moose gave ample proof that there was life somewhere in the wilderness.

In several places we saw on the gray trunk of some great pine or spruce deep scratches in the bark where bears had stretched themselves and sharpened their claws, and when we reached the lower end of the carry there were bear tracks in the mud on the bank of the stream. We placed our loads under the canoe and turned back for the balance of our outfit, which had been left behind. Before we had covered half the distance a few large drops of rain began to patter on the dead leaves, and the trees were shaken by sudden gusts of wind. In a few moments a perfect deluge was descending, which threatened to drench us in spite of the protection afforded by our rubber coats. The mossy forest floor absorbed and held the moisture like a sponge, and at every step the water oozed up around our feet. The trail was soon transformed into one long mire, where puddles were far more plenty than stepping stones, and the dripping foli-

age of the trees and bushes seemed to take malicious delight in wiping the wet leaves across our faces and in sending little streams trickling down our necks.

The two ends of the carry are known respectively as the "taking out place" and the "putting in place," and when we reached the former, after our half-mile tramp, we sought refuge for ourselves under the canoe.

There is no better roof than the bottom of a birch. We crouched there for a while watching the storm and listening to the melancholy sighing of the trees in the surrounding forest.

The rain beat a tattoo on our bark shelter and the surface of the stream was covered with innumerable diminutive fountains, so fiercely was it pelted.

When the storm showed some signs of abating we made our second trip across the carry, but before we reached the "putting in place" it was raining harder than before, if such a thing were possible. However, we launched the canoes, put the luggage aboard—covering it with rubber blankets as best we could, and continued on our journey. Two miles down stream we came to the second fall. At this place the delay was slight, for only a single ledge extends across the river, and the canoes were lifted around one end without trouble. Then came another stretch of dead water and the "long falls" where for a mile or more the river is one chain of rapids, falls and pitches. The water, crowded between walls of ragged, broken rock, leaps and dashes through the wild gorge as if angry at restraint. A few pools are interspersed between the stretches of quick water, and canoes can be taken through without making one long carry around. The

first two pitches we "ran," shooting through the foaming water guided by skillful paddles, and emerged into a basin of deep, black water behind a great rock. Here the canoes had to be carried over into another pool to avoid a fall, whence they were lowered by the painters through some more quick water. Then they were taken out again and carried some distance over the rocks, when they were once more consigned to their native element. In this manner, alternately carrying the canoes and having them carry us, we gradually worked our way through; but long before we put them in the water for the final stage of the day's journey we were all wet to the skin. The rocks were wet and slippery, and we were thankful when this worst place of all was behind us.

But "it is a long road which has no turn," and at last we were afloat with only five miles of smooth dead-water between us and our destination. The sky was lighting up a little in the west and the rain did not fall so copiously.

We were wet, cold and hungry, so that with visions of warmth and plenty at the camp we paddled vigorously. The banks stretched away on either hand, the same two unbroken lines of forest trees which all day long we had been passing; but about three o'clock in the afternoon we saw a clearing on the right, in which was the house where we intended to spend the night. It was a low, unpretentious structure standing, with its adjacent log hovels, in the middle of the clearing several rods back from the stream, but to us it was as welcome as the most magnificent of city hotels could have been.

On landing we placed our goods under the canoes as before, and then hurried to the house, taking with us our rods, rifles and personal luggage. We were given a hearty welcome by the old backwoodsman who lived there, and he soon had a roaring fire blazing like a conflagration, around which we grouped ourselves, enjoying the genial warmth.

Our saturated garments hung from hooks in the beams overhead, but in various non-descript, but dry, substitutes furnished by our host we were very comfortable.

In a short time he announced that our dinner was ready, and in a very much shorter time we were discussing the venison steak and other viands set before us, with appetites rendered keen by life in the open air and the long fast and exertion of the day. After our meal we again sat around the fire chatting with our host and with each other.

"There seems to be plenty of game this fall. Two deer came out into the clearin' 'tother day, 'n' we sot on the porch 'n' watched 'em a spell afore they went back into the woods. We didn't shoot, for we had plenty of fresh meat in camp. Did you boys see much game on your way down stream?"

"Yes," one answered, "we saw plenty of deer and moose sign, as well as several deer themselves, and there are fresh bear tracks up at the carry."

"Yes, bears are pretty thick this year, but it's a rather cur'us fact that people don't see nothin' much on 'em in the woods. As a gin'ral thing bears are pretty shy, and don't want much to do with human critters, if they can help it, though they'll fight if cornered, and a she bear don't want much foolin' round her cubs. It's surprisin' too, how quick one'll git out o' sight if ye do run across him. He'll give one tremendous jump into the bushes, makin' noise and crashin' enough for an elephant, but after that first jump when he gits out o' sight, you won't hear another sound. They slip away dretful quiet like."

"Me and my brother, we come across bear in woods las' winter," said my Indian guide, "he had hole under the roots where big spruce blow over, and we kill him with axe. We been in woods choppin' and don't have no gun."

"Well, we had a scrimmage with one, two or three years ago last spring, without goin' very fur away from home," continued the old man. "One night I had gone to bed and was jest settlin' down to sleep when I heard an awful racket down below, and a boy who was workin' for me came up and said there was a bear in the buttry. There was an Indian here that night named Mitch, and after I turned in he and the boy sot here by the fire talkin' and smokin', when they heard a sound of somethin' or other movin' round in the buttry. Then some tin pane tumbled down, makin' a terrible din, and they jumped up and opened the buttry door to see what was the mat-

er. They thought perhaps one of the dogs had got shut up in there, but they slammed that door to a good deal quicker 'n they opened it, 'cause there was a big black bear in there, and they didn't have no idee of tacklin' him bare-handed, and their guns wa'n't loaded. They didn't even have no axe handy to swat him with, as you and your brother did, Sebatiss." Here the old man paused to light his pipe, for, like any other old sailor or backwoodsman, he could spin a yarn much better with the help of the narcotic weed.

"I dressed myself as soon as I could and we loaded our rifles. I told Sam, the boy, to open the door quick after we were all ready, and Mitch and I took different positions in the room here, so that one or t'other of us could end a bit of lead where it might do the most good. You see, the butt'ry is a pretty big one, but with Mitch over here, and I about where I be now, we could cover the whole of it.

"Well, when we got all ready, Sam he slipped up to the door, yanked it wide open and jumped back. But by an time the bear had gone. The butt'ry winder had been left open and he had climbed out the same way as we got in. I guess the things he knocked down frightened him, for they made noise enough, and the butt'ry was a sight to behold.

"He had knocked down two pans of milk and a mess of corned beef and pork and had made a dreifull muss of it. He didn't seem to have eaten much, so we thought perhaps he might come back if we kept quiet, and I told Sam and Mitch that if he did for them to tip out the door and each one go round the house. One was to go round one side and one round t'other. Then if he got away from me one o' them would be pretty sure to get a shot.

"So we sot there, keepin' quiet and not saying a word, and after a while ere enough we heard him climbin' in agin. Sam and Mitch went out and I opened the door jest in time to see him disappear through the winder.

"I yelled to them to look out for him, but it was an awful dark night and they couldn't see him. As he ran round the corner of the house he went plump into the Indian, who was going round the other way. He pretty near knocked the wind out of Mitch and I don't know which was the most frightened. The bear got off with a whole side that time, however, and disappeared in the darkness.

"Mitch came in puffin' and we sot down agin to wait. We didn't much think he would come back but thought we'd wait and see. After a while we heard him but he was pretty wary, and we could tell that he wasn't climbin' in but was sniffin' round outside. Then he seemed to move away and Sam got up to peek out the winder in this room. The winder was down, but all a sudden Sam up with his rifle and lazied away right through the glass.

"The bear had run right by the wood pile out there, where the ground was all white with the chips that were strewn about, and as his black hide showed up agin 'em Sam drew a bead on him. We rushed out and when we got there the old feller was kickin' his last kick. It was a pretty shot, but I guess there was some luck about it too. Sam got the bounty and sold the hide, the shot was wuth somethin' to him anyway, luck or no luck. The two was wuth \$25 to him and that, with what I paid him, he spent for schoolin' down to the settlements the next winter. He was a good boy, Sam was, and was tryin' to save some money to get an eddication, so I was glad he got the bear."

We spent that night beneath his humble but hospitable roof, and in the morning continued our journey beneath a sky as blue and serene as if clouds and storm had never been.

WM. A. BROOKS.

THE SOUTHERN CAMP HUNT.—I.

It has often occurred that, among the horde of hunters and sportsmen inhabiting this great country of ours, few know anything of the methods of our old time "camp hunting in the South."

These hunts were usually conducted by gentlemen well known to each other; and all disagreeable persons were excluded. None but genial, active and useful men were allowed to go along—except superannuated old "fellows of the craft" who were invited and implored to go, every comfort and consideration being at all times shown to them, for nothing so adds to the pleasure of a "camp hunt" as the presence of one or two of these old hoary-headed knights of the horse, hound and gun; to rest by the blazing camp-fire, and relate great stories of their perience to the younger lads, and quietly smoke their pipes.

One of these hunts has ever lingered in my memory. I lived in the great State of Texas, and a brother had written me to come at once to Mississippi and join in a "camp hunt." When I arrived at my brother's house he was making things lively, preparing for the hunt, and was on Saturday in November, and we were to start the following Monday morning to join the rest of the party at old man Purvis's at Strong River Bridge, in Smith county, a distance of 20 miles. Everything was made ready by Saturday night. The two-mile wagon packed with every conceivable commodity thought conducive to comfort and pleasure of an outing. Two half-breed Scotch terriers—one as black as ebony, the other white as polar bear, and game from the tips of their shaggy coats the marrow of their bones—and three deerhounds, constituted our share of the dogs; and then there was Wash, one of my brother's late slaves, whom even the intoxication of freedom could not separate from him. He was as stout as Hercules and brave as Geronimo; nothing could

cause him trepidation, nor has a lie ever polluted his tongue or given deceit to his master—hence, taken "up one side and down the other," a better negro never was created than Wash. Wash was to go with us, of course, and with his high top boots, red opera overshirt, big home-knit gloves, and with his 1x4 grin, revealing a wealth of ivory only less in display than an octave of piano keys, was the ideal personification of a camp hunt teamster.

Sunday, the weather began to show ominous indications of a snowstorm, and by night had turned quite cold. Monday morning we were up early; three inches of snow lay upon the ground. The morning was gloomy, the sky overcast with black, smoky clouds, with a few straggling flakes still falling. My brother paced the floor with both hands stuck in trouser pockets, while his slouched hat hung over his face, and my own pulse beat was less than normal; yet the hour was up and no time for vacillation now. The "word was out" and we must meet the others at the bridge this day, so my brother says, "Charles, are you willing to try it?" "I am," was my quick reply, as I wished to infuse a little enthusiasm into his drooping spirit. "We will go," he said firmly. Then I advised by

men for cooks, camp-minders and to drive the teams. These go along for the fun and an equal share of the spoils—otherwise "non-combatants." One is Wash and a white fellow, and another darky as general "supernumerary and roustabout." Next comes the canine representation. And all being ready, a blast of the horn, crack of the whips, a yell or so from the young bloods, and the unique and picturesque caravan moves.

It is still overcast and cold, and for two long and freezing days we quietly travel on, but that ever rollicking, eternally joking predilection, so proverbial of the Mississippian, never knows an end.

We passed over some of the most enchanting country to a hunter's eye, that I have ever seen, and many a time did I crave the order from our leaders to stop—but no, it was, not yet; until the closing of the fourth day, when our cavalcade drew up at the ford on Rocky Creek, in Jones county. A more charming spot I never beheld, to make the standpoint of a carnival, the which we came to do.

This famous camp-hunters' rendezvous holds a claim in modern military history. Here on this identical spot, as evidenced by the many scarred pines where we camp—the dashing Federal raider, Grierson, and his men, were attacked and scattered over these pine hills, in confusion, by a band of Confederates.

Having no special head in control of these hunts, all parliament was of a conventional nature, each member having his say, even to the cooks and camp-minders; however, the more experienced individuals did the planning.

To set the camp in shape is the prime consideration of all, and requires judgment and system. A place to pitch the tent, to feed the stock, to build the camp-fire, and spread the sleeping pallet, to butcher the deer, stretch the hides, and pound the steaks, and every other appointment must be attended to before any start is made to hunt, and the men, dogs and teams must have a good rest.

Many a fool goes into the woods to hunt, never once giving the camp a thought, until night, with all its impossibilities, has overtaken him, with not one preparation made. The first thing he does on arriving at camp is to get out his gun and plunge into the woods to shoot something, yes, shoot something, make a noise, make himself generally conspicuous, to the disgust and bother of all others in the camp, frightening the horses, having the dogs all running and barking, disturbing all the game within miles around; but let me tell you that kind of chap don't creep into our mess but once; for then it is his fault, but the next time the fault will be ours. The first time we pay the penalty, the next time he does.

What a pleasure to the thoughtful man to lie on the pallet before the great log fire, and hear the tired horses munch their feed in the troughs, and the faithful dogs lying promiscuously around, agitating from time to time the shifting fleas, while they sniffle the teasers over their own hides, with sensitive noses, and you smoke your pipe and listen the while to the mirthful jokes and guffaws of cheerful darkies from their corner of the ample camp—indeed, sir, there's nothing like it under the sun.

The big camp-fire, built of oak logs cut 12ft. long, and laid on skids to keep them off the ground and admit free ventilation, the interstices of the logs stuffed with "fat" pine knots, makes the grandest fire that ever graced the somber solitudes of a pine forest.

The great camp-pallet formed of sundry blankets and quilts, like Jacob's coat "of many colors," forty or more in number spread lapping edge on edge, make a bed ample for all, 15x7ft. in extent, spread before the glorious blaze—twice the width of its length. When all are disrobed we crawl beneath the adequate covering, and as by a common impulse all are a-snore, lulled to sleep by the crunching of horses, sniffing and pawing of restless dogs and crackling and seething of the magnificent fire, only a yard from the margin of our capacious resting place, I have told you how it is done, and ere the sun flickers above yon straw-covered hill we must all be in motion. Oblivion!

I hear the rustling sound of "shucking" corn, stamping and crunching of the horses, clanking of the ox's horns as one prods his mate to keep his own side—all else as still as the "chancel halls of death." I lie and await other movements soon to follow. "Mas Jim! Mas Jim!" "What's up, Wash?" my brother answers from under the warm coverlid. "I 'spec it time us is gittin' up. I hear de owls hollin, and de moon, it des pearin' 'bove the hill back dare, and dese mules and hosses and steers pears lack dey wants dair breakfus an' all, so b'lieve by dat, day is mose here, we all better be gittin' up an' stir'n 'roun' ef yer 'spec er soon start, I tell yer."

That was enough for my brother, for he, like all the rest, was anxious to be up and among the "moss heads," and with one simultaneous bound all were up. The glorious fire by this time had smouldered to a heap of living coals, yet all aglow in the dim, anti-diurnal darkness that as yet enshrouded the weird camp.

Every one was now astir, but the quiet and system that reigned reminded vividly of a company of soldiers preparing for battle by the pantomimic order that prevailed. The cooks soon had a smoking breakfast ready, which must be the last meal we take of domestic material alone, all subsequent ones must yield the spicy aroma of the flesh of the wild deer. Then all are rapidly loading the guns, counting down the pellets, ramming home the wad, click-click, and the cap is placed upon the nipple, dogs are fed, horses saddled, and the anticipated hunt organized.

### AMONG THE LAURENTIDES.

By appointment I met Mr. and Mrs. S., of Chicago, in Montreal on a bright day in June, 1892, for carrying out a long cherished desire to visit the Laurentide Mountains, whose picturesque beauties have been so frequently described by visitors to that charming region of dark forests, frowning rocks, foaming rivers, lovely lakes and magnificent trout. We had planned to make our first stop at Lake Edward, but fate willed otherwise. At the station in Montreal we met Mr. Louis F. Burroughs, vice-president of the Laurentides Club, an association of anglers and sportsmen, who control numerous lakes and many miles of the best trout streams in Canada. Mr. Burroughs informed us that he and his friend were bound on a two-weeks' fishing trip to the preserves of their club and kindly invited us to partake of their hospitality for a day or two at their club house, which is situated about a mile and a half from the railroad station, assuring us that rare sport with the trout would be one of our rewards. It is needless to say that this invitation was joyfully accepted.

Laurentides station is about midway between Quebec and Lake St. John, and is situated on the banks of the roaring Batiscan, one of the most charming rivers in Canada. Here at 11 o'clock we left the train and found three sturdy guides with their boats. Including the guides, our party now consisted of eight persons, and as we marched single file (guides in the lead, bending under their burdens) up the steep hill, through the magnificent forests, the picture was one long to be remembered.

A half hour's tramp brought us to Lake No. 1, on the opposite shore of which stands the club house, to which we were quickly rowed.

After a substantial dinner we sallied out to try our luck with the dazzling denizens of the dark waters that abound in this wonderful region. The trout were hungry and rose eagerly to the fly, and we soon had our creels well filled. We returned to the club house about 6 P. M., and after partaking of a delicious supper, skillfully prepared by the wife of the guardian of the club house, settled ourselves in easy chairs and passed a most delightful evening with our new-found friends.

Next morning we were up with the lark and went out to feast our eyes on the glories of the magnificent scenery that surrounded us. Here we were in the very heart of the Laurentides—majestic mountains, covered with dense evergreen foliage from crown to foot on either hand, and nestled at their feet lay two sparkling lakes, separated only by a narrow neck of land, upon which stands the club house. The sudden transition from the busy world to the restful and sublime solitude of this matchless wilderness enthralled our senses and filled our souls with peace and contentment.

The morning hours were spent in that fascinating sport known as the "gentle art," and we were rewarded with a good catch of the peerless fish with which these waters are abundantly supplied.

The hour for our departure from this lovely spot had arrived, and we reluctantly said good-bye to our generous host and retraced our steps to the railroad, bearing with us the remembrance of a day delightfully spent in a delightful spot with delightful companions. Success to the Laurentides club and the rare men who founded and maintain it.

We reached Lake Edward in time for a late dinner, after which we procured guides and boats and started out to try our luck with the trout, for which this lake is so justly celebrated; but our success was indifferent and we returned to the hotel with half filled creels. Evidently we had not struck the right spot for trout.

Next morning, bright and early, we were taken in tow by the little steam launch belonging to the hotel, and started on a ten-mile trip down the beautiful lake to the place "where trout hide," and such a panorama of the beauties of nature as we had never before beheld passed before our delighted and bewildered vision. The lake is irregular in shape, some twenty or twenty-five miles in length, and is studded with islands from the size of a haystack to those of many acres in extent, all covered with rich green foliage from the water's edge to their highest point, no two of the same size, no two of the same shape. The lake is surrounded with mountains of modest height, wooded, too, like its lovely islands, and has scarcely a sign to indicate that man had ever before invaded its charming precincts.

A two-hours' ride brought us to the fishing grounds. The anchor was cast, our rods quickly strung, and the sport commenced. Within an hour we had landed a dozen trout, weighing all the way from a pound to 2½ lbs. each. The sport was exciting in the extreme, but such luck would not last always, and by noon the trout seemed to have business elsewhere. Therefore, we concluded to reel in, weigh anchor, go ashore and prepare dinner. A suitable spot was found, a fire started, lunch basket unloaded. The guide dressed some of the trout, and soon had them, with salt pork, sizzling over a hot fire in a frying pan; a rude table was improvised, and a meal "fit for the gods" was soon spread before us.

The afternoon's fishing yielded small returns, but we enjoyed the superb scenery, and returned to our hotel in the evening well satisfied with the day's sport. Next day being Sunday we rested. On Monday we left Lake Edward for Lake St. John, where we arrived in the evening, and were charmed with our first view of this noble inland sea. We had planned to visit the Grand Discharge the next day, but a severe storm set in early in the morning and raged furiously all day, rendering navigation unsafe.

While at the Roberval Hotel, where we were stopping, we made the acquaintance of a young Englishman from London. This was his first visit to America, and he was anxious to try his hand at whipping an American trout stream. We invited him to join us, and on Wednesday morning started for the Ouiaichoune River, which was said to be swarming with trout. An hour's drive brought us to our destination, where we found an octogenarian Frenchman, who owned an antediluvian boat. It was moored on the bank of the river at the foot of a steep bank, down which we slid at the risk of breaking our necks, and into this rickety, leaky, old flat-bottomed boat

we all tumbled. Our English friend took a seat in the bow, with Mr. S. and myself amidships, and our "ancient mariner" in the stern, where with one paddle he undertook the task of paddling us up stream against a pretty stiff current. Our English friend evidently was inclined to be a little nervous, and every time the boat tipped a little he would sing out, "Ough, is the water deep?" Our progress was necessarily slow, but we soon got the hang of the boat, and as the trout were rising freely all around us, we commenced casting, but for some unaccountable reason the wary fellows scorned our tempting offers and declined to be made captives. Later they became more eager, and we would occasionally land one of fair size, so that by noon we had secured enough for dinner, when we decided to land and initiate our English friend into the mysteries of preparing a trout dinner on the banks of an American trout stream in the wilds of Canada. Thanks to our foresight in bringing with us pepper and salt, a chunk of salt pork, some bread and a frying-pan—our dinner was a success, and our English friend testified his appreciation by eating heartily and pronouncing it good.

Thursday, a most charming day, we visited the wonderful falls of the Ouiaichouan. A buggy drive of four miles brought us to the river. Here we left our team and took the trail that leads to the foot of the falls. This trail for nearly half the way leads along the bank of the wild river, which here rushes madly through a deep rocky gorge, strongly resembling the Ausable Chasm of Adirondack fame, and is equally as wonderful and picturesque. A delightful walk of a half hour brought us to a point where the magnificent water-fall burst in full view on our astonished vision. High up between two towering mountain peaks is a narrow gorge through which the noble river pours its mighty volume of dark clear water over an almost perpendicular precipice 200 ft. high. During its plunge into the abyss below it strikes projecting rocks, which transform the water into a maddened mass of feathery foam, white as eider-down. The roar of the mighty torrent can be heard for miles, and its grandeur is overwhelming.

We spent an hour enjoying the beauties of this peerless work of nature, and then returned to our hotel and made preparations for our departure. At 9 P. M. we boarded the train for Quebec, where we arrived the next morning at 6 o'clock. Immediately after breakfast we chartered a caleche and had an exhilarating drive to Montmorency Falls, which appear tame when compared with the falls of the Ouiaichouan, but still very beautiful and fully entitled to the praises that have been bestowed upon it. The next morning we found ourselves in Montreal, where we separated, after having spent ten of the most delightful days of our lives. F. W. D.

St. Louis.

### A NEW CANADIAN TROUT.

*Salmo (Salvelinus) marstoni*, sp. n.

B. 11 to 12; D. 13; A. 13; V. 9; P. 14.

The specimen described is close upon 12 in. long. Body subfusiform, pointed at the snout, slender at the tail. The height of the body is about one-sixth of the total length; head one-fifth, crown convex. Snout one and one-third, and interorbital space one and one-half times the eye. Eye little less than one-fifth of the head, two-thirds of the space between the orbits on the forehead. Mouth large; maxillary straight, reaching almost as far back as the hinder edge of the eye, with strong teeth along its lower edge nearly its entire length; teeth on intermaxillary and mandibles stronger. A series of four strong hooked teeth at each side of the tongue, and behind the glossopharynx, on the basibranchials, a narrow band of several series of smaller ones. Gill rakers straight, short, sharp, denticulate, 8-14 on the first arch. Opercle thin, with few striae. Scales very small; apparently there are about 230 in the series immediately above the lateral line, and more than 250 in one five or six scales above this. Distance from first ray of dorsal to end of snout little more than that from the same ray to the tip of the adipose fin. The middle of the total length falls halfway between the tip of the hinder rays of the dorsal and its base. Dorsal and anal fins slightly emarginate at ends of median rays.

Pectorals and ventrals small; base of latter slightly behind the middle of that of dorsal. Caudal pedicel slender; caudal notch very deep; hinder border sinuous, as in *S. alpinus*; lobes pointed. Excepting *S. namaycush*, the notch is deeper than in any other of the American species.

Back dark brown, with an iridescent bluish tint; unsupported. Dorsal dark, clouded somewhat, but without spots or bands. Pectorals, anal and ventrals orange in the middle, yellowish or whitish toward their bases and margins. The dark color of the back shades into whitish, with a tinge of pink below the lateral line. Head black on top, silvery on the cheeks, white beneath. Ventral surface white, no doubt red in breeding season. Flesh pink. Caudal fin yellowish toward the base, brownish, or darker, toward the hinder border, which has a narrow edging of light color. Faint areas of lighter tint suggest that there may have been a few spots of reddish or yellowish along the lateral line on one of the specimens; but the condition is such that the matter must remain in question, likewise the number of caeca, and the presence of parr-bands, of which there are several very faint indications.

This fish evidently is closely allied to *Salmo oquassa*, the blueback of the Rangeley Lakes; it reaches a greater size than that species, and is readily distinguished by the maxillary and its dentition, the caudal fin and the coloration. Similarly when compared with *S. stagnalis* and *S. rossi* it is seen to be quite distinct. With the introduced saibling, *S. alpinus*, of the Sunapee Lake it has still less in common.

The specimens were taken in Lac de Marbre, Ottawa county, Province of Quebec, Canada, whence they were sent by favor of the Hon. J. G. A. Creighton. They reached us at the instance of A. N. Cheney, correspondent of FOREST AND STREAM, who when asked to suggest a specific name replied, "Name it for Mr. R. B. Marston, editor *Fishing Gazette*, London, an Englishman overflowing with good feeling for everything pertaining to fish, fishing and America, and who is doing much to enhance friendly interest between the people of the two countries." It is a pleasure to introduce one of the handsomest of American charrs in the name of a man who answers to such a description. S. GARMAN.

Mus. Com. Zool., Cambridge, Mass.

There is little to be added to Prof. Garman's statement,

which I send herewith, but I must add a few words that credit may be given to another friend, and at the same time note a coincidence. One morning a few weeks ago the express brought me from Prof. John D. Quackenbos, of New York city, a beautiful trout, unlike anything that I had before seen. I repacked the fish to go to Prof. Samuel Garman for identification, and two hours after its receipt and before the express had taken it to Cambridge, a letter came to me from Mr. J. G. A. Creighton describing the Lac de Marbre trout just then called to his notice. Mr. Creighton's description fitted the fish sent me by Dr. Quackenbos, and this was my first knowledge of its habitat. Later Mr. Creighton procured others specimens which were sent to Prof. Garman, as he relates. The largest specimens so far procured were about 18 in. long, but so lean and lank that they weighed only about 1½ lbs. each, instead of nearly 3 lbs. The Marston trout are deep-water fish and all the specimens have been taken with bait. Of all the species of trout that I have seen not one surpasses in beauty of coloring and outline the fish that Prof. Garman has described, and I fully appreciate the compliment that he paid me when he asked me to name the new trout, and it was a pleasure to name it for my friend, Mr. Marston, the founder of the Fly-Fishing Club, London, who is deserving of the honor. A. NELSON CHENEY.

### BOSTON AND MAINE.

SUCCESS is sure to be remembered as well as defeat. This is true of the angler and the shooter, as of other people. A little over a year ago Mr. A. W. Tompkins, of Foster, Weeks & Co., received a box of trout via the Bangor steamer. In the box were a couple of brook trout that weighed nearly 4 lbs. each and a couple that weighed about 2 lbs. each. The trout were sent him by his friends "Skip," or "Skipper," Somes and A. S. Hartwell, both of Waltham, where Mr. Tompkins himself resides. An account of these fish was published in the FOREST AND STREAM at the time. It was also mentioned, as a matter of surprise, that such monster trout could have been taken in the vicinity of Somes' Sound, only a short distance from Bar Harbor, that most noted summer resort. But "Skip" Somes was born at Somesville (I believe that it is called Somesville in the near vicinity of Somes' Sound), and he assured his friends at the Waltham watch factories, where he is a machinist, that he should bring home some big trout. The trout sent to Mr. Tompkins were a part of this promise. They have gone again, Mr. Somes and Mr. Hartwell, and the temptation has been too great; Mr. Tompkins has followed them. He left Boston on Saturday by steamer for Bar Harbor. But he will spend very little time at that resort of fashion and gaiety. Those big trout are over in Eagle Lake and Long Pond, only a short distance from Mount Desert and Bar Harbor. Our sporting friends will be pretty sure to take some fine fish. Indeed there is not a doubt of it, if anybody in the world can get them; "for Somes and Hartwell are there."

Readers of the FOREST AND STREAM will remember frequent mention of Mr. W. S. Hills, a Boston gentleman, who has become entirely blind within a few years, yet who keeps up his love of angling just as much as if the happy days gone by. For many years Mr. Hills visited Moosehead Lake with the Kineo Club, of which he is a member. For a couple of years he has fished the same waters, though as a blind man. Casting the fly, of course, is very difficult for him, without the aid of his eyes, but there are the several forms of bait-fishing and trolling open to him. A year ago he fished with the Kineo Club, and for quite a time he was high line. He fished earnestly and a good deal of the time, and doubtless his brother fishermen blessed with eyesight could scarcely realize the amount of pleasure he derived from the sport. He had thought about it—dreamed over it—for months. This year he is sea fishing off Bunton' Reef on the southeast shore of Long Island. He has succeeded already in landing some very fine tautog. He goes out in his boat, Lizzie, with his attendant, G. Horton, almost daily in good weather. The other day they were very successful, landing in three hours 40 lbs., the fish averaging 6 lbs. But Mr. Hills is missing his old associates and associations at Moosehead. He has put on a good "salty" look and "sea-going" air, however, and soon expects some real sport with the bluefish. He is a lover of the FOREST AND STREAM, every word of which he has read to him, and, Mr. Editor and brother anglers, if you could know with what pleasure he will read these lines you would feel a spirit of thankfulness that there is such a paper and that your eyesight is spared to make it and read it. I shall long remember the occasion when Mr. Hills stopped me on the street to give me an account of his last attempt to get a moose in Maine. Then he remarked that he was using his left eye to shoot with, the right eye being almost wholly blind. "And," he remarked, "I fear that I have got to give up shooting, much as I love it, for my only eye is fast becoming blind."

Now comes the latest yarn in natural history, not one word of which I shall vouch for the truth of till I have had time to investigate. The Maine papers say (it started in the *Aroostook Pioneer*, I believe) that when Francis Chase, of Moro, went to the cow yard to milk the other evening he saw a strange sight. He had made veal of the calf of one of his heifers a short time before. The be-reaved bovine mother had adopted, evidently, the calf of a caribou, and the little stranger was with her. The farmer's cows are pastured in a back lot, contiguous to the woods, and it is surmised that a caribou with a couple of calves—perhaps only one—had, either willingly or unwillingly, submitted to the adoption of its offspring by the bovine. The report winds up with the remark that "the calf seems contented, and it is hoped that Mr. Chase will raise it." I shall do my best to get at the truth, or the untruth, of this story, and the FOREST AND STREAM shall have the advantage of the investigation. SPECIAL.

### On the Greenbrier.

FORT SPRING, W. Va., July 7.—The Greenbrier River is stocked with bass, and expert fishermen pronounce it one of the finest streams for bass fishing. Last season Prof. Humphreys, who boarded with me, caught over 600. There are still some catfish in the stream. They are an excellent food fish, very firm and sweet. The season for bass fishing is now at hand, and parties are having fine sport.

Fishing parties or individuals can get board very reasonable here. Fort Spring is a little village on the Greenbrier River, and is a popular place for those seeking health and pleasure in the mountains. R. A. C.

## THE STORM.

A LIGHT gray scud was flying across the lower sky. Above great masses of cloud, black as factory smoke, rolled in dense volumes. Far in the west a light gray streak was rising, indicating heavy rain.

Below not a breath of air stirred. B—Lake lay like a great mirror, not a motion on its surface save the light ripple made by our boat.

We were far out on the lake, our boat a mere light shell. "John," I said, "we are going to have a bad storm."

"Yes, I think we are," answered John.

"Well, hadn't we better try to get ashore, John? The western shore we can't make, for that would be going right in the face of the storm, but the eastern shore is not over a mile away. Hadn't we better pull for it?"

"All right if you say so, Mr. Sherman; but I'll tell you one thing possibly you don't know, and that is, just before a storm every muscullonge in the water starts out on the rampage, and he'll snap at everything he sees. There's no time like just before a storm to catch muscullonge; and a little ways from here there's a bar I have never taken you to yet. If you say so we'll give it a trial and then pull for the shore."

"But will your boat stand a storm and heavy sea, John?"

"Ride it like a cork."

"All right, then, pull for the bar."

I was fishing with two rods that day and John with one. I fastened fresh minnows on all the hooks, and placed one of my rods across the boat so it extended out to the right. John's rod was out to the left and my other rod lay across the stern. So the minnows were all far back of the boat and well separated.

While I was fixing the lines John was slowly rowing northward.

"Well, now, isn't that a go?" said John. "Three bites at one time. I'll wager you a day's pay against a dollar that we lose two of them."

"Done; I'll take it."

It was no small problem, three fish hooked and a storm coming. Finally I placed the rods so the reels would work perfectly. I then pulled a part of the line off each reel; fortunately the fish remained quiet while I was fixing the rods. I then placed a separate line between each of the fingers of the left hand, so that the presence of the fingers would put a strain on the fish. I kept the right hand free so as to catch any line that was being pulled too hard. There was no time to be lost. I gave one line a sharp pull with the right hand. Up shot the fish into the air, then away to the right. I let him have his run, then pulled him in as I far as I dare, coiling the line carefully in the boat. Then in succession I pulled the other two lines. Each fish jumped out, then had his run, then allowed me to bring in a little line. I was surprised to see that all the fish were large.

Suddenly the boat began rocking. I looked up—Heavens, what a sight! The lake was a mass of foam, the hollows of the waves were like ink, the full force of the wind struck us and almost lifted us out of the water, the water seethed and boiled about us. It seemed impossible for a boat to live in such a sea. But with the first motion of the water the oars dipped and now all the force of John's muscular arms was put into rowing against the waves to keep the boat as near as possible in the same place. But in spite of John's best efforts we began drifting, all three of the fish beginning to run at the same time. For ten minutes there was the liveliest sport I have ever experienced. Think of it, three strong, active muscullonge rushing and tearing through the water, each held by a light silk thread and the boat drifting before a storm that was a perfect tornado. Time and again the lines were stretched to their last limit, time and again the thin silk conquered and the fish yielded. At last they showed signs of exhaustion and seemed willing to follow after the boat, their runs were less frequent and less difficult to stop; gradually I got them to follow in the wake of the boat.

"Stop rowing, John," I said, "I think these fellows will follow."

John stopped rowing and the boat drifted fast before the storm. Then followed an interesting feature of this singular fishing. The fish followed after the boat, swimming on top of the water. Every few minutes one of the fish would turn his head to the side and try to run off, but a quick, sharp pull would bring him back into line. There was an odd fascination in watching this disposition to rebel and in quickly checking it.

I began to thoroughly enjoy it, when suddenly there was a hissing sound and the rain began falling, or rather drifting, blowing, whirling in blinding, drenching sheets of water. It obscured everything. The air was like a dense cloud or fog, the eye could not penetrate it twenty feet, cloud and foam seemed to mix; the tops of the waves seemed caught by the wind and dashed into our faces. The way we were sitting we had of necessity to face the storm. The water poured from our hats and clothing in streams. It began to fill the boat and soon we were ankle deep in the water. I was forced to drop the lines and abandon the fish to chance, first taking the precaution to fasten the rods to the side of the boat. I then gave all my attention and both hands to the work of bailing out. In spite of all I could do the water kept gaining on me, every wave adding its portion to it. I worked hard and worked without ceasing, until my arms were numb and my back stiff. There was no lull, no diminution of the storm; the wind seemed to increase, the lake to grow ruffer, the lightning sharper and the thunder was fairly deafening.

The boat, half full of water, was becoming heavy. Instead of riding the waves like a cork as John predicted, it mounted them with difficulty, it was in danger of being swamped at any moment, our position was beginning to grow alarming. At last I was forced, from sheer exhaustion to rest, no difference what the result, I could work no more. I dropped the bailer and rose up. I had scarcely got my head up, when—slap—something hit me in the face.

The blow was so severe that it bewildered me for a moment; I could not realize what had happened. When I recovered from my confusion I found to my surprise a huge black bass splashing about in the boat, evidently bewildered by the storm, or possibly touched by an oar, he had leaped into the air only to encounter my head. He was a fine fellow and worth saving, so I caught him, and with a piece of twine secured him to the side of the boat.

This consumed valuable time, and when I took up the

bailer again I found the water had gained very considerably on me. The boat sat very low in the water. It took all John's strength to keep it in place.

I had just emptied the first bailer, when suddenly I heard behind me a short, sharp snap; I glanced over my shoulder. It was as I feared, an oar had broken.

Almost instantly we were whirled into the trough of waves, and a moment later we were both struggling in the water, eyes, ears and mouth were filled.

I struck out almost mechanically without considering direction. A few strokes and I struck something hard. I got my hands and knees on it. I then raised my head to look around and was surprised to find myself not 10 yds. from shore. I was kneeling on the bottom of the lake in water not 2 ft. deep. All this distance we had drifted in the storm.

A minute later we were on shore, and were fortunate to find shelter from the storm in an old boathouse, two as wretched, dilapidated, miserable looking fishermen as it is possible to imagine.

When I recovered a little I remarked, "Your boat didn't ride like a cork, John?"

"No," he answered. "But I told you they'd bite just before a storm."

At last the rain ceased and we ventured out to see what damage had been done. Far up along the beach we saw our boat right side up apparently uninjured, and as we approached it we saw our three rods in the places where I had fastened them. We hurried forward as fast as we could in our wet clothes and secured the rods. To our surprise there wasn't a line on any one of them; lines, hooks and fish gone. Even the bass I had tied to the side of the boat was gone.

"John," I said, "this must be what they call 'a water haul'."

"Yes," he answered, "and a wet one."

F. I. SHERMAN.

## NEW HAMPSHIRE WATERS.

MANCHESTER, N. H., July 7.—*Editor Forest and Stream:* All that is needed to determine the number of people who love to "go-a-fishing," which a place contains is the general opportunity for such love to assert itself. The Fourth furnished the chance for such observation in Manchester. Nearly all the mills and workshops being closed from Saturday night till Wednesday morning, about every pole and piece of tackle of whatever design or age was brought to the light of day and put into the service. Massabesic Lake, as usual, suffered the most from the onslaught. Ponds and brooks within a radius of fifteen miles were each visited by scores of anglers, with mostly indifferent success. I saw two Frenchmen that, having failed in getting a mess of fish, came marching triumphantly home with a turtle that would weigh 30 lbs., hanging between them, and smacking their lips in anticipation of the soup that would come later. A few good strings in count were taken and some large bass. Among the latter one of 1½ lbs. by R. J. Barry, and one of 4½ lbs. by John Scanlon, a boy of fifteen years, who undoubtedly passed the happiest Fourth of any person in the city. The fish measured 22 in. and was taken at the outlet of Massabesic.

Many palatable meals, as bony as they were in the main scant, were enjoyed, and with the renewed physical vigor obtained by the participants, they are voting the three days' vacation a success. On the Fourth I visited the Merrimack River, a few miles out, as an experiment, in search of bass, never having tried the stream before, and hearing of very few doing so, but as no boat could be obtained, and the river being high on account of the mills being closed, it was impossible to do any satisfactory work, though I was convinced that bass are there, as I captured samples of the gamiest kind, and with favorable conditions, I have no doubt a good string would have resulted.

Melvin Hall, of the adjoining town of Auburn, a short time since, in that town caught a 7 lbs. string of thirteen brook trout. The largest weighed 1½ lbs., a size that is very rare in this locality, but not a surprise in "Mel's" hands, for if any man can land the big ones he can, and to complete one of his characteristics, his friends, Mayor E. J. Knowlton and Chief Engineer T. W. Lane, were remembered from his basket. "Mel" is not only a fisherman but an all-round sportsman. Coon hunting is his special delight, and in company with T. W. Lane and the latter's dog Jack, a team is formed that is hard for "coony" to beat. Jack was purchased by the late Hiram P. Young five years ago, since which time he has added 244 coons to his credit. He is a handsome black and tan beagle, nine years old, and now badly used up with what appears like rheumatism, and although receiving the best of treatment at the hands of his owner, to whom he was given by his close friend Mr. Young, just before his death, I fear he has treed his last coon. "Mel" is also a great stayer in a rabbit swamp or on a fox chase and seldom gets "skunked."

John H. Andrews and son Harry, W. B. Moore and Will Eames, are enjoying a two weeks' fishing trip at the Connecticut lakes, whence they started the 30th. They write "good luck and lots of fun."

An ardent pair, William Stevens and Joseph A. Chamberlain, who know the business thoroughly, work well together and love the recreation, captured a nice string at Gorham Pond last week.

James McGregor, one of Manchester's oldest and best known sportsmen, died of liver trouble, this afternoon, at his home, a road house on the way to Massabesic Lake, aged 78 years. This State has few men who have given as much time to the successful use of the rod, dog and gun as "Jim." He had lived, hunted and fished around this city, and particularly the lake, for more than fifty years. Sport he followed because he loved it, and the effects of his free outdoor life was amply shown in his well preserved frame, steady nerve and quick eye. Generous, jovial and true he will be missed and mourned by many.

PAYSON.

## A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

CAPE VINCENT, N. Y., July 3.—The bass fishing here is in full swing, and not for years have the catches been so large. Saturday, among others, were the following catches, each by one boat: 117, 115, 80, 67, etc. Two large boat liveries furnish beautiful and safe boats, and experienced guides can be had at reasonable rates.

ROBT. S. FOWLER.

CAPE VINCENT, N. Y., June 30.—I think the following list of some of the catches of black bass made by gentlemen here in the past two days will be of interest to some of your readers. Mr. Esterbrook, New Jersey, June 29, 91; June 30, 81. Mr. Kepler, New York, June 29, 75; June 30, 48. Mr. Weekes, New York, June 29, 42; June 30, 68.

C. T. SACKET.

BARNEGAT, N. J., July 2.—Fishing poor in the bay but large catches outside. Yesterday Peterson, Cox and Ridgway caught about 600 lbs. of sea bass, porgies, etc., out to sea. No fish in bay whatever. Cannot say anything for the coming week.

W. C. INMAN, JR.

KENNEBAGO LAKE, Me., June 29.—C. W. Whitney and O. C. Whitcomb of New Hampshire, in four days ending June 29 have caught 519 trout, the largest 2½ lbs. Monday, 26th, Charles Staples, Jr., of Maine, caught 100 trout.

CAPT. G. A. ROYAL

CLAYTON, N. Y.—Jack Gordon, of Texas; Harry Crosby, of Chicago, caught 5 pickerel and 155 black bass in four and a half hours on July 3.

A GUIDE.

REDWOOD, N. Y., July 7.—Wm. Comstock, of Evans Mills, caught July 6 in Mill Sight Lake, at Redwood, 45 bass, 30 small and 15 large-mouths; the largest small-mouth weighed 3½ lbs., largest big-mouth 5½ lbs. Oarsman John Dollinger. Fishing is of the best and Dollinger House guarantees a catch of fish, if not, board bill free.

ZOLLER & SPRINGER.

SCHROON LAKE, N. Y., July 6.—Trout fishing at Schroon Lake is very good. Mr. F. L. Cross has made some very nice catches, ranging in number from 76 to 210. On Saturday last Messrs. Wood and Locke caught 123 of the speckled beauties in Schroon River; largest 3 lbs. 7 oz. Messrs. Knox and Bruce caught 23 weighing 8 lbs. Bass fishing has just commenced. Mr. Tompkins, of New York, caught five to-day, one weighing 4½ lbs.

L. R. & E. D. L.

KENNEBAGO LAKE, Me., July 6.—Mr. S. C. Deyer, of Boston, caught on July 3d 83 trout, 4th 103, 5th 104, 6th 50, a total of 340. Dr. E. P. George, of Thomaston, caught on July 4 250 trout; Dr. Nathaniel Jewett, of Ashburnham, on the 6th 50. All were taken with the fly.

G. A. R.

## Bewitched Rods.

A CORRESPONDENT, "Sancho Panza," writes of a recent fishing trip to a lake, which on their arrival was found to have been ditched dry: Determined to have a pike fish, we drove over into Licking Creek to the old tan factory dam. An old man named Kinder had charge of a saw-mill at the dam, and he told us that the owner of the dam would allow no one to fish. We told him we had driven twenty miles to have a fish, and that we were all acquainted with the owner of the dam and would run all risk, and fish. The old man did not like it, but said no more, so we started in to fish. After an hour's fishing without any luck, we invited the old man to partake of our refreshments. After that he began to have a better feeling toward us; and at last said in broken English: "I am sorry vor what I done to you men." "What was that, pap?" "I pud a spell on you." "Can't you take it off?" "Nod till the sun goes down." And so we discovered why we were having such hard luck. He assured us we would not get a pike if we should fish all day. He told us that a party of hunters had incurred his displeasure, and that he had put a spell on their guns, so that they were unable to kill any game. However, toward evening his spell did not work, for one of us succeeded in getting several nice pike. The old man does not know till this day that his spell did not work.

## The Chicago Fly-Casting Club

HELD its weekly meeting and quarrel yesterday, July 6, at Washington Park. Petty jealousies and quarrels have come up at nearly every meeting. At the last meeting the special quarrel was on Montgomery Ward & Co.'s employing an expert, who also is a member of the club, and who "hogs" (fly-casting vernacular) the medal. Mr. Isgrigg, the party objected to, declined to participate. The objection was peculiar in that those who objected were employed by dealers in sportsmen's goods. Still it might as well be one thing as another. But it seems that out of a club of about eighty members there should be a larger attendance. E. E. Wilkinson cast 70½ ft., B. W. Goodsell 70 ft., G. W. Strell 63 ft., W. E. Davidson 64½ ft. Best percentage for long distance, 79½, by W. E. Davidson. Meetings each week will be held at Washington Park till further notice.

B. WATERS.

## Off for the Kiamichis.

SHERMAN, Tex., July 7.—A party of six sportsmen left yesterday for the Kiamichi Mountains, Choctaw Nation, Indian Territory, for a two weeks' hunting and fishing trip. Great sport is expected, as reports from this section say that bass, trout and other game and fish have been taken in large numbers. The route is to Stringtown, I. T., where they will have two wagons in readiness to convey them to the camp, about 20 miles east. In the party are Thos. Bass, John Myers, Ed. Hildebrand, Chas. Dickerman and Dupon Lyon, and two or three others. The "boys" are all old fishermen and expect great sport.

## Adirondacks.

THE attention of sportsmen is called to the advertisement printed elsewhere in our columns of an Adirondack preserve, embracing a beautiful lake surrounded by virgin forest, and affording good trout fishing and hunting. The owners offer one-half interest in this preserve for sale, and the opportunity is certainly worth investigation.—*Adv.*

## Fishculture.

### Plant Yearlings Where Needed.

BY WM. F. PAGE.

A paper read at the Twenty-second Meeting of the American Fisheries Society, Chicago, Ill., June 15, 1893.

[THE term "yearling" as heretofore used (and as must from the necessity of the case continue to be used) is faulty in that it signifies only that the fish under discussion has reached a certain age, acquired a certain degree of intelligence, and cost a certain sum for attendance and food. The cost of a yearling will depend, other things being equal, upon the general cost of living in the locality in which it has been grown. The intrinsic value of the yearling for stocking purposes, if normally developed and in health, should depend upon its size, as it certainly would if the fish were to be used for the table. Latitude and elevation above the sea regulate to a large extent the possibilities of any particular hatchery for raising fish within a stated period to a given size. There is in the United States a variation in this respect of nearly 1,000%. All consideration of the relative values of fry and yearlings for stocking purposes should be confined to the product of some particular hatchery or at least hatcheries under like climatic and hydrographic conditions.]

In the past, particularly at the last meeting, the opponents of raising fish to yearlings prior to planting have used arguments which would fall under the following heads:

- (a) The excessive cost.
- (b) Its want of analogy to other processes.
- (c) The large number of fish which would unavoidably be lost, and
- (d) Its want of permanent and commensurate results.

To an answer to these points I ask your attention:

The main element of cost heretofore discussed has been that of food. It is, in fact, almost, if not altogether, the chief factor of expense in raising from fry to yearlings. The attendance need not be counted (except perhaps in some particular case) for the preparation of the food and the feeding of it to the fish can safely be entrusted to the care-taker, who looks after the brood stock and other property.

There are among fishes, in common with other animals, several dietaries, some followed from a matter of choice, some from necessity and others from ignorance on the part of the attendant. They may for convenience be thus classified: First, bare subsistence diet, merely sustaining life and resulting in stunted, deformed fish or starvation; second, healthy diet, promoting normal growth and development; third, fattening diet, fitting for heaviest marketable weight, and fourth, over-fattening diet, causing a temporary or permanent suppression of the functions of the reproductive organs, a partial or total destruction of the eyes and inflammation of the intestines, frequently resulting in death. The first and fourth of these diets have killed very many fish, the second has hurt none and the third is outside the proper object of this paper. The question largely turns upon what constitutes a healthy diet? What does it cost? and is that cost excessive? No phase of this question is more obscure, more diversified in practice or richer in possibilities.

In the following paper wherever reference is made to the "daily rations," "allowance," or "formulas," the amount and proportions given apply to yearling trout unless otherwise stated, the intention being to express only the artificial food supplied without taking into account the natural food the fish secure. Nor have I considered the highly important though ever-varying elements of "initial vitality," "range," and "space" in discussing the growth and size acquired by fish at different establishments. It will rarely or never happen that these conditions are identical at different establishments, for we know that at any one they are found varying from year to year and frequently in the same season. In our considerations of artificial food and growth we must for the present disregard, or assume as constant, the initial vitality, natural food, range and space.

For convenience of study I have adopted as a unit "the average daily rations in pounds per thousand yearling trout." I am aware that the unit would be more expressive and exact if it were based upon the number of pounds of fish rather than upon the number of fish to be fed. I have the data of the amount and character of food and rate of growth of the fish at sixteen trout cultural establishments in the United States and Great Britain, the régime and results of which may fairly be assumed as typical of fishculture in general. These data present the astounding variation in the daily rations per thousand yearlings of from 2½ oz. of animal (or flesh) food, in ponds containing very little natural food, to 10 lbs. of animal food in ponds abounding in natural food. I have calculated the weight of one thousand of the average yearling trout raised at these places to be 52.75 lbs., and the average daily rations to be 3½ lbs. In other words, the average allowance for yearling trout is 6½% of their weight. This, it seems to me, is out of all proportion to their necessities, and certainly is not warranted by analogy. It is true, as before pointed out, that the rate of growth depends to a large extent upon the location of the hatchery, and the corollary follows that the food allowance will also vary with the location. The allowance of a hatchery in a warm section cannot be considered a guide for one in a colder or more elevated region. For instance, trout reared in the Ozarks acquire a weight 700% in excess of those grown in the mountains of Colorado. The Colorado trout could not consume the allowance of the Ozark trout, and the Ozark trout would starve on the Colorado allowance. On this subject Mr. Stone says in "Domesticated Trout" (page 236): "The quantity [of food] varies with the season, the quality, quantity and temperature of the water, and other circumstances, and cannot be definitely stated. Green says 5 lbs. for a thousand two-year-olds. I should say this would be an average feed through the year. I think it safe to say that under favorable circumstances large trout of any age will eat 1.50 of their weight in summer, that 1½ of their weight will keep them in good condition through the year, and that they would do very well on half that allowance." Dr. Slack, in his book, "Trout Culture," stated that his brood stock thrive very well on ½ of 1½ of their weight per day.

In the report of the U. S. Commission of Fish and Fisheries for 1884 is a translation of Mr. Carl Nicklas's book entitled "Pond Culture." In this work Mr. Nicklas enters exhaustively into the character and quantity of food necessary for fish. On page 112 he says: "As there are no data on the subject, it will be difficult to lay down exact rules as to the quantity of food. It will be correct to presume at least approximately the same principles will have to serve as a basis as those prevailing in the feeding of cattle, and we shall, therefore, be enabled to fix a standard which will come as near the true one as possible." Reasoning on this basis, Mr. Nicklas concludes that 1,000 lbs. of carp will require 15 lbs. or 1½% of their weight of food per day. When we consider that a carp will consume, and probably requires, more food than a trout, we see that these three writers are in fairly close accord; and that the average practice of feeding 6½% of their weight to trout is in excess of the amount required. However, it must not be forgotten that these growing yearlings would most likely need a higher per cent. than the matured fish; but I cannot believe that the process of growing would require six times the material found necessary for maintenance after growth was accomplished.

So much as to the amount of food necessary and that given in actual practice. Let us look now at what constitutes the food of trout under domestication. At sixteen places I find liver is used. Curd, horse meat and mush at three places. Maggots, mussels, boiled fish and hens' eggs are each used

at different places. At four of the places natural food is very abundant in the waters and largely depended upon for a portion of the year. You are all familiar with these various forms of food, and I shall not make further reference to them except to touch upon the points of natural food and the mixture of vegetable and animal food for trout. No little was said in the meetings of 1891 and 1892 upon the former subject, and I should not now refer to it except that on the part of some an incredulity was expressed as to the possibility of producing an adequate amount of natural food for more than a few hundred fishes. The following letter from Mr. Andrews will, I hope, satisfy the incredulous on this point:

WESTGATE HOUSE, Guilford, England, May 6, 1893.—Dear Sir: In reply to yours of April 18 it gives me great pleasure to comply with your request, and if the following is of any use to you I shall be very glad. I presume you have kept a copy of your letter to me, and I therefore simply answer your questions as numbered.

1. I have two hatcheries, the principal one being at Guilford with capacity for hatching between 3,000,000 and 4,000,000 ova. The other hatchery is at my ponds at Haslemere and is smaller.

The principal rearing ponds, and also ponds for the larger fish are at Criche, Haslemere, and are from 200 to 300 ft. above sea level.

3. Temperature of the hatching water at Guilford is pretty uniform at 49 to 51 deg. Temperature at my ponds varies from 49 deg. in winter to 56 deg. in summer. Occasionally it rises 2 or 3 deg. higher, but very seldom.

The quantity of water passing through my Criche ponds amounts to nearly a million gallons per diem, and is only very slightly affected by a long drought and to no visible extent. The place is, moreover, not subject to flood, as all the springs rise on my grounds. The same applies to the other places which I use as fish farms.

4 and 5. I cannot tell how much liver and horse flesh is given to the yearling fish, but as natural food, viz., *Gammarus pulex*, *Limnaea* and larvae of all water insects are present in great quantities, I can safely say the artificial food given to the fry is very small, and in two out of the three of my sets of ponds no artificial food whatever is given to the fish. We cultivate the natural food to a large extent, leaving one or more ponds every year for the purpose, and it is not an uncommon thing for us to transfer 150 gallons of *Gammarus pulex* and 20 bushels of *Limnaea* from one pond to another.

6. We get yearling fish of *fario*, *levenensis*, *fontinalis* and grayling from 4 in. up to 8 and 10 in. in length in 10 to 11 months, and there is very little difference in size of the four varieties above named. I do not care for the *S. tridens* and have only had a few which were given me by Sir Jas. Maitland some four or five years ago. I need hardly say that the best yearlings are from fry planted in January and February, and the smaller yearlings are from fry planted later. Our fish begin to spawn late in October and I have taken eggs as late as March 20, but I place less value on these late ova.

7. Weight of 5 in. yearling is about 350 grains, sometimes 450 grains, and this will apply to *fario*, *levenensis* and *fontinalis*, but grayling are a little lighter, being a slighter made fish. We include *levenensis* in the *fario* variety.

American *fontinalis* do well with me, reaching a large size, and I have breeders of this kind of 4 and 5 lbs. Many of my two-year-old fish weigh 1½ lbs. and 2 lbs. in the second year, but I do not supply fish as two-year-olds over 12 in. I am, dear sir, yours very truly, (Signed) THOS. ANDREWS.

It must be evident, I think, to every progressive fishcultivist that a change is coming over the spirit of the dream of fishculture, and in view of the fact that this change has its origin in, and is spreading from the Old World, we must look at our laurels or else abandon the boast that we are the most advanced nation in fishculture. Only one thing can be urged against the new departure, and that is the cost of the land and the construction of the larger plant necessary for such a self-feeding establishment. But when we reflect that in cramped Great Britain private individuals without Government aid have successfully accomplished this thing on a paying basis, we must acknowledge that in broad and comparatively scantily populated America it can be done. If fishculture as a private business expands in this country as I hope to see it the artificial propagation of natural fish food will be undertaken and accomplished. And to him who first does it will come the cream of the profits of the business. It will be by this process we will secure a rational, healthy diet at a minimum cost.

But however willing and ready we might be to take up the propagation of natural fish food on a scale commensurate with the demands, such an undertaking would necessarily be slow in its accomplishment, and probably considerable time would elapse before it became sufficiently developed to be understood and relied upon. In the twentieth meeting Mr. Seal told us how easy it was to secure a start and propagate natural food in any desired quantity. My own experiments fully confirm his statements, and by consent of the Commissioner I hope soon to test them on a larger scale. In the last meeting Mr. Fairbank told us how abundantly and cheaply this food produced itself at his place, and how well his fish thrive upon it. Pending the development of this new method, which I feel sure will yet be undertaken and prosecuted by Americans, I submit for your consideration the methods of feeding trout as practiced at Wyeheville and Neosho Stations of the U. S. Fish Commission and also at the Troutdale Fish Farm, at Mammoth Spring, Ark. The method followed at these three places is not, so far as I know, prosecuted elsewhere. The differentiation consisting in an admixture of vegetable matter with the flesh or animal matter, heretofore constituting the sole food for trout under domestication. A few notes on the methods of preparing and administering this food at the Neosho Station will illustrate the method of the three places where it is used. A thick mush is made by cooking "shorts" or mill-middlings in boiling water, which, after it has thoroughly cooled and stiffened, is mixed with liver ground to a fineness suitable to the size of the trout to be fed. The very young trout have never been subjected to this diet (though it is not doubted that they could be induced to eat it), but they are started and kept upon a pure beef liver diet until they are thoroughly trained to congregate for their food. When the fry have been on liver for about two months we commence to mix in a little mush, and gradually increase the proportion of mush (and quantity of food) until by the time they are six months old the mush and liver are in equal proportions. After that time the addition of mush is made freely, so that when the fish are yearlings the liver may be reduced to a minimum.

Exigencies have arisen, making it desirable to economize on liver. At such times we have not hesitated to put the trout on a diet of pure mush. They do not allow this food to sink to the bottom and eat it only when pressed by hunger. On the contrary, they rise to the surface, sometimes eat it in the air, and rarely or ever allow a particle to reach the bottom. To 1,000 yearling trout we have been giving a daily average of 1.87 lbs. of this mixture, in the proportion of 3.79 mush to 1.0 liver. Their average length at one year old was 6 in., and the weight for an average 1,000 was 51.56 lbs. The loss in raising 40,000 trout to yearlings on this diet was 6 per cent. of the number of fry. That the fish produced by this diet were normal and healthy is beyond all question, and if evidence is wanted it is to be found in that their progenitors, spawning them at two years old, were raised on the exact same diet. The natural question is, what does this food cost? Shorts cost at Neosho, Mo., 90 cents per 100 lbs. One pound of shorts makes 3.6 lbs. of mush. Mush therefore costs one-quarter of a cent per pound. Liver

during 1892 was delivered in Neosho from Kansas City for 8½ cents, per pound. From this I deduce the cost of an average daily ration for 1,000 yearlings was 1.707 cents. If this food is not cheap enough to suit your views, I then ask your attention to the following condensed history of an experiment in feeding trout which I undertook last summer. On Aug. 9 12,000 healthy trout fry which had up to that time received the same general treatment and allowance of food as we usually give, were deprived of all animal or flesh food. From that time until they were shipped in February, 1893, not an ounce of animal food was given them, and it is certain that the natural animal food which they might have obtained was the very least. Their allowance throughout this time was 45 lbs. of mush per day, costing a fraction under one cent per 1,000 fish per day. At the end of the year they averaged 4 in. in length, and an average thousand fish weighed 27.5 lbs. The fish were normal and healthy, and though under the average size for Neosho, they were above the average of at least two American establishments.

In closing this branch of the subject let me say that the food composed of a mixture of animal and vegetable matters more nearly approximates than any other artificial trout food in use a rational, healthy diet; and when we consider its capabilities of creating and sustaining the heaviest growth in the shortest time, we must admit that it is not an extravagant diet. A study of Mr. Nicklas's article heretofore referred to conclusively shows that fishes need the smallest proportion of hydrate of carbon; and further, that the best fish food is that containing the largest proportion of nitrogenous materials. He says on page 111: "The most suitable articles of food are blood, horse flesh, fish guano, curds, meat dried and ground fine, refuse from slaughter-houses, etc. All these, however, require to be mixed with other articles of food containing less nitrogen so as to restore the proper proportion of nutritive substances. On the whole, the food for carp will have to be mixed very much on the same principle as that for cattle and other domestic animals." (In the passage just quoted Mr. Nicklas has reference to carp, but his remarks apply with equal or greater force to trout.) This is just what we claim to be doing in mixing mush with liver. It is probable that we are not at present combining these elements in the best possible proportion for fish, the Neosho formula being 1.0 meat to 3.79 mush, yet I believe we are using a more rational and inexpensive diet than is to be found in any one element of animal substance. If you answer me that the trout is naturally a carnivorous animal, I reply by reminding you that the trout we feed in our ponds are domesticated animals. The jackal and the wolf are carnivorous, but your domesticated dog sickens and dies when restricted to the only food acceptable to his ancient progenitors.

[TO BE CONCLUDED.]

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

- Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.  
Sept. 5 to 8.—Kingston (Ont.) K. C. at Kingston. H. C. Bates, Sec'y.  
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park. D. C. Collins, Sec'y.  
Sept. 19 to 22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.  
Oct. 3 to 6.—Minneapolis K. C. at Minneapolis. H. T. Van Duster, Sec'y.  
Nov. 21 to 24.—New Jersey K. C. at Newark. Dr. W. F. Seidler, Sec'y.  
Dec. 12 to 15.—R. I. Fowlry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

- Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. E. D. Adams, Sec'y, Winnipeg.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 15.—American Field Trial Club Trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.  
Nov. 30.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

- Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### Hamilton Kennel Club.

THE dogs which have been donated by different Canadian fanciers to the Hamilton Kennel Club, to help pay off the guarantors of the last show are well worth winning. According to the list sent us by the assistant secretary, Mr. Tulk, many of the animals are of the very best breeding. First on the list is Canada First, a cocker presented by Mr. Geo. Bell, and is by champion Fascination out of champion I Say, whelped Oct. 11, 1892. Vixen, a dachshund, is presented by Mr. C. W. Ricketts and is by imported Comrade out of Saja and whelped June, 1888. She has won first prizes at Buffalo, N. Y., and London, Ontario. Marionette is a collie bitch, whelped Sept. 5, 1891, and is by Metcally Wonder II. out of Dawn. She is donated by Mr. R. McEwen, the well known collie breeder. Iocaste is a fox-terrier bitch, whelped August, 1890, by champion Blemton Trump ex Bacchante. She is presented by Mr. A. A. MacDonald, of Toronto, and is in whelp to his imported Dark Eye.

Noble Regent is a St. Bernard, whelped April, 1893, by Nice ex Lady Amber and is presented by Mr. Murray Williams, of Oakville, Ont. He is said to be well marked. Wentworth Thora is one of Dr. Griffith's bull-terriers, whelped October, 1892. She is by Principio ex Kathleen Mavourneen, which shows good breeding. Bright Light is a liver and white pointer bitch which Mr. T. G. Davey contributes to the fund. This bitch is by Signal ex Brighton Leda, both imported. Black Silk is a cocker donated by Mr. J. Kennedy, proprietor of the Raven Kennels, Hamilton, Ontario. This dog is by King Raven ex Gyp, and is a likely winner. Another fox-terrier bitch, Miss Coronet, by Suffolk Coronet ex Bonally Belle, is given by Mr. F. R. Close, Hamilton, Ont., and her breeding is more than good. She was whelped Oct. 17, 1892. Another dachshund, the well-known Combat, a winner of several prizes, is given by Mr. C. W. Ricketts of Hamilton, Ont. Combat is by Contest ex Mischief and was imported from England. Mr. J. A. Spracklin parts with a nice cocker in Black Pete II., by champion Black Pete ex Althea. This dog was first at London, Ont., 1890, and has not been shown since. The twelfth donation is from Mr. James Luckwell, of Woodstock, Ont., and is a cocker, Florence G., by champion Black Duke ex Woodland Cricket, and was whelped in October, 1892. It will, therefore, be seen that the affair is well worth the attention of any fancier. Mr. W. J. Tulk will furnish any particulars about the drawing, which will come off Aug. 4 at the Royal Hotel, Hamilton, Ont., at 8 P. M. The spirit in which the dogs have been given is most exemplary, and shows that Canadian fanciers, though credited with being a little cantankerous at show times, are "comrades" when trouble comes along.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

CHICAGO, July 8.—I notice that in *FOREST AND STREAM* of June 29, one of my kennel notes was held over by mistake till it was out of date. I refer to the one mentioning the Beagle Club meeting at the World's Fair, June 14, which was sent about June 1.

From Mr. J. E. Fisher, of Riverside, Ind., the well-known trainer, I received a letter from which I quote the following: "Dog owners are now looking around, some placing their dogs with trainers for field trial preparation, and some are having them trained for private shooting."

"Why does not the U. S. F. T. Club give later dates than July 1 for closing its entries? The far West people have dogs which they would like to start if the dogs would qualify. The Derby closes before the owners have time to correspond with the handlers. I had a very promising dog for the Derby in Trials A, but the time to make arrangements was too short. The owner, having other business to attend to, wrote a day or two too late, and thus the dog was shut out."

I am impressed with the belief that the unpleasant occurrence was due more to the owner's negligence than to the date of closing the entries. Mr. Fisher will readily see that if the entries were kept open till every owner calmly and leisurely got good and ready to make up his mind and later on wrote that that interesting cerebral movement was completed, the trials might not be held till far in the future.

It is a great loss to the field trial interests that the Central Field Trials Club will hold no field trials this year. It was one of the most popular and successful fixtures in the circuit. It would not be too late even now to arrange for a trial, although there is but little probability that such will be done. Mr. Wallace with his experience and ability could conduct a trial most skillfully. Furthermore, he is most popular with field trial patrons. On this subject a correspondent writes me: "It certainly is too bad to let such a good club, on such a firm footing, fall flat just because there is no one to move in the matter."

## The A. K. C. Management.

Under the above caption Mr. Heppner had a long communication in *FOREST AND STREAM* of June 15. The communication was originally a letter to the secretary of the Great Dane Club of America. Prefixed to it is a resolution by the club, which indorses Mr. Heppner's action as delegate. Just why it was necessary for this club to indorse its delegate's action, when no record is presented showing that his action was questioned, and just why the delegate wrote a very long, fulsome letter on the A. K. C. management on matters entirely outside his acts or official powers as delegate, also is not shown by the record. Still, Mr. Heppner may have felt that the canine world needed the light which he could turn on it, and the manner of it, so that it was good, is of little importance. That Mr. Heppner has set everything all right by his personal assurance that everything is all right, will doubtless be received with rejoicings. One little paragraph among many similar ones, does not seem quite logical. It is as follows:

"But the A. K. C. considers it beneath its dignity to answer anything that is outside of an interpellation by a delegate at the proper time of quarterly meetings."

Some persons might be pleased to term such as being negligence, sulkiness or obstinacy. How it would affect its dignity is not at all plain. The A. K. C. is a creation of the kennel world and it can not well have more dignity than its creator. But all this about dignity is too fulsome and frivolous to consider seriously.

What I desire to touch upon is the following, in which he says: "For instance, the *FOREST AND STREAM* had an item the other day from its Western correspondent to the effect that the A. K. C. taxed the doggy world too highly and piled up a great deal of money which really belonged to the dogmen, and wound up with the remark that there was some \$8,000 in bank. Now I say that such a statement should not be admitted, and if it appears in arguments in favor of a rival club, then I say to the embryonic rival of the A. K. C., 'Beware of your friends.'"

Now that Mr. Heppner's opinion on what is proper to publish and what is not, is known, I feel that the writers will carefully govern themselves accordingly, with a proper sense of gratitude for the admonition. But compare this disapproval with the latitude he bestows on the A. K. C. membership quoted later herein.

When I said, many weeks ago, "It is not a money-making concern, or at least such is not its purpose, yet it has over \$6,000 in its treasury, according to its treasurer's last report." That was the report of the A. K. C. meeting Feb. 22, the treasurer's report showing a balance of \$6,200.66. I do not object to being quoted, but I do object to garbling or misrepresentation.

Of course, there must have been money expended since Feb. 22. I presume the stud-book printing, salaries, etc., had to be paid, but the stud-book will bring back returns in sales, so that it is not entirely a debit item.

Mr. Heppner further says: "I do not believe, gentlemen, that any fair-minded American could conclude, however, that because a man is an officer of the A. K. C. he should be deprived of the privilege of expressing his private opinion on any subject whatsoever, even as to World's Fair judges."

Mr. Heppner being undoubtedly a fair-minded American, I ask him if the press of America has not the same right to express its opinion as he concedes to the A. K. C. Yet he has expressed the opinion that it has not.

Mr. Heppner's proposition to canvass among the delegates to get the stud book fees reduced, provided some one else would pay any deficiency, is too absurd for consideration. A secretary is paid for doing the work at a salary of \$1,800 a year, yet he is in the employ of another concern and only gives the A. K. C. affairs such time as he chooses. Yet one-third of his salary is charged to the stud book. Before Mr. Heppner makes any propositions of that kind he should see that it is not entirely a jug handled affair.

In regard to the parts referring to Dr. Perry, I have every confidence that that gentleman can easily take care of them.

## Unparalleled Brutality.

In a letter to me, under date of July 7, Mr. J. T. Mayfield, of Bicknell, Ind., says: "A most inhuman crime was committed in this place (Bicknell, Ind.) at 3 A. M., July 7: Geo. McLin had some dogs in charge to train. He had them confined in a building 9x18ft., with no window for ventilation or yard for exercise. On July 6 a gentleman asked me if I knew the condition of McLin's dogs. I did not, but I went over with him to see them, and the sight I saw (after breaking the lock) was horrible. Four of them were dead, and half eaten with maggots. The other four could walk, but could not bark. I had McLin arrested for cruelty to animals. He gave bonds in \$200. This morning the building and dogs were burned."

"Five of the dogs belonged to Mr. F. H. Perry, of Des Moines, Iowa. Parties owning the others will please write to me, or to Messrs. J. M. Freeman, Chas. Hoover, or Rev. L. Peck, Bicknell, Ind. They can find out more about the matter from them. I ask the owners to assist me in pushing this case to the end. Don't delay."

These are acts so atrocious that words are empty and forceless in denouncing them. Mr. Mayfield's call for action best expresses the situation. If money is necessary to carry on a rigorous prosecution, the dog owners and handlers of this

country should see that it is promptly forthcoming. Such atrocious cruelty should meet a legal punishment so prompt and swift that there will be the least possible interval between the crime and its punishment. The execration of mankind should follow forever. It is inconceivable how any man could so heartlessly leave a lot of dumb, helpless dogs, gentle and loving by nature, to swelter in confinement and die of hunger and thirst. In his letter, Mr. Mayfield further said that it was proven that McLin had not been near the dogs for a week. Aside from the heartless cruelty exhibited, there are serious business considerations involved. Taken all in all, it is one of the crimes which occur betimes and which have no measure of comparison, for they stand alone. But the law can be invoked and the public can express its loathing for a man who cannot be called a brute, for no brute would do such an act. It properly is the domain of fiends. All praise to Mr. Mayfield for his act.

I learn that Mr. W. S. Bell, of Pittsburgh, eminent as a sportsman and field trial judge, has had misfortunes in his kennel. Distemper caused the death of two one-year-old puppies, one by Count Eric—Tessie, the other by Dick (a grandson of Count Noble and Belle Gladstone).

## Automatic Register for Dogs.

The following excerpt is taken from a letter written to me by Mr. Royal Robinson, Indianapolis. It is a satire on the sportsmen who advocate keeping a score card and determining a dog's qualities by addition and subtraction:

"Two or three years ago I was favored by the inventor with a diagram and explanatory notes of 'A Scrub's Automatic Game Annunciator for Dogs, with the nose in the wrong place.' It was a practical application of a very happy idea, and I hoped the device would be put upon the market and come into general use, especially upon field trial dogs, where, as you know, something of that kind is badly needed. Some cause, probably his well known modesty, has operated to keep 'A Scrub' from doing anything with it, and the public is the loser."

"This little device, so useful upon a dog of perverted nature, suggests to me something which should prove of great value to the fraternity, but I lack the mechanical genius to put it in shape, hence I must give the idea away. I propose to put upon the dog a close-fitting, but very light, electrical jacket with a convenient pocket for a score card, upon which would be automatically registered the value of his various qualities as shown while in competition."

"The absolute fairness and accuracy of decisions reached would commend this scheme to field trial patrons generally, and especially to those who always have the best dog, but are beaten by the judges."

"Judges would no longer be needed except to lend dignity to the head of the procession, and 'discretionary power,' that bugbear which keeps our friend, 'A Scrub,' awake of nights, would be killed at a blow."

"The good people who have tried so long to devise rules under which the dogs would be properly placed regardless of the judges' qualifications, could take a long and much needed rest, while they who have insisted that the relative merits of two dogs could be as easily and accurately measured as the contents of two wood piles, would say, 'I told you so,' and the score card advocates would shout with glee. But you know all this better than I do."

Mr. J. T. Mayfield, of Bicknell, Ind., well known as a successful trainer, writes me that he never saw breeding birds more plentiful. He says: "I find six and eight pair in almost every stubble. A most favorable condition for successful running of the U. S. F. T. Club's trials."

B. WATERS.

909 SECURITY BUILDING, Chicago.

## Where is the Spaniel as a Sporting Dog?

Editor *Forest and Stream*:

Ever since the first letter appeared in your issue of March 23, prefixed "Where is the Spaniel as a Sporting Dog?" I have been pleasurably looking forward to a letter appearing that I might exclaim, "Ah, there is a man after my own heart; there is a man that shoots woodcock, and hunts them with cockers, a man thoroughly conversant with the habits of the bird, and the mode of hunting them with the cocker, and that really does hunt them." I have waited in vain, for I have not seen that letter yet.

I shall try to give my reasons for the above statement as I go along. "Cocker" writes: "That the black dog is a pretty fellow no one will deny; but who has shot over a black or solid liver dog in the late afternoon of an autumn day and not been thoroughly disgusted at his inability to distinguish the dog from an inanimate lump of sod at twenty or thirty feet? With the old liver and whites this trouble of not being able to distinguish the dog would be so little as to be almost unappreciable."

A solid black or a solid liver cocker can be seen long after the shooter can see to kill a woodcock, a fact well known to all woodcock shooters.

"Solus" writes: "Staying at a farmer's house a few years ago, I had the pleasure of seeing one pointer, one setter, three field spaniels and at least a dozen cockers, nine of which were modern and the balance 'very ancient,' work through a briar swamp near by, etc."

Heavens above! Fancy a sportsman (a woodcock shooter) going out to shoot woodcock with fifteen spaniels, with a pointer and setter thrown in. Why, in the covert "Solus" describes, if there were fifty birds in it, fifteen good spaniels would have every bird up in five minutes. The writer says the dogs were taken to this place not to find game but as a test to the spaniels. A test for what?

Another correspondent writes that the cocker cannot be seen in thick cover. To this I would ask, At how many woodcock out of one hundred killed over cockers are the dogs in sight of the shooter when the birds were killed? My answer to this question is, not fifty. Your cocker in a thick covert may be within twenty yards of you and not visible. What does it matter whether the shooter sees his dog or does not when the woodcock flushes, the bird will tell you by his loud whistle that he is up, and where he is. This is just as absurd an objection to the cocker as any of the other objections that have been made.

In your issue of June 22, your correspondent, signing himself "It Seems to Me," writes: "There is a standard that any man can understand, and a pretty good one at that, and it seems to me that in at least two shows the working cockers were placed over the toys, with a jolly row on paper in consequence. It seems to me that not so long ago Mr. Bell disputed this same statement that the dog show winners were not hunters, and offered to wager good money that his dog could hunt game as well as 'mugs.' Mr. Bell certainly did issue a challenge to, I think, Mr. Keyes, of Ottawa, for a field trial for cockers to take place during or after the field trial held at Chatham, Ont., in the latter part of November, but Mr. Bell, not being a woodcock shooter, any more than Mr. Keyes, was not aware that after November there is not to be found half a dozen woodcock in Ontario, if any. Mr. J. Otis Fellows, in your issue of June 22, writes: "Spaniel" is all right, he knows something about a working cocker." I am much obliged to Mr. Fellows for his opinion. My reason for saying that Mr. Keyes is not a woodcock shooter is that he took no notice of Mr. Bell's challenging him to a field trial for cockers late in November. Of course, I understood the trial to be run on woodcock, woodcock being the only bird except ruffed grouse that the cocker is used for, and to have a field trial on ruffed grouse at Chatham, Ont., would be simply ridiculous. A few sportsmen may and do (as I do

myself) use their cockers for snipe, but it is not usual to do so. Field trials with a pigeon in a basket as proposed in *FOREST AND STREAM*, will not do at all. Field trials in the coverts for the cocker would not be a fair test, as one dog might be put down in a covert where there were several birds; another dog in a covert which contained only one or two, the next dog into a covert *nil*, and so on. Again an inferior dog might get the covert with the greatest number of birds, and being a wide ranger get up most of the birds by merely stumbling on them. The covert, perhaps, being thick, the judges might not see this, and likely not being first-class judges (which, judging from the letters in *FOREST AND STREAM*, are few and far between) might not notice this defect, and award the prize to an inferior dog."

Spaniel men that wish to have field trials for the cocker can do so, and I am happy to tell them how to proceed. Procure a field or common of five, ten or fifteen acres—a pasture field, if possible. Get a recently killed woodcock, tie a string to one of its legs, and trail the bird from one end of the field to the other. When near the upper end diverge to one side about 50 yds., still trailing the bird, and leave it there. Now bring out a brace of the cockers entered for the trial, each dog being accompanied by his master or trainer, and place them in the field. Allow each man to work his dog as he desires. When the dogs have worked the trail to the head of the field where the trail diverged, discharge a gun and tell the dogs to seek dead and find. Each brace can be tried in the same manner, and the best picked out for a final trial. The same plan can be followed in the covert. One-eighth of an acre will suffice for the covert trial. For each brace of dogs drag the bird freshly over the same trail or as near to it as possible. Do not trail the bird all over the field, as that would not be fair for the dogs coming after. After the above trial is gone through, try the dogs at retrieving the woodcock. Stand and throw the bird from you. This will test his mouth and retrieving powers. Take each dog out separately for this trial. Lastly, take the dogs to the water and give them a trial at retrieving from the water, and do not forget to stand well back from the shore and penalize the dog heavily that on reaching the land leaves his bird there instead of bringing it to his master."

The above is written on behalf of the handsomest, most affectionate and easiest taught dog in the world—the spaniel. I hope my remarks will hurt nobody's feelings. If they do, my excuse must be my great love for the spaniel, especially the black cocker and black field spaniel. SPANIEL.

COOKSTOWN, Ont.

## The Rhode Island Show.

THE Rhode Island State Fair Association, Mr. Collins, the secretary, tells us, have taken hold of the bench show in connection with their annual State Fair, deliberately and strongly, which has been something that for the past five years they have been gradually bringing to such a point that their sound and conservative committee would adopt. The history of the introduction of dogs in the State Fair dates back to 1886, when the present president, Mr. Fred E. Perkins, was superintendent, the first year the department was inaugurated. The association was poor and composed largely of agriculturists, who could only see good in the valuable breed of collie dogs, and to encourage the breeding of those dogs in the State they offered only diplomas. Between twenty and thirty entries was the result. Since then they gradually, year by year, added a few classes and built a few benches in the poultry building. The interest, locally, gradually increased, until last year they had in round numbers 150 dogs exhibited. Nothing was given in prizes except diplomas, and wins did not count. When the present committee decided last December upon the reorganization of the State Fair, Mr. Perkins and Secretary Collins saw the opportunity that they had so long waited for to push forward the kennel interests. They looked the ground over and found the dates of the fair clashed with no other organization, and at once forwarded their check and applied for membership in the A. K. C. Now that they find themselves in conflict with the World's Fair management, a fact which they most sincerely regret, it does not have any influence upon them other than to stimulate them to make their present bench show a creditable success. The poultry show occupies a building 155 by 60, and the bench show a new building, which is almost completed, 180 by 90. The greatest fear has been that they would not be able to do full justice to the exhibitors in the dog show. They have therefore called to their aid the best possible assistance, and chosen Mr. Walter J. Comstock as chairman of the dog show committee. They feel confident that his judgment in many matters is most excellent. His ideas are good and he works with a feeling of pride that he would like to have the show one that would receive the approbation of kennel men. Mr. Collins writes us: "We endeavor to be just and equitable to all exhibitors in every department. We are impartial and without sentiment or prejudice in favor of any individuals or cliques. You will observe that while this may lose some of the social features that exhibitors may enjoy in a dog show held alone, it has its advantages from a purely business standpoint."

## Dispersal of a Noted Kennel.

WE are rather startled to hear that owing to press of business cares the firm of Toon & Symonds will dissolve partnership. This firm has been familiar to all readers of show catalogues during the past couple of years, and we sincerely trust the kennel will still be kept up by Mr. Symonds. The dogs are all for sale and many of them are well-known prize winners fit to strengthen any kennel. Some of the noted ones are: Scotch terriers—Tiree, Rhuduman, Kilstor, Scotch Hot, Highland Roy, Norwich Mouse, Gipsy Yet and Bella II. Irish terriers—Jack Briggs, Manxman, Salem Witch, Judy, Paddy Doolan and Cissey and the mos. puppies by Jack Briggs out of Salem Witch. Among the pointers are Devon Banger, in rare form and thoroughly broken. Anticipation and Expectation, by Naso of Strasburg out of Ruby VII., one of the best bitches when shown on the English bench, having won a lot of first prizes and specials. The black and tan terrier team is well known and includes Prince Regent, Gipsy Girl, Rosette and Meersbrook Empress. The St. Bernard bitch Lady Monkton and the three pups by Baron Rudolph also swell the list. The beagle bitch Jenny Lind, quite a nice one too, will seek a new home. Then there are the whippets Boston Model and Perfection, and Sheffield Lad, the Pomeranian. Two good smooth fox-terriers in Endcliffe Spice and Lady Roseberry will also go, and so will the wire-haired Barton Sting. Strange to say, of the breed this kennel started out with—Yorkshire terriers—there is only one left, Jenny, a capital specimen and a winner at Boston. There are also some greyhounds in the kennel, of the names of which we have not been advised. Mr. Symonds is getting up a descriptive catalogue and the dogs will shortly be on the market.

## A Canine Cyclone.

SYRACUSE, N. Y., June 22.—The adlet was discontinued at my request. Figuratively speaking, I became the center of bewitched and bewitching dogs, all anxious to adopt me as their master. Letters and printed matter came to me from every point of the compass, offering bow-wows of all kinds and degrees of excellence. I did not know that two or three lines in *FOREST AND STREAM* could raise such a storm of dogs—a cyclone, in fact. B.

## DOG CHAT.

### Foxhound and Bloodhound Match.

It is to be hoped that the proposed match between a native foxhound and English bloodhound to show that the former is quite the equal of the latter as a man trailer will not be allowed to fall through owing to inaction on either side. We are firmly convinced from observation that the foxhound will be found to be the equal of the bloodhound in trailing the boot, in fact there are trained hounds now used for that purpose. We have known setters and a fox-terrier to do the same thing, though it must be said that in these cases the person trailed was well-known to the dogs. Mr. Wade, who takes the foxhound end of the match, is on a still-hunt for his champion, and we believe that no definite arrangement has yet been made. Dr. Lougest, on whose estate the match, if it comes to anything, will probably take place, tells us that he has over 500 acres of woodland at Mt. Vernon, and his neighbors have given him full permission to hunt over their grounds, so that there would be more than 1,000 acres at the disposal of the competitors. Dr. Lougest, in a letter to us, states that he is not aware of any bloodhound in this country specially trained for this work, so that it would be necessary to send to England for a bloodhound or spend considerable time in training one over here. We certainly understood that Mr. Winchell has several bloodhounds that are good man-trailers. If the match comes off Dr. Lougest will allow his Belhus to join in the hunt if necessary. Such a trial is sure to prove very interesting, and we trust nothing will occur to prevent it, especially as Dr. Lougest, if the match takes place on his estate, gives all sportsmen a cordial invitation to take part.

### Collie Ears.

A writer in the English *Stock-Keeper* some time since, signing himself "Every Day Collie," remarked, when speaking of the long, clean head and small, semi-erect ears, that "The latter is possibly the greatest improvement that has been made in the collie for many years. Good ears have been most difficult to obtain, and are not yet bred with any certainty. These points have been greatly valued, and very rightly so, but in the race to obtain good heads and ears, we now find fine, long, weak heads and prick ears. I have very carefully examined many winners during the year, and have reason to think many of them are prick-eared dogs faked. Several have been weighted until entering the show ring; some have glue on when shown; others, it is plain to see, have been tampered with; have no hair on inside of ear or ears, as the case may require. They may keep in position just while the judging lasts; see them a very few hours later; you are astonished. Should the show last two or three days, you find they are prick-eared dogs, when it is plain to see what has been done. Why not disqualify these dogs, and award prizes to those shown in their natural state?"

### To Guarantee Prize Money.

The English Kennel Club, alarmed at the frequency of delinquent shows in the matter of paying prizes have, according to *Stock-Keeper*, Eng., made out a form which must be signed by the principal officers of the show committees intending to hold shows under E. K. C. rules. In this form we find that committees must undertake before receiving any dogs, to have their show benches properly disinfected to the satisfaction of the regularly appointed veterinary surgeon and, further that the whole of the prize money shall be paid within a reasonable time after the closing of the show. Six of the principal members of the committee must sign this guarantee, and if any member holds a public appointment, such as mayor, etc., such particulars must also be stated, with the name. This is a good move and will certainly do much toward restoring confidence, and will do away with "shyster" shows held under cover of E. K. C. rules.

### Gerda II.

Dr. Lougest's mastiff bitch Gerda II. whelped July 2 a litter of 8 pups to Mr. Winchell's Beaufort's Black Prince. This would not be remarkable in itself, but taken in consideration of the fact that this makes the third litter within 12 months, it stamps matron Gerda as a prolific treasure. On

IDEAL GREAT DANE DOG.

July 12, 1892, she whelped her first litter to "Dr. Lougest's dog Igleside Maximilian; second litter Dec. 25, 1892, to the same dog, and now this last litter. Dr. Lougest's dogs are all in capital health, "Thanks," he remarks, "to the fresh air and green fields of Mt. Vernon." This is cheap kennel food and we recommend it in large doses at this time of the year.

### Miss Caution.

In regard to the important question as to Miss Caution's disability or otherwise it may be of interest to know that J. F. Pritchard, who had charge of Mr. Whitney's kennels of which Miss Caution was some time an inmate, tells us that they never had any trouble in breeding Miss Caution; the only trouble, and a serious one, was that no litters resulted from the mating. The treatment that this bitch has now undergone will, however, we hope, overcome this difficulty, and a promising litter from her make its appearance in the Peoria kennel.

### The A. K. C. and Lawyers' Fees.

It has been intimated from time to time that included in the bill of \$3,802 paid by the A. K. C. as lawyers' expenses was the expense that Secretary Vredenburg, as Mr. Vredenburg, incurred in the suit for libel against Mr. Peshall. Had this expense been included in this payment of \$3,802, it would have been an imposition on the American Kennel Club, especially after its president in open meeting stated that none of this expense should fall on the club, as it was a private suit, etc., etc. With a view to giving Mr. Vredenburg

an opportunity to deny the rumors we asked him to state his side of the case. He was unwilling at first to give the subject sufficient importance, but eventually said the sum of \$3,802 paid to lawyers was incurred only through the Gallip suits for libel against the A. K. C. officials and also in protecting the associate members when Mr. Peshall served them with summonses to answer several suits that Mr. Peshall intended to bring, but which have not yet come trial. Included in this sum were the expenses incurred in preparing their defense and obtaining a history of the complainant, which the club has now in its possession. Mr. Vredenburg further states that any member of the advisory committee is entitled to see the vouchers, etc., for this bill now in the possession of the A. K. C.

### Closing of Field Trial Entries.

There is some dissatisfaction expressed among field trial men on account of clubs postponing the original date of closing of entries. There is certainly some cause for complaint for it does not seem fair that one owner should make his entries in good faith on July 1, and then find that if he had held off he would have had until September 1, to make

NOT CORRECT TYPE.

"A faulty head, in Wurttemberg called by the nickname 'Berliner'. The frontal bones are higher than the occiput; lack of proportion in skull and muzzle; eye too large, etc."

up his list. One prominent owner, feeling the injury that has been done him by postponement, has determined to cancel the entries he made before July 1, and the club having broken faith would, we believe, not be justified in retaining the money paid for these entries.

In the case of a man who enters six dogs, not knowing until some months later which of them will be qualified to compete, it works a serious injustice. Another owner who has not been so punctual may by the latter date know just what his dog can do and enter accordingly, thus effecting a saving of many dollars. This practice if persisted in will surely be detrimental to large entries in the Derbies especially, for when entries close promptly, say May or June 1, not a fifth of the dogs entered fill their engagement, but the club is so much to the good on the original forfeits. Dogs that fill do not by any means pay for the stakes offered.

### Yorkshires.

Mr. P. H. Coombs, known to the fancy as an old breeder of Yorkshire terriers, intended to fill the place of Bradford Harry, which died lately, by purchasing another good show and stock dog, but now he is almost out of the breed, having concluded to sell his Merry Duchess to Messrs. Barnes Bros., Wellsville, N. Y., together with a daughter of hers by champion Bradford Harry. This purchase will give considerable strength and value to the Wellsville kennel, which already contains a son of champion Ted and some other fashionable blood. In Merry Duchess they get a daughter of Banks' Royal by the famous Old Royal, and in the puppy they get the value of champion Bradford Harry with two distinct crosses to Huddersfield Ben.

### Postpone the World's Fair Show.

We understand that at the advisory committee meeting of the A. K. C., called by President Belmont, it was resolved that the president of the A. K. C. be instructed to communicate with the World's Fair management suggesting that the show, conflicting with dates claimed by a club member of the A. K. C., be postponed till October. Dogmen all over the country will, we feel assured, pray that this resolution may have the desired effect. If Mr. Buchanan wishes his show to be the success it should be he will listen to the call for postponement, and in the meantime ascertain how many more of the judges on his list are not willing to serve.

Appropos of the above we may be allowed to correct the wilful misstatement of our Philadelphia contemporary which we can only attribute to the effects of the heated term through which we are at present passing. For its information we may remark that *FOREST AND STREAM* consults the interests of the dogmen, and if we through contact with dogmen, find that their interests are not sufficiently consulted we do not hesitate to so inform personally the proper authorities who have it in their power to correct. Finding that there was a feeling that the World's Fair show should be held in October we went to Mr. Vredenburg on Tuesday, June 27, and brought the fact to his notice and represented that, as the A. K. C. was the only body Mr. Buchanan seemed willing to pay attention to, why not call an advisory committee meeting. Mr. Vredenburg entirely agreed with our suggestion and asked us to inform Mr. A. D. Lewis, acting secretary, as we were on the way to the A. K. C. office, that he would like to see him, intending to instruct him to ask President Belmont to call a meeting. This was done and afterward a meeting was called with the result as stated, and in our issue of June 29 appeared the suggestion as made to Mr. Vredenburg. It could not possibly come out before but it was quite early enough to be ahead of any other paper, and has influenced our contemporary to again misrepresent the facts.

### Handlers' Methods.

A merciful man is merciful to his dogs. On reading the account of the cruelty of which handler MacIn, of Bicknell, Ind., has been guilty we are reminded very forcibly of what led us to speak of the different behavior of dogs to their handlers at the Bicknell trials in 1891. We had then in mind the covering, cringing manner in which this handler's dogs behaved when approaching him, and which convincingly showed that the rod of iron hung low in this kennel.

### Novel Bulldog Match.

Another bulldog match will take place shortly, or rather

it is proposed, for it is under rather novel conditions. The match arises through the question as to which is the superior mover, Dockleaf or King Orrey. This is to be settled by a walk of ten miles. The match as it stands at present strikes us as little less than cruelty; five miles will probably be found quite sufficient for both under the best conditions of weather and roads.

### Not True.

The Portland (Me.) *Express*, in speaking of Miss Whitney and her ability as a judge of St. Bernards, etc., gets along very well and complimentarily until it says: "In attire Miss Whitney is just a trifle 'mannish.'" Those who know this genial, womanly woman will bear us out in the statement that few women, nowadays, show less cause for such an accusation.

### More Bulldogs.

Mr. Gillmore, of New York, *Stock-Keeper* says, has purchased the bulldogs Cameron and Reve Royal, and will bring them over in August.

### Bonnet.

Mr. A. A. MacDonald has purchased the wire-hair fox-terrier Bonnet from Mr. W. Brodie and she will be mated with his new dog, Dark Eye.

St. Augustine, the recently imported smooth-coated St. Bernard, is now at Mr. Bousfield's kennels at Bay City, Mich., and is looking well and improving rapidly. Robert Davison, who came over with St. Augustine, is now in charge of the kennels. Mr. Davison is said to have had considerable experience with St. Bernards, having been for some time in Mr. Rotherham Cecil's kennels in England under the tutelage of Lewis Pugh, well known in his special sphere. Mr. Bousfield has built new kennels, which are well situated in lots of exercising room and with two acres of shade. He intends to extend the buildings shortly, so that the kennel will be able to take dogs to board and condition for shows, and this part will be entirely in Davison's charge.

After the Brooklyn show Dr. W. F. Kenny, an enthusiastic Irish terrier breeder of Providence, R. I., purchased Crib, the winner in open dogs. On May 30 his Irish terriers Cathelene and Belle of Shaanon were safely delivered of twelve pups between them, by Crib. Four of these were born without tails, a concession to docking that must have surprised the Doctor no little. According to the Providence *Journal*, on two of the pups there is no semblance of a tail; on the others a small bunch appears where the tail should be.

The English *Stock-Keeper* of June 3 has this to say: "The American Kennel Club is offered some extremely wholesome advice in *FOREST AND STREAM* of May 18. From simply following the history of the club in the columns of our transatlantic contemporaries we should be inclined to think the words of warning are timely, and so evidently well meant as to merit attention."

We distinctly characterize as untrue a statement in our Philadelphia contemporary regarding Mr. Wade and the Brooklyn show. We have never yet knowingly broken confidence on any news matter confided to us with the proviso "not for publication," and this rule has sometimes worked to our detriment. In this instance there was no secrecy that we are aware of. We simply "happened" on the news, like so many of the good things that *FOREST AND STREAM* gets hold of and knows how and when to use.

The St. Bernard bitch Sabitha, that Mr. Patterson bred to Sir Herbert and afterward shipped to Mr. Alex. Alkinan, Redondo Beach, Cal., whelped May 22, eleven pups, six of which are dogs. All are doing well and are likely to help the good cause along the Pacific coast.

The St. Bernard Kay, probably better known to the public than most prize winners, because he was owned by the wife of President Cleveland, died last week from the effects of being tapped for ascites. This operation, which took place at the Harvard veterinary school, where the dog had been sent for treatment, consists in the insertion of a tube into the abdomen, permitting the accumulated fluid to

IDEAL GREAT DANE BITCH.

escape. The operation is a very simple and easy one, requiring the administration of only a small amount of ether, just enough to render him partly unconscious. The dog was very weak after the operation and finally succumbed July 6. It is said there are only two known cases of recovery in dogs after this operation.

United States Commissioner Allen's St. Bernard dog Pope, by champion Valentine out of Venus, died last month and his owner thought so much of the dog that he could not bear to see it buried in the ordinary manner in which dead dogs in a city are disposed of. He therefore had a neat casket built and in this the remains of Pope were shipped to Burlington, Vt., where Mr. Allen has his country seat, and here among the hills of Vermont, under the shade of a spreading tree and a small monument, Pope awaits a dog millennium.

Many of the hills about Pittsburgh are pierced by horizontal shafts leading to the rich deposits of coal. In these shafts a race of hardy dogs are employed as beasts of burden. A team of two dogs is generally used to drag a little car loaded with coal on the narrow gauge tramway.

The Capt. J. M. Taylor, spoken of as judging at the W. K. C. show in 1877 is not the well-known setter judge of the present day, as was supposed at the time we wrote "Twenty Years of Bench Shows" in our issue of June 29.

We bespeak a welcome among dogmen on the other side of the water for Mr. A. D. Stewart, of Hamilton, Ont., who sailed for Europe on July 1. Fanciers will find the secretary of the Hamilton K. C. a thorough lover of a dog and a good all-round man into the bargain.

## The Type of Great Danes.

BY A. H. HEPPNER.

(Continued from page 11.)

THE standard of the German Mastiff Club, of Chicago, describes the head of a great Dane as follows: The head or skull should neither be domed nor flat, rather lengthy and not too broad, the frontal bones slightly raised; little indentation between the eyes, with very little or no stop; cheek muscles well developed, face not too broad. The whole formation and expression of head and face should rather resemble the hound than the bulldog or mastiff, except the muzzle, which is not like that of any other breed, as the German mastiff or great Dane has a muzzle peculiarly his own, the entire head and face, but much heavier, but more nearly resembling those of the approved bull-terrier than of any other breed. Too much resemblance to the hound is a fault.

The German standard is: Head moderately stretched out and rather high and more condensed sideways than appearing pressed flat. In profile the forehead and bridge of nose with a perceptible stop; skull and bridge of nose must appear parallel. In a front view the width of the skull must not be much greater than the strongly developed flews; cheek muscles not projecting, so as to give the head a clean-cut appearance from all sides, clearly defined in its lines. Straight, wide bridge of nose, apparently slightly rounded, terminating in a wide nose not projecting over the lips. Lips in front blunt and not very lippy; few moderately developed; teeth of lower and upper jaws meeting even; the eye always not brown, of good size, round with a penetrating expression; eyebrows strongly developed; ears lightly set, not too far apart and upright.

This standard was issued in Hamburg, 1880. Before that time there was no collective name as at present, i. e., German Dogge, and previous to that time there existed specific strains, subdivisions, as I may call them, of the great Dane, under the name of Ulmer dogge, Dänische dogge, Hatzrude, Saufänger, etc. All of these names meant special strains and indicated certain exterior (points) of these dogs. These different strains have been bred, separately within themselves, for centuries and, queerly enough, have been kept pure by virtue of the fact that certain territories of Germany preferred one or the other of these strains. It shows that the great Danes of to-day, as Germany breeds them, is less a matter of merit than of necessity, compulsory as it were, German breeders had to produce typical dogs, because they could breed to no other but their neighbor's dog. We find the Hatzrude and Saufänger more particularly in Würtemberg, as a dog used for practical purposes, combining substance and courage in the practical work in former times of chasing wild boars and large game.

We find the more graceful and heavier-headed Ulmer dogge also in the south of Germany, but more so as an improvement on the coarse and ugly Hatzrude. We find the Dänische dogge confined to the northern parts of Germany, more especially in large cities, where a big, powerful animal is a nuisance and a graceful, medium-sized, velvet-coated, noble little dog is naturally preferred as a pet. Now let us proceed to describe these strange breeds, each one by itself, and we will have explained why a Melac and why a Wenzel can exist when these different strains have only been combined by name as Deutsche dogge or, as called in this country great Danes.

## Toronto Dog Show.

THE following are the railway and express companies' arrangements, so far heard from, for the transportation of dogs to and from Toronto show, September 11 to 15: Detroit, Grand Haven and Milwaukee Railway, and Toledo, Saginaw and Muskegon Railway, will carry all dogs free of charge. Chicago and West Michigan Railway and Detroit, Lansing and Northern Railroad, will carry dogs free at owner's risk. The Baltimore and Ohio will carry dogs free. The Lake Shore and Michigan Southern Railway Co. state dogs must go by express. Wabash Railroad Co., per dog, 1 to 100 miles, 25 cents; 101 to 250 miles, 50 cents; over 250 miles, 75 cents. Flint and Pere Marquette Railroad will transport dogs in baggage cars free of charge. Canada Atlantic Railway Co., same arrangements as the Grand Trunk Railway. Toledo, Ann Arbor and North Michigan Railroad will carry one dog free, all in excess to go as excess baggage or by express at owner's risk. Intercolonial Railway of Canada will be the same as Grand Trunk and Canadian Pacific Railways. Grand Rapids and Indiana Railroad Co. will carry dogs at same rates as the direct lines.

In cases where exhibitors wish to show their dogs at various exhibitions before returning to the original starting point they may be charged for their dog from the first point of exhibition, and from the first point of exhibition to each subsequent exhibition, and dogs will be returned free from the last exhibition to the original starting point on production of the necessary certificates from each exhibition as herein provided for.

This arrangement will be in force for three days, not including Sundays, after the close of each exhibition.

The following express companies—Canadian, Dominion, United States, Wells, Fargo Co. and National—will return dogs free over their lines whose owners have paid regular rates going.

## A Fair Offer Withdrawn.

Editor Forest and Stream:

Mr. Goodman effectually dodges my proposition. I did not want to prove my theory, or I would not have proposed such a public and expensive way, of which Mr. Goodman is well aware, and never touches upon in his reply, as the carrying out would have, if wrong, exploded my theory very quickly. I will relieve his mind by withdrawing my fair offer, it being now impossible to fulfil the contract, even if Mr. Goodman should not have backed out, the great Dane Wenzel having fallen a victim to that heinous fiend, the poisoner. It is a pity poor Wenzel was a blue and not a brindle, you would have seen them all crazy about him then. Mr. Goodman's other remarks I will not reply to now, and in regard to Imperator's not being under his charge during the spring show season, I owe him an apology. He declares he did not have him; then it was somebody else, and a queer business it remains still. I should like to see your Chicago staff member interview Imperator's owner about it.

G. MUSS-ARNOLD.

TUCKAHOE, N. Y., July 8.

## International Coursing Meeting.

A COURSING meeting, open to the public, will be held on Oct. 3, 1893, and following days at Huron, S. D. The stake will be for 64 greyhounds or less, with a proportionate deduction in the winnings if the stake does not fill. The running will take place on the plains near Huron. Huron is situated on the Chicago & Northwestern R. R., 20 hours from Chicago.

Greyhounds from abroad will be entered at the port of New York free of duty, through arrangements made by the committee with the customs authorities, and may remain in the United States for six months. The meeting will be run under National Greyhound Club rules, which are substantially the same as the rules of the National Coursing Club. Judge, Mr. Roger D. Williams, of Lexington, Ky.; slipper John Brett, Northvale, N. J.

The stakes are: The Columbus cup, for 64 or less, all aged greyhounds at \$50 each, to which will be added \$2,000; winner, \$2,000; second, \$1,000; third and fourth, \$250 each; four dogs, \$80 each; eight dogs, \$50 each.

The Columbus purse, for 32 dogs beaten in the first round

of the cup; winner, \$800; second, \$100; third and fourth, \$50 each; four dogs, \$30 each.

The Columbus plate, for 16 dogs beaten in the first ties of the cup; winner \$200, second \$80, two dogs at \$40 each.

The entry fee is \$50; 10 per cent. will be deducted from the winnings in the cup and purse, and 5 per cent. from the winnings in the plate, for expenses. Nominations may be taken upon payment of \$25 each, at any time prior to Sept. 1, 1893, on which date the balance of entrance money will be payable. Nominations may be sent to J. Herbert Watson, chairman of committee, 26 Court street, Brooklyn, N. Y.

## Flaps from the Beaver's Tail.

TORONTO, Can.—Mr. A. A. Macdonald is now the owner of the wire-haired fox-terrier bitch Bonnet, imported by Mr. Brodie. Bonnet at the first try took the special for the best terrier bitch at the recent Toronto Kennel Club show. She will be bred to Mr. Macdonald's new dog Dark Eye.

My British Columbia correspondent writes me that Mr. J. S. Graham, of Seattle, Wash., was so much taken with Dr. Milne's (Victoria, B. C.) winning cocker puppies that he induced him to part with the brace, Mr. Tolmil and Baby Mine, at a very satisfactory figure. Mr. J. C. Carmichael's liver and tan cocker bitch Lady Giffie, has received the attentions of Dr. Milne's Captain Hunter and it is hoped the result may give a fillop to "our national dog" on the coast.

The Seattle show has stirred the British Columbia fanciers up and it is on the tapis that an Eastern judge will be brought out for their next show.

The English Kennel Gazette for June sagely remarks: "There seems to be a tendency in Canada to take up the spaniel fancy \* \* \*." Well rather! I have heard a rumor or two that appears to point that way. H. B. DONOVAN.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

## NAMES CLAIMED.

Prepared Blanks sent free on application.

Thasmo Socie. By F. M. Thomas, Catskill, N. Y., for fawn pug bitch, whelped Sept. 13, 1892, by Pug Bailey (Teddy-Trinket) out of Thasmo Nell (Ole-Doll).

Lady Vix. By Thasmo Kennels, Catskill, N. Y., for red Irish setter bitch whelped June, 1891, by champion Chip (Quail) out of Nora (Rory O'More).

## BRED.

Prepared Blanks sent free on application.

Bessie Roy II.—Prince L. A. J. Lewis's (Central Falls, R. I.) English setter bitch Bessie Roy II. (Cincinnati Count—Bessie Roy) to his Prince L. (Royal Prince II.—Nina Laverack), May 13.

Sadie B.—Prince L. A. J. Lewis's (Central Falls, R. I.) English setter bitch Sadie B. (Warwick Albert—Princess Belton) to his Prince L. (Royal Prince II.—Nina Laverack), March 3.

Maud Noble—Count Noble. Inwood Kennels' (Providence, R. I.) Gordon setter bitch Maud Noble (Gyp—Fan) to their Count Noble (Ben—Belle), May 28.

Neva B.—Alberts's Druid. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Neva B. (Pride of Dixie—Fairy Belle) to his Alberts's Druid (Soudan—Gwynnie), Feb. 16.

Wynne Gladstone. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Wynne Gladstone (Gun—Victoria Laverack) to his Spex Noble (Count Roderigo—Queenie), May 8.

Bessie Girl—Axtel King Don. T. E. Roberts's (White Plains, N. Y.) pointer bitch Bessie Girl (Voltaire—Renie) to Bronx Valley Kennels' Axtel King Don (King Don—Meter's Red), May 13.

Harte's Rose—Red Duke. W. Harte's (St. Louis, Mo.) Irish setter bitch Harte's Rose (Duke Royal—Sunol) to his Red Duke (Beau Brummel—Winnie II.), April 17.

Harte's Sally—Red Duke. W. Harte's (St. Louis, Mo.) Irish setter bitch Harte's Sally (Chief of Tara—Shamrock Belle) to his Red Duke (Beau Brummel—Winnie II.), April 27.

Harte's Bessie—Red Duke. W. Harte's (St. Louis, Mo.) Irish setter bitch Harte's Bessie (Carless—Jessie Lorraine) to his Red Duke (Beau Brummel—Winnie II.), April 27.

Alice—Hundesport's Bergmann. Wm. Loeffler's dachshund bitch Alice to his Hundesport's Bergmann, April 19.

Lina K.—Hundesport's Bergmann. Wm. Loeffler's dachshund bitch Lina K. to his Hundesport's Bergmann, April 30.

Seatchon—Hundesport's Bergmann. R. L. Surtees's dachshund bitch Seatchon to Wm. Loeffler's Hundesport's Bergmann, May 10.

Holly to Wm. Loeffler's Hundesport's Bergmann, May 20.

Miss Fortune—Hundesport's Bergmann. Ch. Zeitelhack's dachshund bitch Miss Fortune to Wm. Loeffler's Hundesport's Bergmann, May 16.

Miss Rogers—Racer, Jr. Shrewsbury Beagle Kennels' (Red Bank, N. J.) beagle bitch Miss Rogers (champion Royal Krueger—Veira) to their champion Racer, Jr. (Racer—Vickey), June 30.

Hoy—Racer, Jr. Shrewsbury Beagle Kennels' (Red Bank, N. J.) beagle bitch Hoy (Fleetwood—Countess) to their champion Racer, Jr. (Racer—Vickey), June 17.

Romp C.—Racer, Jr. Shrewsbury Beagle Kennels' (Red Bank, N. J.) beagle bitch Romp C. (Tony—Skippy) to their champion Racer, Jr. (champion Racer—Vickey), June 4.

Kate—Tony. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Kate to his Tony (Pansy Blossom), April 24.

Byron. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch (Roma—Pert) to his Byron (Winks—Idiom), May 18.

Pansy Blossom—Byron. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Pansy Blossom (Dot—Tina) to his Byron (Winks—Idiom), April 17.

Gyp—Byron. M. H. Ranlett's (Rockland, Me.) Italian greyhound bitch Gyp to F. H. Hoyt's Byron (Winks—Idiom), May 27.

Leona—Byron. J. Hawkins's (Rockville, Conn.) Italian greyhound bitch Leona to F. H. Hoyt's Byron (Winks—Idiom), June 9.

Dolores—Byron. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Dolores (Winks—Pansy Blossom) to his Byron (Winks—Idiom), May 13.

Trixie—Byron. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Trixie (Winks—Pansy Blossom) to his Byron (Winks—Idiom), May 15.

Marquerte—Tot. Mrs. Moore's (Sharon, Pa.) Italian greyhound bitch Marquerte (Milo—Pansy Blossom) to F. H. Hoyt's Tot (Elf—Dream), June 12.

Bloom II.—Duke of Hessen. Rinada Pointer Kennels' pointer bitch Bloom II. to Hempstead Farm's Duke of Hessen, May 5.

Colleen Bawn—Komulus. D. Bows, Jr. (Brooklyn, N. Y.) Irish terrier bitch Colleen Bawn to Hempstead Farm's Komulus, March 9.

Nellie—Fenian Boy. V. Mott's (New York city) Irish terrier bitch Nellie to Hempstead Farm's Fenian Boy, March 9.

Madge—Woodmansterne Trefoil. R. McEwen's (Byron, Ont.) collie bitch Madge to Hempstead Farm's Woodmansterne Trefoil, Feb. 25.

Conrad II. B. E. Valentine's (Brooklyn, N. Y.) collie bitch to Hempstead Farm's Conrad II., March 5.

Gem of Kippen—Sandford Druid. Hempstead Farm's (Hempstead, L. I.) pointer bitch Gem of Kippen to their Sandford Druid, May 22.

Hempstead Peggy—Prawn. Hempstead Farm's (Hempstead, L. I.) pointer bitch Hempstead Peggy (Duke of Hessen—Woolton Game) to Mr. Heywood Lonsdale's Prawn, May 6.

Merrylegs—Sandford Druid. Hempstead Farm's (Hempstead, L. I.) pointer bitch Merrylegs to their Sandford Druid, April 13.

Zneika—Groubian. Hempstead Farm's (Hempstead, L. I.) Russian wolfhound bitch Zneika to Secarott Kennels' Groubian, May 10.

## WHELPS.

Prepared Blanks sent free on application.

Neva B. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Neva B. (Pride of Dixie—Fairy Belle), April 16, seven (five dogs), by his Alberts's Druid (Soudan—Gwynnie).

Sadie B. A. J. Lewis's (Central Falls, R. I.) English setter bitch Sadie B. (Warwick Albert—Princess Belton), May 1, five (three dogs), by his Prince L.

Lady Noble. Inwood Kennels' (Providence, R. I.) Gordon setter bitch Lady Noble (Don—Lady), June 8, ten (six dogs), by their Count Noble (Ben—Belle).

Alfie Brink. Inwood Kennels' (Philadelphia, Pa.) cocker spaniel bitch Alfie Brink (Bamboo—Josephine), June 8, five (four dogs), by G. Douglass's Woodland Duke (Black Duke—Woodland Duke).

Harte's Bessie. W. Harte's (St. Louis, Mo.) Irish setter bitch Harte's Bessie (Carless—Jessie Lorraine), May 11, six (three dogs), by his Red Duke (Beau Brummel—champion Winnie II.).

Drytime. J. H. Watson's greyhound bitch Drytime, June 11, three bitches, by his Royal Crest.

Belle. F. M. Thomas's (Catskill, N. Y.) Irish setter bitch Belle (Sarsfield—Red Flash), May 28, nine (six dogs), by his Thasmo Ned (Charlie W.—Lady Learnerd).

Prudence. Shrewsbury Beagle Kennels' (Red Bank, N. J.) beagle bitch Prudence (Forest Boy—Lady Lee), June 21, four, by C. S. Wixom's champion Royal Krueger (champion Banerman—Cora).

Tina. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Tina, May 30, three (two dogs), by his Byron.

Pert. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Pert, April 27, four (two dogs), by his Tony.

Pansy Blossom. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Pansy Blossom (Dot—Tina), June 25, three (one dog), by his Byron.

Brulette. F. H. Hoyt's (Sharon, Pa.) Italian greyhound bitch Brulette, May 14, three (one dog), by his Dante.

## SALES.

Prepared Blanks sent free on application.

Nellie L. Blue belton English setter bitch, whelped June 12, 1893, by Prince L. out of Sadie B., by A. J. Lewis, Central Falls, R. I., to J. H. See, Providence, R. I.

Fred L. Black and tan English setter dog, whelped June 12, 1893, by Prince L. out of Sadie B., by A. J. Lewis, Central Falls, R. I., to C. E. Bassett, Fairview, R. I.

Scamp. Black and tan dachshund bitch, whelped May 21, 1892, by Windrush Rioter out of Lina K., by W. Loeffler, Milwaukee, Wis., to M. Liebermann, Menominee, Mich.

Alice. Black and tan dachshund bitch, whelped Dec. 7, 1885, by Waldmann II. out of Crawly, by W. Loeffler, Milwaukee, Wis., to M. Liebermann, Menominee, Mich.

Miss Fortune. Black and tan dachshund bitch, whelped Sept. 28, 1891, by Hundesport's Bergmann out of Lina K., by W. Loeffler, Milwaukee, Wis., to C. Zeitelhack, Jefferson, Wis.

Pert. Fawn Italian greyhound bitch, by F. H. Hoyt, Sharon, Pa., to J. C. Carter, Manchester, Conn.

Ingomar. Fawn Italian greyhound, by Dante out of Marguerite, by F. H. Hoyt, Sharon, Pa., to E. L. Chapman, Larned, Kan.

## PRESENTATIONS.

Sir Archy. Pointer dog, by Ridgeview Dazzle out of Dauntless, by Rinada Pointer Kennels, Massapequa, L. I., to Wm. Fleiss, New York city.

Maud Kippen. Pointer bitch, by Lad of Kippen out of Lady Seaton, by Rinada Pointer Kennels, Massapequa, L. I., to C. Engelbrecht, Jersey City, N. J.

Alice Carmel. Pointer bitch, by Lad of Kippen out of Lady Seaton, by Rinada Pointer Kennels, Massapequa, L. I., to Quinton McCall, Orange Valley, N. J.

Kip of Kippen. Pointer dog, by Lad of Kippen out of Lady Seaton, by Rinada Pointer Kennels, Massapequa, L. I., to Henry Werner, Hoboken, N. J.

Don Kippen. Pointer dog, by Lad of Kippen out of Lady Seaton, by Rinada Pointer Kennels, Massapequa, L. I., to W. Damon, Brooklyn, N. Y.

Boston. Pointer dog, by Ridgeview Dazzle out of Dauntless, by Rinada Pointer Kennels, Massapequa, L. I., to W. E. Lewis, Norwalk, N. Y.

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

A. H., Boston, Mass.—Consult our advertising columns. The Cumberland Kennels, Nashville, Tenn.

J. H. P., Sistersville, W. Va.—You are right. The momentary stopping of the dog cannot be called a false point. Rooding is the act of the dog in following footstep.

G. G. H., Saratoga Springs, N. Y.—Will you kindly give me the exact pedigree of the Irish terrier Bruce, by Peter II. out of Kate; his winnings are, very high com. New York, 1892, and high com., Brooklyn, 1893. Ans. Bruce is not registered, and neither are his sire and dam in the English Stud Book, therefore we are unable to give pedigrees.

## Dachting.

THE summary of the British races which we give this week shows several interesting facts. In the first place the breakdowns have been frequent in all the large boats, and each in turn has been kept out of races to make repairs. As to the merits of the four new yachts, Valkyrie is thus far first and Britannia second, but Britannia has shown much greater speed of late, and with further tuning up is likely to give trouble to Britannia after Valkyrie leaves for America. Calluna has not been fully tried under her new rig, and it is impossible to say where she will be at the end of the season. Most of the races have been sailed in light weather, and only one or two in a sea and wind, so that Valkyrie's superiority under these circumstances is decidedly in her favor. Nothing has yet been said about her starting for New York, and as it will take from one to two weeks for her to fit out for the trip, and three to four weeks

more to cross, she is not likely to be here before the middle or even the end of August.

WITHOUT accepting as true all the extravagant reports that have been published of Jubilee's great speed and of 13 to 14 knots with nothing to hurry her, it is a fact that the yacht has been going very well on her trials, and this from the start, before she is fully rigged and in good condition. From all accounts she carries her canvas ably and steers easily, and will require no material alterations of lead or spars, a very important thing in favor of a new yacht. She has not tried her centerboards as yet, but is stiff and handles well without them. After some days' sailing about Marblehead and a very successful brush with Volunteer, she has returned to Lawley's for the final finishing.

BUT little is heard of the two Herreshoff yachts Colonia and Vigilant, as they are sailing quietly about Bristol, out of the way of chance observers, but report says that Colonia will be hauled out for the addition of some lead to her keel. It is also reported that Vigilant is still leaking a little. Colonia is to have a new mainsail, made by Wilson & Silsby, the first one not being entirely satisfactory. Pilgrim is still at Constitution Wharf, Boston, the work of fitting out going on very slowly, and it is doubtful whether she will be ready for trial this week. She has been delayed in ironwork, blocks and other fittings, and to an extent that is likely to be felt in her early races.

THE news was received in New York on Sunday that Navahoe had just passed in by the Solly Islands, presumably after a successful passage. Her spars are awaiting her at Southampton, and she should be ready for sailing by about July 19, so that she will have ten or twelve days before the regatta of the Royal London Y. C. on July 31, the first race she will be able to start in, as the fleet has not yet returned from the North. Tom Diaper, the old racing skipper of Norman, Valkyrie and other famous racers, has been engaged for the season by Mr. Carroll as pilot. Navahoe reached Cowes shortly after noon on Sunday, Lord Dunraven being one of the first to visit her.

QUEEN MAB has at last reached New York after a long and severe passage, arriving at Tebo's on July 9, in tow of a tug from Bermuda. She will refit at once, so as to be ready for the races of the New York Y. C. cruise.

THE weather at New York for the past two weeks has been in marked contrast to that which prevailed during the June regattas, the winds having been quite strong from N.W. or west, making very fine sailing.

AN unusual number of heavy blows, ranging from a severe thunderstorm up to a cyclone have been reported throughout the country, and much damage and even loss of life has resulted on land, as well as afloat. On Saturday evening a number of boats and small yachts were capsized about New York, and several persons drowned; and on Sunday afternoon Chicago was visited by a very severe windstorm, which swept the Lake, capsizing one shoal sloop and drowning four or five persons, while there is reason to fear that several other boats met the same fate. However necessary the shoal wide centerboard yacht may be in some localities, it is little less than murder to take out a party of ladies and children in such a craft, and the use of them by the careless or ignorant is almost equivalent to suicide. The number of fatal capsize thus far this season, most of which we have made no mention of, is really serious; hardly a week passed without news of the drowning of one or more persons through the use of capsizable and unseaworthy yachts.

### Cape Ann Y. C. Open Regatta.

GLoucester—MASSACHUSETTS BAY.

Saturday, July 8.

THE Cape Ann Y. C. of Gloucester, Mass., sailed a very successful regatta on Saturday, the wind being light at times, but the yachts making a good race in the various classes. The little Excite did some fine sailing, beating all but one of the larger boats on even time. The times were:

Topsy, T. D. Nolan.....	12 45	Not timed.	
Irvyng, H. J. Houseman.....	12 45	2 44 05	1 56 55
Mr. E. M. Post's fast Bon Ton won the prize for best elapsed time.			

The judges were R. K. McMurray, Staten Island Athletic Club, and Frank Fisher, Kill von Kull Y. C. and the regatta committee were George Ross, H. E. Euell, George Swartout, Frank Fisher and T. F. Donovan.

### Audubon Y. C. Annual Regatta.

NEW YORK—HUDSON RIVER.

Tuesday, July 6.

THE fifth annual regatta of the Audubon Y. C., of 153d street, New York, was sailed on July 4 in a fresh N.W. wind, the course being a 6 mile triangle on the Hudson River, two rounds making 12 miles. The times were:

CLASS 1—OPEN SLOOPS.			
Start.	Finish.	Elapsed.	Corrected.
Lizzie F., M. Flint.....	3 30	3 32 00	
Hilma, J. Kursteiner.....	Withdraw.		
Agnes N., Henry Kennel.....	Withdraw.		
CLASS 2—CABIN SLOOPS.			
Alta, W. L. Frost.....	3 30	3 32 30	
Aller, Baker & Osborn.....	3 30	3 32 45	
Vinona, J. E. Grover.....	3 30	3 32 30	
Clara B., V. Schmitz.....	Withdraw.		
Theresa K., G. Kohlisch.....	4 11	3 58 28	
CLASS 3—OPEN CATBOATS OVER 20 FT. WATERLINE.			
Pauline B., C. S. Raymond.....	3 19	3 17 15	
Frankie V., A. B. Van Riper.....	3 33	3 49 22	
Bonafide, J. J. Murphy.....	Withdraw.		
CLASS 4—OPEN CATBOATS UNDER 20 FT. WATERLINE.			
H. C. Miller, Chas. Rea.....	3 31	3 31 55	
J. L. Miller, J. Luther.....	Withdraw.		
Julia, C. Walden.....	Withdraw.		

The winners were Lizzie F., Alta (Aller, second prize), Pauline B. and H. C. Miller. The judges were C. J. Leach, Daniel Sherman and J. S. Birrell.

### American Y. C. Naphtha Launch Race.

MILTON POINT—LONG ISLAND SOUND.

Tuesday, July 6.

THE American Y. C. has made no attempt to hold its usual sailing regatta this year, but on July 4 a special race for naphtha launches took place, the course being four miles out on the Sound and return. There were two classes, 30ft. and under, and over-30ft., the allowances being based both on length and power, 24 seconds per foot or fraction of a foot, and 40 seconds per H. P. per mile, naut. The times were as follows:

CLASS 1—OVER 30 FT.			
Start.	Finish.	Elapsed.	Corrected.
Cleopatra, Alex. Stein.....	3 31	0 57 14	0 49 46
Rambler, W. D. Ellis.....	3 34	0 57 15	0 49 46
Iota, Jacob Lorillard.....	3 34	0 57 15	0 49 46
CLASS 2—UNDER 30 FT.			
Daisy, D. P. Duffie.....	3 33	0 54 26	1 09 03
Argo, C. F. Street.....	3 36	1 26 59	1 24 03
Halecyon, D. S. Hammond.....	3 39	1 21 44	1 20 32

The prizes were won by Iota and Daisy.

The regatta committee included George W. Hall, William S. Alley, Stephen W. Roach, Isaiah Paxson and John R. Hegeman, Jr.

### Riverside Y. C. Annual Regatta.

RIVERSIDE—LONG ISLAND SOUND.

Saturday, July 8.

THE Riverside Y. C. was specially fortunate in having a fine south-west wind for its regatta on Saturday, and with a fleet of 30 yachts there was plenty of sport for the guests and members on the club steamer Alcedo, as well as for the various crews. The courses were: Course 1, for sloops and cutters: From a line marked by two stakeboats anchored southwest of Capt. Knapp's Island, to black buoy off eastern end of Little Captain's Island, keeping same on starboard hand, to black buoy off Matinecock Point, keeping same on port hand to black buoy off Centre Island Reef, keeping same on port hand, thence to starting line. The black buoy on the east end of Little Captain's Island 4 to be passed on port and red buoy off western end of Greenwich Point to be passed on starboard returning; 17 nautical miles.

For all yaws, catboats, and jib and mainsail boats: From a line

marked by two stakeboats anchored southwest of Capt. Knapp's Island, to black buoy off eastern point of Little Captain's Island, keeping same on starboard, thence around a stakeboat four miles south southwest, leaving it on port, then around a stakeboat four miles east by north, leaving same on port hand, thence home, keeping Flat Neck buoy on starboard and black buoy off eastern end of Little Captain's Island Light on port; 13 nautical miles.

The wind was fresh from southwest throughout the race. The times were:

Boston City Regatta.

BOSTON HARBOR.  
Tuesday, July 1.

The annual open regatta of the city of Boston was sailed as usual on July 1 in a moderate westerly breeze of sufficient force at all times to make a good race; while with some 70 starters the sight from City Point was a fine one. The courses were:

For first and second classes: From judges' steamer down West way, leaving Thompson and Rainsford Islands on starboard, Long and George's island and Point Allerton buoy 3 on port, and back through the Narrows, leaving Fort Warren, Gallipoli's island and Nix's Mate bell buoy on port, buoy 6, Lower Middle, on port, buoy 7, Castle island, on port, to flagboat anchored off Marine Park pier, leaving it on port, passing between judges' steamer and flagboat; 13 miles.

For third, fourth and special (21ft.) classes: From starting line, leaving Old Harbor buoy No. 4, Dorchester bay, on port, Black buoy No. 1 (nearly opposite) on port, Castle island buoy No. 7 on starboard, Sculpin ledge buoy on port, buoy No. 6, Lower Middle, Castle island buoy No. 7 and flagboat off Marine Park on port, passing between judges' steamer and flagboat; 8 miles.

For the mosquito class and Whitehall boats: From starting point leaving buoy No. 4, Dorchester bay on port, buoy No. 1 (nearly opposite No. 4) on port, buoy No. 7 on port, flagboat off Marine Park on port, passing between judges' steamer and flagboat; 4 miles.

House-Boating Again.

THE writer read with unflagging interest a recent series of articles in FOREST AND STREAM on house-boating. His interest was due to the intelligence of the articles, and to the circumstance of his having shipped several seasons aboard of a house-boat in a capacity that corresponds to that of a man before the mast on a merchantman or an able seaman on a man-of-war. He is prompted to contribute something from his experience, because it may further an acquaintance with a healthful pastime comparatively unfamiliar in this country. The writer can hardly refrain from giving at first an emphatic endorsement of house-boating. He can understand why the uninitiated may not agree to this. Indeed he has heard the merit of house-boating discussed from the standpoint that it calls for none of the more robust virtues. Let it be admitted that it does not require the heart of a sailor, "bound with triple brass." But as a pleasure like the pleasure of the naturalist or of the angler, as a minister to the disposition there is in healthy minds to be out of doors in good weather, house-boating is not easy to be surpassed. To the mere picknicker it is ideal. For simple eating and drinking, and lolling out of doors it is in street language, "dead sight." House-boating voyages are long as the trees, the green banks, the sky's panorama, the plants, the lake or canal, are all about to rest the mind and delight the heart of him who goes a house-boater. To him who has wit enough to know about some other life than man's dull existence, to the botanist, the zoologist and to the artist and that sort of person no better field than the opportunities which house-boating affords. To house-boating is to be translated with your house, your room, your chair, your congenial bed, your kitchen and cook stove, your drawing room, if you say so, away from the town on to some river or lake in the country. If one hath no disposition for that sort of thing, why enough has been said among gentlemen. But who will deny that through his brain cumbered with the dust, tanglements of business there sweeps a fresh breeze when the wind is at his back, and the sun is in the sky, and among the trees? Who will deny that his grosser appetites, his hunger, his thirst, his sleep, to speak of nothing better, get in short time a better tone? These sentiments are trite enough, but like good sermons they bear repetition.

House-boating is no idle business of necessity. The real artist in any pleasure and the greatest enjoyer of it understands that he must be of its activity. He must be in the water, and follow the stream, even hew the wood and draw the water, man the tiller, and lay out on the ropes, cook, if he has that great gift, lay out routes and take responsibility. House-boating furnishes this opportunity for activity. If we remember correctly, one sort of house-boating was little noted in the articles referred to. It is easy to appreciate the pleasure to be had with the house-boat, as it is seen every summer on the Thames—that ancient barge, the "house-boat," that carries the "house-boat" to the precatory Briton. To come from the "roar of the sea" and the life of the business and politics of such a monster as London and step aboard a broad and airy house-boat on the cool river and moving tide, beneath the green trees to dine and pass a quiet evening with good friends, to sleep untroubled and to awake amid the country scenes of the night before—is to enjoy. We can understand the satisfaction of the artist or the hunter who anchors his house on the shore of the lake where his vistas and his quarries are near at hand; we can understand that there is pleasure in a houseboat that carries in its interior a boiler and an engine that shall put it wherever the owner wills, but we must be excused for affirming that beyond all these is the pleasure of the house-boater, whose lot is cast where his boat may be moved through the landscape by some quieter but sufficient power. This has the charm, the life, the drive, the thrill, minus its dust, close quarters, cramped positions and its shaking up. Such is the pleasure on a houseboat whose habitat is a canal, for instance, and above all a canal which parallels a river, and where opportunity affords, becomes part of it.

The canal has a poor position among highways. The popular idea about it is that it is a low sort of place from end to end, trodden only by spavined horses and mud-spattered wheels, and that it is a place, and all monopolized by a rough company generally. That it proved to be the highway to the Presidency on one occasion was not enough to lift it even a little in popular estimation. This is all a mistake, and arises from a lack of its acquaintance. In cities the canal is apt to merit these charges, and its squalid appearance in cities is attributed to it unjustly everywhere. Escaping the contaminations of the town and breaking the monotony of the highway, the canal becomes a thing of beauty and a joy forever. We defy any character of aesthetics to say aught but in praise of it there. The following bit of poetry does the canal some justice. No description that the writer might give could tell of it so well, and for that reason it is here introduced without other apology:

THE CANAL.

The smooth canal, where level meads extend,  
Lies with the sunlight glittering on its breast;  
So softly on their way its waters wend,  
They hardly stir the rushes from their rest.

The towing path, a narrow strip of gray,  
Follows one curving bank; its further bound  
A hedge of tangled rose and hawthorn spray,  
Beyond, a sweep of undulating ground.

And past the pastures, where the placid herds  
In undisturbed contentment graze or lie,  
A wood—a very paradise for birds—  
Unfolds its fluttering pennons to the sky.

A foot bridge high above the current flung,  
Of woodwork still unstripped of bark, and slight,  
Looks like a forest branch but newly swung  
For sylphs to watch the waters from its height.

And should perchance a laden barge draw near,  
The silent boatman stationed at the helm,  
The slow horse and the gliding hull appear  
Part of some pageant in that fairy realm.

Then silence or the hush of blending songs  
From winds and waters, rustling leaves and reeds;  
From sylvan minstrels, and the birds' throngs  
That chant the measure of our dreams, succeeds.  
—Henry Rose, in *Gentleman's Magazine*.

The house-boat is at its best when moved, not propelled by boiler and engine within itself, but towed by a steam launch or by horses, yea, even by that maligned beast, the faithful and persistent mule, than whom there is no better toter. The landscape moves along like the fairest of panoramas. There are the ever shifting vistas of the trees, the rearing fields and the sun-dappled meadows, the flowers and plants and hung with vines. Even human characters fit into the scenes, and flocks of sheep, broods of ducks or processions of dignified geese are the very animation for a picture. Such excursions may be extended far into the country. They are bound to no time tables or schedules. Where night overtakes there may the traveler take his evening meal, and his pipe of peace and lay him down to slumber. What a kinging is this!

On such tempestuous voyages as are here attempted to be indicated, it has been the good fortune of the writer to go. Many a time has he shipped simply for his bed and "keep," and what company there was. His duties were small, to be sure; to handle lines at the locks, to pole the boat off the walls of masonry, at times to man the helm, and with as much skill as could be summoned to perform the delicate business of aiding the boat and her valuable freight unharmed into the dark pocket of the lock. The B. and S.—which, by the way, does not stand as ordinarily, for brandy and soda—was a house-boat born under a lucky star, lucky in its owners and lucky in its home port. Where the Oswego, a broad river next to the largest if not to the longest in the State of New York, pours its hasty stream into Lake Ontario, and where is the "Clinton's big ditch"—the Erie Canal—there are its moorings, its beginnings, its end, its significance, for its very first employment in the world was to carry sand. Happening into the possession of appreciative persons who discovered beneath its rough frame and homely presence adaptability to a loftier career, it was overhauled by carpenter and painter and returned to the "foaming main" rejuvenated, beautified and transformed. A sturdy house-boat of fine construction was built upon its deck, in the rear a capacious kitchen, near the fore a dining-room of ample dimensions and furthest forward an observation apartment, all lighted by broad sliding windows, seated with cushioned seats from front to kitchen and withal, the usual furniture of comfortable and pleasing apartments. The writer was employed as a deckhand aboard this craft several seasons and was a witness to many of its delightful excursions. Although occupied with his menial employment he could not refrain from the pleasures of these excursions. To perform his duties, as, for instance, peeling potatoes, the task being transacted at the kitchen window looking forth upon the green banks and hills as they quietly slid by, was a positive pleasure. The making of the locks; the roar of the incoming waters, the cool shade of the lock walls, the slow rise of the boat to the next level, the gradual opening of the gates on a new view, the tightening of the rope and the slow removal of the voyage were pleasant to witness, and a menial could appreciate them. When once the writer unlocks the reminiscences of his service with the proprie-

tors of this house-boat—who are always considerate and always "good pay"—he knows not which to recount nor where to make an end. Perhaps it was better to end now after such a formidable beginning. G. T. C.

JUNE, 1893.

A Novel House-Boat.

A UNIQUE vessel, known as the Half Moon, will leave Baltimore to-day for New York if the wind is favorable. It represents a new departure in yachts, widely different from swift steam vessels or stately sailing sloops and schooners. The new vessel is known as a house-boat and is the product of the Baltimore builders, Vm. Skinner & Son. The Half Moon is an idea of Mr. Wm. Kent, a New York lawyer. He calls it an experiment, but there is said to be no doubt of its being a success. As the old bluff-sided vessel Half Moon, commanded by Hendrick Hudson, carried astonishment to the natives along the shores of the river that now bears the famous navigator's name, so Mr. Kent's house-boat is expected to attract interest among the owners of the many-tyred craft which abound in the waters of New York Bay and Hudson River.

The new boat is 84ft. long, 18ft. beam, and 7ft. between floor and upper deck. She has all her compartments on one floor and perfectly enclosed within her wooden walls. There are twelve of the compartments, all private and comfortable. With the exception of a small space reserved for the washbasin, mooring lines and anchors, and a corresponding open space aft for the helmsman and in which to handle the mainsheet, the boat is enclosed.

The first compartment, entered from a forward companionway, is the owner's private room, 10x13ft. Thence a passageway extends aft to the galley.

Mr. Kent's two children have on the starboard side dainty berths, and opposite is a toilet and dressing room.

Next opens the saloon and dining room combined, which is 14x15½ft. Rising from the centerboard well, which is about 4ft. above the floor, heavy cherry leaves can be moved and a table set to seat a dozen persons improvised. Transoms covered with Russian leather cushions are on each side of this apartment, which will seat many guests.

Just outside the saloon, on each side of the fore and aft passageway, are two guests' staterooms, each 7ft. square.

A handsome stairway leads to the open deck above. The stairway is of ash with cherry balustrades and handsomely carved posts.

The steward's room and owner's bath room, each 6x7ft., occupy opposite sides of the stairway, and then the galley or kitchen, which is 6x15ft., ends the quarters reserved to Mr. Kent and his family.

Aft of the galley is the crew's mess room, 9½x8½ft., with wash room adjoining, but separated by a bulkhead. The crew's quarters are 6½x13ft.

The deck above is 64ft. long by 17ft. wide. It is a delightful promenade, enclosed by iron railings and fitted with stanchions for the spread of awning. A natty naphtha launch and gig swing from davits alongside.

The interior is lighted by ten large windows on each side, fitted in heavy cherry frames, inclosing French plate glass panels 18 by 24in. in size.

The vessel has two rakish-looking masts, the mainmast being much shorter than the foremast. She will carry fore and mainmast and one jib, which were made by Francis P. Murphy. The stationary washstands, toilets and all the plumbing are by James McCart. Shirley trained the electricians, Finch Eisenberg the bedding and Klipper, Webster & Co. the furniture. John J. Madden, Son did the varnishing of the natural wood finish of the boat which prevails inside and out. The only painted out on the vessel is on that part under water.

The Half Moon will draw but 2½ft. with all her weights on board. She will be sailed to Chesapeake City, and thence reach New York by the inland route.

This season Mr. Kent proposes to use his vessel under sail, visiting places in New York Bay and Hudson River, moving when and where he pleases with all the comforts of home about him. The boat is so built that steam can be added and used as an auxiliary power.—*Baltimore Sun*.

The British Racing Yachts.

IN THE FOREST AND STREAM of June 15 we gave a description of the Thames and Bristol Coast course, and summary of the races up to date. Since then a dozen more races have been sailed about the Isle of Wight, the Mersey and the Clyde, and the four large yachts in which the interest mainly centers have been worked up to much better form, although breakdowns are still plentiful. The race from Southampton to Harwich on June 3 was followed by the two regattas of the Royal Harwich Y. C. on June 5 and 6. The first was sailed over a course of 37 nautical miles, from off Harwich, around the Bell Buoy, past the Cork Lightship, Shipwreck Lightship, Sunk Lightship and back past the Cork and Bell Buoy. A short but severe storm at the start sent all away with wet sails, but in light airs. *Satanita* sailed well at the start, but burst her bobstay plate and withdrew. The final times were: *Valkyrie* 7:21:12, *Britannia* 7:22:37, *Iverna* 8:35:07, *Calluna* 8:35:50. *Valkyrie* won first and *Britannia* second prize. In the 40-rat-rat class *Varuna* beat *Lais* and *Vendetta* quite handsly.

Next day was fair, with the wind rather stronger and steadier, but still light at times. *Valkyrie* led all day and won easily, the finish being timed: *Valkyrie* 4:32:26, *Britannia* 4:34:45, *Satanita* 4:46:32, *Iverna* 4:55:14, *Calluna* 5:08:09. Again *Varuna* beat the two new boats quite handsly.

After Harwich the next meeting was on June 10, in the Nore to Dover race of the Royal Thames Y. C., sailed in a good breeze and in remarkably fast time. The distance was 52½ nautical miles, 19 miles to windward, 15 miles of free reach, and 18 miles before the wind. The elapsed time was 4h. 53m. 5s., and *Satanita* is credited with a speed of 14½ knots in the hour's reach between two known marks, though she had a tide of two knots or more with her. *Britannia* and *Valkyrie* were also in the first, being timed: *Britannia* 3:08:05, *Valkyrie* 3:03:22, *Satanita* 3:08:57, *Calluna* 3:10:31, *Iverna* 3:21:37, *Amphitrite*, schr., not timed. *Britannia* won by 6s., corrected after a measurement of both boats, with *Valkyrie* second and *Calluna* third. *Calluna* carried a clubtopsail, the others carrying jibheaders.

On June 12 the regatta of the Royal Cinque Ports Y. C. was sailed over a course of 44 miles, nant. two rounds of a triangle from Dover to Deal, and back to Dover, and South Goodwin Lightship (see chart June 15). *Satanita* had left for Southampton for alterations. The wind was moderate and the sea smooth, all carrying clubtopsails. *Valkyrie* led *Britannia* by 2s. at the end of the first round, but on the second *Britannia* was slightly delayed by some fouling of her gear, and later *Valkyrie*, after passing the Varne Buoy for the second time, carried away the hanger of her throat halliard block and was compelled to retire. *Britannia* won by 10m. 10s. The times were: *Britannia* 3:57:32, *Iverna* 3:57:32. In the 40-rat-rat class *Vendetta* burst her bobstay and gave up after the first mark, *Lais* finally beating *Varuna* by 15m.

The race next day across the Channel to Boulogne and back should have been one of the finest of the season, with a long open course and a strong breeze at times; but it was spoiled at the very start by a tri-angul-fair between *Vendetta*, *Valkyrie* and *Britannia*. The following description is from *Land and Water*:

"All were carrying big topsails, and getting jibtopsails and balloon-staysails ready. *Vendetta* had her bowsprit end nearly up to the line and had sprung up on her course clear ahead of *Valkyrie*, the forty having at once begun to luff to avoid getting covered by the big ships. *Valkyrie*, however, with an eye on *Britannia*, luffed close round the mark boat, and her weight carrying her on, she had not time to keep away, but in trying to do so she hit *Vendetta* on her quarter, and in slewing her round fouled the backstay and brought topmast down. *Britannia* was like a rat in a trap, and in trying to ease an inevitable foul with *Valkyrie* fouled the mark boat and then threaded her bowsprit inside *Valkyrie*'s rigging. *Vendetta*, directly the big ships had done for her forward heads, gave up, and on the way round, lost her bowsprit and settled close alongside *Britannia*, and some gear getting foul she settled with her stern about *Britannia*'s port rigging and her bow almost under the big cutter's counter. *Britannia* and *Valkyrie* had now filled on starboard tack and were sliding along in shore with the forty in charge, *Britannia* laying down to the wind, owing to having only leeway on, pressed her mainsail on to *Vendetta*'s port cross-tree, and *Valkyrie* was forced to luff to her. *Britannia* and *Valkyrie* were fouled, and *Valkyrie*'s crew partly chopped off *Britannia*'s bowsprit. *Vendetta* first got clear, and then *Britannia* twisted round, and her bowsprit breaking off, the sister ships got clear, *Valkyrie* alone coming out of the mess without damage. Meanwhile the rest of the fleet had been racing away, and *Iverna* and *Calluna* were in the van, with *Mabel*, *Lais* and *Varuna* close together, *Valkyrie* starting off in chase 12½m.

*Valkyrie* had a long stern chase ahead, but at the Boulogne mark she was 6m. astern of *Calluna* and but 2m. astern of *Iverna*. The finish was timed: *Calluna*, 3:23:37; *Valkyrie*, 3:23:04; *Iverna*, 3:32:29. In this race *Lais* beat *Varuna* by 6m.

The disabling of *Vendetta* took place Tuesday morning and a friendly steam yacht towed her over to Ryde on Wednesday, the yacht going over to her butlers, Samuels & Payne, on Thursday morning, where an entire new outfit of spars was shipped the same day. Her balance-rudder had previously been replaced by one of the ordinary type. *Britannia* also required extensive repairs after her share of the fun. *Satanita* was meanwhile at Fay's yard for alterations. Her mast was lifted out and shortened 3ft. at the heel, her boom, 16in. in diameter, was sawn in two and hollowed, leaving the walls about 6in. thick, being then glued up and sealed with varnish intervals, and about six feet of lead was transferred from inside to the bottom of the keel. The mast was lightened about 20wt. and the boom 12wt.

June 16, the first day of the Royal Southern Y. C. Jubilee regatta, had no race for the large yachts, and the weather was light and fluky, so that the course was shortened by the regatta committee in the 40-rat-rat race, *Vendetta* being the winner by 2m. over *Varuna* and 4m. over *Lais*.

On June 17, the second day, the big ones were all out again, the weather being light but giving a very good race. The course was 41 miles, nant., about the Solent. *Calluna* made a good start, but soon took the ground and was hung up for some time. *Valkyrie* took the lead and gained gradually all day, the finish being timed: *Valkyrie*, 4:52:39; *Britannia*, 4:48:31; *Satanita*, 4:59:03; *Calluna*, 5:49:08; *Iverna*, 5:51:30. *Varuna* led the 40-rat-rat all day until her main halliard bolt broke, when she withdrew, *Lais* thus winning, with *Vendetta* 9m. astern.

The next meeting of the racers was in another jubilee event, that of the Royal Mersey on June 24-25, the former the first reefing breeze of the season, *Valkyrie* was not ready and did not start, though at anchor with the fleet, and *Calluna* was so late in getting under way that she did not start, thus losing a fine chance for her small rig, the others carrying single reefs and housed topmasts. An inside course was chosen on account of the sea on the Mersey Bar, three rounds making 57 miles. *Iverna* was beaten just 18m. in the first 18 miles and withdrew, leaving *Britannia* and *Satanita* to fight out a very pretty duel, in which the former won by 2m. 40s.

On Monday the weather was fine, with a smooth sea and a moderate N.W. wind, the course being 60 nautical miles. *Calluna* left for the Mersey at 10 a.m. and was followed by *Valkyrie* at 11 a.m. The original rig having proved too small, leaving the other four to fight it out. *Valkyrie* led the way, the finish being timed: *Valkyrie* 6:12:42, *Britannia* 6:22:47, *Satanita* 6:24:42, and *Iverna* 6:59:00. *Satanita* sailed well, having had a poor start. *Iverna* was very badly beaten by all the new ones.

From the Mersey the racers continued on to the Clyde, the first of the great Clyde regattas, that of the Royal Largs Y. C., being sailed on June 29 over a 50 mile course made up of many short legs, the day being clear, with smooth water and a strong N.W. wind. *Britannia* led all day, but was hard pushed by *Satanita*, while *Valkyrie* was but third. *Iverna* withdrew after the first round. The finish was timed: *Britannia* 5:09:33, *Satanita* 5:12:30, *Valkyrie* 5:14:37. The Royal Clyde Y. C. was booked for two days racing, July 1-2, but the first day was a mere drift, *Britannia* finally winning, and *Valkyrie* saving her time over *Satanita*, *Calluna* being last and *Iverna* giving up. The race started in a fresh N.E. breeze, several of the yachts having one reef in, but the wind soon died out. The finish was timed: *Britannia* 7:12:37, *Satanita* 7:14:12, *Valkyrie* 7:15:37, *Calluna* 7:17:50.

On the second day the wind was light and fluky, out *Calluna* took the first place, the times being: *Calluna* 4:25:55, *Valkyrie* 4:26:13, *Satanita* 4:35:32, *Iverna* 4:38:14, *Britannia* 4:46:33.

On July 4, the day of the Royal Western Y. C. regatta, there was more wind, but with squalls and calm streaks mixed together. *Britannia* led for a time, but sprung her mast and withdrew, and *Calluna* also met with a mishap which put her out of the race. *Satanita* did poorly compared with her work of the preceding races, and finally fouled her mark and withdrew. Only *Valkyrie* and *Iverna* finished, the former winning by 11m.

On July 5 the regatta of the Mudhook Y. C. was sailed in a fresh and squally N.E. breeze. *Britannia* and *Calluna* were both out, needing new masts. *Satanita* led for a time, but was passed by *Valkyrie*, she finally finished ahead, but failed to save her time on *Valkyrie*, the finish being timed: *Satanita* 4:37:43, *Valkyrie* 4:38:10, *Iverna* 5:35:34.

The regatta of the Clyde Corinthian Y. C. was sailed on July 7, *Britannia* being ready with a new mast, but *Calluna* was still in the dock. The wind was very light and variable and a poor race resulted. The finish was timed: *Valkyrie* 4:59:53, *Britannia* 5:01:23, *Satanita* 5:03:17, *Iverna* 5:05:30.

On July 8 the Royal Clyde Y. C. held its regatta, a severe thunderstorm striking the fleet early in the day and robbing *Satanita* of her bowsprit. *Britannia* finally won after a very fluky race with *Valkyrie* 40m. astern.

Embla.

The new steam yacht *Embla* was launched early this morning at Seabury & Co's yard at Nyack-on-Hudson. The launch was to have taken place on the 10th inst., but the tide did not serve high enough, and Mr. Hanan and his party of friends had to wait till 1 o'clock this morning. The yard then looked like fairyland. Powerful searchlights made it as bright as day, and the yacht was decorated with electric lights and lanterns. As the yacht slid off the ways, Miss Lizzie Hanan broke a bottle of champagne on her bows and christened her *Embla*.

The *Embla* is a handsome white boat, with a buff-colored smoke-stack, and is schooner rigged. She is 162ft. in length over all, 18ft. on the waterline, 20ft. beam, 11ft. depth amidships, and 8ft. draught.

The keel is of white oak, also the stern post, stem post and dead-woods, and the frames or timbers are of steel. These are closely centred and extend from keel to gunwale in one length each. The reverse frames, keelsons, and deck beams are steel, securely fastened with dressing cases and wash bolts, having hot and cold water for planking. All fastenings are galvanized and composition through bolts. There are five steel bulkheads so arranged as to make watertight compartments.

The interior accommodations are very complete. She has 9 staterooms and 17 guests can sleep on board. Mr. Hanan's quarters are aft, and arranged with all conveniences. There are two connecting staterooms, with dressing cases, toilet cases and bath-room. These rooms are all finished in mahogany paneling. Aft of the owner's room comes the saloon, extending the full width of vessel and 16ft. long. This is arranged with bookcases, tables, piano, writing-desk, open grate fireplace, buffet and icebox. The finish is in mahogany panelwork. The next aft of the saloon are 4 staterooms, finished in cherry, for use of the owner's family and guests. Each room is fitted with dressing cases and wash basins, having hot and cold water. There is also a bath and toilet room on the port side aft. The bath-tubs are also connected with salt-water supply as well as fresh water.

In the stern of the yacht is a large double stateroom finished in white and gold. Forward of the engine room are 2 more staterooms, fitted with baths and finished in cherry. Then comes the galley, which is very large and extends the full width of the boat. It is fully equipped with dressers, icebox, racks and shelves. Next comes the officers' quarters and mess room, while the crew's quarters are in the fore-castle. The entrance to the owner's quarters and saloon is through the after deck house, which is divided so that part can be used for a smoking room, while the dining room is in the forward part of the deck house. The galley is connected to pilot house, is directly over the officers' quarters and galley and has a dumb-walk from the galley. These deck-houses are built of mahogany, with windows of plate glass. The fore part of the deck-house is the captain's room.

The machinery is an 800-horse power triple-expansion engine, surface condensing, and two safety water-tube boilers. Coal bunkers are arranged on both sides and ends of the boiler room. They will hold 40 to 50 tons. The boiler water tanks have a large capacity, and separate tanks are supplied for culinary and domestic purposes. Her speed will be 18 miles an hour. Steering gears are arranged in the pilot-house and on the bridge, which runs the full length of the forward deck-house. In all of the yacht's equipment everything is modern and complete. A steam windlass will be used. An electric launch 24ft. long will be carried on the davits. It is charged with storage batteries for six hours' run and 7 miles per hour, and the batteries may be recharged while the launch is on the davits. Besides the launch she will carry 2 large gigs and 1 cutter. She is lighted by electricity throughout, has a 5,000-candle power searchlight, and is heated with steam.—*New York Times*.

Quincy Y. C. Second Championship Race.

QUINCY—BOSTON HARBOR.

Saturday, July 8.

The Quincy Y. C. sailed its second championship race on Saturday afternoon, several of the yachts having already sailed a lively race in the morning in the Monaquet Y. C. The wind was still blowing hard from southwest, with rough water and reefs turned in. The times were:

FIRST CLASS.		Length.	Elapsed.	Corrected.
Beatrice, John Cavanaugh.....	.....	.....	1 37 22	.....
Moondyne, A. J. Shaw.....	.....	.....	1 37 22	.....
White Fawn, A. E. Jones.....	.....	.....	.....	Withdrew.
SECOND CLASS.		Length.	Elapsed.	Corrected.
Opeech, W. P. Barker.....	.....	.....	1 25 63	0 58 45
Aurisia, H. M. Faxon.....	.....	.....	1 28 13	1 01 10
Vision, George Crane.....	.....	.....	1 31 41	.....
THIRD CLASS.		Length.	Elapsed.	Corrected.
Mab, John Shaw.....	.....	.....	1 35 30	1 03 41
Sunbeam, Harold Faxon.....	.....	.....	1 41 53	Not meas.
Elsie, Keating & Bailey.....	.....	.....	1 38 58	Not meas.
This was the first time Beatrice in one day. The judges were H. L. Rice and P. H. Gavin				

The twenty-second annual regatta of the New Jersey Y. C. that failed for lack of wind will be again attempted on Wednesday, August 23, and will be sailed over the upper and lower bay courses.

A Disaster on Lake St. Louis.

THE St. Lawrence Y. C. of Montreal, one of the most active racing clubs on fresh water, has met with a terrible calamity in the drowning of the commodore and the wrecking and sinking of a number of yachts in a sudden storm on July 8. The sailing waters of the club are on Lake St. Louis, a widening of the St. Lawrence River above Montreal, the lake being very shoal in many places, especially around the club anchorage, so that the yachts are practically limited to a maximum draft of 3 ft. The fleet was formerly composed of open racing boats of the New York sandbag type, with unlimited crews and under a length rule. The efforts of some members of the St. Lawrence Y. C. the rules have been changed during the past three years, shifting ballast and unlimited crews being prohibited, and the Seawanhaka rule adopted. Some new yachts have been built to meet the altered conditions, one of the best of them, Valda, being illustrated in FOREST AND STREAM of Dec. 23, 1891, and the old boats have been reduced in rig and more or less altered. The racing is done mainly in light winds, and although the lake is subject to severe storms at times, the boats as a rule are wide,  $2\frac{1}{2}$  to 3 beams to length, of  $2\frac{1}{2}$  and 3 ft. draft, and heavily rigged.

The race on Saturday started at 3:40 P. M., in threatening weather, the starters being Rita, Valda, Chapone, Molly Bawn, Coquette, Eagle and Frolic. Molly Bawn is a Burgess boat, built for the Lake, and Frolic was once well known in the Atlantic Y. C. of Brooklyn, built by John Munn.

On the second leg of the course, with Eagle and Valda leading, a furious storm of wind, rain and hail broke over the lake, tearing up a bad sea, in a few minutes and capsizing Eagle, Chapone, Rita and two yachts which were not racing, Petrel and Butternut. Frolic and Coquette lowered sails and rode out the storm safely, and Molly Bawn and Valda pulled through all right, Valda rescuing three men from Chapone.

A party of ladies, but when the storm broke he landed them quickly and called for aid, Messrs. C. J. McCuaig, A. D. Dumford and L. Yall Davidson responding instantly. The little launch put out in the face of the storm, though hardly able to make headway against the sea, even if she kept aloft herself. The yachts had been capsized for a long time before the launch reached Rita, on whose bottom were C. O. and V. Clarke, Church and Lucas. The party bravely declined to be taken off, as others were in more danger, their boat floating and supporting them. The launch then made for Chapone, which had floated for a time, and picked up Messrs. Almon, Oswald and Davidson, Valda taking care of the two Messrs. Clouston and Mr. Bogert. Chapone floated until her air tanks burst and then she sank.

Eagle, a sloop 39 ft. over all, 35 ft. l.w.l. and 10 ft. beam, had sunk on capsizing, her crew keeping themselves afloat on planks and spars for an hour, but soon three minutes before the launch reached them Com. Elias H. Levin became exhausted and sank. Messrs. Ross, Simmons, Robertson and George and Carl Gobler were picked up in an exhausted condition, but were revived by the rescuers, though Mr. Simmons and Mr. Ross were nearly beyond aid.

On Petrel were Mr. and Mrs. Davidson and Mr. Fidler, and on Butternut were Mr. Mosler with his son and daughter and Mr. Jamieson; all were rescued by rowboats. Com. Levin's body was found next day by a searching party in a war canoe near the spot where he sank. Eagle lies in 30 ft. of water.

Beverly Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 8.

The 197th race was sailed at Marblehead, July 8; a brisk S.W. wind which forced all the third class cuts to reef. Prizes were open to other clubs. Champion pennants on actual time to B. Y. C. boats only. In second class Irene, Emma L., Black Cloud and Madge, which had entered, failed to appear. Tyrant started with a handicap and withdrew, as did Korban. Hiladee and Susie sailed a very close race, both crossing the line on a puff that gave them more than they wanted.

Susie protests Hiladee's measurement, and result is given subject to this protest. In time, though she joined the others on first leg and sailed the course. Koorali and Magpie sailed a very close race, and former might have won had she not been forced round and blanketed at finish by Reaper. The knockabout boats did well, Carl beating Reaper, having more wind, as she started later, and not being cramped as Reaper was by too much sail. Summary:

SECOND CLASS.			
	Length.	Elapsed.	Corrected.
Hiladee, S. Small, H. Y. C.	27.02	1 57 10	1 47 30
Susie, W. W. Keith, C. Y. C.	28.06	1 58 21	1 49 37
Tyrant, C. W. Wilson, L. Y. C.	30.05	.. ..	.. ..
Korban, E. Horton, Q. Y. C.	23.08	.. ..	.. ..
THIRD CLASS—SLOOPS.			
Reaper, Com. Benson, B. Y. C.	24.00	2 18 15	1 56 31
THIRD CLASS—CATS.			
Koorali, R. C. Robbins, B. Y. C.	23.04	2 09 19	1 56 53

Typoon, J. T. Taylor, .. ..	23.09	2 11 34	1 59 35
FOURTH CLASS.			
Alpine, C. J. Blethen, L. Y. C.	19.03	1 15 06	1 06 23
Sheerwater, T. G. Stevenson, E. Y. C.	17.02	1 19 45	1 09 28
KNOCKABOUT CLASS.			
Carl, C. H. Foster, B. Y. C.	.. ..	2 03 33	.. ..
Susan, Henry Taggard, E. Y. C.	.. ..	2 08 31	.. ..
Jane, C. S. Parker, C. Y. C.	.. ..	2 13 05	.. ..
Santa Maria, J. J. Southern, H. Y. C.	.. ..	2 14 02	.. ..
Francis, G. M. Wheeler, C. Y. C.	.. ..	2 18 07	.. ..
Betsy, Theo. Jones, E. Y. C.	.. ..	2 23 20	.. ..

Santa Maria parted throat towards end of first round, but repaired damage and kept on. Koorali and Reaper take legs for pennants. Hiladee, Magpie, Alpine and Carl take firsts, Susie and Susan take seconds. Judge, W. Lloyd Jeffries.

Manchester Y. C.

THE Manchester Y. C. held its second race for the Sunset Hill cup on Monday, July 3. The wind was southeast, and at 2 in the afternoon it blew about 34 knots. Three of the yachts, Hornet, A. and Albatross, and Wraith sailed, while the Yankee Maid went out under mainsail and forestaysail. The start was made at 1:45, the yachts crossing the line: Hornet, Wraith, Albatross, Yankee Maid.

The first and second marks were passed in the same order. At the finish Yankee just caught up to Albatross.

	Elapsed.	Corrected.
Hornet, Chas. Jackson, .. ..	1 11 59	1 11 57
Wraith, A. H. Higginson, .. ..	1 17 02	1 16 08
Albatross, A. W. Craigie, .. ..	1 24 07	1 26 03
Yankee Maid, E. P. Stanley, .. ..	1 24 13	1 23 05

On July 6 the third class sailed its annual race, Mr. Boardman's Snipe winning by 3s. The times were as follows:

	Length.	Start.	Elapsed.	Corrected.
Snipe, E. A. Boardman, .. ..	16.01	2 41 30	1 40 10	1 40 10
Alce, F. E. Stanwood, .. ..	16.11	2 41 30	1 40 20	1 40 20
Tiny, F. L. Huidekoper, .. ..	17.11	2 41 30	1 51 22	.. ..

The wind north, light and puffy. Two yachts of the second class, the Wraith and Yankee Maid, sailed a match race. The start made was a good one, Wraith getting away a few seconds ahead. On the first leg the Yankee Maid slowly gained on Wraith and rounded the first mark 40s. ahead. By the second mark, Wraith had gained about 1m. on her competitor, but on the last leg Yankee Maid overhauled and won by 1m. 45s. Times were:

	Start.	Finish.
Yankee Maid, E. P. Stanley, .. ..	2 34 00	3 49 45
Wraith, A. H. Higginson, .. ..	2 34 00	3 47 01

Knickerbocker Y. C. Special Race.

COLLEGE POINT—LONG ISLAND SOUND.

Saturday, July 8.

THE Knickerbocker Y. C. sailed a special race on Saturday for cabin sloops and cutters, the course being a triangle from the club house to Borretto's Point, and thence to College Point, and back. The starters were few in number, though a fresh S.W. breeze gave every chance for a fine race. The times were:

CLASS A—CABIN SLOOPS AND CUTTERS 25 FT. AND OVER.			
	Start.	Finish.	Elapsed.
Alice, .. ..	3 21 23	4 48 37	1 27 14
Nahwa, .. ..	3 21 00	4 51 19	1 30 19
Liberty, .. ..	3 21 00	4 51 42	1 31 58
CLASS B—CABIN SLOOPS AND CUTTERS UNDER 25 FT.			
Annie, .. ..	3 30 40	4 49 06	1 28 26
Alpha, .. ..	3 31 22	4 53 30	1 30 58
Nanitta, .. ..	3 21 00	4 55 58	1 34 58

The Sippican Y. C. of Marion, Mass., on Buzzards Bay, is a prosperous young racing club with a fleet of over fifty fine boats, nearly all cat-rigged. We are indebted to the secretary for a copy of the club book.

A Corinthian Blowout.

THE other day we Corinthians, of San Francisco, gave a sort of "al fresco sworrry" to the Encinalos of Alameda, inviting them to join us in a little mild outdoor dissipation. As it is something near impossible for us to beat the Encinalos on their own ground, the idea of a reception at the club house was abandoned, and we were not in it with the Encinalos there—and an all night excursion to Corte Madera Creek, about seven miles from our headquarters, organized in its stead. A good sized craft was provided to carry to the scene of trouble all those whose friends had forgotten to invite them to sail the ocean blue with them. Tents, camp-fires, chowder, coffee, hard-tack, beans and one or two other things in kegs were provided "agin anybody got cross;" and there being no commodore on hand (one had gone to the Fair and the other to Japan) an efficient substitute was found in a gentleman who would long ago have had a flag of his own if it had not been for his reprehensible conduct in abstaining from owning anything to fly it on; anyhow, as a land commodore he was an eminent success.

Owing to the fact that a very important part of the supplies had to be sent up in the White Wings, and that the noble craft got confused in the darkness and lost the wind, afterward being towed around in a masterly manner by the tug Cyrella, some of the yachtsmen were a good deal incommoded by the darkness, but in course of time their suffering was assuaged and by 11 P. M. there was hardly a dry whistle in the congregation. We were grouped in a gracefully abandoned manner by the side of a road which—not appropriately, I hope—led down to the State prison, reclining under some more or less spreading oaks or laurels (it was too dark to see which) on a number of tons of hay provided for the purpose by the thoughtful care of the committee, and with the exception of the camp-fires generally blowing away in light winds, and the occasional sound of a drum, which I can't repeat them, and music galore, both vocal and otherwise. A craft having a character for sobriety to sustain, we left about 1 A. M. to turn in, but a good many, I think, saved the trouble of getting up in the morning by staying up all night. At any rate, it sounded a good deal that way.

On our way down stream we were startled by a loud splash, and thinking some one might have come to grief in the darkness rowed in the direction of the sound, to be informed by a gentleman aboard one of the fleet that their blanked skiff had gone adrift and his shipmate had gone overboard after her. We kept on in the direction we supposed boat and swimmer to have taken, for as the poet remarks, it was "A naughty night to swim in," until we judged by the sounds that he had overtaken the derelict, pushed her to the shore, waded through the mud and brambles of the twenty-five boats in the fleet, but we were soon aware of a white object advancing rapidly but not silently through the gloom. It proved to be a gentleman, like Eve before the fall, "mit nodnoks on," who was rowing lustily and swearing even as did our army in Flanders, doubtless with the design of avoiding a cold. Concluding from the vigor of both performances that he was in no need of our assistance we resumed our journey.

Some of our guests next morning in paying visits, but as this was an essentially free and easy picnic everybody got out killyk when to him seemed best, some of the smaller Encinalos starting bright and early to get across the Channel before the regulation forty-mile zephyr got its boots on; some delayed too long and had to wait for high water that night; the majority, however, got away in good style, though the channel of Corte Madera Creek is laid in absolutely required. Barring a little too close acquaintance with the bottom there were no drawbacks, nobody got hurt, and everything, I believe, passed off to the satisfaction of our guests.

W. B.

SAN FRANCISCO, CAL.

Excelsior Y. C. Club Race.

MINNEAPOLIS—LAKE MINNETONKA.

Saturday, June 24.

THE first regatta of the recently reorganized Excelsior Y. C. of Lake Minnetonka was sailed on June 24 in a strong S.E. breeze, the course being 10 miles and times as follows:

	Elapsed.	Corrected.
Idler, .. ..	1 31 30	1 18 06
Orloie, .. ..	1 47 00	1 47 00
Genevieve, .. ..	1 22 30	1 22 55
Mystic, .. ..	1 36 45	1 28 09
Waterwitch, .. ..	1 25 30	1 16 54
Cupid (cat), .. ..	1 39 00	1 20 20
Elvira (cat), .. ..	1 40 00	1 31 24
Aurora, .. ..	1 28 00	1 23 40
Advertiser, .. ..	1 26 00	1 16 00

The judges were Col. Puckett, W. E. Wilbur and H. A. Kent.

YACHT NEWS NOTES.

Owing to the American Model Y. C. of Brooklyn, N. Y., having offered a handsome challenge cup as an inter-club trophy under certain conditions, the model yachtsmen of Philadelphia have been put upon their mettle. The conditions are that boats must sail under the length and sail area rule. Hitherto the majority of the clubs in this city have sailed under the length-over-all rule, without any restrictions as to sail area. In order to compete with the Brooklyn club a series of experiments have been made with new boats designed with a view to meet the Brooklyn club rules. On July 4 the Manayunk Model Y. C. sailed a race for a clock presented by Dr. Evans. The contestants were: Navahoe, the Evans' Zip, J. H. and Quikstep, J. G. Rosenburg Club. The two last named are exaggerations of what can be done under the waterline and sail area rule, being about 68in. over all with a waterline of about 43in. The wind was shifty from the W.S.W. when they started at 11:10 A.M., with Navahoe leading. The course was from the boathouse to Glen Willows and return, off East Manayunk. The two "lead pipes," as they were named, could not hold a steady course and were soon left further and further astern. Navahoe crossed the line at 12:32:30, Quikstep 12:00:08, Zip 12:12:12. There was a shift of wind on the homestretch and again the complicated steering gear of the new boats proved a source of trouble. Finally both gave up and Navahoe went in a winner at 12:34:06. The clock will be sailed for again by the regular yachts of the club on July 16, as, of course, Dr. Evans cannot take his own prize. The steam yacht race, held under the auspices of the Philadelphia Model Yacht and Cruising Club, on July 4, on the Schuylkill River, resulted in a victory for the Minnie, which craft proved herself a veritable flyer. The start was made from Girard avenue bridge at 3:05 P. M., the following obeying the judge's signal: Paragon, C. Dulen; Cushing, W. F. Payne; Minnie, F. Mitchell. The latter at once took the lead and, steaming along very steadily, was several lengths in advance of the point. Here the Paragon gave up, her steering gear having given out. Cushing then on but was left further and further astern. Minnie crossed the line off Turtle Rock a winner at 3:17:37, with Cushing second at 3:19:37. The crowd was somewhat noupoused at the result, as every one believed that the Paragon would prove the winner. They nevertheless heartily cheered the Minnie and her owner. The Minnie would have made better time only she was driven out of her course by a heavy westerly squall and had to battle against a head wind.—Philadelphia Times, July 5.

The boats of the Bilge Water Y. C. were gathered in a fleet at Fishermen's Wharf at 9 o'clock yesterday morning, and at about 10 o'clock started for a trip to Long Island Sound. The fleet stood away from Arch Rock and afterward proceeded to Sausalito and Angel Island. A landing was made at the island and all hands participated in a clam bake. There was plenty of breeze on the bay on the home trip and the Bilge Water boats presented a pretty appearance as they stood in toward Meigs Wharf. About a dozen sloops, a number of plungers and a whole fleet of smaller craft took part in the regatta, which a great success. From the Bilge Water Club is composed of members of the boating fraternity along the front, and has proven to be a very successful organization. It would have been hard work to hire a boat on the front yesterday, as nearly all of the knights of the oar and who cater to the boating trade were off with the Bilge Waters' picnic.—San Francisco Call.

The Buffalo Y. C. sailed a race on July 4, the times being:

40 FT. CLASS.			
	Start.	Finish.	Elapsed.
Merle, .. ..	12 00 25	2 42 30	2 42 30
Crick, .. ..	12 00 00	Did not finish.	.. ..
Cypress, .. ..	12 01 30	Did not finish.	.. ..
30 FT. CLASS.			
Kathleen, .. ..	12 03 00	1 36 00	1 33 00
Alcyone, .. ..	12 02 00	1 40 00	1 38 00
25 FT. CLASS.			
Winona, .. ..	12 02 00	1 54 00	1 52 00
Hindoo, .. ..	12 02 45	2 01 00	1 58 15

Referee, Edward Varlan. Judges, Chas. Aldinger and A. F. Read. Time-keepers, Howard D. Pulsifer and W. W. Read.

At the suggestion of Mr. August Belmont, steam yacht Ituna, the Long Island Railroad Company has kindly established a yacht landing at Long Island City for the convenience of yachtsmen using the anchorage at Twenty-sixth street, East River; or who may desire to land at Long Island City, direct from their yachts. The boat is a good one, and the surroundings have been made as attractive as well as convenient. It is believed that this landing will be of special service to members of the club, whether landing from their own yachts or

from those of their friends, when on their way to any point on Long Island; as more than half an hour can be saved, as against going by way of Twenty-sixth street and the ferry.

The postponed race of the Massachusetts Y. C. for catboats was sailed on July 6, in Dorchester Bay, with but two starters, the wind being N. W. and so puffy that Arab turned in a single reef and Maggie a double one, Arab carrying full sail on the second round. The times were:

	Length.	Elapsed.	Corrected.
Magpie, H. G. Otis, .. ..	23 4	1 07 50	0 41 25
Arab, F. B. Olmstead, .. ..	20 8	1 10 25	0 42 55

First prize—Magpie, \$10.

Arab lost a man overboard, but he was picked up by another yacht. The Yachtsman has published its second annual midsummer number, a special number double the size of the regular weekly edition. The present one for 1893 is a very creditable production, containing several readable yachting and sea stories and a number of excellent illustrations. The latter include pictures of Volunteer, Calluna and Sautania and four large colotype reproductions, one a very good picture of Mayflower in her original cutter rig.

The Shelter Island Y. C. has elected the following officers: Com. R. B. Lynch, sloop Gavilan; Vice Com. R. B. Roosevelt, Jr., cat Olga; Rear Com. J. B. Edson, steamer Palos; Sec. and Treas., C. Pliny Brigham, sloop Narona; Meas., Charles Olmstead. Trustees: R. B. Lynch, W. H. Bradley, D. P. Hathaway, F. A. Schroeder, T. A. Howell, J. A. Aspinwall, H. E. Nitchie, J. B. Edson, C. H. Otis, H. L. Coe and Dr. J. L. Keep. House committee: J. B. Keep, E. O. Hamilton and C. Pliny Brigham.

The Pine Lake Y. C. of Oconomowoc, Wis., re-elected Com. Fred Rietbrock, Sec. A. C. Rietbrock and Treas. August H. Vogel. John Barth was elected vice com. and the executive committee now in office: O. C. Hansen, Henry L. Atkins and Henry Niedecken. The annual meeting decided on July 15 as the date for holding the annual regatta for sloops. The corresponding event for cat-rigged yachts will not occur until Aug. 26. In the meantime bi-weekly contests for the commodore's cup are quite sure to occur.

Eben Holmes, of Marion, Mass., on Buzzards Bay, has just completed for H. R. Reed a centerboard sloop with an extreme deck length, her dimensions being: Over all 49ft. 3 in.; l.w.l. 39ft. 6 in.; beam 14ft. and draft 5ft. The forward overhang is the longer. With such extreme dimension the yacht naturally has ample room below. Her name is Isem.

The annual regatta of the Hempstead Harbor Club will be sailed on July 16, starting at 1 P. M. off the club house, Glen Cove, L. I. The race will be open to yachts of the New York, Seawanhaka Corinthian, Stamford, Marine and Field, Douglaston, Riverside, Corinthian of New York, American, New Rochelle, New Haven, Atlantic, Indian Harbor, Knickerbocker, Horseshoe Harbor, Cedar Point, Columbia and Sea Cliff yacht clubs. The yachts will be classed by l. w. l. and measured by the Seawanhaka rule.

Fleur de Lys, schr., built in 1890 for George Trotter, sailed from New York on July 3 on a cruise to England and Norway. The yacht was originally designed by Mr. Burgess for a cruise around the world, which was postponed at the time of her completion; but she is off now for a long trip, and may make the round passage before she sees New York again.

It may not be generally known but the James McGiehan, who was killed some days ago at Parkville, L. I., was the oldest son of the well-known builder P. McGiehan, of Pamapo. Young McGiehan was a good boatman and sailed many races. He leaves a widow and five children.

The Gas Engine and Power Co. has lately issued a very artistic and attractive pamphlet describing the naphtha launch made by them. Another of their advertisements is a small pamphlet in the shape of a shell.

Carmita, the 46ft. fin-keel, has been hauled out at Lawley's, where some two tons of lead will be removed from her keel and a longer bowsprit will be shipped. Her bottom was very foul when hauled out.

The wreck of the steam yacht Alva has been finally removed by the contractors, Kelly & Van Sandt, of Atlantic City, and there is now 24ft. over the middle and 30ft. over the ends. Upward of \$7,500 of explosives has been used.

The "Who Won" Publishing Co. has in preparation an immense pennant 54x36 in., made up of the burgees of American yacht clubs, each burgee being 36in. hoist. The pennant will be hoisted at the World's Fair some time this week.

The fin-keel Folly which started for New York under sail, met with such bad weather that it was not deemed advisable to force her around the Cape, and as she is wanted at Oyster Bay she has been shipped by steamer to New York.

The fleet of the Corinthian Y. C. of Philadelphia, after a rendezvous at Larchmont on July 4, is now on the annual cruise through Long Island Sound to Newport. Com. Wilkinson is in command in the flag ship Speranza.

"Yachting in Southern California" is the title of an attractive article by Walter Mayhew in the June number of the California Illustrated Magazine.

Au Revoir, steam yacht, Wm. Dupont, was in collision on July 3 with the tug James McFadden, striking her twice and nearly capsizing her. The yacht lost her bowsprit.

Iroquois, schr., has been laid up in Winttingham's Basin, her charter to the owners of Vigilant having expired, and Mr. Ellis being still abroad.

The Philadelphia Y. C. sailed on June 30 on its annual cruise down the Delaware and through Chesapeake Bay. Com. Brown is in command.

The American Y. C. gave its second lawn party on July 8, a large number of members and guests being present.

White Layde, steam yacht, has been chartered by Mrs. Langtry to an American owner with the privilege of purchase.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

JULY.	
15-30. W. C. A. Meet, Ballast Island.	22. Toronto, International Pad-30. Red Dragon, Delaware River.
AUGUST.	
11-26. A. C. A. Meet, St. Lawrence River.	
SEPTEMBER.	
2. Orange An., Arlington, N. J.	4. Holvoko, Fa. ll. Holyoke, Mass.
4. Ianthe, An., Passaic River.	16. Red Dragon, Delaware River.

It is not a little discouraging to men who visit the general or division meets every year to find the same blunders of location and transportation repeated annually, and to undergo the same tiresome and disagreeable experience of a night in some country hotel instead of the anticipated pleasures of the arrival in camp, and then to sit for half a day on some sunny dock waiting for the boat that never comes. The worst part is that no committee ever profits by the experiences of previous ones, but each starts out in sublime self confidence, to meet with the same failures as the inevitable results of the same natural causes. In the matters of location and transportation the division officers this year have profited nothing by the fruitful experience of the A. C. A. officers in 1890, and the consequence is that the division camp on Chimmion's Island is but a miniature of Jessup's Neck, a good place when one gets there, but a terrible place to get to.

It is all right for those who have a couple of weeks to spare for the entire term of the meet, and who can afford to waste a day or two in getting to camp with their duffie and as much in returning; but for the majority of the members, to whom time is precious, and who need quick and sure transportation for tents and canoes, or who wish to run out to the camp for a few days during the meet, the Norwalk Islands might also as well be in Lake Champlain or the St. Lawrence River as in the Sound. The general location is poor; apart from the sentimental objection that Norwalk, Conn., is well outside the Atlan

tic Division, it is a long way from New York and very far, indeed, from the geographical center of the division. What is worse, on reaching South Norwalk one is by no means at the camp, and he is very lucky if he can find any method of getting there. The committee has made several futile experiments, one in the way of a naphtha launch, another with the small steamer that runs past the camp to Roton Point, and the third by a small open sailboat, but each of the three has proved a failure, and the only reliable means of reaching camp is to hire one of the small flat bateaux to be had at South Norwalk and to row the three miles. Those who came up on Saturday for the annual meeting and to spend a Sunday in camp were unable to get to the island at all until a late hour Sunday, and as the Connecticut blue laws tie up nearly all of the trains in the State on Sunday, those who were compelled to be in New York that night were limited to an hour or two in camp.

HAD the camp site possessed any special advantages that could not have been found elsewhere, there might have been some reason for going to a spot that was practically inaccessible, but on the contrary the mosquitoes, the many oyster stakes and the great rise and fall of the tide made it anything but an ideal camp site, and justified the unfavorable opinion of the committee which visited the Norwalk Islands in search for a site in 1890. The comfort and enjoyment of those who attend the meets depend so much on the getting to and from camp easily, quickly and surely, that a failure in this direction is more serious than in any other of the camp arrangements.

THOSE who were lucky enough to get to camp for the full time report that the meet has passed off most pleasantly, with a large number of men and tents and a specially pleasant ladies' camp. The Norwalk C. C. has worked from first to last to aid the visitors from the sister division.

THE races of the Royal C. C. thus far, including the noted challenge cup race, have been very tame, and with few entries, and it is plainly evident that the club made a most serious blunder in prohibiting sliding seats at the last annual meeting, as well as in continuing the absurd and obsolete regulations for the second class. The canoe yawl is constantly gaining in favor among British canoeists, and these craft are found in many races in competition with the narrow canoes. The unlimited use of the sliding seat, and probably the removal of the restriction on sail as well would give a certain stimulus to British canoeing which is very badly needed, and in any event could do no harm, as canoeing is now in a most unsatisfactory condition in the Royal C. C., if not throughout England.

### Western Canoe Association.

THE ninth annual meet of the Western Canoe Association will begin on Saturday at the original camp site, Ballast Island, Lake Erie, and will continue for two weeks. Camp will be opened Saturday July 15; the first week will be devoted to racing, beginning Tuesday, July 18, and continuing until Saturday, July 22, under the direction of the regatta committee. The racing each day will be posted upon the bulletin board at 8:30 A. M. and 1 P. M. Special sports and the carnival will be announced in the camp. The date of the annual business meeting will be announced by the commodore at the meet. A camp postoffice will be established at headquarters.

#### CAMP RULES.

1. A member of the executive committee will be appointed daily by the commodore to act as officer of the day.
2. Tents may be pitched to the liking of each individual or club, under the supervision of the commodore.
3. The occupants of each tent are requested to put their tent and the surrounding space in order each day before 9 A. M.
4. No visitors will be allowed in camp before 10 A. M.

#### GENERAL INFORMATION.

Ballast Island can be reached by daily steamers from Cleveland, Sandusky, Toledo and Detroit, leaving each city about 8:30 A. M. Canoes and duffle will be carried free of cost on the steamers, provided the owners are with them.

Mail should be addressed to Canoe Camp, Ballast Island, via Put-in-Bay, Ohio. A branch postoffice will be established at headquarters. Camp supplies can be obtained at Put-in-Bay at moderate prices.

Those who do not desire to cook in camp may procure meals at the dining hall of the Ballast Island Club, which, during the coming season, will be under the management of Mr. C. H. Kelso.

A dark room and conveniences for the use of photographers will be provided by the Association.

Headquarters and bulletin board at commodore's tent.

A canoe hop will be given at Wehrle's Pavilion, Middle Bass Island, on Thursday evening, July 27. The invitations will of necessity be limited and restricted to members of the Association and their immediate friends. It is especially requested that all who expect to attend will procure tickets from the secretary before noon of the day of the ball.

The night for the carnival and illumination will be announced in camp by the executive committee, and all canoers are requested to bring a supply of Chinese lanterns and fireworks for the occasion.

The programme of the races is as follows:

1. Paddling—Class I—One half mile.
2. Paddling—Class II—One half mile. Record event.
3. Paddling—Class III—One half mile. Record event.
4. Paddling—Tandem, all classes, one-half mile.
5. Paddling—Upset.
6. Hurry-scurry—Run fifty yards, swim fifty yards and paddle one hundred yards.
7. Sailing and paddling—Classes A and B—One and one-half miles. Sail first half mile, paddle second and sail third. Record event.
8. Sailing for Gardner cup—Free for all classes—Best two heats in three. Each heat to be two turns of the course, or three miles. Record event for A and B.
9. Sailing for the W. C. A. trophy—Classes A and B—Best two heats in three. Each heat to be two turns of the course, or three miles. Record event.
10. Sailing for Longworth cup—Class C—Best two heats in three. Each heat two turns of the course, or three miles.
11. Sailing (man overboard)—Free for all classes—At a given signal, crew to throw a paddle overboard to leeward, pick it up and continue on three courses around the line.
12. Sailing—(Passenger race)—Free for all classes—Three miles. All races will be governed by the W. C. A. rules.
13. Sailing—Columbian melee—Three miles within one hour of starting, sides to be chosen by two canoeists, the latter to be designated by the regatta committee till all available canoeists present are chosen. Points to be counted by the committee at the finish, and the side having the greatest number of points to be declared the winner.
14. Consolation race.

G. P. Mathes, G. G. Case, J. H. Ware, M. C. Smith, regatta committee.

### CANOE NEWS NOTES.

The Grand Rapids (Mich.) Boat and Canoe Club is busy training its men for the rowing races on July 26-27, and for the rowing regatta at Detroit in August.

Winnipeg, Manitoba, has a canoe club which has lately installed itself in a new club house, and is rapidly filling its membership to the limit, which is 100.

The Shrewsbury C. C., of Red Bank, N. J., held a race for the commodore's cup on July 4, a paddling race of one mile. William Allaire won, for the second time, with Louis Frick second and William Rudolph last. The cup must be won three times to become the property of the winner.

The Rochester C. C. held the first of a series of trophy races on July 1, the course being two rounds of a mile and a half triangle. The times were:  
Nan F. L. Smith.....0 53 00 Massawippi, W. H. Martin.....1 06 00  
Gull, Henry McVeigh.....0 54 30 Pollywiggle, C. D. Martin.....1 12 00  
A paddling race for the new trophy was set for July 8, and the next sailing race will take place on July 22.

Mr. Poultny Bigelow, of the New York C. C., writes from Gmünden on the Traun See, Austria, that he has just cruised the Moldau, the chief river of Bohemia, from Budweis to the Elbe; and the Elbe on to Torgau. He reports canoeing as growing rapidly in Germany. Canoeing is the first American canoe on the Moldau. Mr. Bigelow is planning another canoe to succeed her, a purely cruising canoe, something after the early Nautilus type, with both ends well rockered up, no rudder and small sails.

### The A. C. A. Meet.

PURSER MCKENDRICK has sent out the following characteristic invitation to the members of the Northern Division:  
TORONTO, June 24.—Gentlemen—As the canoeing season is now in full swing we wish to turn your thoughts down the St. Lawrence to where our annual camp is to be held, on Wolfe Island, a few miles from Kingston.

Previous camp grounds have been good, but this one surpasses the best of them. Commodore (Cottrell) and Secretary Burns, knowing that the World's Fair would be in competition with them, have entered the lists and promise the best outing the Association ever had. For full particulars consult your year book.

The ladies' camp is especially well adapted for the purpose; so bring your wives, chaperones and sweethearts along with you. There are no mosquitoes, centipedes, sand flies, burglars or stray goslings around the premises. There are good race courses and race programme, plenty of shade trees, grass sod to pitch tents on, sloping beaches to bathe from, clean store to buy provisions from, a dark room provided for photographers, large ice-house filled with ice free from cholera microbes, and the air is so filled with ozone that the A. C. A. physician (Dr. Winne) declares we will eat the caterer bankrupt in as many new members as possible. Special rates have been secured for members on the railroad, so arrange to spend the two weeks' holiday with us among the prettiest of the Thousand Islands.

Don't forget that your fees of \$1 were due Jan. 1. If you haven't paid them yet please do so and save me wasting postage collecting it. As it will be four years before we can have the general meet in our territory again we would like to make it a huge success by bringing in as many new members as possible. Fill in the enclosed form and inclose \$2 for fees for a new member.

Remember the date, Aug. 11 to 26.

W. G. MACKENDRICK, Purser Northern Div. A. C. A.

## Rifle Range and Gallery.

### International Columbian Prize Shooting.

THE following shooters from the Independent Rifle Club of New York and others were present July 2 and 3: Gebhard Kruse, Herman Weber, Wm. F. Baab, Reinhold Busse, Jacob Bittschier, Geo. Leower, Bernhard Walther, Alexander Stein, John Eussner, Wm. Söll, Geo. Bauer, Michael Heilmann, Amos Boltenburger, Henry Weiler, Gustav Zimmermann, F. C. Halbe, John Bodestab, Friedrich Haas, Capt. W. B. Weber, New York; Edward Maas, Brooklyn; Aug. Begeron, Wm. Hayes, Newark; Ernst Fischer, Hoboken; Carl Graeff, Bingen-on-Rhein, Germany; Max Rosenthal, Milwaukee, Wis.; Dr. Julius Wirth, Highland, Ill. To all the shooters the Columbian medal was awarded.

The following scores on the different targets were made:

Columbia Target.—Dr. J. Wirth 58, D. Valther 55, Max Rosenthal 67, G. Krause 64, A. Begeron 58, E. Fischer 57, A. Stein 51, W. Hayes 60, F. Schwickert 57, Gus Zimmermann 63.

King Target.—T. Bittschier 170, G. Leower 123, Dr. J. Wirth 184, B. Walther 202, M. Rosenthal 195, E. Fischer 181, R. Busse 192, G. Krause 190, A. Begeron 187, Wm. Hayes 193, F. Schwickert 188, Gus Zimmermann 214.

Man Target.—Wm. Hayes 94, G. Zimmermann 93, M. Rosenthal 91, E. Fischer 90, A. Stein 90, R. Busse 90, B. Walther 87, G. Krause 88, Geo. Reitzhaupt 86, A. Begeron 83, F. Schwickert 82.

Standard Target.—Gus Zimmermann 45, W. Hayes 45, E. Fischer 45, A. Stein 43, R. Busse 43, F. Schwickert 39, M. Rosenthal 36, G. Krause 83.

People's Target.—Gus Zimmermann 71, E. Fischer 71, Wm. Hayes 71, G. Krause 69, A. Stein 69, E. Busse 68, T. Martin 68, B. Walther 68, M. Rosenthal 67, F. Schwickert 63, J. Bodestab 62.

Bullseye Target.—Wm. Hayes 34 out of 100 shots, E. Fischer 21, R. Busse 20, Gus Zimmermann 16, B. Walther 16, J. Rittschier 16, Alex Stein 15, G. Krause 14, A. Begeron 11, F. Schwickert 10.

### Greenville Rifle Club.

WEEKLY gallery shoot for class medals, July 17: Capt. Robidoux with 242 is now only 4 points behind Purkess in the race for first. Plaisted and C. Boag are both close up to the two leaders. Score, 10 shots, possible 250, distance 35yds.: Robidoux 242, Plaisted 240, Purkess 238, Collins 226, J. Boag 236, C. Boag 231, Chavart 230, Gotthardt 227, Dadds 215, Lembeck 200, Gassman 197.

The Saturday outing of the Greenville Club in Armbruster's Park on July 8 was well attended and many good scores were made. A 50 shot race between Messrs. Ross, Dorrier and Plaisted developed the following totals: Ross 1,089, Dorrier 1,053, Plaisted 1,015.

The following 10-shot scores were made by the members present: Ross 224, Chavart 223, Plaisted 217, Dorrier 217, Spahn 208, Pfeiffer 200, Collins 196, Purkess 195.

### Cincinnati.

CINCINNATI, O., July 2.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended below, 200 yds., off-hand, at the standard target:  
Gindele.....80 83 Martin.....75 74 Drube.....69 55  
Payne.....79 77 Stegner.....63 63 Puthoff.....56 55 50  
Weinheimer.....74 72 Randall.....76 74 Nagel.....49 37 39  
Topf.....69 54 59 See.....74 71 70

### Revolver Shooting in England.

THE National Rifle Association of England have decided to reintroduce the rapid firing competition for target revolvers, which they had tended to omit this year. They will also allow head front sights in the military revolver competitions, which seems a pity, as though it will lead to improved scores, it will do away with the distinctly military character of these competitions, and in fact competitors will be able to use the same revolver that they use as a target revolver.

### Harlem Rifle Club.

THE following scores were made July 7 by members of the Harlem Rifle Club, at 75ft., off-hand: J. A. Boyken 243, C. Hutch 241, E. W. Busby 241, W. H. Cochran 238. J. BODENSTAR, Sec'y.

### Turtle Bay Rifle Club.

THE club keep up the interest of its members in shooting matters during the hot weather by the introduction of team matches. This week the teams were Ochs and Krampert vs. Walter and Oberle. The scores are appended:

J. Ochs, Jr., 237 244 245—730 H. Walter.....242 236 241—719  
J. Krampert, 237 234 241—712—1442 J. F. Oberle.....230 235 239—697—1416

### Excelsior Rifle Club.

WEEKLY shoot in Armbruster's Park, Greenville, N. J., July 7. Ten shots, German ring target, 300yds.: L. P. Hansen 208, C. Ward 200, J. Hughes 173, J. Speicher 189.

### New York Rifle Club.

CYPRESS HILLS PARK, L. I., July 8.—Six members met for competition for club trophies: 10-shot scores, standard American target: E. R. Chadbourne, 93, 92, 90; M. Harrington, 89, 88, 84; Thos. Floyd, 87, 82; Hamilton, 78, 76; Major Shorley, 82, 83; Geo. W. Downs, 70, 72, 80.

### The Millers.

THE following scores were made July 5 by the members of the Miller Rifle Club, Capt. E. Fisher, at headquarters, 423 Washington street, Hoboken: Miller 240, Schlent 239, Kleepping 238, Meyers 236, Rogers 230, Meyer 232, Caragher 229, Liele 235, Murphy 232, Sohl 236, Bach 229, Vogel 233.

### RIFLE NOTES.

On Friday, July 14, the New York Schutzen Corps will hold its regular monthly outing and practice shoot in the Union Hill Park, Union Hill, N. J.

On Wednesday, July 19, the Independent New York Schutzen Corps will hold its monthly shoot in Washington Park.

The members of the Independent New York Corps arrived home from Chicago on Friday, July 7. All report having experienced a very pleasant time. Several of the members of the corps distinguished themselves at the Columbia international shoot by their fine shooting. The report of our Chicago representative gives a full report of the individual scores of the members of the corps. Gus Zimmermann adds new luster to his reputation as a rifleman by his fine score of 214 on the King target. This score will be hard to beat and may stand high to the close of the festival.

A team shoot for \$500 a side, 100 shots per man, takes place at the Glendale Park, Long Island, Friday the 14th. The teams are Walther, Krauss and Busse vs. Zimmerman, Martin and Pittschier.

The New York rifleman should not forget the shooting festival of the South New England Bund, which takes place in Hartford, Conn., on July 24 and 25. The prizes on the ring target range from \$45 for the first down to \$1, the twentieth, or last prize. The bulls-eye target has many attractions for the steady holder, where with 10 shots for \$1 he can get 50 cents in return for every red tag (24 in. center) made. The tickets are limited only to the extent of the shooter's pocketbook.

Many of our rifleman are diligently seeking for relief from the onerous labors attached to shooting the patched bullet. When in the shooting house at Greenville on Saturday last we met that old veteran of the butts M. Dorrier, who was shooting his Ballard from the machine rest, using the lubricated bullet. We applied our rule to one of his 10-shot strings and found that it measured only 10 1/2 in. from center to center; many of our patched bullet devotees would consider that good work with their favorite. Barney Zettler has promised to let us in on a ground floor basis on the theory and practice of the lubricated bullet. Should we succeed in connecting our sympathies to his work of information on these matters the patrons of Forest and Stream will have a draught of it.

In last week's issue there was an open-bore challenge fired by the Paterson fraternity in the direction of New York. Some of the scattering pellets ricocheted in the vicinity of the Greenville Rifle Club, at Greenville, N. J. Now the Greenville boys would like to have the Paterson folk try another shot full-choked and aimed directly for Greenville. The Greenville contingent will make good game for the Paterson rifleman to practice upon before crossing the Hudson. As the New Yorkers are said to be more tenacious than the celebrated Chicago hard bird, the Paterson men will profit by the preliminary practice. The Greenville boys are well feathered at the present time. Get your gun, Paterson.

## Trap-Shooting.

### The Fourth at Lynchburg.

LYNCHBURG, Va., July 5.—The Lynchburg Gun Club held its sixth annual picnic on the 4th. This time it was a family occasion and a general gathering of friends. It was a most enjoyable affair and was fully appreciated by the five hundred or more visitors. At 1 o'clock a great lunch was spread, one of the kind that runs into a feast. Just right here is where happiness actually commenced and the enjoyment of the day reached the highest point. Out under the big oaks for one hour there was a most contented and happy gathering. We all missed our old Arthur Du Bray. While we hope he is having a large time at Chicago, we should have liked to have him here on this event. Below are the principal scores of the day:

No. 1, team shoot, 10 singles:  
Nelson.....6 Smith.....4  
Terry.....8 Miller.....6  
Dornin.....10 Withers.....6  
Moorman.....6 Hamlet.....7  
Stearns.....3 Chambers.....7  
J. Cleland.....5—38 Jennings.....4—33

No. 2, 5 pairs for a lap robe: Dornin 7, J. Cleland 4, Moorman 7, Nelson 7, Stearns 6, F. Christian 5, T. Christian 3, Miller 4, Terry 7, E. Cleland 5, Adams 6, T. S. Jennings 4, Edmonds 6, Smith 4, Durphy 6, Empe 8, Jenkins 5, Hamner 4, Withers 5.

No. 3, team shoot, 10 singles:  
Nelson.....8 Stearns.....8 P. Christian.....7  
Terry.....9 Adams.....5 T. Christian.....6  
Dornin.....10 Jennings.....2 Empe.....7  
Moorman.....8 Smith.....4 Withers.....6  
J. Cleland.....8 Edmonds.....4 Hamner.....1  
Jenkins.....5—47 Averett.....5—23 Durphy.....9—36

No. 4, 9 singles and 3 pairs for Silverthorn badge: Nelson 10, J. Cleland 10, Terry 14, Wren 9, Spencer 13, Empe 11, G. Langhorne 10, Dornin 13, Moorman 10, Stearns 11, Old 6, Averett 8, Jenkins 10.

No. 5, 10 singles for hunting vest: Nelson 10, Dornin 8, Cleland 9, Hamlet 6, Stearns 9, Payne 4, Terry 8, Moorman 8, Empe 9, Wren 8, Chambers 8.

No. 6, team race, 10 singles, unknown angles:  
Terry.....6 O. Wrenley.....7  
Nelson.....10 Stearns.....7  
Dornin.....9 Wren.....7  
Moorman.....8 Chambers.....8  
J. Cleland.....8 Hamlet.....4  
Empe.....8—6—47 H. Langhorne.....5—34

No. 7, 5 pairs for a lap robe: Nelson 9, Dornin 9, J. Cleland 3, Empe 8, Terry 4, Moorman 4, Stearns 3, Wren 3.

No. 8, team shoot, 10 singles:  
Nelson.....10 J. Cleland.....9  
Dornin.....9 Hamlet.....8  
Durphy.....12 Empe (re-entry).....6  
Wormley.....5 Terry.....6  
Moorman.....8 Stearns.....6  
Empe.....8—7—44 C. Wormley.....6—36

Extra event, 10 singles: Nelson 9, Stearns 9, Dornin 9, Terry 10, Empe 8, Chambers 4.

W. W. Dornin made greatest average during the day's shoot. J. Cleland won the Field shoot on a clean score.

### Pelhamville Sweeps.

PELHAMVILLE, N. Y., July 5.—Inclosed please find full scores of sweepstakes shot here yesterday. Owing to scarcity of pigeons main event had to be reduced to 7 birds. Pigeons good, taking season in consideration; weather all that could be desired. The gentlemen shooting belonged to the following organizations: W. H. Brickner, L. E. Miner, E. Knof, Wauregan Gun Club of New York; McKenna, Coder, Dr. V. G. Hudson, Emerald Gun Club of Brooklyn; H. G. Eff, not attached to any club. M. B. BRICKNER.

No. 1, 3 birds, 3 moneys, birds extra, entry \$1, Hurlingham rules, 60yds. boundary, 25yds. rise:

W. H. Brickner.....241—2 Dr. Little.....001—1 ...  
Dr. V. G. Hudson.....121—3 121 Coder.....123—3 0  
Osterhout.....111—3 112 L. E. Miner.....221—3 222  
McKenna.....112—3 123

No. 2, 5 birds, 3 moneys, birds extra, entry \$2; otherwise as in previous event:

W. H. Brickner.....12111—5 Dr. Little.....11022—4  
Osterhout.....32211—5 L. E. Miner.....32211—4  
Coder.....11122—5 McKenna.....20001—2  
Dr. Hudson.....22101—4

No. 3, miss and out, with privilege of re-entry if missing on first round, entry \$1, rules as before: Dr. Hudson 4, Osterhout 3, L. E. Miner 4, W. H. Brickner 3, Dr. Little 1.

No. 5, 7 birds, 3 moneys, entry \$4, rules as before, winner of first money to take handsome gun case given by Mr. M. F. Brickner:

W. H. Brickner.....1221112—7 Osterhout.....0101221—5  
Dr. Hudson.....222112—6 H. P. Eff.....6221231—5  
Knof.....12111—6 L. E. Miner.....0061210—3  
Dr. Little.....2012012—5 McKenna.....0200000—1

Match for the price of the pigeons. Long Island rules:

Dr. Hudson.....212—3 H. P. Eff.....100—1  
No. 7, 10 keystones, 2 moneys, entry \$1, A. A. rules, 16 and 18yds. rise:

Dr. Little.....111111111—10 Coder.....1011111101—8  
Osterhout.....111111011—9 H. P. Eff.....01000101—5

No. 8, same as No. 7:

Dr. Little.....111111111—10 Spencer.....110111110—8  
Coder.....111111111—10 H. P. Eff.....011111011—8  
Osterhout.....11111111—9

Referee, Mr. Jacob Pentz.

### Rochester Rod and Gun Club.

THE following scores were made at the Fourth of July shoot of the Rochester Rod and Gun Club:

No. 1, 15 singles: Worth 9, Meyer 9, Hadley 9, Fletcher 4, Lewis 6, Borst 7, Rogers 8, Mann 8.

No. 2, 15 singles: Hadley 15, Lewis 10, Worth 11, Meyer 15, Fletcher 9, Borst 12, Rogers 12, Hicks 10, Lane 14, Van Ostrand 8, Gardner 12, Mann 14.

No. 3, 10 singles: Lewis 4, Hadley 8, Fletcher 7, Weller 7, Borst 6, Van Ostrand 6, Meyer 10, Worth 7, Rogers 4, Gardner 7, Hicks 9, Lane 5, Mann 5.

No. 4, 10 singles: Hadley 9, Lewis 4, Fletcher 3, Van Ostrand 1, Weller 4, Borst 2, Rogers 3, Meyer 8, Worth 4, Gardner 4.

No. 5, 5 pairs and 5 singles: Van Ostrand 5, Meyer 12, Hicks 8, Borst 10, Rogers 10, Lewis 8, Lane 10, Gardner 7, Hadley 8, Weller 8, Worth 12, Mann 11.

No. 6, 10 singles: Borst 7, Lewis 6, Van Ostrand 3, Meyer 8, Hadley 4, Hicks 6, Harvey 0, Worth 3, Lane 4, Weller 7, Mann 10.

No. 9, 15 singles: Lane 12, Worth 11, Borst 9, Van Ostrand 11, Hadley 8, Weller 14, Marble 9, Meyer 11, Kay 7, Gardner 10, McCarthy 9, Hicks 5, L. T. Meyer 4, Mann 14.

No. 10, 10 singles: Van Ostrand 7, Meyer 8, Worth 6, Hicks 6, Kay 0, Fulton 6, Hadley 8, Weller 5, Borst 6, Mann 6, McCarthy 6, Lane 5.

Eastern New York League Tournament.

AMSTERDAM, N. Y., July 4.—The Riverview Gun Club was certainly favored with a cool and pleasant day for their mid-summer tournament. During the morning a stiff west wind made the shooting quite difficult. The tournament was held on the club's grounds which are conveniently located on the highlands, on the south side of the Mohawk River, overlooking the city; and is not three minutes walk from the West Shore or N. Y. C. R.R. depots. The club has expended a considerable amount of money this summer in grading and have erected a commodious and very convenient club house, cashier's office, and have one of the most convenient and best trapper's screens we have ever seen. They certainly had everything in excellent shape for a large gathering of shooters. The shooting was done at Cruttenberg & Card's kindbird targets, which worked perfectly in the expert traps, not more than 25 birds were broken by the traps all day.

The fine programme ought to have called out full lists of entries, but just why there were not more shooters present it is hard to say. The club had expectations of a fair attendance as some of its members had attended all the league shoots this year—but one.

The visiting shooters were Frank Northrup, Johnstown, N. Y.; J. D. Banta, Springfield, Mass. (also a member of Johnstown Gun Club); W. N. Armstrong, Little Falls, N. Y.; Chas. W. Scharf, Canajoharie Gun Club, came at 4 o'clock, having been detained at home on account of a death; Mr. Geisel, Charles Beckford ("Rock") and Horace B. Darby, secretary of the Eastern New York Trap-Shooters' League, of Albany; Mr. Scowden, Coeymans, a Junior, of New York, and Frank Hall, of Ridgefield, N. J. Mr. Hall is a member of the Riverview Gun Club, and came up to spend the "Fourth" and to call on his many friends here. He is an excellent shot when in practice, but has scarcely fired a shot since he was here last September. However, he carried over to New Jersey the handsome gold-lined silver shaving cup and brush which the club put up in the miss-and-out event; he also won second prize, a brace of 25 birds, in the trap-shooting contest. The present members of the home club, and if they had not entered as they did the tournament would have been a grand fizzle. The cashier's box was in charge of Messrs. D. S. Pierce and Elmer Trull, who did their work quickly and very efficiently. President Hartley and Captain Briggs did the hustling. Z. R. Jacoby and Horace B. Darby scorers. Frank Linnebecker had charge of the pull. Everything passed off in excellent shape—with a few exceptions. The traps did not shoot the way they wanted. Some of the shooters fired nearly 800 shots during the day.

On the whole, notwithstanding the small attendance, it was the most pleasant meet, taking everything into consideration, we have at ended this season. Following are the scores:

No. 1, 10 kindbirds, "Jack Rabbit," American Shooting Association rules, entrance \$1.30:

Northrup.....	1111111111-10	Rock.....	011110011-7
Armstrong.....	100110000-4	Trull.....	000101000-3
R M Hartley.....	111010111-8	Briggs.....	111011111-9
Linnebecker.....	010101111-3	Miller.....	001010010-4
Geisel.....	010001000-3	Pierce.....	010110011-6
Banta.....	110110101-7	Warring.....	011101111-8
G V Hartley.....	010101111-7	Scowden.....	110101111-9

In this event those breaking 60% of their birds got 10 cents for each target broken. The surplus divided 60 and 40%.

No. 2, 15 kindbirds, entrance \$1.95:

Northrup.....	100111011111-13	Warring.....	11011011111-13
Armstrong.....	100101011000-6	G V Hartley.....	10101011110-10
R M Hartley.....	011101111111-13	Scowden.....	001010101101-9
Rock.....	10011011111111-11	Briggs.....	11111011111-13
Geisel.....	11100001010101-7	Young.....	0000101011010-7
Banta.....	11100101111111-10		

No. 3, 10 kindbirds, entrance \$1.30:

Northrup.....	1111111111-10	Warring.....	1101100111-7
Armstrong.....	1001111110-7	G V Hartley.....	1100001011-5
R M Hartley.....	111111111-9	Briggs.....	101110111-8
Rock.....	01010101-3	Young.....	100101111-7
Geisel.....	00111111-3	Hall.....	110011111-8
Banta.....	01001010-5		

No. 4, 15 kindbirds, unknown angles, entrance \$1.95:

Northrup.....	111111111111-15	Warring.....	0101101100111-10
Armstrong.....	00010011010110-7	G V Hartley.....	10100110010111-9

This gun can be furnished in 12-gauge only. It weighs about 34 lbs.

**Towanda Gun Club.**

TOWANDA, Pa., July 5.—The traps are in place, trappers at their posts, squads filled, the shooters line up facing the traps for the first round, a voice that has been out the night before celebrating the glorious Fourth sings out "pull" and the tournament of the Towanda Gun Club has opened for July 4, 1893. An object resembling a black saucer, with a yellow ring frescoed thereon, is seen flying through the air, the gunner facing No. 1 trap takes careful aim as he supposes, but the target lands among the reeds and willows along the river margin, to be retrieved as referee calls out "lost bird." The next two flying disks are the following five lost, and so continues the sport until all present are satisfied.

Our grounds are situated on the banks of the Susquehanna River, many targets falling in its waters, being low and shallow at this point, and at this season of the year a number are retrieved. A large gravel bar covered with dark green willows makes a dark green background. Blue-rook traps, having the new Standard-Keystone carrier adjusted, with Keystone targets, were used, and being thrown very swift and hard, a stiff breeze often making them vary in flight, making the shooting difficult, as the scores will testify.

The following persons participated: Joe Adams, Waverly, N. Y.; Wm. Von Wolftradt, J. H. Albert and F. Forbes, Athens, Pa.; Wm. Meehan, Long Valley, Pa.; Fred Emery, Evergreen, Pa.; Wallace Dimock, Liberty Corners, Pa.; Willard Shiner and Jay Ward, Towanda, Pa.; Montague, Rittenburg and Ditch, also of Towanda.

All events but Nos. 6 and 7 were 75 cents entrance, rapid-firing system, under American Association rules.

No. 7, 10 singles, rapid firing system, 9 singles unknown angles and 3 pairs, American Association rules, for county and club badges, entrance \$1.50:

Montague.....	110101011101111111	10 11 11—21

W. F. DITTRICH, Sec'y.

**Thanks from Knoxville.**

KNOXVILLE, Tenn., June 23.—Editor Forest and Stream: The Knoxville Gun Club feel it to be duty as well as a pleasure to express to their many friends among the sporting fraternity their sincere appreciation of the numerous kind words of commendation we have expressed directly and indirectly relative to the success attendant upon our meeting of May 23, 24, 25, 1893.

It is with pleasure and thanks we beg to assure the trap editors of the FOREST AND STREAM, and each and every shooter who was with us upon that occasion, that we fully appreciate and are deeply gratified for all such expressions as: "Largest attendance; best purses; less kicking, smoothest run; clock-work precision; best system of handicaps; nothing like the fine system of office work; gentlemanly patience to all inquiries; in fact, the best all round shoot I ever attended."

We do not claim perfection, but we do claim business principles and gentlemanly assistance from the shooters themselves, combined with the great aid of our editorial friends of the sporting papers is bound to make a successful issue to any tournament.

Come again, boys, May '94, and we will be glad to see you all and promise you even a better shoot and, we trust, just as pleasant a time. Thanks to one and all for courtesies.

Respectfully,  
KNOXVILLE GUN CLUB,  
Per R. VAN GILDER, Sec'y.

**Fourth at Red Hook.**

RED HOOK, N. Y., July 5.—Inclosed I send you condensed scores of our shoot of the Fourth. Blue-rook targets and traps were used. The shooting was at known angles, excepting that a cross wind made the flight of the targets very uncertain.

R. J. CARROLL, Sec'y.

Fifteen targets in each of the following contests:

**The Standard Gun Club.**

THE Standard Gun Club, of Baltimore, Md., gave an all-day shoot at their shooting ground, Acton's Park, on July 4. The programme consisted of four 10-target sweeps, 20 15-target events and a 50-target race for the individual championship of Maryland, the club in this race giving a handsome silver cup to the winner. The race was won by Mr. H. T. Tucker, of the Standard Club, after tying Mr. Hunt, our last year's champion on 46 breaks out of 50, and then shooting him out in the tie.

No. 1, 10 singles: Franklin 10, Bond 7, Hunt 8, Willey 5, Smith 8, Devall 8, Claridge 9, Dyson 7, Bosley 5, Chase 8, Gross 8, Williams 5, Kutter 6, Buckbee 9, Ethridge 5, Chase 6, Lotz 5, Storrs 8, Lupus 9, Clements 9.

No. 2, 10 singles: Franklin 9, Bond 8, Devall 6, Willey 8, Chase 4, Smith 7, Claridge 10, Ethridge 7, Hunt 9, Bosley 5, Lupus 9, Buckbee 5, Jory 7, Clements 9, Williams 7, Lotz 6, Ducker 9, Storrs 9.

No. 3, 15 singles: Franklin 13, Ducker 14, Bond 11, Devall 14, Willey 11, Smith 12, Claridge 12, Tracy 9, Jory 10, Bosley 7, Williams 8, Gross 12, Lupus 13, Clements 14, Chase 10, Lotz 11, Buckbee 12, Storrs 12.

No. 4, 10 singles: Hunt 9, Storrs 7, Bosley 7, Jory 6, Willey 10, Jack 10, Clements 7, Claridge 6, Lupus 9, Bond 7, Lotz 8, Williams 8, Chase 7, Tracy 7, Buckbee 8, Devall 10.

Championship race, 50 singles:

Franklin.....	41	Storrs.....	37	Claridge.....	37
Devall.....	41	Jory.....	37	Williams.....	37
Bosley.....	41	Ethridge.....	36	Lotz.....	29

Smith.....	38	Ethridge.....	37	Kutter.....	25
Hunt.....	46	Lupus.....	39	Dyson.....	W
Buckbee.....	40				

Tie shot off at 20 singles:

Hunt.....	17	Ducker.....	19
-----------	----	-------------	----

H. E. LUPUS, Sec'y.

**The Findlay Gun Club.**

THE following scores were made at the Fourth of July shoot of the (Ohio) Gun Club:

No. 1, 25 singles: Ritter 22, Clark 21, Tritch 18, Yerger 14, Clark 13, Stein 12, Nisely 9, Loomis 9, Guise 8 and Barton 6. The prizes were awarded in the order named and were a deerfoot knife, a smoking set, a pair of kid gloves, a necktie, hammock and a roast of beef.

No. 2, 10 singles: Evans 9, Boggs 8, Karg 7, Clark 6, Guise 5, Rosenbaum 4, Nisely 5, Stein 4, Ritter 4, Hubert 4, Barton 1 and Tritch 9.

No. 3, 25 singles: Only persons who never shot were allowed to contest. Eliza 16, Coons 11, Gillespie 10, Thompson 8, Shiny 7, Morrison 6, Duffield 5, Gass 5, Jarbeau 5, Dennison 3 and Kimmons 2.

No. 4, 10 singles: Guise 7, Rosenbaum 5, Evans 8, Spear 4, Clark 4, Johnson 7, Ritter 7, Dennis 6, Boggs 7, Duffield 6, Gillespie 8, Barton 3, Stein 8, Yerger 5, Sbaefer 5, Gallagher 6, Tritch 6, Thompson 5, Coons 1, Dennison 4, Loomis 7.

No. 5, 25 singles: Evans 19, Boggs 22, Duffield 16, Dennis 10, Elsen 12, Gillespie 17, Coons 12, Rosenbaum 13, Dennison 11, Barton 9, Clark 10, Nisely 4, Guise 14, Ritter 18, Wilcox 19, Stein 17, Yerger 15 and Spear 11.

No. 6, 10 singles: Guise 8, Yerger 7, Dennison 8, Evans 10, Clark 5, Ritter 7, Rosenbaum 8, Grubb 1, Dennison 7, Duffield 3, Stein 3, Elsen 9, Graves 2, Thompson 5, Dennis 4, Gillespie 6, Loomis 4, Barton 3.

No. 7, 15 singles: Guise 10, Evans 11, Clark 9, Ritter 11, Barton 11,

Dennis 7, Loomis 10, Duffield 10, Elsen 12, Stein 13, Gillespie 10, Graves 8. John Ritter got the silk umbrella for making the best average. Charley Steen got the second best average. Clark had the lowest average.

**Paterson's First Live Bird Shoot.**

PATERSON, N. J., the great city of silk and locomotive manufactures, boasts of over 60,000 population. This population is a mixed one, as in all manufacturing cities, and includes several thousand Englishmen. Now Englishmen, as a rule, are fond of live pigeon shooting from the trap, and it is rather strange that while live bird shooting has flourished in all the towns immediately contiguous to the city, its inhabitants had never had an opportunity to witness an open contest on their native heath previous to Thursday, July 6. Private matches were shot occasionally but as these were not advertised the public knew nothing of them until they were by-gones. On the above date, however, they were given an opportunity of witnessing the initial open contest, which was arranged by T. W. Morley, of Paterson, and C. H. Townsend, of FOREST AND STREAM. About 200 availed themselves of the privilege thus accorded. Had the shoot been held on the previous day, when all the factories were closed, the attendance would have been heavy.

Willard's Park is situated on the Little Falls road, about three miles by electric cars from the Erie depot. On the opposite side of the road flows the Passaic River, the water at this point being as clear as crystal. About 100yds. back from the main entrance, nestling in a pretty grove is the park hotel, and about 100yds. in the rear of this is the baseball ground where the shoot was held. The grounds are enclosed, and to the left of the entrance is a well built and commodious grand stand. The traps were set on the diamond, the center trap being east-southeast from the score, toward the corner of the grounds. The background was the green hills about a mile distant. The ground was almost perfectly level. The boundary was the fence on three sides and the dead line was marked by line from corner to corner of the grand stand. Some of the old veterans present declared this to be the finest ground on which they had ever shot. The weather was delightful, the sun shining clear and bright and there being a brisk southwesterly wind to take the edge off the heat of the sun and to assist the birds in their flight.

The shoot was announced to begin at 10 A. M., but it was after the dinner hour when the first shot was fired. At this time among those present were M. F. Lindsley and his wife, "Wanda," of West Hoboken; Mr. and Mrs. John Lechner and Mr. and Mrs. Frank Class, of Morris town; J. H. Richmond and G. T. Hollister, of New York; Chas. Lenone, of Passaic; Eddy Collins, of West Hoboken; J. W. Hoffman, of German Valley; W. S. Canon and Samuel Castle, of Newark; W. G. "Hollis," of Harrison; "Dutchy" Smith, of Plainfield; T. W. Morley, of Paterson; C. H. Townsend, of FOREST AND STREAM; Aug. C. Deirich, Wm. Dutcher, F. R. Wolf and John Ranson, of Paterson.

SAMUEL CASTLE. CHARLES SMITH.

Soon after noon it was proposed to have a "warmer" in the form of a sweepstake at 5 birds, \$5 entry, 3 moneys. The result of this will be seen below, third money being shot off, miss and out, and finally divided after killing 7 each by Morley and Canon. The birds used in this sweep were a mixed lot, poor to medium, being the culms from the 500 on hand:

Lindsley.....	12222—5	Lenone.....	10011—3
Morley.....	3021—3	Hoffman.....	22202—4
Class.....	12121—5	Canon.....	21100—3
Richmond.....	12122—5	Castle.....	12111—5
Hollister.....	22201—4	Green.....	12112—5
Collins.....	22221—5	Smith.....	12101—3

Here a half hour recess was taken for dinner, and in the meantime several more shooters appeared, among them being Chas. M. Hadden, of Newark; James L. Smith, of Hackensack; T. C. Wright, of Paterson; E. C. George, of Little Falls; N. S. Roche, of Kearney, and T. Dunclee, of Paterson. Al. Heritage, of Jersey City, also appeared, and a little later came John Erb, of Newark, and Noel G. Money, of Oakland.

At 1:35 P. M. the big event of the day was started, the conditions being 20 live birds per man, 5 entry, medium, being the culms from the 500, of Newark; James L. Smith, of Hackensack; T. C. Wright, of Paterson; E. C. George, of Little Falls; N. S. Roche, of Kearney, and T. Dunclee, of Paterson. Al. Heritage, of Jersey City, also appeared, and a little later came John Erb, of Newark, and Noel G. Money, of Oakland.

The start was made with twelve entries, but with the consent of the shooters five late comers were permitted to enter. According to the rules this cut the money into five parts, first being \$71.50, second \$59.50, third \$47.50, fourth \$35.50, and fifth \$24.

Some of the finest work of the day was done by Wm. S. Canon, New Jersey's one-armed expert, his second-barrel shots being equal to those of any of the contestants. When it is considered that Mr. Canon is obliged to brace the butt of the gun in his armpit until a bird rises, and that on firing the first barrel the gun invariably leaves his shoulder, his second-barrel work can be described as phenomenal. On this day he was at his best and no bird seemed too fast for him to stop with his Francotte.

On the fifth round there were five with straight scores, on the tenth round the number was reduced to two, on the fourteenth round Richmond alone had a close string, and on the next round he too caught his "Jonah" and fell back in a hole where there were already five others. The story of the shoot, however, is best told by the following table, showing by the use of FOREST AND STREAM's great and exclusive trap score type the direction of flight of every bird:

Trap score type—Copyright 1893, by Forest and Stream Publishing Co.

R K Roche.....	2 2 3 1 2 4 4 1 2 5 5 1 1 1 5 5 1 5 4
M F Lindsley.....	2 2 0 1 2 2 2 2 0 1 1 1 2 1 1 0 2 0—16
J F Class.....	1 2 3 1 3 5 1 2 1 4 3 2 4 4 2 2 3 3 3
T W Morley.....	3 2 1 2 0 1 1 2 1 2 1 2 1 2 1 2 2 2 2—19
E Collins.....	4 3 1 2 4 2 3 1 1 1 5 5 1 2 5 5 5 5 1
J W Hoffman.....	3 2 1 1 1 2 2 0 1 2 1 2 1 1 1 1 0—18
W S Canon.....	1 1 3 3 2 3 4 2 1 2 2 1 2 1 1 1 2
S Castle.....	3 2 2 1 5 1 1 4 3 1 1 1 1 3 5 1 3
J L Smith.....	2 1 0 1 1 2 1 1 1 1 1 2 1 1 1 1 1—19

C Lenone.....	2 3 1 3 2 4 2 5 4 4 4 4 4 1 5 4 2 2 4
G T Hall.....	3 5 5 5 4 5 5 4 1 5 1 2 4 1 3 5 1 5 1
C Smith.....	4 2 4 2 3 1 1 1 2 4 4 3 2 2 4 1 1 5 3 1
Hollis.....	2 1 3 5 4 2 4 5 1 1 3 1 1 1 5 3 1 2 3
C E George.....	5 3 4 2 3 1 1 1 2 2 5 3 5 4 1 5 2 5 2
T C Wright.....	4 2 4 2 1 2 5 1 4 3 2 2 3 4 4 2 3 4 2 5
J H Richmond.....	1 2 4 5 1 4 5 1 2 4 1 5 1 1 2 1 5 2 1
T Dunclee.....	3 3 4 4 3 4 2 2 4 4 3 2 1 2 3 4 1 2

First and second were shot off, miss-and-out, Class Collins and J. L. Smith dividing the former on the seventh round, and second being divided by Morley, Canon and Castle, after shooting eleven rounds each, when the supply of birds gave out. Roche drew his pro rata of second. Third was divided. Lindsley was fortunate in being alone for fourth, as was Hoffman for fifth.

Thus ended the first open shoot for this town, but that it will not be the last goes without the saying. If the management was not satisfactory, the fact was not stated on the grounds, in fact the unanimous opinion of all was that they had spent a most enjoyable day, and would be only too glad to pay another visit to Willard's Park.

C. H. TOWNSEND.

**The Hollywood Columbia Jubilee.**

A big crowd of spectators assembled at the Hollywood grounds on July 7 to witness the Columbia Jubilee contest at 50 live birds, 30yds. rise, ties at 10 birds, \$100 entry, of which 60% to first, 20% to second and 10% to third. The match resulted in a victory for L. S. Thompson on 47 kills, Welch, Hoey and Murphy being tied for second. On the shoot-off at 10 birds Hoey missed his second and fifth, Welch and Murphy killing 10 each; and on the second run Welch won second, Murphy taking third.

**DRIVERS AND TWISTERS.**

BRADDOCK, Pa., July 5.—The Eagle Gun Club, composed of some of the best amateur shots in this vicinity, of which Superintendent Gayley, of the Edgar Thomson Steel Works; Dr. Reed, of Camden; and George Anderson, of the Seventh Avenue Hotel, are leading lights, have delightful trap grounds on the topmost elevation on the hill north of Braddock. They held an all-day shoot there to-day, and had many a good argument with the shells. Joe Anderson led in the singles, breaking 109 blue-rocks out of a possible 140, and Messrs. Kirk and Charley Anderson got 107 each. There were none obtained less than 95. J. A. Anderson hit 22 out of 24 and Joe got 20. Both Mr. Gayley and A. M. Scott did remarkably well for marksmen out of practice and are excellent wing shots. A sumptuous spread was served among the trees.

The International shoot to be given by Jack Parker on Aug. 22, 23, 24 and 25, on the famous Des-three-shos-ka Island, at the mouth of the Detroit River, promises to be an exceptionally attractive affair. Mr. Parker will have a shoot each day for a guaranteed purse of \$200; also a team race with \$75 for first money, entrance price of targets and a shoot for \$100 purse with entrance price of targets only. There will be two trophies shot for, one at live birds and one at targets, for the championship of the United States and Canada. The tent and exhibits of the Manufacturers' Trap-Shooting Association, will be on the grounds during the entire shoot.

The Meadville and Franklin (Pa.) gun clubs shot a team race on the Meadville grounds on July 4, five men per team, 25 targets per man. The scores: Franklin: Frazier 22, Mallory 20, Crawford 18, Gray 12, Wilson 25; total 97. Meadville: Miller 19, Smith 22, Clark 16, Leberman 12, Gundaker 18; total 87. The score in the second shoot was not quite as good for either team, the Franklin boys, however, holding up nearly to their previous record. Result: Meadville: Kelso 16, Pater 16, Barrackman 16, Hotchkiss 14, Winegar 18; total 81. Franklin: Frazier 20, Mallory 13, Crawford 17, Gray 24, Wilson 21; total 94.

A card from Henry Goodman and A. C. Dick ("Richard"), of Cincinnati states that at the request of numerous friends who took part in the 1892 Coney Island shoot, they have decided to repeat the affair, and have selected as the dates Aug. 16, 17 and 18. The shoot is sure to be well attended, as the two gentlemanly managers have hosts of friends all over the country. Cincinnati merchants will donate a large sum of cash to be added to each event. Programmes will be ready in a few days.

Frank Northrop of Johnstown, N. Y., was in great farm at the Fourth of July shoot at Amsterdam, breaking an average of 94 1/2% of the targets he shot at. He took part in ten regular events, getting in for first place eight times and for second place twice. He shot a new Wilkesbarre gun, which was completed only a few days before the shoot. His scores make a splendid showing for the gun as well as for his holding.

The Arkansas State Sportsmen's Association will hold their third annual shoot at Little Rock, on Aug. 7, 8, 9 and 10, and it is the intention of the committee to make this surpass any previous event held in the State. The shoot will be open to the world. There will be added money in a number of events.

"Uncle Dan" Lefever of the Lefever Arms Co., has presented to the West Shore Gun Club of Syracuse, a \$40 gold medal to be shot for by members on the first and last Saturday of each month, and to become the property of the member winning it five times.

The sixth annual tournament of the Standard Keystone Target and Trap Co. will be held on Aug. 22, 23, 24 and 25. The Standard Keystone trophy will be shot for on the first day; L. C. Smith cup on the second and the Peters Cartridge Co. trophy on the third. The fourth day will be known as championship day. The Pequot House will be the shooters' headquarters.

The Hollywood Independence Handicap was shot on July 5, the conditions being 15 birds each. The entries were: E. L. Post, 28yds.; J. R. Ellison, 28yds.; Captain Munro, 30yds.; Edgar G. Murphy, 30yds. and Phil Daly, Jr., 38yds. The entrance fee was \$20. Money and Ellison divided the stake, each killing 12 birds.

The Sigourney (Ia.) Gun Club issues an attractive programme for its second annual tournament, to be held on Aug. 8, 9 and 10. The programme shows both live bird and target events, and on the last day there will be a special match shoot at 100 live birds each, between C. W. Budd of Des Moines and C. M. Grimm of Clear Lake, for \$100 a side.

The Continental Gun Club, of Reading, Pa., held a shoot on the Black Bear Inn grounds on July 4, each man shooting at 25 targets. The scores were: Abraham Helman 23, A. Geyer 15, James Kuhns 14, Frank Kuhns 13, Harry Matz 14, Joseph Rorig 11.

Tacoma, June 30.—The final challenge match for the McNaughton Gun Co.'s trophy was shot last Wednesday on the Tacoma Gun Club's ground, with the following result: A. McNaughton 42, E. E. Ellis 46.

Edgar G. Murphy, of New York, and Robert S. Welch, of Philadelphia, are to shoot a match at Hollywood on July 19, at 100 live birds each for \$1,000 a side.

In our account of the State shoot at Rochester, we credited Gus E. Greiff with a residence in Carlstadt, N. J. This was an error as Mr. Greiff is a resident of New York City.

T. W. Morley, T. C. Wright and other Paterson enthusiasts, are about to organize a gun club. They will probably arrange to hold their shoots at Willard's Park.

There will be a three days' tournament at Frank Class's Morris town (N. J.) Driving Park this fall. The first two days will be devoted to blue-rook targets and third day to live birds.

The 1894 grand American handicap of the Interstate Manufacturers' and Dealers' Association will be held at Dexter Park, on April 4, 5 and 6.

The 50 target sweep which was to have been shot in Newark, N. J., on July 15, has been postponed. The date will be announced later.

The Michigan State League will hold a shoot at Coldwater on July 18 and 19.

The Essex Gun Club will hold its monthly shoot at Marion next Thursday.

O. H. TOWNSEND.

THE BEST LINE TO CALIFORNIA from either Chicago or St. Louis is the Burlington route. Takes you via Denver, Colorado Springs, Leadville, Salt Lake and Ogden. Daily vestibuled trains, with Pullman sleeper, chair cars (seats free) and Burlington route dining cars.—Advt.

## Springfield, Mass.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with special reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 234 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales.

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History, and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition, Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM BOOK LIST.

Canvas Canoes, and How to Build Them. 50c.

**FOR SALE. MEMBERSHIP SHARES**

**Triton Fish and Game Club, CANADA.**

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 102,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 4 lbs. (*Salmo fontinalis* only). The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus).

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment. Intending purchasers should carefully examine Sec. 4 of constitution, also pages 12 and 24 of by-laws about membership certificates, agents, membership cards, route and mode of payments.

For Prospectus, By-Laws, Maps, etc., and full information address

**Messrs. TOWNSEND & HOWARD,** 928 TEMPLE COURT, NEW YORK CITY, AND THIS PAPER.

**FOR SALE. Camp Ground,**

**SARANAC LAKE, Adirondack Mountains.**

Point of land just north of Sweeney Carry and Hotel Wawbeek, well wooded, high elevation, large water front, with a superb view of the country to the north, east and south, easy of access, and one of the finest camping spots in this whole country, containing about 45 acres. Address P. O. Box 1,980, Boston, Mass., for further particulars.

**Adirondack Preserve FOR SALE.**

Two gentlemen owning one of the finest fishing and hunting preserves in the Adirondacks, would sell one-half interest in the property to a party of two or four gentlemen. The lake, nearly a mile long, surrounded by virgin forest, is renowned for its fine trout and as a resort for deer. It can be reached in nine hours from Utica. A comfortable furnished house with six rooms, out-buildings, garden, artificial pond for fish fry. Five miles of road built. Eight different lakes can be visited from camp in from one to three hours' walk. References exchanged. Address E. Z. WRIGHT, Utica, N. Y.

**TROUT LAKES FOR SALE.**

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

**Hunting Grounds For Sale.**

We offer for sale one farm, 600 acres, situate in Warren county, North Carolina, six miles from Macon, same from Littleton. Quail, deer, wild turkey, ducks, geese and old hares on and near the farm. Fine grain, cotton, tobacco and fruit farm. Fair dwelling and out-houses. Hunting privilege on adjoining farms can be bought cheap. 14 hours from New York via S. A. L. Apply to owners. Price, \$6 per acre. **EGERTON BROS., Macon, N. C.**

**ALBEMARLE AND PAMPHICO CRUISING AND Hunting Association**—Bear, Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing: Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 20. One more subscriber wanted. H. A. Weeks, 74 Murray St., N. Y.

**FRUIT AND GAME FARM FOR SALE.**—75 acres, nice cottage, 1,000 fruit trees, health perfect, taxes low, game plentiful. Price \$2,000. Long time privilege to shoot over 5,000 acres if desired. C. D. EPES, Crewe, Nottoway Co., Va.

**The Adirondacks.**

**Map of the Adirondack Wilderness.** Pocket edition on map-bound paper. \$1.00. "It is the most complete map of the Adirondacks region ever published."—Forest and Stream.

**Pocket Map of Lake Champlain and Lake George.** May-bound paper, 50 cents.

**Guide Books.**—The Adirondacks, illustrated, 16mo., 272 pages, pseudo cloth cover, 25 cts. Lake George and Lake Champlain, 25 cts. Address S. R. STODDARD, Glens Falls, N. Y.

**THE PROTEAN TENT.**

**A BLANK DAY.**

BUT IT WAS NOT ON THE

**RAILROAD.**

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

**Don't Go After Bear**

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

**Don't Go After Turkeys**

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

**Don't Go After Ducks**

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

**The Quail, Woodcock and Snipe**

shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

**A. H. HANSON,**

Gen. Pass. Agent, Illinois Central R. R., Chicago.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

**A FEW OF THE PRINCIPAL RESORTS.**

**ANDRO-COGGIN LAKES** (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

**THE WHITE MOUNTAINS** (via Gorham, N. H.).—For trout and varieties of game.

**THE SALMON RESORTS** of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

**LAKE ST. JOHN REGION** (via Quebec).—For ouananiche trout, caribou, bear, moose, beaver, otter, etc.

**THE RIVER ST. LAWRENCE** (in the neighborhood of the line for 400 miles).—For masacalonge, pike, bass, whitefish, pickerel, perch.

**THE THOUSAND ISLANDS** (via Gananoque or Kingston).—For pickerel, black bass, masacalonge, pike.

**MUSKOGEE LAKES.**—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

**PARRY SOUND AND GEORGIAN BAY** (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

**AKES ONTARIO, ERIE, HURON AND MICHIGAN** (via stations at all principal ports).

**LAKE SUPERIOR** (via Collingwood, Wiarton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

The famous river runs by our farm; best of trout fishing; an elegant summer house. Terms very moderate. Write for terms. JOHN TYLER, Prop.

## GRAND VIEW HOUSE.

Liberty, Sullivan Co., N. Y.  
Excellent trout fishing. Good family accommodation; one-fourth mile from station. Terms and circulars upon application. J. B. CARRIER.

## LIVINGSTON MANOR HOTEL,

Livingston Manor, N. Y.  
The best trout fishing streams to be found in Sullivan Co. Terms, \$2.00 per day. Bar supplied with the choicest wines, liquors and cigars the market affords.  
W. L. McPherson, Prop.

## MANSION HOUSE,

Main St., Liberty, Sullivan Co., N. Y.  
Good fishing in the Ten Eyck. Special attention given to commercial travelers. First-class livery attached. Free bus to and from trains.  
J. MURPHY & SON, Proprietors.

## WILLOWemoc HOTEL,

Willowemoc, Sullivan Co., N. Y.  
Situated a few miles from Livingston Manor station. Is the best trout fishing section in the county. Livery from the House will meet trains upon notice.  
R. G. ROOSA.

## LIBERTY HOUSE,

Liberty, Sullivan Co., N. Y.  
Summer Resort. T. H. Houlton, Prop.  
Among the mountains; 1,000 ft. above the sea; 119 miles from N. Y.; no malaria; excellent hunting and fishing; livery accommodations; free bus to all trains.

## Ontario & Western Hotel,

South Fallsburgh, Sullivan Co., N. Y.  
(Opposite Depot).  
Accommodates 40. Good livery attached. Terms reasonable. ARCH. D. O'NEILL, Prop.

## THE SCHAEFER HOUSE, Liberty, Sullivan Co., N. Y.

Open all the year; special accommodation for sportsmen and travelers; cuisine the best; close to depot; livery; fishing; parties supplied; Brooklyn reference; write.

## STODDARD HOUSE,

Stevensville, N. Y.  
The best pickerel fishing in the county five minutes walk from the house. Partridge, rabbit and red fox in season.  
H. M. STODDARD.

WOODBORNE HOUSE, Woodbourne, N. Y. An unsurpassed summer resort, recently enlarged and refurnished. This locality unequalled for trout fishing the Neversink and its tributaries have long been and still are famous. The hunting is also good. The house is 1,200 ft. above tide, the atmosphere is clear, pure and healthful. Post-office, daily mails, direct telegraphic communication. Stages connect with all trains. Private conveyances furnished if desired.  
L. L. WALDORF, Proprietor.

## EARL HOUSE, Sackett Harbor, N. Y.

Accommodates 40. Excellent bass fishing. One of the best points for duck shooting in season. Located on line of Rome, Watertown & Ogdensburg R. R.  
R. H. EARL, Proprietor.

## BIG GAME AND TROUT IN WASHINGTON.

A sportsmen's camp in a new country, near Mt. St. Helens, Wash. Fly-fishing on lake, open season May 1. Elk, mountain goat, deer and bear, open Aug. 15. Good guides.  
LOUIS B. AKIN, Etwa, Wash.

## MITCHELL HOUSE,

(Formerly Elting House).  
W. E. MITCHELL, Proprietor,  
Ellenville, N. Y.  
Good trout fishing in near by streams.

## FRONTIER HOUSE,

Morristown, N. Y.  
This house, located on the Lawrence River, is but a short distance from Black Lake, so long known for its celebrated bass and pickerel fishing.  
JAMES F. CULLIGAN, Proprietor.

## THOUSAND ISLANDS. RIVER ST. LAWRENCE.

MARSDEN HOUSE.  
Good bass, pickerel and mascalonge fishing. House pleasantly located. Rates, \$2.00 per day.  
G. A. MARSDEN, Proprietor.

## THOUSAND ISLANDS—THE COLUMBIA.

Island Park, N. Y. Second season of the finest and most thoroughly equipped hotel on the River St. Lawrence. Special rates by the week or season. The finest bass and pickerel fishing on the river are most easily reached from this house. Send for pamphlet.  
INGLEHART & HADCOCK, Proprietors.

## Hotels for Sportsmen.

## 1,000 ISLANDS. St. Lawrence Hotel,

ALEXANDRIA BAY, N. Y.  
\$2 per day. Special rates by the week.  
Also HOTEL COLUMBIA in connection, on European plan. Houses accommodate 150.  
FRED. D. HOWELL, Prop.

## Thousand Islands. River St. Lawrence.

## IZAACK WALTON HOUSE,

T. M. ESSELSTYNN, Manager.  
CLAYTON, N. Y.  
BASS AND PICKEREL IN ABUNDANCE.

The Largest and Best Located Hotel in Clayton.

## 1000 Islands. St. Lawrence River.

## FINE VIEW HOUSE,

One of the best points on the river for Bass and Pickerel. Next dock below Thousand Island Park. House newly furnished.  
Terms, \$2.00 Per Day.  
Open until Oct. 1. Post office address, Fine View, via Thousand Island Park.  
G. W. BRETSCH, Proprietor.

## IN THE ADIRONDACKS.

Taylor House and Cottages.  
TAYLOR'S-ON-SCHROON, N. Y.—In a charming location among the pines, on the high banks of Schroon Lake. Fine mountain scenery, good fishing, boating and driving. Table the best and supplied from hotel farms adjoining. Electric lights in hotel and on grounds. Billiards and bowling. Pure mountain spring water. Sanitary arrangements perfect. Send for circular. C. F. TAYLOR & SON,  
Taylor's-on-Schroon, N. Y.

## THE PAVILION HOTEL,

Islip, L. I. (on Great South Bay).  
Open until Oct. 1. Accommodates 250. South Bay is now the best fishing resort on Long Island for bluefish, weakfish, bass and flounders. After 15 years' experience at Elberon, N. J., it is sufficient to say that the best of care will be taken of families and guests. I solicit the patronage of former patrons.  
O. T. JONES.

## ADIRONDACKS.

species of big game shall be domesticated, or at least reared on farms and estates in a condition of semi-domestication. The experiment has been successfully tried with a number of species and we have not yet seen the end of it.

## GAME BIRD IMPORTATION.

EXCEPT in the case of two species, the discussion about the introduction in America of foreign game birds has thus far amounted to very little. Attempts have been made to introduce European quail, several old world partridges, pheasants of various species, black game and capercaillie. Of these the pheasant alone have become firmly established, and that chiefly on the Pacific slope.

Many will recall the interest that was felt in the wholesale importation of European quail (*Coturnix communis*) which took place in 1879, mainly through the energy and public spirit of Mr. Horace P. Toby, of Boston, Mass. Some thousands of these little birds were brought over from Sicily, and were distributed among sportsmen and sportsmen's clubs in the United States. The birds were hardy, bore the voyage well, and when turned out were in good condition. From time to time they were seen, either singly or flocked, and it is certain that they bred, for on one or more occasions very young birds were sent to this office for identification. Notwithstanding all this, in the course of a year or two the birds all disappeared, and now it is long since we have heard of the capture of an individual of this species. It was believed by many people that when the winter approached and they began their migration, they flew out to sea, and so perished. Whatever the cause, their introduction was a complete failure from the point of view of the gunner.

With the Asiatic pheasants the case was very different. The birds introduced by Judge Denny on the Pacific coast did wonderfully well, and have spread over all of Oregon and Washington, and are now slowly making their way southward into California. Nineteen birds turned loose near Victoria, Vancouver Island, having received protection for a few years increased to thousands, multiplying to such an extent that they have furnished good shooting near that city for years.

English pheasants were introduced some years ago at Tuxedo, by Mr. Lorillard, and later at Jekyl Island, and while they did fairly well and to some extent spread over the surrounding country, they cannot be said to have added greatly to the game supply. Within a year or two past a number of gentlemen have experimented, chiefly with *Phasianus torquatus*, which has proved itself a most hardy bird, and perfectly well able to withstand the rigors of the winters of northern New York.

Only in the case of the migratory quail and the pheasants have these experiments in acclimatization been tried on such scale as to offer any hope of success. The introduction of partridges, capercaillie and black game has been by individuals, and these species have failed to gain a foothold.

Besides the importation of foreign species, efforts have been made to introduce in parts of the East various grouse and quail of the West, and our Bob White has been taken to Utah, Idaho and California, and has done fairly well.

With the growth of the preserve system in this country comes the demand for greater abundance and variety of game birds, such as exist in America, in Asia or in Europe. There are enough different kinds of birds to be experimented on, there is land enough on which they can be protected, and there are enough people interested to bear easily the expenses of such an importation.

We should be strongly inclined to recommend that efforts be made to introduce here black game and capercaillie, hardy forest-inhabiting species which would not fear the severity of our northern winters and which would have to be protected only from the gunner. Such experiments, if successful, would benefit not alone those individuals who should control the preserve on which the birds might be turned out. If the introduced species did well and increased in numbers, the overflow from any preserve would soon furnish sport to those who might shoot near its borders; the preserve owners might soon be in a position to distribute eggs or birds to other associations desiring to introduce these birds, and so in the course of a few years a very large number of persons might be benefited.

Of course, at first every thing must be experimental,

but in view of the enormous sums of money annually spent by those who take their recreation with the gun, and the importance of the matter if success were attained, it seems well worth the while of shooting individuals and clubs to carefully consider this whole subject of the introduction of exotic game birds.

## SNAP SHOTS.

THE salmon has not yet fairly been established in the Hudson as a fish for anglers, but already there is bruited a scheme to organize a club of fishermen for the purpose of getting sole control of the fishing privileges at Mechanicville. The reasons given are that under existing conditions some of the salmon now killed are taken in an illegal manner, and that the crowd of fishermen is too great, while the fishermen lack the polish of cultivated salmon anglers and fail to observe the ethics of the craft. We suspect that the plan to gobble up the fishing is prompted by some other motive than solicitude concerning the law and the gospel. Both of these may be maintained without sequestering the fishing for the benefit of a favored few. The Fish Commissioners have an ample, able, efficient and intelligent force of protectors at command, and President Huntington and Chief Pond may be depended upon to see that the law is enforced. The ethics of salmon angling may be inculcated by admonition and example. The vast proportion of fishermen who go to Mechanicville are now, no doubt, in distressing ignorance of the proprieties, but they may be educated to better things. If the State has spent its money to stock the Hudson with salmon the citizens of the State—and of other States, for that matter—should have what benefit there may be in the result so far as they afford opportunities for angling.

Attention is called anew to the changed press day. This journal is now put to press on Tuesday instead of Wednesday, of each week. Correspondents sending communications intended for publication should mail them so that they may reach this office by Monday at the latest, and as much earlier as may be practicable. The earlier publication day has been adopted in order that the FOREST AND STREAM's increased army of subscribers in the West may receive the paper more promptly. We mean not only to give the Western sportsman and the Eastern sportsman, and the Northern sportsman and the Southern sportsman, the best sportsman's journal, but to give it to all in the week of publication.

The Scientific Alliance of New York—an association of the different scientific societies and clubs which have their headquarters here—has set on foot the project of raising a fund to the memory of the late Dr. Newberry. It is proposed that this be called the John Strong Newberry fund, and that the income of it be used to promote original scientific research in the departments of geology, paleontology, botany and zoology. The fund is to be administered under the direction of the Council of the Alliance, and it is hoped that it may reach the sum of \$25,000.

The Commissioners of Fisheries of New York have been inspecting Onida Lake with reference to the establishment of a fish hatchery; a report of their visit is given by Gen. D. H. Bruce in our fishing columns. Should the Commissioners decide to select a site on Onida Lake, the selection would not only be fully warranted by the natural advantages, but would be a fitting recognition of the public spirit, enterprise, generous effort and common sense methods of the anglers of Syracuse and vicinity.

The claim was made by our Florida contributor "Tarpon" the other day, that John Gomez, of Panther Key, whose portrait we published, was the oldest man in America. Gomez was born in 1781, and is now 112 years of age. But the editor of the Walker (La.) News sends us a note of an older person still, Christian Conrad, of Manchester, Mich., who reached the age of 114 in May of this year. Of the two the Michigan man holds the record.

It is worthy of note as a sign of the times that the prize essay at St. John's College, Annapolis, Md., this year, read by Mr. Chas. W. Duvall, had for its theme, the economic importance of insectivorous birds—a much more lively, timely, sensible and important topic than the greatness of Julius Caesar or the poetry of Götthe.

For Prospectus and Advertising Rates see Page 70.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## You are invited

to visit the "Forest and Stream's"  
exhibit in the Angling Pavilion at  
the entrance from the main hall  
of the Fisheries Building, in the  
World's Fair.

## WHAT ABOUT THE ELK?

NOT many weeks ago we printed a communication from a Rocky Mountain hunter, who lives in an elk country, urging that a stop should be put to the capture of live elk for purposes of domestication. Our correspondent took the ground that for each elk captured for this purpose several others were killed or driven away. We have just received a private letter from another Rocky Mountain hunter, who lives in an elk country, and this is what he says: "Nothing can save the elk but domestication, and unless measures are taken to capture a number and breed them in confinement, before very long they will be as scarce as the buffalo. When I was out this spring I captured one bull elk, for I needed meat, but I killed no more, though I had many opportunities. The snow was from 6 to 10ft. deep, yet this elk was in good condition, living on fir and willow branches. If I had the capital I would stock the great plains with animals that will never suffer from the hard winter."

Here then are two opposite views held by two men, each of whom lives in a game country. Which is right?

The writer of the letter last quoted goes on to speak of the destruction of elk in his country, instancing the killing of about thirty by one party for bear bait this spring, and of seventy by another last autumn for the skins and hide, and all this in the face of a very stringent game law just passed by Montana.

We cannot but believe that unless public sentiment shall soon manifest itself more strongly in favor of game protection in the Rocky Mountain States, the large game must ere long be practically exterminated everywhere except in the National Parks and in the forest reservations.

We have frequently expressed the belief that elk could be profitably reared in domestication. They are very easily kept, but of course would have to be held under fence to be protected from hunters. We know of no reason why an adult elk should not at the proper season be worth as much money as a fat steer, and certainly it could be reared to maturity with much less danger than a steer.

We look forward to a time when many of our native

## The Sportsman Tourist.

### THROUGH THE HEART OF PERU.

In Two Parts.—Part I.

ACCOMPANIED by two friends one May morning I sailed for Colon, sometimes called Aspinwall, on the steamer Crescent City. The aim of our journey was to cross South America at its widest part, and to this we were impelled by no motives geographical or scientific, but rather, weary of the life of clubs, we wished for a change to endure a certain amount of hardship and privation. As to the gratification of our desires in this respect later on, we had no reason to complain.

The idea of the trip had originated with one of my friends, who had somewhere read an account of a journey from the Argentine Republic to Chile, which, entailing a many days' ride across the pampas, is a monotonous but no means difficult undertaking. When at Lima we found how widely our proposed journey differed from what we had supposed it to be; but we were committed, and no one suggested a change of programme.

Nine uneventful days took us to Colon where some of our sailors, having become somewhat disorderly under the influence of drink, were escorted on board by the local police, colored men, barefooted, with tattered uniforms, carrying in their hands drawn sabres, the nicked and rusty appearance of which gave them anything but a formidable look. The next morning we started for Panama. On the train was a physician, who many years before had served in his professional capacity during the building of the road. According to him the number of deaths among those employed in its construction had been grossly overestimated, some having put the number at no less than 70,000. The true figures, he stated, were fever 300, cholera 150, felo de se among the Chinese 800, other causes 250, in all 1,500.

At Panama we passed three days waiting for the departure of our steamer, part of the time being employed testing our firearms on the beach, where we saw numbers of crabs of a bright red color looking quite ready for the table. The steamer upon which we took passage for Lima was comfortable in the extreme, each of our party having a large and airy deck-cabin. On the morning of the third day we sighted the coast of South America, having previously crossed the equator and later were able to distinguish Plata Island, the former rendezvous of the Buccaneers, and especially of the famous Morgan. The next day we reached Guayaquil. This Ecuadorian port is not very inviting and the walk through it (during which we were asked to buy monkeys, parrots and bananas over a foot in length) quite sufficed to satisfy our curiosity. We left for Payta after taking on board a great number of deck passengers, who occupied squares marked off in chalk on the deck. With them were their goods and chattels, consisting of pots and kettles, great quantities of pineapples and bananas, with ant-eaters, monkeys, parquets and various gay-plumaged birds.

The next day we reached Payta and visited the cathedral, where among the pictures of saints and other devotional works of art we noticed a colored lithograph of Washington at Trenton and the flags of all nations. At this place the cemetery is surrounded by a white-washed wall, upon which a native artist, who, I was told, had never seen any vegetation whatever, Payta lying in a desert, had painted some blue trees. Our next stopping place was Callao, the seaport of Lima, our destination.

At Lima we passed eighteen days making preparation for our journey and sight-seeing. Notable among the sights of Lima are the cathedral, the bull fights of Callao and the amateur bull fights of Magdalena del Mar, where ambitious novices face bulls whose horns are tipped with rubber. It is worthy of remark that in all Lima no statue of Pizarro can be found, since even at the present day any honor to the conqueror would give deep offense to the Indian population.

That which excites the greatest wonder and interest around Lima is beyond question the Oroya Railroad. This wonderful road, begun by Henry Meiggs, an American whose enormous wealth and stupendous enterprises once excited the wonder of the world's ablest financiers, had for its proposed terminus Oroya, 15,645ft. above the level of the sea and 120 miles distant from Lima. It is related of Don Henry, for so the Peruvians used to call him, that on the afternoon of the day on which the contract was awarded hand-bills calling for laborers were circulated in every part of Lima, and that on the succeeding morning two thousand men were at work. The contract price of the road was 27,000,000 soles, the silver sol being at that time equal to our dollar, but the bad faith or poverty of the Peruvian government virtually brought the work to a standstill, it having been completed to Anchi, at an altitude of between 12,000 and 13,000ft. Don Henry died leaving his affairs much embarrassed, and with him ended for many a long year all work of extension upon the Oroya Railroad.

This wonderful road ascends the mountain side by a marvelous system of tunnels and inclined planes, the grade sometimes reaching as much as 4½ft. in 100, a chasm at one place being bridged by means of a pier 258ft. in height, then the highest in the world.

It may not be out of place here to relate an anecdote illustrating the character of him who undertook so great a work. After leaving San Francisco Henry Meiggs went to Chile where he laid the foundation of his enormous fortune by the construction of various railroads. It was before his departure for Peru that he made this characteristic proposition to the Chilean government. The Araucanian Indians had successfully defied the early Spanish conquerors and even up to Don Henry's time the flower of the Chilean army had been unable to accomplish more than yearly to wrest from them about half a mile of the territory, which was fortified and held. The lands of these Indians were rich in the precious metals, and Don Henry proposed to the Congress of Chile to subjugate the entire territory of the Araucanians at his own expense, putting up \$4,000,000 as a forfeit in case of failure and asking no compensation for all this beyond each alternate quarter section of the conquered land.

The Chilean ministry, desiring further information, inquired as to the methods of which he proposed to make use. To this Don Henry replied that the matter was simple enough. His plan was to visit California, to make known the extreme metallic richness of the land, to

secure the services of 10,000 miners and to let them loose upon the territory. Don Henry's offer was carefully considered, and finally declined with thanks, it being furthermore stated "that the Chilean ministry preferred the Araucanians." Had the proposition been accepted, not Araucania alone but Chile would have been essentially American to-day.

At 9 A. M. on the morning of the 21st of June, accompanied by an officer of the Oroya Railroad, we started in a private compartment to inspect this wonderful feat of engineering. The upward course began at once, following the valley toward the base of the distant Andes. At 10 we breakfasted in our compartment and about noon, having reached the mountains, began the steep ascent over terraces where looking out of the car windows one could drop an orange hundreds of feet on portions of the track below, through tunnels drilled into the solid rock, and over bridges spanning yawning chasms, until at about 3 P. M. our destination was reached at an altitude of nearly 10,000 feet.

Beyond a slight quickening of the pulse none of our party suffered from sorroche, an attack from which, however, the height attained could hardly have led us to expect. This malady, of which so much is heard among the Andes, has for its symptoms palpitation of the heart, blueness of the face and violent vomiting. As in the case of sea-sickness, many are totally exempt from it, while others are always affected. That this affection is so much better known in South America than in other mountainous countries is probably accounted for by the fact that greater altitudes are there more readily reached. Monte Meiggs is comparatively not difficult of ascent, and yet it cannot be far from 20,000 feet in height.

After a very substantial dinner, which the keen mountain air rendered doubly acceptable, we prepared for our return. The descent was to be made in a hand-car and by gravity, since a car started on any portion of the Oroya Railroad can, without any other motive power, run into the station at Lima. This hand-car had been brought up with us on the train, and upon putting it together it was noticed that the fastenings of two of the wheels were broken. After a hurried consultation, for it was growing late, some telegraph wire was found by the men who were to conduct the descent, and the broken portions were tied together. They hoped this would answer, they said.

"And if it does not?" I asked. They shrugged their shoulders.

I looked askance at my companions, but they stood by in silence. Probably, like myself, they would willingly have seconded a proposition to return by the regular train, but were too proud to make it. Without a word we took our seats on the car. Silently one of the employees opened a bag, from which he took three Colts revolvers, and keeping one handed the others to his two companions. These they cocked and placed between their feet.

"It is not uncommon," one thoughtfully explained, "for desperadoes, since this car is used by the paymaster, to throw it off the track and open fire with Winchesters upon the survivors. I got a tumble and a bullet myself not so very long ago."

Again I looked at my companions. It was perhaps owing to the high altitude that each seemed to exhibit the preliminary signs of sorroche. As for myself, my heart was in my mouth; but it did not trouble me long, for of a sudden the brakes were taken off and with a spring the car shot forward, apparently leaving at the point of departure my entire internal economy. Down we rushed with ever increasing speed, the car swaying from side to side, on one hand the mountain wall, on the other a drop of perhaps a thousand feet, through tunnels of midnight darkness, around sharp curves where the broken wheels fairly creaked with the strain, whizzing across the Puente del Infiernillo—the bridge of hell—while the shades of evening were thickly gathering. The starless night closed in around us, shutting from our straining eyes all view of the track in front. It was now simply a question of chance as we plunged into the darkness.

"We ought to have started sooner," muttered one of the men, "a stick or stone or even a dog on the track would throw us into the valley." All talk, difficult enough before on account of the rushing wind, now ceased, and in silence we watched the sparks fly from the wheels. Thoughts of the armed outlaws and of the broken fastenings kept running through my mind, and the journey seemed almost endless. At length the sudden twists around the sharp curves ceased. We were in the valley. Presently a big light burst upon us.

"Down brakes, Sykesey," cried one of the men. The station was before us. Thank God!

Before leaving Lima we finally engaged a man speaking Spanish and English to accompany us as interpreter, several others who had been suggested having decided not to make the journey with us. Each member of our party had two small bags containing a change of clothing and a few necessities. These bags were arranged to balance on either side of the back of a mule. We had also ponchos\* of rubber and wool, and our arms consisted of two shotguns, a Winchester carbine and four heavy revolvers. Our stores were packed in three small wooden boxes with hinged tops and fastening with padlocks. These boxes were mainly filled with canned meats to be used only in case of necessity. Cooking utensils were carried in a bag and were supposed to balance one of the boxes of provisions. Tents we had none, owing to the great difficulty of transportation, though blankets of course were taken. One member of the party in addition started with a spring overcoat, a silk umbrella and a bottle of cologne, but these outgrowths of civilization did not form a portion of our outfit upon our arrival at the other side. About the heaviest part of our impedimenta was our silver coin, carried in bags, since the paper money of Peru circulated but a comparatively short distance beyond the coast.

From Lima to Pacasmayo is a two days' journey north by sea. The steamer was bound for Payta, and was crowded with passengers for the various intermediate ports. The captain of the steamer informed me that this was called the "hog route," owing to the very uncleanly habits of the local passengers, and added that he had frequently seen Peruvians while leaning over the bulwarks turn and eject tobacco juice upon the deck.

At Pacasmayo we remained three days the guests of the officials of the railroad. The first day we visited on horseback the adobe ruins of the Temple of the Sun at Jequetepec, now hardly more than immense mounds of

earth. Near by was a hill which had served as a cemetery, and on the surface in every direction lay skulls, bones, fragments of huacas\* (clay vessels for food or water often placed with the dead), shrouds and hair, while under ground the relics of mortality were in such profusion that the butt of a riding whip readily brought them to view. The next day we went up the road about sixteen miles on a special train, taking a couple of peons armed with spades, and opened a burial mound. After half an hour's digging we were rewarded by the discovery of two huacas and a number of earthen pots, one still partly filled with corn. Subsequently we unearthed a pair of bronze tweezers and later a skeleton, the teeth slightly green from a bit of copper held in the mouth, perhaps to pay toll over some sub-Peruvian styx. The next day was passed at a large hacienda where hundreds of Chinese were employed in the manufacture of sugar. Four hours by rail on the succeeding morning took us to Laviña.

Here began a twenty-day journey on mule back, exclusive of time spent in waiting at various points since the arrieros or mule drivers declined to accompany the traveler with their beasts for a period longer than five or six days. Our route lay over the mountains to Cajamarca, where Atahualpa, the Inca, was taken; from there to Celendin, thence to Chachapoyas, the capital of the department of the Amazonas, where that delicious fruit, the chirimoya, is found at its best; and on by way of Molino Pampas to Moyabamba. During this time we were thrown with all sorts and conditions of arrieros or mule drivers, some intelligent (comparatively speaking) and some of the densest ignorance. Upon one occasion an Indian boy attached to the party, picked from the ground a paper ring from a cigar which had been thrown away. This he strung around his neck for a talisman. Another time we had an arriero, whose idea of Peru was of the most exalted kind. According to him it produced everything, "Any bears here?" we once asked. "Plenty," "Any lions?" "Yes indeed," "Any elephants?" (After a long pause during which his truthfulness was evidently struggling with his patriotism) "No, but there are foxes."

The mules were at times more intelligent than the arrieros who accompanied them. So steep were the mountain paths that the saddle was fastened by a loop under the tail to prevent its slipping over the animal's head. Flights of steps on the mountain's side often required the wary beast first to plant the fore and then the hind feet upon one flat stone, so that all four hoofs were included in a space hardly larger than a man's handkerchief, and this many times repeated at length achieved a descent at first seemingly impossible. Again the path lay over 20 or 30ft. of limestone rock, down which trickled a tiny stream, the descent being too steep and slippery to walk, and accomplished only by the mule drawing all four feet together and sliding down. Once near Chachapoyas on a very narrow way, skirting the mountain wall, our path led directly over an ugly rock having about 3ft. of level earth on the outer side. Wishing if possible to avoid passing over the slippery surface, I turned the animal's head toward the margin referred to. The mule advanced very slowly, and keeping its weight mainly upon three feet, pressed with the other upon the part indicated; when all of a sudden the entire mass of earth and stone fell crashing into the valley, 1,000ft. below. The mule drew back its foot and stood trembling for full a minute.

Our journey by mule-back, while arduous, had furnished but little of real adventure, though once I got into a very unpleasant position. While riding along the narrow path, having on one side the mountain wall and on the other a precipice, my foot became entangled in a small bush against which the mule had borne me in its efforts to keep away from a sheer drop of 1,000ft. on the other side; and the beast continuing to advance, my foot was carried back and the howls of the Mexican spur were driven deep into its body. The animal, wild with pain, reared on its hind feet and found little difficulty in throwing me off, half unseated as I was. Fortunately I fell lengthwise, as the path was too narrow to allow me to lie in any other position. There I lay with my foot jammed into the stirrup, completely at the mercy of the mule. The vicious animal was not slow to avail itself of its opportunity and delivered kick after kick in rapid succession, fortunately with unshod feet. I never before felt so helpless. Next the beast started to run, dragging me a short distance over the rocky path, when finally the rusty stirrup opened at the top, cutting my foot completely across, but freeing my foot. I jumped up and shook myself; no bones were broken, and beyond some cuts and bruises I was unhurt. I found my navy revolver at full cock, probably from contact with a stone.

After our three weeks of muleback over roads often differing in no way from inclined planes of stone, sometimes serving as water courses by way of variety, and after days of weary waiting for lazy arrieros at wretched Indian villages, we rode, my three companions and myself, into the level country around Moyabamba. We had left behind us chain upon chain of the Peruvian Andes of ever decreasing height; behind us the vampire bats, on account of which we had passed many a night booted and with muffled throats, and to whose existence the faint and bleeding mules bore ample witness in the mornings; behind us the sorroche with its headache, palpitation of the heart and bleeding from the nose; behind us the garapatas, small insects that bore into the skin, the cause of never-ending sores and sometimes death, according to the natives. We had left home "to rough it" and had certainly succeeded to our hearts' desire and more, with cold nights spent in mountain tambos† or on the ground; often so hungry that our dreams were of food, and we awoke with jaws moving mechanically; at times drenched with tropical rains, and occasionally with hardly enough water to prepare our meals.

Everything in Peru, so far, with two exceptions, had surpassed our expectations; the chasms bridged by trees did not equal the blood-curdling wood-cuts seen in geographies; and the bull fights, where the bull was by no means as fierce and powerful as the gaudy pictures in rain boxes would lead us to believe. At times the scenery had been superb. Once halting our mules on a mountain pass, with condors soaring around and trains

\* The huacas seen in collections in Lima are very interesting and of various shapes and sizes. Some are modeled after men and women and animals of all kinds, the chirimoya and other fruits. Curious whistling huacas exist, having been used to hold water. They are so arranged that when their contents are poured out, the air rushing in through a hole constructed for the purpose, gives a whistling sound.

† Huts.

\* Poncho, a blanket with a slit in the center through which the head passes; a garment much in vogue in South America.

of llamas\* winding along the narrow path, we gazed down 2,000ft. on the green valley below, where a tiny stream, the Marañon, the headwaters of the mighty Amazon, flowed like a silver thread. A horse could have jumped it there. We had no thought to follow it down, however, a journey never then accomplished, for further on its banks teemed with unseen warriors, whose air-guns and poisoned darts sent traveler and trader alike on a longer journey than the one they had undertaken. One of these tribes, by an unknown process and without any apparent incision after decapitation, removes all traces of bone from the heads of the slain and allows the flesh to dry. Of these heads, one seen by us was no larger than an apple, and yet the features were perfectly preserved, and with the long hair had rather a ludicrous appearance.

Well, our mountain journey was over; if we had danced we had also paid for the music. As we rode through the plain the scenery became more tropical, birds' nests 3 or 4ft. long hung from the trees, and swarms of butterflies arose from the ground and hovered round us, flitting to and fro in such dense masses of color that they looked in places for all the world like the shifting scenes of a kaleidoscope. At length we reached Moyabamba, the capital of the department of Loreto, the great wooded district of Peru. It was the home of a Prefect to whom we had letters and who took us in until we could secure peons to carry our luggage, for here our journey by mule-back terminated, since further over the low but precipitous hills and across the fords and torrents not even a dog could follow.

The Prefect was a bachelor and really seemed overjoyed to have us with him, and over brandy and water urged us to make a protracted stay and take a rest. But in those days it made us tired to rest, and I counseled my friends to give the Prefect no peace until our quota of peons was secured. We passed a sleepless night, as is usually the case when one first rests under cover after camping in the open air. The population of Moyabamba is almost entirely Indian. Many of the women are really beautiful, plump, with high color, and some with Madonna-like faces; indeed, Moyabamba is celebrated for two things—the beauty of its women and the excellence of its Panama hats. These hats were the finest in the world until the more enterprising inhabitants of Guayaquil bore off the palm; for in all the seven thousand inhabitants of Moyabamba I think there could hardly be found as much enterprise as is possessed in one real live Yankee. The Limanians and the people of the coast, Heaven knows, are indolent enough, and to every request requiring action they invariably return the same reply, “Mañana,” to-morrow; but the residents of the chief town of Loreto surpass even them, their answer under similar circumstances always being “Passado mañana,” day after to-morrow. There is nothing like leaving a good safe margin.

Moyabamba draws its supplies from Brazil, finding it somewhat cheaper, though American flour at the time of our visit was worth forty dollars a quintal, about one hundred pounds. We sold our saddles and bridles at nearly their cost price in Lima, and also our heavy blankets, retaining ponchos of wool and rubber.

CLARENCE BLOOMFIELD MOORE.

\* Llamas (pronounced yamas) are ill-tempered beasts and spit viciously when aroused. Llamas in Peru are all domesticated. The huanoa, which much resemble them, is found wild, as is the now rare vicuña, with long silken fleece in former times reserved for the garments of the Incas alone.

**Natural History.**

**LOS CLARINEROS.**

A BROAD veranda runs around three sides of the inner court, the patio, which is entirely surrounded by the house itself. On the red bricks, each nine inches square, with which the corridor is paved, stands the table at which we sat for our 11 o'clock breakfasts and our 5 o'clock dinners. Café at 7 in the morning each took in his or in her own room, and chocolate about 9 in the evening we had in whatever one or more of the rooms we happened to be gathered in when the girl appeared with tray balanced on her head and cups and cakes and chocolate on the tray.

When at table on the corridor my back was to the wall of the casa, which was as white as snow and as smooth and hard as marble. Before me was a well-supplied table. Beyond it an orange tree rose from a little circle in the cobble-paved patio, and bore at times a profusion of snowy blossoms most generous of their rich fragrance; at other times a multitude of golden balls which one had only to reach, almost from the edge of the corridor itself, to enjoy in all their fresh juiciness. The walks, laid with thick flags sawn from soft gray talpatati quarried from the side of the mountain which looks down upon the table where we sat, were bordered by geraniums and hollyhocks, by oleanders and jasmine, and pomegranate and roses, that half hid the great circular basin of concrete wherein lilies forever bloomed in water which ever fell from the fountain that rose from the center of the pool.

Beyond these, and on either hand, were the red roofs of the casa, sloping far down from ridge toward the court within. The tiles which covered the roof once were red, but lichens now covered great spots, and in the gutters formed by the tiles fuzzy, prickly cacti grew, their rounded heads adorned by pretty blossoms above the needle-like thorns. Over the roof we saw the pines that fringed the crest of the white cliffs of La Leona, a thousand feet above the city it overlooks. High above them the zopilotes floated among the sunlit clouds that drifted southward before the never ceasing northeast trades.

Whenever we sat at table in our ideal dining-room we were sure to see strutting on the roof the veriest dandy and braggart of all bird creation—a fellow filled to overflowing with delightful vanity, abounding impertinence and limitless audacity. There was also no little music and plenty of cheerfulness in his soul. Somewhat of a robber he was, too, but he disdained sneaking ways in which the cunning or brain takes the place of courage and of that might of muscle which so long made sole right of man—in which our brave bird may possibly not be much worse than some who imagine that they are of higher type of creation.

Whenever we gathered at table some clarinero would surely alight on the roof, strut mincingly about for a moment, and stop expectantly to eye us. Then he would

trot down to the edge of the roof, cock his head aside and survey the patio and the table. I would fillop a crumb of bread or a bit of tortilla toward him. He would hop straight up in the air as soon as he saw the flying bit of food, then settle on the edge of the tiles and carefully survey the ground. If he could see no sign of his implacable foe, the chachalacca, the sleek pheasant whose duty it was to keep watch and ward over the young chickens, and whose pleasure it was tyrannically to rule all other birds about the place, if nothing could be seen of that harsh-voiced enemy of peace and quiet, our glossy, black-coated dandy would drop to the ground, seize the crumb and in great haste fly back to safety on the roof.

There he would thresh the piece on the tiles until it was broken into bits small enough for swallowing. That done he saucily cocked his big white-rimmed eye at us, lifted his wings and gave them a quick flirt, jerked his trim tail up and down two or three times, pointed his bill straight toward the heavens, turned his head around until the lower part thereof was over his resplendent, metallic green and black neck and shoulders, and opened his throat. Out from his swelling breast poured a rich volume of high, clear notes, sweet and pure—the song that has given to him the name of *el clarinero*, the trumpeter.

It was a pleasure to go, early in the mornings, to the ancient bridge of brick and stone and mortar that has bound them together these centuries for resistance to the attack of swift floods from the near mountains. There I would lean on the smooth, rounded top of the parapet and look down on the broad backs of dusky Indian girls as they arose, glistening like seals, after a plunge in the clear pool.

On the rocks and gravel near by, and in the shallow water that rippled about them, the clarineros trotted about. Now and then one would thrust his bill suddenly into the water, then throw his head up. A gulp would follow, and a minnow was forever lost to sight.

The clarinero is by no means an exclusive bird, nor is inclined to confine himself to city life. He contributes to the cheerfulness of every hamlet, and never neglects the lonely hacienda. Indeed, he is often seen and heard near the yet more lonely rancho, in which laborers sleep and the herdsman rests from the arduous task of watching his cattle. If there should be staked on the ground to dry in the bright sunshine the skin of a newly-slaughtered goat or bullock, our clarinero will be by no means backward about helping to pull off whatever shreds of flesh or fat may be attached to the hide. Nor is he bashful when he finds the flesh cut into long strips, hung on poles and raised high on a frame in the open air, to dry into tassajo, but he promptly alights on the strips and tugs away at any bit of meat on which he can get a good hold.

E. W. P.

HONDURAS.

**The Mourning Warbler in Niagara County, N. Y.**

LOCKPORT, N. Y., July 9.—In my list of birds of Niagara county, N. Y., published in FOREST AND STREAM September, 1889, I intimated that the mourning warbler (*Geothlypis philadelphia*) breeds in this county; mentioning that on June 8, 1888, I saw a male of this species and three days later a female at the same place, but did not succeed in finding a nest.

June 13, 1891, I secured nest and three eggs, as well as the female bird. This nest was in a small opening of a dark, heavy timbered woods, and placed in the center of a cowslip. This nest and eggs are now on exhibition at the World's Fair, in Mr. Frank H. Lattin's exhibit of rare nests and eggs.

In 1892 I searched these woods and others in the vicinity thoroughly, but failed to find this species. On May 30 last I could not get into these woods on account of so much water, and concluded that it would be useless to look for these birds there in June. I therefore have not visited the vicinity until to-day.

I was gathering wild flowers when I noticed that some small bird seemed very much excited, probably on account of my presence there. On looking at it through my glass I saw it was a female mourning warbler with a small worm in its bill. Soon the male bird came, and I had a good view of them for some time, but did not succeed in finding their nest or young, although convinced that they were there.

An hour later, in another piece of woods, while watching three young screech owls sitting in a row about 10ft. from the ground—which were also watching us, with their heads turned nearly half way around—we saw another pair of mourning warblers, which also seemed anxious about the presence of ourselves or the owls. We watched the warblers for some time, often being within 10ft. of them, but were again unable to find their nest or young, although fully satisfied that they were there.

The mourning warbler is not a rare migrant in Niagara county, as was formerly supposed, but it is an uncommon summer resident.

J. L. DAVISON.

**THE SOUTHERN CAMP HUNT.—II.**

[Concluded from last week.]

THERE are eight hunters, and a deploy of one hundred yards apart will make a line a half mile in extent, which will cover a good belt. The irregular V, or crescent, is the thing as nearly as can be maintained in a broken country. There is a right, a left and a center guide.

On this occasion my brother was selected as center guide, as he rode a white pony and could be seen further by the terminal guides, thus acting as a pivotal bearing to all concerned, as all moved by the center guide, and both right and left wings swung around him as the course of the hunt and topography of the country indicated.

The rules of the hunt are these; when a deer is sprung, or “jumped,” the one who bounces him hollers “Look out” or shoots, or both as the case may require, then all hands immediately stop. The deer will usually run ahead a short distance, then surely turn to the right or left, when the guns will begin to play upon the flying

quarry and some one is apt to grass him before he gets through the gantlet. If the deer is killed outright the killer gives three long blasts of his horn, when all hands assemble to him as soon as possible. The deer is quickly skinned, cut in quarters, put in the wallets, with which each one is provided, when the line is again deployed and the “breasting” resumed. This is called “breasting,” and the most exciting and war-like of all the methods of deer hunting, and when you have been on one of these hunts with the right kind of men you will get enough to last a year to the day; but you will want to do it some more every year so long as you live. When the line encounters a broken piece of country one guide gives two toots of his horn, the other two guides reply with one long blast each, thus enabling all to maintain a regular line in the roughest country.

The dogs are kept in the rear as much as possible, never allowed to follow false scent or break over until put after a wounded deer. In open woods it is easy enough to control the dogs; but occasionally, when the line is traversing a black-jack rough or morass, or reed brake, the dogs see their chance for fun, and there's no use, no argument will stop them—the loud yelp of an old hound will stir the enthusiasm of the other hounds and “gush” of the half-breeds; then the deer and hunters must look out. As the hounds warm up, the half-breeds rush in with their yaf, yaf! and the deer is up. Now a general cry ensues and a wild pandemonium is turned loose in the jungle, and out come the frightened deer in every direction without regard to the order of running or the person or thing run over, when a wild, reckless fusillade takes place among the excited hunters.

There is great excitement in this way of hunting, nor is there another place where it is so practiced as in the localities I have mentioned, and in few other points in Florida, Alabama and lower east Louisiana.

The face of the country is irregular; sometimes only undulating, then quite broken, but universally covered with a tall, rank grass, three to six feet high, interspersed with an evergreen shrub, the gallberry, which forms in dense patches from a few yards in extent to as many acres, from two to eight feet high. In these patches the deer often lie; but if not much hunted, they prefer the open ground if the weather is warm, and lie in the tall grass, and will so lie at times until the hunter rides right upon them; then, like a bunch of quail, they suddenly burst from under your horse's nose, and with keen snort, great branching horns and flourish of white plumes are up all around you. You wonder whence they came or why you did not see them before, and unless you have the staunchest of horses, you will also wonder why you are lying on the deer's bed, as I did on this memorable trip.

The line had passed across a valley between two long ridges, and as we rose upon an open plateau on the summit, Dan Miley was riding to my right, but with no one else in sight, when four deer bounded up obliquely before us to my right and to his left—two does and two yearlings. I fired my shot barrel at one doe; my fool horse wheeled and prevented another shot. Miley put in both barrels. I saw a yearling he had slightly crippled slip into a treetop and squat. I dismounted and ran there as quickly as I could, whereupon the deer sprang out, but the first leap met my rifle ball through his shoulders and he changed ends. The doe went but a short distance and was dead. Miley had drawn first blood from the fawn, hence the claim was his. This was my first and only luck on the hunt, as my horse, a borrowed one, was unmanageable. The two deer were soon disposed of and the hunt resumed.

Having gone but a short distance I heard the crack of Joe Miley's rifle very near me, across a ravine, then the *rip-rip-rip* of a heavy deer as he ran down a long point of ridge through the black-jacks. I shouted, “Look out! look out!” which was answered by the double discharge of a gun, and a few minutes later there were other shots at remote distances, then all was still. Three low toots from the old man's horn and I appeared on the scene. He had killed an immense buck by breaking his neck with his rifle. Had ridden upon two big fellows as they were “chawin' their cud, same as cows,” he said, “and I drew or bead and broke that un's neck, see? Tother tuck er tree on me only ter run over them 'tother fellers whut couldn't hit the wheel-house uv er steamboat. Jes' listen ter them dang fools er shootin', it's bang! bang! all day an' kill nuthin'. I'd ruther be split'n' rails then be bothered with sern dched fools.”

“Well, Mr. Miley,” I said, “all can't be good shots, and you know the boys will have their fun.”

“Well, yas, I reckon yer right.”

By this time my horn had attracted the other hunters, and this monarch was soon dressed and divided into the sacks, and in a little while all are in the saddle again.

The line had scarcely spread its length when the cry of a dog broke upon the ear, and almost simultaneously, a yell of “look out! look out!” bang, bang, “look out!” bang, bang, look! bang, bang, bang. I stopped my horse and held my breath, my heart set up a tattoo, then a long pause, save for the mingled cry of the mongrel pack that now had full sway, and were rasping the hills and hollows with their wild demoniacal cries, up and down, round and round the broken knobs, grassy gulches and tangled reed brakes. Then a still remoter fusillade broke upon the ear; bang, bang, bang. Then the screaming pack seemed to swell into greater volume as they crossed an elevation, now softening down into gentler cadences as they passed beyond the distant hills; when bang, bang, came again in subdued quavers, and all was painfully still, like the calm when a storm has passed. Not even the breathing of my horse could I hear, the tumult had so subdued his nerves. But the suspense does not last. Now comes the long, keen wail, in three notes, from my brother's horn, another from Dan Miley's, then a third from beyond the hills. Riding quickly to the horns I find my brother with an immense buck and not far from him Dan Miley with another similar one. They were in a deep hollow when the main break was made, and “a perfect band of old bucks burst upon them.” My brother shot one dead the first barrel, and his gun hung fire on the second, hence a miss. Miley put both barrels into one. One of the others got a fine doe.

Everybody, dogs and all, being now in, we proceed to butcher the two big bucks to put into the wallets and take the doe in whole, and it being now 3 o'clock, we must return to camp. We were all soon in the saddle and the line stretching out, not, however, to so remain.

I had just crossed a small branch or stream and gained

the summit of a sharp ridge, when bang, bang, b-b-bang, "Look out, boys, look out!" and a finer sight I had never witnessed. A tremendous five-point buck had sprung from the "branch" in the very midst of the deploying line, making straight up a long open slant. Everybody shoots, and nothing but a frightened old buck could run like that. With his big horns laid back and plumes spread like a fan, he seemed to cleave the air. Somebody has hit him, but his gait is little retarded. His flag waved defiance, as he gained the crest of the ridge and sank from sight beyond, bound for a big reed brake a half mile away. The whole pack of hounds and half-breeds are now enjoying the result of their raising and simultaneously "break into song" as they spin along the quarry's track.

Some of the men had gained the other side of the brake by heading it. The old stag, having gained the morass, began his tactics. The brake is several miles long and from 100 to 300 yds. wide—an oozy quagmire, covered with reeds, bamboo brier and bay trees—and would bog a bed quilt, so man nor horse would attempt a penetration, though deer and dogs have a secret about getting through that has yet to be learned. But now the row is in full progress, the cunning game plays his part well. The yelling, yaffing, screaming of the mongrel pack, mingled with the bang, bang! of the guns now and then, and the excited "hollering" of the hunters, until now I hear the keen *pi-yow-ah!* of old man Miley's rifle ring out through the pine forest—then the closing in chorus of the pack, and all is still again. The day's hunt is now virtually ended. All rapidly close around the new quarry and quarter him up and divide into sacks. It is now growing bitter cold, and the dogs, black and wet with ooze, are shivering until their teeth chatter with rigor. We are soon snug in camp. The night has drawn around us and all is dark, save the glorious fire; and then comes the welcome announcement: "Supper ready, gen'lmen; yer's had big luck ter-day, en' I reckon yer's tired an' hongry, so I cluded to fix yer all up er more bigger supper than las' night, en hopes as how yer'll do hit justis."

My brother, who has acted the part of clerk to the party for years, calls the roll, the purpose of which is to keep a correct account of the expenses of the camp, and a diary of every day's proceedings and results, so there is never a dispute after the camp adjourns.

When the roll is called each one is required to tell the number of shots he made, and heads and character of game killed, so that all claims are settled then and there. After all this formality the general abandon begins and goes on till all yield to the requirements of sleep; but here is where the mirth-provoking yarns, repartee and detail, so characteristic of the "Mississippian," crop out. When each has narrated his experience for the day, and all have pulled their heads under and are dead asleep, it may be midnight, or 2 A. M., when suddenly some fellow has thought of something he has failed to tell in the general parley, and up he gets with a voice that chills your marrow. "Jim; oh, Jim; I forgot to tell you 'bout—" and out he gets, regardless of the discomfort he is affording those next to him by the sudden exposure to cold, rushes to the fire, builds up the smouldering chunks, and, lighting his pipe, begins a fresh recitation of what he failed to add in the general convention, thus awaking another fellow who has "forgot something," and then the smoking, shivering, talking and laughing crowd of ghosts talk until chilled by the cold. At last the jargon ceases, they crawl under the cover, and once more all are asleep. But my rest is broken and there is no sleep for me. The night has grown old, the gaunt forms of tall pines begin to materialize in the new-forming light. Shimmering stars one by one have quenched their spark amid the deep blue ether of heaven. The frisky fox squirrel has perched upon yonder pine knot to chaff the new invaders. The big horned owl is "blowing his gourd" in that dense clump of pine. The teams and hunting horses are pawing and munching their morning fare. Wash is humming a dirge as he feeds the stock and smokes his pipe. A heavy white frost enshrouds the bosom of earth, and the dawn of day is here.

Hello, fellows! and all are up. Everything is quiet, pantomimic bustle, no shouting, blowing of horns or unnecessary firing of guns here. The true hunter hates a noise out of order. The timid game is ever on the alert for unfavorable sounds, the slightest impression of danger may place a fine old buck miles away. Breakfast, and then we are off. The more experienced heads have planned the "beat," and the line is soon in motion. The guides resume their original places to avoid confusion.

The line has scarcely deployed, when there comes the sudden report of a gun that awakens the stillness of the cold, frosty morning, and reverberates along the heavily timbered slopes, and I see a white puff of smoke and a couple of deer spinning across the open vale, until with rapid strides they clear the ridges and are gone. A clean miss, as no signal comes. The crowd moves slowly along, with every nerve strung, and an eye and ear to every moving grass blade or scraping leaf. Bang, bang, bang, look out, fellows! look out! bang, bang, look out! here! here! here! run here with the dogs! here! here! too-t! too-t! run! b-bang! bang! "I told you so, I got 'em! I got 'em!" All has hushed. Ah, there's the three long toots, and old man Joe and I move slowly and watchfully toward the signal, crossing some broken knobs covered with rank grass above our horses' backs, and as we reached the crest of a narrow ridge, and looked down a narrow valley just in time to see my brother and white pony emerge from a thicket, two powerful bucks got up right under his horse, but on the wrong side to shoot, so he threw up his feet, turned all hold loose and fell off. Springing to his feet, he fired on the biggest buck, which was behind and dropped him, then some seventy yards, but he was up in an instant and going, he had fired the other barrel at the smaller one too far, and missed him. The two bucks passed along a portion of the line whose guns belabored them terribly, but there was no other hit. The Scotch half-breeds were near us, and I soon had them stretched out after the big buck, which they overhauled, and it was dispatched; but the others are not idle. The hounds having taken vantage of this turmoil have each a deer or two to himself, and the wild chaos that now pervaded that region was simply overwhelming—the cry of the half-breeds, the big bell notes of the hounds, mingled with the incessant *yaf, yaf, yaf* of the terriers; bang! bang! bang! *yow!*, *yow!*, *yow!*; bang! bang! "Look out, boys! look out over there, Jim! he's er comin'," bang, "run here, Sam, and bring er dog. I've crippled a buck; shot all the lead into 'em. Fetch old Ring! Sick 'em, Ring, sick 'em!"

*Yaf, yaf, yaf*; bang! bang! "I got 'em that pop, I told you so." And the grand hurly-burly has hushed as still as if there was no living creature in a hundred miles; but what is the narrator doing the while? Let me tell you. Down off his horse, frozen nearly to death from the combined force of cold and excitement, trembling from head to foot like a gristmill in action, and never a deer, dog or man in sight, but having a fine lot of shivering, and listening to the racket. So much for one's luck.

Ere long the signals begin to wait out upon the crisp morning air, one, two, three, or four, are sounding the death knell of some unlucky deer, while I mount my trembling steed and seek the nucleus of the convening crowd.

Arriving, I find everybody talking, everybody asserting claims and making much ado; three fine deer are here, two grand old bucks and a fine doe. One of the bucks to my brother's gun, the other between Miley and Dukes. The doe to Pervis. The cold still intense, a pine knot fire is built at once to warm up our benumbed hands and feet.

These fine animals are soon dressed, quartered, put in the sacks, pipes lighted, all remount, and the "breast" again resumed. I had ridden but a short distance and just as my horse had waded a clear running creek, bang! came a solitary report scarce 100 yds. from me, and a rapid toot, toot, toot. I hastened quickly to the horn. Dan Miley had jumped a large buck, and having slightly wounded him, saw him lie down in the grass not a great way off, so calling up some of the dogs, the men began to deploy in a V-shape front and forward move. The dogs are put on the trail, the deer being the nucleus of all attention. The dogs had gone less than 200 yds. when a loud scream from the hounds proclaimed the hot scent, and out came the old fellow right amid the dogs and equidistant from the enfilading lines of the hunters. I am behind the dogs, and again out of range, but a grander sight I never beheld, before or since, as he sped up the open glade in front of both lines, and although grand and thrilling, yet amusing, to see the old fellow with head laid back, and great spreading tail waving as he cleared the gauntlet of a dozen guns pouring into him, and to see the dogs run him by sight, and everybody "hollering."

But the chase does not stop here, this being only initial. All having gathered for consultation, Jim Dukes and my brother agreed to follow the dogs, as they were good riders and unencumbered with meat, and struck out in pursuit, as the hounds were in full cry, still in hearing. After a short parley, the rest of us turned about and resumed our trend in the direction of camp, moving leisurely along, jumping deer now and then, out of range—then a "Look out! look out!"—bang, bang, until some one kills another deer. So now having all the "venison" we could conveniently pack, the day being far spent, and we fatigued and hungry, we strike square for camp, which we reach a while before sundown. We had been in camp but a short time, when my brother and Dukes came in with the big buck. They had run this deer from near noon until late afternoon, and when they killed him were ten miles from camp.

This closed the second day's hunt with five more as fine deer as man ever saw. Four of them big, fat bucks, with splendid horns, and one fine doe, aggregating near 600 lbs. of venison to pack down, for that day.

The undressed deer and the rest is all carefully salted down in boxes and barrels brought with corn in them, to be returned full of meat, as a foregone conclusion.

The next two days' hunt were a repetition of the first two, and I will spare you the detail, although the scenes were as glorious as those related. Nineteen fine deer being the final bag, fourteen of which, immense bucks. Not a pound of this fine meat was lost or wasted. I ate of some of the hams the following summer.

On the morning of the fifth day in camp the wind had shifted to the east, the sky overcast, and a cold drizzling rain began to fall. The wagons are packed in snug order and the teams started for home near ninety miles, where we arrive in prime shape after three days more travel.

C. L. JORDAN.

### CAMP-HUNTING IN FLORIDA.

FLORIDA is a good place for sport. Hunting and fishing can be indulged in to one's heart's content, and though the deer are gradually disappearing from the settlements, there are still a few haunting the old favorite spots, while by going a reasonable distance they are still to be found in good numbers. Turkey, quail, snipe and duck also abound to gladden the gunner's heart, though the close season for turkey and quail commences March 1 and ends Nov. 1. The game law has only been in force now for two seasons, and it will be interesting to note how it affects sport. The deer are supposed to get eight months' rest also, but as they vary their breeding time considerably in different parts of the State; it is left to the Commissioners of each county to say what four months shall be the open season. This gives one a chance to get a little more work in, as in this county (Polk) the close season ends Nov. 1, and in the adjoining one (De Soto) it ends Oct. 1; so by crossing the county line one gets five months' hunting in the place of four.

It is unquestionably a most delightful life one leads when camping out in Florida. Personally, the distance from a postoffice is by no means a small consideration; but the perfect air of freedom, the charming surroundings, the splendid climate, the jolly goodfellowship, the strong feeling of health, the success of the day, the glorious uncertainty of the morrow, the sound, healthy sleep resulting from healthy exercise—a hundred things combine to make it charming. The abundance of good water and "lightwood" renders it a simple matter in selecting a camp. Of course rain occasionally interferes with one's comfort, but winter as a rule is a dry season, and the cold is seldom severe enough to do more than make a good fire acceptable. And oh, what an appetite one gets. Nice juicy tenderloin or "backstrap" of venison, barbecued ribs or backbone stew—nothing comes amiss, and the cook has to hump himself.

It is advisable to take a good supply of canned provisions, etc. on these trips, but it is hard to make beginners believe this. Consequently things run pretty fine at times. Luck often hangs fire for some days, and, moreover, it generally takes a few days in a new country to get fairly on the run of the deer. In company with two good hunters (one a cracker who has killed hundreds of deer) I started on a trip on the 12th of February, '89. We were tantalized with occasional glimpses of game,

but the country had been disturbed a good deal and the grass recently burnt off, so the deer were very wary and it was not till the 16th that we did any good. Of course when luck came, it came in a hurry—as on the 15th we bagged four deer and on the 17th two more. We had no meat in camp except some of the most rancid bacon I ever ate when the first batch of deer came to hand, so it will be easily imagined how welcome they were.

Again, only last month (February) I, with two others, started on the 6th for a camp-hunt. One of the others, who was taking his first hunt, undertook to look after the commissariat; accordingly I was more or less prepared to find the supply slim, but when it was discovered that all our stock of bacon had been left behind, well? A few quail along the road helped matters along, but when by the greatest good luck we bagged a fine fat doe on the evening of the 8th, one small can of potted ham—not a lunch for a hunter—was absolutely all the meat we had in camp, and 43 miles to a store.

It is doubtful whether a hunter could be induced for a pecuniary consideration to do as hard a day's work as he sometimes does for nothing. Let me quote a case where I doubt if any one would have paid enough to make either parties concerned undertake it knowingly.

In October last F. W. and myself were on a camp-hunt. One evening it was decided to try some fresh country, some miles from where we camped, and accordingly at daylight next morning the wagon was hitched up and we drove about four miles to where we intended to hunt. We were doing all our hunting on foot, as the deer were lying out in thick palmettoes, where horses had great difficulty in getting about. After leaving the wagon we tramped for some distance—two or three miles—with no success, but at last a fine buck got up near F., who was about 200 yds. to the left of W. and 300 yds. from myself. F. and W. had Winchester rifles and I a shotgun. For some reason F., who is really a fine shot, failed to touch him. I fortunately stopped my dog, and we went on, W. and I turning to the right and F. following the buck in hopes of another chance. After another long tramp, up jumped a buck and doe about 40 yds. from myself, and the buck bit the dust, W. apparently wounding the doe slightly.

We butchered the buck, hung him up and proceeded to trail the doe, but there were apparently so many trails that the old dog got completely bothered, and we abandoned it, more especially as we could find no traces of blood on the doe's trail, and we feared the buzzards would have found our buck. When we had got back within sight of the dead deer we separated to go each side of a high palmetto patch which skirted a pond, W. going on the pond side on my right, and Smiler—my dog—being off some distance to my left. Almost immediately I heard W. shoot and give a triumphant shout. Thereupon I turned back round the patch into the pond to join him and had got to where he had shot (he had walked on ahead), when the dog, who was coming up to the shot dashed into the palmettoes close to me, and the next thing heard was a desperate struggle and the bellowing of a deer. Naturally thinking it was W.'s cripple I drew my knife to go in and finish it, when suddenly the deer—a large doe—struggled gamely clear of the palmettoes and broke Smiler's hold, rushing close by me with a large gash in her throat and one side of her face peeled. Still thinking it was the wounded deer, I expected Smiler to catch her, but seeing that she was gaining fast on him I shot and broke her neck.

"Here she is," I cried. "Yes, all right—go on butchering—here's mine," shouted W., holding up the head of a grand buck. The doe having the wind of me and hearing W. down wind had evidently squatted, and Smiler must have run on to her.

Well, here was a nice lookout and no mistake, five long and weary miles to the wagon and three large deer to carry! The country was quite an impossible one for a wagon, besides which the time occupied in going for it and returning would have kept us very late. Therefore there was nothing for it but to put our backs into it.

Fortunately F. came up shortly and we dispatched him to keep the rapidly gathering buzzards away from our first deer, and at length we started; W. being the stoutest, carrying the big buck, and F. and I the other buck and the doe respectively. Stoppages occurred at every pond for water, for it was hot, and we had to rest frequently as well. I thought things nearly as bad as they could be, but I had to be enlightened yet.

When a little more than a mile and a half from the wagon a buck ran across about 150 yds. ahead. In spite of the deer on their backs F. and W. went to work at once with their Winchesters, and W.'s third shot turned him over with a broken back. This made matters worse than ever in the way of portage, but they had to be faced, and after the customary offices had been performed W. took the two lightest deer, one on each shoulder, and on we went wearily. The wagon was reached at last, and just at dark we got to camp simply tired out. We had taken nothing since daylight but a pint of whisky (and lots of water), so F. went to work at once to prepare supper, while W. and I proceeded to skin and cut up the deer. As we were bound to be home in two days it was absolutely necessary for the meat to be salted that night preparatory to smoking it on the morrow, so that it was about midnight when we finally washed ourselves, changed our blood-stained garments and crawled to bed. We did not start out at daylight next morning. R. F. B.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Took to the Woods.

MR. WM. C. HELD, of Saginaw, E. S., Mich., writes me as follows to-day. It would seem that the season has been so wet that the snipe have taken to the woods. I have known of several instances where snipe have perched upon objects high above the ground, and have seen the upland plover perch upon a fence. Such cases are very rare. Mr. Held's picture shows a hunter standing at the edge of a wood and holding up a bunch of snipe. It is a pretty little bit by itself. The letter reads:

"I herewith send you a Kodak view of one of the places where we killed our snipe this spring—in the woods and fields, where in this section of the country you will always find the little rascals when the water in the marshes is high. Have you ever seen a snipe sitting on an object of any kind, such as a log fence or limb of tree? I have seen them perched upon the above-named objects on

several occasions this spring. It looks terribly out of place for them."

That Reminds Me.

On my desk the other day I found a card with the following inscription: "Sorry I can't see you. Yours in FOREST AND STREAM, O. O. Smith." I am sorry, too, that I could not meet Mr. Smith. But is not "Yours in FOREST AND STREAM" a good thing? It is much better than "Yours in F. O. B.," or "Yours in R. S. Q.," or in about anything else? The fellowship, the freemasonry and the comradeship of the friends of a good, big, clean paper are pleasant things, and "Yours in FOREST AND STREAM" just covers the whole situation accurately and concisely.

But speaking of Mr. O. O. Smith reminds me of Mr. Bob Smith, now or once a well-known attorney in Boston, Mass. I never met Mr. Bob Smith, and do not know whether or not he is still living, but I can tell a mighty good story on him, just the same. The story came to me through a shooter whom we will call Billy for short, who was out on this hunt, years ago, when the incidents in hand occurred. The parties on the hunt were Mr. Bob Smith, Mr. Wirt Dexter and Billy. Mr. Wirt Dexter died not many years ago, and when he died one of the noblest sportsmen of Chicago passed away.

Mr. Dexter was a good shot, but Mr. Smith—well, he wasn't, according to Billy. They were shooting prairie chickens, out in Nebraska, and Mr. Smith's gait on these easy birds was about one in thirty, according to Billy. Moreover, he was troubled with a wild pointer dog, which would persist in breaking in and chasing after the birds which his master couldn't stop. "I guess the dog allowed that was the only way he could get a mess," said Billy, "but I knew the dog was spoiling Mr. Smith's fun, and I told him how to break the dog of running in. I told him to wait till he broke in the next time, and when he got off about forty or fifty yards, to slap a load of shot into him. I knew that a few doses of that sort of medicine would stop almost any dog from chasing.

"Well, Mr. Smith went out the next day with his dog, and from the shooting we heard over his way we thought he must be having rattling good sport, but he came in after lunch and didn't have a bird.

"'Didn't you have any luck, Bob?' Mr. Dexter asked him.

"'Oh, no; no luck at all,' Mr. Smith said, 'I cawn't hit them. I cawn't hit them.'

"'How about the dog? Have you got him broke from running in?'

"'Oh, no; he's bad as ever, just as bad as ever,' said Mr. Smith, and he turned to go away.

"'Well, why didn't you try shooting him, the way Billy said?' says Mr. Dexter.

"'I did try it,' says Mr. Smith, 'but it's no good.'

"'Why, what's the matter? That usually works,' Mr. Dexter says.

"'Why, confound it, man,' says Mr. Smith, 'if you must know it, I cawn't hit the dog!'

Very Gun-Shy.

Speaking of unpleasant field dogs reminds me of a dog we had out with us on a little snipe hunt over at Warsaw, Ind., not long ago. This dog was a setter of lofty parentage, and was a beautiful fellow, but so gun-shy he would run if you spoke to a friend about going shooting. We took him up in the country to trade him off, his owner, Mr. Austin Funk, auditor of the county, having offered a liberal commission to any one who would sell him or give him away. Charlie Irvin was auctioneer, and every farmer we met got an interview on the subject of buying a handsome dog, worth \$500, at the low sum of \$3.25. The farmers all seemed to think, from Mr. Irvin's looks, that he had stolen the dog, and so we couldn't make a sale. We went on out to the shooting grounds, and after the first shot our dog left us and went under the wagon, where he stayed all day. When we started home we decided to make a cut rate on dogs, and offered the retiring canine to three farmers at \$1.50, \$1.25 and \$1 respectively. It wouldn't do. We passed a wayside grocery, and resolved to sacrifice the dog for two bottles of ginger ale. This was declined, and we made it one bottle, but no takers. The man there knew Mr. Irvin to our misfortune. "Why, Mr. Irvin," said he, "you wouldn't have any dogalong that wasn't a good one. That dog is worth \$200, and you're only fooling with me." We couldn't say anything to shake this belief, and left much discouraged. We were well nigh in despair after we had tried four different times after that to give the dog away, and throw in the collar and chain. No one would take him, and we arrived in town with the dog still in our possession.

At last late that evening we found a man who needed a dog to chase the chickens out of his garden. He was willing to stand a round of cigars if we would give him this dog. We joyfully agreed to this, and he led the dog away. Next morning at 8 o'clock he was around trying to get us to take him back. He said that when he struck a match to light a fire in the morning the dog broke a window trying to get away. He couldn't afford any such dog as that, and was satisfied something was wrong with him, emotional insanity or something of that sort. We told him the cigars were all smoked up, and we couldn't think of robbing him by trading back. Then we all went over to the auditor's office and claimed commission on the sale of the dog. We allowed a round of cigars was about right for the commission (there were five of us who were trying to make the sale) and Mr. Funk settled cheerfully. Since then I hear that the present owner of this useful property has been to Mr. Funk a dozen times begging him with tears in his eyes to take that dog back, but Mr. Funk says he can't think of robbing him. "You keep on shooting over him," says Mr. Funk, on each of these occasions, "and maybe you'll break him of that gun-shyness some day—if the ammunition holds out."

About the City.

Mr. Merrill Funk, late of Warsaw, Ind., is now connected with the great house of Montgomery Ward & Co., going into the shell-loading department with Rolla Heikes and Eddie Bingham. Mr. M. E. Moran by the way, one of the gunmakers in the same house, is a Warsaw man. Mr. C. E. Irvin, of Warsaw, is in town to-day, and there is a sort of a Warsaw reunion over on Michigan avenue.

Any Coyotes To-day, Lady?

Mr. Martin L. Cummins, of Georgetown College, Washington, D. C., asks, "Where can I buy half a dozen coy-

otes, and at about what price apiece?" Most of the coyotes right around here are caught off, but can not some Kansas or Montana friend call to mind some boy who has dug out a litter? If Mr. Cummins will write to Mr. L. F. Bartels, Denver, Col., he may be put in the way of getting what he wants. Or perhaps Mr. E. Hofer, in charge of the Hunter's Cabin, Jackson Park, Chicago, has the address of Montana men who can supply coyotes. Mr. Hofer was in charge of the work of capturing young wild animals in the Yellowstone Park, for the Smithsonian Institution and other concerns, and if he were now in Montana could get the coyotes himself. Prices on coyotes vary. I have bought a very good coyote for fifty cents, and sold him for a can of tomatoes, but they may be held at \$5 or \$10. The coyote is not staple.

At the Wild West.

Often as one sees Buffalo Bill's Wild West Show, it gives him goose flesh to go there and see the boys ride. Taking the cowboys, the Mexicans, the American Indians, the Cossacks, the Arabs and the cavalymen of England, Germany, France and the United States, I presume one would most fancy the riding of the cowboys, and then perhaps that of the Mexicans. The U. S. cavalymen ride well, far better, it seems to me, than the English troopers now with the Hon. William's show. The seat of the Englishmen seems clumsy and unsteady. The Cossacks and Arabs ride all over a horse, and I should think would kill up a lot of stock.

"Probably you don't know where the best riders are to be found," said Mr. Frank Butler, manager of the bright little shooting specialist, Miss Annie Oakley, who does so much to make the programme interesting. "The American cowboys are splendid horsemen, of course, but the Italian cowboys of the Campagna can ride any bucking horse that our boys can. The Australians are good riders too, and can handle 'buck jumpers' all right."

Mr. Butler has been with the Wild West Show eight years. He says that accidents sometimes happen to the most skillful riders. Harry Shannon, one of the best of the cowboys, was nursing a sprained ankle while we were there, and that same evening we saw one of the best Arab riders thrown. His foot hanging in the stirrup he was dragged and kicked by the horse, and finally helped out of the arena with a broken rib, a most fortunate escape from a helpless position and from what seemed probable death.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Sea and River Fishing.

"Game Laws in Brief." June, 1893, revised. Game and Fish laws of all the States, Territories and Provinces. Correct, reliable, handsomely illustrated. Published by the "Forest and Stream." Sold by all dealers. Price 25 cents.

A CHOICE BUT CHEAP VACATION.

DURING a series of years in school and college and afterward in professional life, I have tried all sorts of plans for making my vacation pleasant and profitable. I have camped at the sea-shore, tramped the Adirondacks, fished the woods of Maine, traveled through Europe, visited the Catskills, the White Mountains and the various watering places of New England, but for a complete change, for solid rest, and for utter inexpensiveness, I have never found anything equal to that of which I am about to speak.

One summer while in Yale College, my uncle said to me, "Nephew, what are you going to do this vacation?" I replied that I had formed no plans as yet. "Well," said he, "Let me tell you what to do. Select a congenial companion, and take with you a suit of old clothes, a few changes of flannel underwear and plenty of good reading matter. Take the Shore Line Road from New Haven to New London, Conn. Five miles beyond New London, on the same railroad, is a little village called Noank, from which go out a great many fishing vessels during the summer season. Some go to Block Island for bluefish, making a voyage of about a week. Others visit Nantucket or Martha's Vineyard, fishing for cod. These are gone two weeks or more. Others still go to the Banks of New Foundland, and are absent some six weeks. These boats are regular fishing smacks, staunchly built, and able to ride the roughest weather. They have a crew of six or eight men, with berths for one or two more. The crews are chiefly of American birth, and for the most part are as brave and manly a set of fellows as one would wish to meet. They are usually glad to take along one or two passengers, giving them their board for the fish they catch. The board is good and so is the fishing, and if you want a right royal good time, take my advice and go to Noank."

A few days after the term closed I was on my way to Noank with a companion. We arrived about noon, dined at a quaint little restaurant, and in an hour's time had found two snacks which were going out the next morning. These boats had room only for one passenger each, so we decided to separate. The captain and crew of my boat were all Americans, except the cook, who was an old Portuguese sailor who had been all over the world. During the afternoon we helped lay in the supplies, consisting of fresh and salt meat, vegetables of all kinds and canned goods of every variety. The next morning we set sail, stopping at Block Island, to take in a supply of ice and a quantity of whitefish for bait. Our destination was Nantucket, and the trip outward was very delightful. To a boy brought up on land, such an experience is full of interest and novelty. To watch the working of the ship, the mysteries of the cook room, and to listen to the stories which old sailors know how to tell so well, affords a never-ending variety, while the ever-changing scenery as we gradually leave the land behind us, the flight of the sea gulls, the rolling of porpoises and the occasional spouting of a whale, all lend an enchantment to the scene which makes the days very short.

Once on the fishing grounds the business begins. The cod and haddock lie near the bottom in about twenty fathoms of water. They are caught with a hook, and though they are not a very gamy fish, yet sometimes they make a fierce fight, and coming up as they do with their large mouth open, they feel much heavier than they are. They run from 5 to 15 lbs. in weight, and occasionally we took one weighing 20 or 25 lbs. Not unfrequently a shark will swallow cod, hook and all, and if he is

hooked so that he cannot bite the line, you are sure of genuine sport. All hands are summoned to the line, and then comes the tug of war. If the line does not break, the shark can be drawn to the surface, and shot, but the very large ones usually get away.

At times the cod bite furiously and business is brisk, and then again they are indifferent to the bait, and for hours and perhaps days, one has nothing to do. At night the fish are dressed and packed away in ice. There are usually many boats on the fishing grounds, and at night the crews visit each other, and vie with each other in telling yarns. The weather was good with one exception, when we had a severe gale for two days, during which time I could do nothing but lie on my stomach and blow the fog horn. It was an experience, however, so grand that I counted it the best part of the trip. In two weeks' time we had loaded our vessel and sailed for New York, where I remained with the ship for two days while they were disposing of the fish, and then returned home by rail. The two weeks' catch netted the crew \$80 each, after all expenses had been paid. They offered to give me a share of the proceeds if I would return with them, but I had other plans for the balance of my vacation. It was one of the most delightful outings I have ever had, and it cost actually nothing except the railroad fare to Noank, and from New York.

I trust that all the young Americans who read this paper will not pounce upon Noank at once, for some of them might be disappointed, but a reasonable number of them could probably be accommodated. It might be well to write to the postmaster or some one who lives in the village for definite information before starting, as the number of boats going out from there is somewhat limited.

CANADIAN ANGLING NOTES.

OF American anglers the cry here is, "Still they come." Never perhaps has there been before such a rush of fishermen from New York and the New England States into northern Quebec. And never before have those who fished here enjoyed sport equal to that reported from the Lake St. John country this summer. Numbers are flocking to the Grande Discharge after the ouananiche, and all are catching lots of fish. I was almost saying that all were enjoying lots of sport. But I recollect that Mr. Robert C. Lowry finds no sport in catching thirty-two ouananiche a day, though he admits that some of them weighed 3, 4 and even 5 lbs. each. It would necessarily be a very funny world, this one of ours, if everybody in it thought alike. And if all men's tales were equal what a poor chance some of us would have for the good things of this life, or rather for what we in our blissful ignorance choose to consider the good things of this life. There would soon be very little angling left in most localities if all the world were lovers of the gentle art; and perhaps it is lucky for the future sport of noted fishermen of ouananiche, like J. G. A. Creighton, Kit Clarke, E. J. Myers and others who have sung so loudly and so enthusiastically the praises of the wily warrior of Lake St. John, that all who angle are not as enraptured as they are with the sport afforded at the Grande Discharge. Still it must be admitted that the majority of those who have fished for ouananiche under most favorable conditions are decidedly of the opinion that ouananiche is far away ahead of trout fishing. But because of Mr. Lowry's reputation as an angler and from the temper of his letter on the Lake St. John ouananiche, I am satisfied that he did not catch ouananiche under the most favorable conditions, though in all my experience I have never seen so little sport, as Mr. Lowry describes it, in so splendid a catch of fish as he reports. But anglers know that there are days and seasons when the gamest fish are heavy and slow, and Mr. Lowry unfortunately failed to hook any of athletic or gymnastic temperament, such as those which have to be sought in the revolving foam that covers the deep heaving pools at the very foot of the heavy rapids. The sport which these afford is no more to be compared with that which is had from tired or lazy fish reposing in the comparatively calm water about the rocks than the struggles of a trout are to those of a chub or outouche. And as for the ouananiche that is hooked on a troll, I cannot see what sport is to be expected of him. But "*Chacun a son gout.*"

Three Quebecers, Hon. L. P. Pelletier, E. B. Garneau and Frank Pennee, killed 62 salmon in one day this week at the Grande Discharge, and many other such catches might be reported.

Mr. and Mrs. E. J. Myers, of New York, who went to Lake St. John a few days ago have passed through to the river Mistassini, and intend to go as far as the Fifth Falls.

Messrs. Brewer and Merriam, of Springfield, have gone up to their preserve on the lower Metabetchouan, Mr. Brewer being the president of the Amaballish Club there.

The new lessees of the Grand Cascapedia, Messrs. De Forest, Dun, Vanderbilt and Dr. Mitchell, have taken possession of their property, the Earl of Derby and party having left it on the day of the expiry of the lease to the Governor-General—July 3. It is Lord Derby's last fishing in Canada, as he is about to return to England, and it has been very poor. Only 23 fish were taken during the party's stay upon the river. Mr. Walter Brackett has killed a few fine fish upon the Marguerite, and Mr. Blanchard is now with friends upon his branch of the stream. Messrs. Edson Fitch and J. D. Gilmour have had good sport upon their river, the Trinity, but upon most of the south shore streams the fishing has been very poor. Such is the report brought from the St. Ameees Mountains by Mr. Henry Hogan and from the Restigouche by parties who have returned disappointed at the small number of fish killed there up to present writing. On the north shore streams a good season is anticipated until the weather becomes too hot.

E. T. D. CHAMBERS.

QUEBEC, July 8.

A Rabbit Fish.

JOHN B. WILLARD of the Willard Mirror & Frame Manufacturing Co. of New York, caught a rabbit fish in Jamaica Bay, July 13. The fish, which is now being mounted for him by Fred Sauter, is extremely rare in waters so far north, but is common about Cuba and the West Indies. It has a peculiarly shaped mouth which in position and form bears a striking resemblance to that of a rabbit, and from this feature it no doubt gets its name. Otherwise it is a scaleless fish about 20 in. long and resembling in color the Spanish mackerel.

## AROUND MINNESOTA LAKES.

THESE notes are written from Two Brothers Camp, on the shore of Lake Melissa, where Jack and I have been for two weeks. Fishing? Well, a little, just enough to keep up our reputation. Why Two Brothers Camp? Oh, because everybody not acquainted with us always takes us for brothers when they see us together. We are nearly always together somehow, and I doubt if two friends who love to go a-fishing and have outings in general ever had better times than we do.

There has not been such pike-perch fishing known in years as the lakes of northern Minnesota have furnished this season. It has been amazing, the strings which have been brought in, and the large average size has been a constant theme among the fisher folk. Several have been caught weighing over 6lbs., and that is heavy for a pike-perch in these lakes. Jack and I have made some fine catches this summer.

The black bass did not begin biting until very late. I caught two in Lake Sally the middle of May, weighing 2 and 2½ lbs. They were the first bass caught this season. A. R. Stephens caught 8 fine small-mouth bass in Monson Lake two weeks later, and about the same time Col. Bartram and Cap. Day sneaked out of town one morning, returning the next day with 79 large-mouth bass, which they caught in Lake No. 6. On this trip they saw a deer near at hand and also a bear. The bear came to the edge of a slight bluff and stood looking down at the fishermen in the boat only a few rods away. The day Jack and I went into camp here these same two men went to Trobridge's Lake, and in two days caught over 90 pike-perch and 60 large-mouth bass.

The other day I went over to Fair Haven House on Lake Sally, where genial landlord McNeil keeps a smile, a hearty greeting, good beds and boats for all who come during the summer. My errand was to get a boat for use at our camp, and while at the pier selecting a boat Mac showed me his new bath houses, eight in number, of which he is very proud, as well he may be. Miss May McNeil came along and said, "Papa, have you shown Mr. Cooley the fish?" "Oh, I nearly forgot; come here and I'll show you something that will interest you much more than new houses and things of that sort." I went along and found the something to be four small-mouth black bass weighing 5, 4½, 4 and 4 lbs., also three pike-perch weighing 6½, 6 and 5 lbs. They were a pretty sight and excited me greatly. They were caught in Lake Sally by a gentleman from Iowa.

This has been the worst season for winds ever known. Last week for three days the wind blew a gale, and to-day the lake is foaming and roaring at a great rate. In May there was a heavy three days' blow that washed away a rod or more of the beach for a mile each way from where our tent stands. During his blow Mr. Rob Corbett, who lives here, picked up out of a pool behind a log two black bass, one weighing 6½ and the other 5 lbs. They had washed in and were stranded there by the storm. A pike was also caught, of size exceeding great, that came to grief during the same storm.

Jack and I have not caught the prize bass yet but we soon expect to. Mr. H. E. Wilson, of Red Lake Reservation, is urging us to come up there in July and catch bass until we are tired of them, and last week I had a letter from Dr. Mahaffey, of White Earth Agency, telling me to come right up there and go bass fishing with him. A man cannot be everywhere at once, so Jack and I have declined these and other kind invitations and rest content in Two Brothers Camp.

DETROIT CITY, Minn.

## MR. HARDING'S SALMON.

BOSTON, July 15.—The season for shore bird shooting in Massachusetts opened on Saturday, July 15. Some of the gunners have their ammunition ready, but the weather is hot and the marshes are generally worse by reason of low water and dry weather than is usually the case. No flights of birds are yet mentioned and it is doubtful if much sport is enjoyed till the weather changes. A few days of east wind and rain would doubtless bring down some flights of summer yellowlegs and jacksnipe. There is a long stretch of coast in the Bay State, with numerous bays and marshes. The locations are numerous where summer shore bird shooting may be enjoyed, but the gunners have manifested little interest up to date.

Reports indicate a plenty of bluefish off Nantucket and Boston sportsmen are trying them occasionally with good results. It is also reported that bluefish are coming up Buzzards Bay and that President Cleveland tries them frequently. Mr. W. H. Caggin, with Dwinel, Hayward & Co., and whom the readers of FOREST AND STREAM will remember as having made that most delightful trip into northern Aroostook county, Me., last November, stopping at the lumber camps, has a cottage at Falmouth, Mass., for the summer, and with a friend he was to try the bluefish in Buzzard's Bay early this week.

C. F. Goodwin and Ed. Weston report the taking of a 6lbs. landlocked salmon in Sebago Lake last week. They took this fish when still-fishing with bait in deep water. It has long been claimed that landlocked salmon could not be taken otherwise than by trolling in that lake in the spring, but this is a case to the contrary. Two 10lbs. salmon are reported as being lately taken in Sunapee Lake in New Hampshire. Occasional catches of a salmon or two are reported from Rangeley Lake and Mooseluamantic.

Boston salmon fishermen continue to fit out for the Canadian and New Brunswick salmon rivers, and some of these spare no expense in these outfits. The tackle people here tell me that outfits costing \$500, \$600, \$800, and even up to \$900, are the good things of their experience which sometimes come. Some of the salmon anglers are also returning, but with reports of low water, hot weather and rather poor success. Mr. Richard O. Harding, with Appleton & Bassett, and secretary of the Massachusetts Fish and Game Protective Association, came back on Saturday from a most delightful salmon trip to the Northeast Branch of the St. Marguerite. He was absent a couple of weeks and was the guest of Mr. David H. Blanchard at his salmon preserve on that river.

The readers of FOREST AND STREAM will remember Mr. Blanchard as the champion of the celebrated petition for the restriction of salmon netting in Canadian waters. This petition, though not attaining its full object, has resulted in much good, as salmon anglers will gladly testify. Mr. Blanchard has been for some time deter-

mined that Mr. Harding should take a salmon. They went to Mr. Blanchard's salmon preserve together last season, but alas! Mr. Harding was obliged to leave before he had caught a salmon. This year he is a happy angler. He brings back to Boston a 20lbs. salmon, measuring 43in. in length, and taken by himself on a Jock-Scott fly. This elegant fish was shown in Appleton's window on Saturday, and Richard's many friends dropped in to congratulate him. He bears his honors easy, only hoping to go again. The fishing was bad all the first of his absence. The weather was hot, and the water was low, and not a salmon could they get to rise for several days, though they tried them faithfully every day. At last the welcome rain came, bringing a rise of water. Then the fun begun. The first day they got a couple of rises, and landed one fish. The second day after the rain they got five rises and landed four fish, including the big one taken by Mr. Harding. It took over an hour to bring this fellow to the gaff. He leaped out of the water six times, once clearing the air for fully 10ft. The catch of these gentlemen thus far has weighed respectively 13½ lbs., 16½ lbs., 22½ lbs., 24 lbs. and 29 lbs. Mr. Blanchard will remain a few weeks longer, and sportsmen will wish him all the success he so richly deserves.

One salmon gave Mr. Blanchard and Mr. Harding a good deal of sport, and so severe did it become that it ceased to be sport. One of the guides had been casting out from the shore into a pool some feet from the bank, near which the water was still. He had not had a rise, and was leisurely reeling in his line, the fly dragging across the pool and over the still water. Very near the shore a salmon made a pass for the fly, but did not hit it. He went over the line, however, and the guide struck. The hook caught the fish in the deepest part of the belly. Here was a chance for a tussle. The salmon, maddened by the sting of the hook, started off. The rod was given him as hard as the line would bear, and in this way he could be checked a little. The first man played the fish till he was exhausted, then the other would take it and work the reel and the rod till his hands were ready to give out. Mr. Harding says that he has had the privilege of handling a good rigging with a big salmon at the other end till he could hold him no longer. They took turns in trying to subdue the fish, till at last he was brought to the gaff, after more than two hours of reeling and running, leaping and sulking. Mr. Blanchard was mightily pleased with the sport, though he does not recommend hooking salmon in the belly as a general practice. It takes too long to subdue them.

Governor Russell is off for the waters of the Miramichi, and with his friend A. H. Wood and possibly another friend. They are after salmon, and are probably the guests of the venerable actor Joseph Jefferson, at his salmon preserve. Mr. Jefferson will be likely to follow later, though at present he doubtless has his hands full in salt-water fishing with President Cleveland at Buzzards Bay.

W. H. Fox, G. W. M. Guild and Geo. D. Loud are off for the fishing ranch of the Maguadavic Club, on the river of the same name in New Brunswick. Mr. Silas D. Dizer, of Prouty & Dizer, an enthusiast as to the Rangely waters, has just returned from a fishing trip to Kennebeco. W. B. Hastings, a Columbus avenue grocer, and L. Dana Chapman, of Dame, Stoddard & Kendall, had a good day with the bluefish at Nantucket, July 4. They took nine fish weighing 8½ and 8½ lbs. each.

H. M. Burt of the Boston Globe, and Henry B. Calender have gone to the Miramichi for salmon. Harry H. Crocker has just returned from a trip to the Megantic preserve. He had most remarkable luck with trout, making a big catch, the real number of which may be published later. He saw nearly 100 deer, one moose and two caribou, while on the trip. Thomas W. Bryant of Torrington, Conn., is at the Megantic Club preserve, with a couple of friends. Gilbert Hodges, with his son and a friend, has just returned from a two weeks' stay at the Megantic preserve. W. A. Maccloud and Dr. McConnell are about starting on a trip to Tim and the Seven Ponds, in Maine. SPECIAL.

## BLACK BASS IN NEW HAMPSHIRE.

"Should you lure  
From his dark haunts above decaying brake  
Or under rock, the monarch of the lake,  
Behooves you then to ply your finest art."

THE open season when black bass can be lawfully taken is from June 15 to April 30, except Spofford Lake, in the town of Chesterfield, which is protected fifteen days later, leaving but about six weeks in the State at large in which they are covered by the law, but as they feed only about half of the year, abstaining during late fall and winter months in this latitude, there remains but about four months when they can be taken with hook and line. They have been introduced into probably more than three-fourths of the 600 lakes and ponds and a large number of the streams of the State, and there is a law and \$100 penalty, prohibiting the putting of them or their spawn in waters where they are not already found, without the consent of the Fish Commissioners.

There is considerable difference of opinion among sportsmen as to whether their presence in our waters is desirable, many claiming that with their aggressive characteristics they kill or drive away better fish than themselves, but their friends are gaining in numbers, and soon only those who fish for something besides sport will be opposed to them. As the true angler, the man who takes enjoyment from the exercise of skill with rod and reel, knows that the pleasure attending the capture of one fair-sized bass is greater than results from the filling of a boat with the small yellow perch, which appear to be the only victims of consequence the bass succeeds in destroying. Before they were put in Lake Sunapee, which claims to be the black bass headquarters, only a few salmon or trout were caught annually there, and the water swarmed with small yellow perch. Now, with the large supply of bass there, the catches of salmon and trout show great gains, and the perch have mostly disappeared. I admit that if a young salmon, shad, chub, sucker, any kind of perch, minnow, or smelt, etc., should come in the way of a bass, and he was hungry, he would take them in, and I believe an 8in. bass would swallow another fish 5in. long, and larger ones in the same ratio, but like the pike, pickerel, or pike-perch, which are almost entirely piscivorous in their diet, as their teeth indicate, he will not make either of them a special object of pursuit, and his food naturally consists mostly of insect larvæ, crustaceans, frogs, crawfish and the like.

They spawn from February to midsummer, each full grown female producing from five thousand to ten thousand, which, with her self-reliant, pugnacious disposition, she succeeds in caring for until they can look out for themselves. On good feeding grounds they will grow one pound each year until maturity. Assuming beef as the standard of 100 in nutritive qualities, the flesh of the black bass stands at 86.5, brook trout 84.2, yellow perch 80.9, smelt 73.8, and salmon 107.9. When properly dressed, which should be done very soon after taking from the water, and should include skinning, on account of a strong, oily secretion under the skin, with the exception of brook trout and salmon it is the sweetest and best of eating. For the table nothing is ahead of brook trout for me. For sport, my experience with both shows bass to be far in the lead for fighting and general game qualities, weight being equal. And I think my experience coincides with others in this particular. I have found, too, that, as they are harder to land after being hooked, it is much more of a lottery than with other fish as to whether you will hook them at all or not. They seem to have off days, when nothing will induce them to take a bait. Another peculiarity of the bass is that their taste for different days varies, if it does not for each hour of the day; the latter I have often thought was the case. At times the angle worm is good enough, generally helgramites capture them, artificial bait of a silvery hue for trolling, the live minnow or small frogs are all temptations they do not resist—when their cranky spell is not on, but should the latter condition exist, after trying part or all of the above without success, as I often have where I knew there were thousands of bass within the sound of my voice, one might as well reel up and go huckleberrying, or home, till they are in better humor. With all their imperfections as weighed from the standpoint of those who love fishing for the sport, more than the fish, they have attractions to draw anglers to the State in advance of any species of fish here, though perhaps not among such as two men who went last Sunday to spend the day fishing in a pond in Dunbarton. They dickered in a fish weighing over two pounds and immediately went into ecstasies over their "black bass" and continued to chuckle until an old lady came along and told them they had a large sucker. Such will of course be happy when eels, pouts and suckers are plenty, and if they have hard cider for sauce supremely so, but the intelligent fisherman, acquainted with black bass and their ways, will always long for waters whose bottoms are as rocky and rugged as the scenery of their New Hampshire shores, the paradise of the bass, and in which he knows those gamiest of denizens lurk and thrive to perfection. PAYSON.

MANCHESTER, N. H., July 13.

At a meeting of the Governor and Council, in Concord yesterday, Mr. Wm. H. Shurtleff, of Lancaster, was appointed Fish and Game Commissioner, as successor to Col. Elliot B. Hodge, who retains his office of superintendent of State fish hatcheries. Mr. Shurtleff is successfully engaged in the insurance business. He is an enthusiastic hustling sportsman, thoroughly awake to the interests of that class in the State, and being possessed of large executive capacity and the tact for doing well whatever he undertakes, it is confidently expected that his appointment will result in a great change for the better protection and propagation of fish and game in the whole State. PAYSON.

## ANGLING NOTES.

## The Spider and the Salmon.

ONLY a short time ago while fishing in Sunapee Lake, New Hampshire, with Dr. John B. Quackenbos, the doctor was reminded of an incident that occurred at about the place we were fishing. The lake contains landlocked salmon which are taken at the surface for a time after the ice leaves the lake, but as the surface water gets warm the salmon retire to the bottom and are caught only by still-fishing with live bait. The favorite bait is the smelt, of which the lake has an abundance of the landlocked form, and the salmon, Sunapee saibling, brook trout and at times the black bass, all feed on them. To attract the smelt a buoy is anchored in water from 50 to 75ft. deep and the place is baited by tying a piece of meat in a bag to the buoy rope close to the bottom of the lake. After the spot is baited for a few hours it is ready to be fished. The smelt cannot be kept alive in the warm surface water for any length of time, so you must catch them as you need them. The angler takes with him a bucket of minnows and his salmon rod is baited with a live minnow until a smelt is secured on a hand line or smelt line as it is called, when the minnow is taken off and the smelt is put on. For salmon it is desirable to have a smelt of good size, for small Sunapee saibling, smaller than one wishes to kill, may take the small smelts if the hook is baited with them. The late Fish Commissioner Powers and Dr. Quackenbos were fishing on "the banks" where the water is fifty-five feet deep and where the Doctor and I were fishing when he told me the story. Mr. Powers had put on a minnow on his salmon rod, then got his smelt line in operation and caught a smelt about nine inches long, which was quickly put on the hook in place of the minnow, and then fishing for a big salmon fairly began. There was scarcely enough breeze to ripple the water, but that made little difference to the fishermen, for they were fishing for salmon more than fifty feet below the surface. A spider was noticed on Mr. Powers's rod, and the anglers watched it as it crawled toward the tip and spoke about it. When the spider reached the end of the rod Mr. Powers shook his rod gently, throwing the insect into the water, where it struggled for a moment, and then a salmon, which both observers estimated to weigh over ten pounds, swam slowly up, sucked the spider into his mouth without breaking the surface, and backed slowly away and disappeared.

## An Escape and Capture.

The following curious incident happened to two fishermen only a short time ago, and as they related it to me I thought if ever a book is written about "Strange but True Angling Tales" this should have a place in it. I once told in FOREST AND STREAM of a somewhat similar incident that occurred in Lake George, and this, too, occurred at the same lake. Mr. Alexander Canfield and Mr. C. H. Hitchcock, both of Glens Falls, were fishing for pike (the pickerel of this State) from a bridge over Dunham's Bay Creek, which enters the lake on the east side about four miles from Caldwell. Mr. Hitchcock tells me

that he was watching a suspicious acting individual who had a bag that looked as if it might contain a net, and stuck the end of the wood reel on which his line was wound in a crack in the bridge floor, while his baited hook remained in the water. He returned to his fishing just as there was a splash in the water and a sharp noise of wood striking wood on the bridge. The splash was made by a big fish jumping in the creek below the bridge with his hook in its jaw, and the other noise was the wood reel striking the rail of the bridge as it went overboard into the water below. The next moment the fish headed down the creek, dragging the float, line and wood reel behind. Mr. Canfield watched the rapidly disappearing float and reel, while Mr. Hitchcock ran around by the road to the nearest house on the bay for a boat at least a quarter of a mile distant. As quickly as possible a boat was procured and he rowed back to the place where the fish was supposed to be. About eighty rods out in the bay he discovered his float as it occasionally bobbed to the surface, and he chased it until he was tired. Once he got an oar under the line but the fish was off like a flash before he could get the line in his hand. At last quite by chance he saw his wood reel fast in the weeds, and with his oar secured it and pulled in the line, only to find the fish gone with a good portion of the line, including the cork float. Mr. Hitchcock was about to return the boat to the landing and give up the search, when Mr. Canfield, who was still on the bridge, called to him that he could see his lost float coming up the creek, and undoubtedly the fish was towing it. Mr. Hitchcock as quickly as possible rowed up the creek until he saw a piece of his line trailing on the bottom, and fishing it up he found the fish on and played and killed it in almost the same place where it was first hooked, or rather hooked itself. That night when the fishermen returned home, the pike that was caught, escaped and recaptured, weighed 8lbs. 2oz.

How to Make a Fishing Wind.

I was fishing at Sunapee Lake last month, and day after day the wind came from the east, which is not considered a good point for the wind to come from. Dr. Quackenbos has on one of his boat houses a carved and gilded Sunapee sailing (and it is an excellent representation of the fish too) for a weather vane. One morning the doctor stepped out on the veranda before breakfast and looked at the gilded fish which was pointing due east—away from the lake. A colored servant, John, was passing and the doctor said: "John, can you not make that fish look just the other way, out over the lake, for we have got to have a west wind." A few moments later John was seen coming up the beach with a rake in his hand, and the doctor asked him where he had been. He said, "Up on the boat house to turn the fish around with the rake handle sir, so it will point over the lake." A. N. CHENEY.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Fishing at the Trap.

IT WOULD have surprised the first inventor of an artificial target if he could have seen with a prophetic eye the development which the sport of shooting at the trap was destined to attain. At first no one thought well of shooting at anything but live wild birds. At present no one goes fishing for anything but live wild fish, and there is no actual measure of skill in the art of angling except as that may be determined in the highly artificial and none too interesting, casting tournament with bait or fly-rods. It would be a great thing, would it not, if some one would invent a way of fishing at the trap?

Well, some one has done it. He is a Chicago man, and his name is James Munn. Mr. Munn is also the inventor of a weedless hook which has found favor. He is an employee in the County Clerk's office here, is an ardent fisherman and of a highly inventive turn of mind. This last invention of his is something unique, and shows well how much thought and care are expended in matters of modern sportsmanship, and to what perfection, albeit an artificial one, our sportsmanship has attained. Shooting at the trap is now recognized, admitted, acknowledged, and no further discussion exists in regard to it. Shall we presently reach a time when fishing at the trap shall have attained the same status? Mr. Munn thinks so, or at any rate claims that he will furnish fishing where there are no fish, make possible an accurate test of skill at angling, and furnish the dry sport of tournament casting with an additional and vital zest.

I called on Mr. Munn, and after some talk induced him to show me one of his traps. He brought out a box about 13 inches long, and 4 by 6 inches in end section. It was innocent looking enough, and was indeed quite bare on its outside, except that across the open top of the end section a flat piece of metal extended from side to side, raised about an inch above the wood.

"This is my trap," said Mr. Munn. "At the determined distance, say 30 yards, I bury this box in the water, standing it the long way up. This flat piece of metal that you see here will then be just at the surface of the water. It will be invisible to the caster where he stands, as indeed the whole top will be. He can't see a thing. It's all just smooth water as when you're out fishing. If the casting is in a competition for accuracy, the position of the trap can be indicated by a little flag. In any case, the trap itself is concealed entirely.

"Now, here is my black bass," and Mr. Munn produced a nice bass just 12 inches long, made of tin, and quite realistic. "You see, I put this bass into the trap, all down. He stands on his tail, head up, waiting for a frog. You have noticed that bass come out of water head first, and as if shot up by a spring? Well, there is a spring in the bottom of this trap, which you can't see. When I put the bass down in the trap, I set the spring. It is just exactly the principle of the Jack-in-the-box, which we used to see when we were boys.

"Two things remain to be done. We must make the bass strike at the frog and we must make him take hold of it. You are laughing. Well, just wait.

"You observe that this bass does not open his mouth. Do you see these two steel wire jaws, one on each side of his head? We have to make believe these are his jaws, only they have square-pointed hooks on the end of them, and they open sidewise, instead of up and down, as the bass mouth really does.

"We put the bass down in the box, which sets the propelling spring. Then we pull his jaws apart, one on each side of the trap, six inches wide say. We catch

each jaw in a trigger, the spring of the jaws holding the trigger in place. The trigger, you will see, is governed by this flat piece of metal which crosses the end of the trap, but which never covers up the aperture of the trap where the bass has to come out. This piece of metal I call the trip.

"The trip, as I have said, is just at the surface of the water. If you pull on the trip you spring the trigger, which releases the jaws. You also at the same instant loosen the propelling spring at the bottom of the trap. Now then, supposing you are casting a frog. You know you must cast over or beyond the trap—bass, I mean—and that you must be accurate to within six inches. You make your cast. Your frog goes 10ft. beyond this little flat bar, or trip, but your line passes across the top of the trip, and when you begin to reel in, your hook, or frog, catches on this trip, which is level with the surface of the water. At the first pull off goes the trigger. Up jumps Mr. Bass out of the box, three feet high, and looking as much like a bass as if he were alive. As he goes up his two wire jaws spring together, the hooks on the ends of them crossing and clamping on the line in such a way that it is impossible to pull a hook or even a sinker through them. You now have had your rise and your fish has been hooked. The trap will do this every time you cast a line across this horizontal trip.

"But this is not all. It is only half the fun in striking a fish. You've got to play him. You think there is no play in a tin fish? There is where you are mistaken.

"You will see that this bass is ballasted with cork until it has just about the specific gravity of water. After the bass jumps out of the box and grabs the line he lies still a while, as any bass will do, swallowing the bait. You wait till he has had about time to swallow your frog and then you strike him—see? Ah! do you see his fins work? The fact is the wire jaws are attached to springs inside the bass which work the tail and fins. My model is not yet quite complete in this, but both tail and fins will work and this will give the bass motion and resistance in the water. You can have quite a lot of fun playing a tin bass if it is only the right kind of a tin bass.

"All these motions I claim for my trapped bass. It will do these things every time. I am not quite ready to show the thing in complete operation, but hope soon to be, and believe it to be perfectly practical."

The rough working model shown me by Mr. Munn convinced me thoroughly of the possibility and practicability of everything he claimed. The trap will work for either bait or fly-casting. It is the intention to have several of the traps, set at intervals, as a "battery" in casting tournaments, and the Chicago Fly-Casting Club may use the trap at their tournaments this summer. If so, the public may have the chance of seeing in operation one of the most unique ideas ever known in sportsmanship. But angling at the trap, and professional fish shots—shades of good anglers, what are we coming to!

Mr. Munn told me that he did not yet have his trap ready for a club market, indeed not entirely completed in all its details, and added that several newspaper men were waiting to write it up when he got it finished. Perhaps this description may be of assistance to the other papers in their subsequent handling of what is really a very interesting bit of news. Mr. Munn has done something new under the sun, and I wish and believe that he may make a success out of his invention.

Alas! Santa Ana.

MR. O. H. HAMPTON, well-known as a FOREST AND STREAM correspondent, is a traveling man. Under recent date he writes me from Mayville, Wis., near by Kekoskee, and says:

"Santa Ana is dead. The bullhead habit was the cause of his untimely departure. He had grown so fond of them that he would eat nothing else, and when the supply gave out he would eat nothing else, and starved himself to death."

As the above was written from the hostelry of mine host D. Puls, proprietor of the American House (wonder why he calls it the American House?), there is every reason to believe it is correct, because Mr. Puls knew Santa Ana well. Alas! poor Santa Ana, that noble horse! His death is a disgrace to the citizens of Mayville and Kekoskee. Unthinking men, was it then impossible, in the past winter of plenty, when bullheads were well nigh copious as of yore, to lay up a store which would sustain Santa Ana until another season of plenty? By such unreasoning want of care are nations ruined, homes destroyed and cities brought into premature decay. Without Santa Ana, Mayville is doomed. It is anathema Mary-antha, in the words of the prophet. Und ach! dot Santy Anny. It is a tausend pities.

Tarpon and Salmon.

The other day I met at the FOREST AND STREAM exhibit at the World's Fair a young gentleman who seemed much interested in the big tarpon. He mentioned that he was from England and was on a long trip of pleasure in this country, his card declaring him to be "Henry Craven, Smedley Lodge, Manchester."

"I should think a tarpon would make an ugly fight," said he, "though I don't fancy the sort of tackle it seems one must use for them. They are heavier than any salmon, to be sure, but I can't see how they can be much livelier. It's grand sport, salmon fishing. Last year I killed a salmon, up in Scotland, that weighed 50lbs. It was a great fight. And, do you know, in Scotland one is not allowed to use a gaff in landing a salmon. The opinion is that too many fish get away in an injured condition when the gaff is in use. We have to land our fish there in a vast landing net.

"I see you have here in the building the skin of a brook trout that weighed 9lbs. or better. It is a very handsome fish. What would you say to a brook trout that weighed 40lbs.? There was one taken of that weight in Wales. It was a monster. You may see we have some fishing in a way in the old country, but it is no such vast a region as this. Last year I took some of your black bass in New England, and liked the sport very much. A muscallonge I have never killed, but I judge from the mounted specimens I see here it must be a fighter, and as I am now not so far from the muscallonge country, I should be delighted to have a go with one, if possible."

Wants a Rough Trip.

Mr. H. Ashbrook, of St. Louis, Mo., writes: "Where can I find good bass fishing in northern Wisconsin or Michigan, in lakes that have not been fished too much?

It does not matter how much of a wilderness I get into or how rough the country is. If the readers of your valuable paper would write me, some who are thoroughly posted, I would thank them."

If Mr. Ashbrook will go to Trout Lake via Woodruff, Wis., cross the lake and portage a mile and a half over to Rice Lake, he will find pleasant camping grounds and be at hand to Crooked Lake, Boulder Lake and the Manitowish River. Especially in the river he will find all the bass fishing he likes, and can take all the wall-eyes he wants, and very likely have fine muscallonge fishing. These are as good waters as lie in Wisconsin, but if they are too easy, guides can be obtained at Trout Lake who will take the adventurous hundreds of miles over the inner waterways and lose him to his heart's content. Mr. W. H. Haskell, of this city, Mr. J. C. Cooper, Mr. J. M. Clark or any of many others to whom I can forward mail, will no doubt be glad to tell about that country to any one who wants a pleasant trip there.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

ONEIDA LAKE.

ONEIDA Lake is situated northwest of Syracuse, the outlet being 12 miles distant. It is some 30 miles long and 5 miles wide, and shallow in depth. Many streams empty into it, the principal one being Fish Creek, which has its head on the margin of the Wilderness. The feeding grounds are everywhere, and the feed abundant. It is an admitted fact that, to say the least, there are no better breeding waters in New York State.

This lake is connected by rivers and streams with a vast area of water. Cayuga, Seneca and Onondaga lakes are the most important bodies of water connected with it, except Lake Ontario, into which the Oswego River empties. The Cayuga and Seneca flow through the Seneca River via Montezuma and Baldwinsville to its junction north of Syracuse with the Oneida River through which Oneida Lake, twelve miles away, discharges its water. At the place of this junction of the Seneca and Oneida rivers the Oswego River begins and the place takes the name of Three Rivers, although the Oswego is but a continuance of the Seneca, the Oneida coming in from the east at a right angle.

To show the fertility of Oneida Lake, I am able to present a few facts given to me by Hon. H. B. Johnson, Commissioner of Public Works of Syracuse. For many years he was a dealer in fish at Brewerton, where the outlet of the lake is, and the record of his transactions is still preserved by him. He bought the greater part of the product of the numerous nets for some fifteen years before laws prohibiting netting were passed. Here is a statement for four months in 1878, which, Mr. Johnson says, is a fair average of the business for fifteen years:

Months.	Barrels.	Pounds of smelt, and perch.	Pounds of pike, pickerel and bass.
August.....	417	55,196	28,821
September.....	597	66,912	38,488
October.....	578	73,432	41,470
November.....	511	70,107	32,093

The largest shipment made by him in one day was 98 barrels, 19,120lbs. In the winter of 1876-77 he shipped 84 tons of pike which were caught through the ice.

These figures show the value of Oneida Lake for breeding purposes. They are verified too, if verification were necessary, by the rapid increase since netting was almost entirely stopped within the last two years. Nobody now living ever knew such excellent fishing as that lake now affords. Mr. Johnson, than whom none knows the lake better, more intelligently, says that "with the present excellent protection continued and the help of a hatchery, it can be made the most wonderful fish-producing water in this country." For that matter nobody doubts this fact.

At the request of Mr. Henry Lottie, who in conjunction with others has personally spent a large amount of both time and money in a successful effort to increase the fish food supply throughout central New York, the Commissioners of Fisheries yesterday visited the lake, a few friends of Mr. Lottie accompanying him and them. All were guests of Mr. Lottie who provided for them sumptuously. With the aid of a steam yacht Constantia was visited, where a stream comes into the lake from the trout region on the north. It was at once apparent to all that it was not only a choice place for hatching pike and some other kinds of fish, but that trout could also be produced as well as at almost any other hatchery in this country. The desirability and practicability of a hatchery at this point cannot be questioned. In no manner can the waters of central New York, Lake Ontario and the St. Lawrence River be so well supplied with fish as from this lake. It can be made a great and inexhaustible reservoir.

Without committing themselves in relation to the establishment of a hatchery, the Commissioner conceded that as the waters of central New York were so well protected central New York was entitled to have requests made of the Commissioner well considered. An order was given to Munroe Green on the spot to send 50,000 muskallonge to the lake in the belief that such fish would flourish in this water even better than in the St. Lawrence.

I append some particulars of the Commissioners' visit and of their observations elsewhere, which, I assume, are of general interest.

D. H. BRUCE.

SYRACUSE, July 15.

From the Syracuse Daily Journal, July 14.

The New York State Fishery Commission arrived in Syracuse last night in a private car on the Central-Hudson road and registered at the Yates. The Commissioners are: L. D. Huntington, New Rochelle, President; Edward P. Doyle, New York, Secretary and Engineer; W. H. Bowman, Rochester; A. S. Josline, Tottenville; D. G. Hackney, Fort Plain, and Robert Hamilton, Greenwich. Mr. Hackney is not with the Commission, but they are accompanied by Munroe Green, brother of the late Seth Green, originator of the hatchery system. The Commissioners came here as the guests of Henry Lottie and with a view of examining the waters of Oneida Lake as to their condition for fish propagation. It has long been held that Oneida Lake is the most favorable water in the State for a pike hatchery, and it is quite likely that one will be established there. At 9 o'clock this morning the Commissioners left the Yates and drove to South Bay, accompanied by Henry Lottie, R. W. Jones, Carroll E. Smith, Gen. D. H. Bruce and J. N. Babcock. The party will return this evening.

While at Mechanicville the Commissioners were convinced that the Hudson could be made in time a good salmon stream, for they received the information on good authority that three large-eld salmon had been taken with a fly at that place. This will be welcome news to

the lovers of this sport, as it will obviate the necessity of their going to Canada after their fish.

From the Hudson the Commissioners went to the Fulton Chain to inspect the hatcheries. While there plans for the new hatcheries were approved, and the work of building them began to-day with the laying of the foundations. Nothing was done at Saranac Inn, because the title to this property is in dispute between Dr. S. B. Ward and the State. The property will, therefore, remain unimproved until the Attorney-General, to whom the Commissioners have referred the matter, gives some decision.

Edward P. Doyle, the Secretary of the Commission, said that the location for the two new hatcheries for which the last Legislature made an appropriation of \$10,000, would be decided upon by the first of next month. Mr. Doyle also said that the distribution of fish for this year had exceeded that of any preceding year by over 40,000,000. For the first time in the history of the Commission, lobsters had been successfully hatched on a large scale.

The car in which the Commission travels is fitted up in such a way as to afford traveling accommodations for the Commissioners and also provide room for the transportation and hatching of small shad fry. After their inspection of Oneida Lake the Commissioners will return to New York, and later in the season will make an inspection of the hatcheries in the western part of the State.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

CLAYTON, N. Y., July 10.—Geo. S. Brownell, Albert Ault, Cliff Ault and Chas. Schubert, of Cincinnati, O., stopping at the Columbian, Thousand Islands Park, caught 23 fine large pickerel on the 10th. This is a good start for this season. O. P. HADCOCK.

LITTLE ROCK, Ark., July 8.—Last Saturday, with Mr. J. M. Pemberton, a shooting and fishing companion, I visited Old River, fourteen miles from this city, and with live bait we took in two and a half hours upward of 60 bass, averaging from 1½ to 3½ lbs. I have since tried them very successfully with the fly, the Johnson-fancy being the most killing fly I have tried. Jos. W. IRWIN.

TOTTENVILLE, Staten Island, N. Y., July 12.—Four weakfish at half flood. One weighed 5½ lbs. one hour after taken; the others were large fish. Prospects for the coming week seem good. JOHN T. HAWKINS.

HENDERSON, N. Y.—Catch of C. F. Beatty, New York, at Brooklyn House, Henderson: July 3, 18; July 4, 42; July 5, rain; July 6, 47; July 7, dead calm, 9. All small-mouth bass. Average weight, about 1½ lbs. A. WILKINSON.

Mr. T. F. SECOR, who has just returned from Chincoteague, Va., reports the fishing unusually poor for this season of the year. Last year he had good sport previous to July 10 in these waters, but this year he caught nothing worth mentioning. He reports that there are some "trailers" caught, but no large bluefish and no weakfish. No doubt the fishing will improve as the season advances.

MERRILL, Clinton County, N. Y.—A guest of the Indian Point House, on Upper Chateaugay Lake, caught three brook trout July 10 that weighed 4 lbs. One weighed 2½ lbs., one 1½ lb. 7oz., and one 7oz. The fishing is fairly good at present, and some nice trout have been taken. R. M. S.

SAYVILLE, L. I., July 8.—There is good fishing in Great South Bay at present. Bluefish and sea bass are biting well. One boat reported a catch of forty bluefish this week. Flounders are also caught in large numbers on the "Cinders." Boats may be had at Sayville, Bay Shore or Islip. July 17.—The bluefish have gone; but flounders and sea bass are taking the hooks.

LAKE RONKONKOMA, L. I.—The bass fishing in this lake is unusually good this year. Since Mr. Wilson's capture of a 7-pounder several other large fish have been taken, including one of 6½ lbs. weight. Bass take the fly well at present, but the largest catches are made casting with the frog.

DANVERS, Mass., July 15, 1893.—Frank Brown caught a brook trout here a while ago that weighed 1½ lbs. We call that a pretty good catch for this part of the country. W. B. C.

JULY 15.—Mr. Harry Crosby, of Chicago, while fishing in Clayton waters for black bass on 8th inst., hooked and landed a 24 lb. muskallonge on an 8oz. rod and light tackle. Mr. Crosby had just one hour's hard work before the fish was finally captured and safely in the skiff. J. G. FRASER.

STEVENSVILLE, N. Y., July 15.—Mr. Fred Sanford, of Liberty Falls, caught one pickerel weight 4 lbs. 10oz., and one pickerel, weight 3 lbs. 12oz. in Stevensville Lake, today. He was out about three-quarters of an hour. Prospects for next week good. H. M. STODDARD.

THREE LAKES, Wis., July 13.—Mr. Walter Stager and son, of Sterling, Ill. caught in four days fishing 483 black bass largest 5½ lbs., and two muskallonge, largest 15½ lbs. Fishing is good. For information address F. R. FRENCH.

ADIRONDACK, N. Y. (Riverside), July 12.—Watch Rock Hotel, on Schroon Lake.—Bass are now running, some good ones being taken. One of our guides landed a 12½ lbs. lake trout last week, and Judge Freedman, of the New York Superior Court, caught one a few days ago weighing 21 lbs. Brook trout fishing is good, one of the guests having a 3-pounder in his catch Monday. GEORGE CECIL.

### Where to Go.

ANYONE desiring information with regard to the hotels advertised in FOREST AND STREAM, such as rates, routes, or fishing and hunting opportunities, should address FOREST AND STREAM Information Bureau, where all reasonable inquiries will receive prompt answers.

### A Walton Celebration at Niagara.

TORONTO, July 12.—*Editor Forest and Stream:* It is a curious fact that while the 300th anniversary of the birth of the father of angling and the chronicler thereof, Izaak Walton, is being duly celebrated in various places in England and the United States, as yet very few points in Canada, the abundant home of all the finny beauties of the continent, the happy hunting waters of so

many fishermen, have intimated their intention of doing honors to the revered Izaak. There is, however, one place which will celebrate the Walton tercentenary and that is Niagara-on-the-Lake, the picturesque and historic old town (now known chiefly as a summer watering place) situated at the mouth of the Niagara River, where its waters go to make Lake Ontario. The waters here have been famous for the excellence of the black bass that are captured in large quantities every year. The water is probably the purest of any in America, as it comes aerated, crystallized and thoroughly filtered by its plunge over the Falls of Niagara and its rapid cleansing career of thirty miles from Lake Erie to Lake Ontario. This fact accounts for the black bass being as fine if not finer than any game fish found elsewhere on the continent. They are all large, small-mouthed, firm-fleshed, none of your flabby large-mouthed fish, and are magnificent eating, having a peculiarly delicious flavor. They are caught at this season with hook and line, the best bait being young minnows, but occasionally they will rise to the trolling spoon.

At such a spot as this the three hundredth anniversary of Izaak Walton will be celebrated on Aug. 9. A large number of noted anglers from Toronto, Montreal and other Canadian cities, and from Buffalo, Lockport, Rochester and neighboring cities in New York State, will gather. The day will be spent in following the bass, and in the evening the anglers' dinner will be held at the Queen's Royal Hotel, in the spacious ball room of the hotel. It will be a fish dinner, and the courses will be the various fish found in the Niagara waters, such as black bass, lake herring, the splendid whitefish, the tasty perch, while such delicacies as whitebait and brook trout will add to the tastiness of the event. After dinner a smoking concert will be held, at which there will be speeches and all the talk that makes fishermen so companionable. It is likely that this occasion will be the beginning of a series of annual gatherings at which anglers from both sides of the border may meet in common waters. WALTONIAN.

### The Chicago Fly-Casting Club.

Mr. E. E. Wilkinson won all the events at the tournament at Washington Park on July 13. In the first contest, for accuracy fly-casting, distance 50ft., E. E. Wilkinson was first with an average of 79ft., J. E. Isgrigg second. Second contest, long distance fly-casting, E. E. Wilkinson was first, he casting 66ft.; J. M. Clark was second with 65ft. Third contest, long distance and accuracy bait-casting, E. E. Wilkinson was first with an average of 99%, distance 135ft.; F. B. Davidson second, average 99%, distance 128ft. B. WATERS.

## Fishculture.

### Plant Yearlings Where Needed.

BY WM. F. PAGE.

A paper read at the Twenty-second Meeting of the American Fisheries Society, Chicago, Ill., June 15, 1893.

(Concluded from page 52.)

Is THE cost excessive? That is something every man must work out for himself. In commercial fishculture the problem is soon solved by reference to the cash account. In governmental work it is a matter between the authorized agents and the legislative body controlling. It depends upon so many things that no one can say the cost is or is not excessive except for a particular locality. A food which we can well afford to use in Missouri is found too costly in the East.

Leaving then the question of expense, let us see wherein does the planting of yearlings lack analogy to other processes. Last year the attempt was made to draw a comparison between stocking a stream with fish and raising an orchard, and with the parallel but half drawn it looked rather adverse to the yearling idea; but had the parallel been carried to its legitimate conclusion we would have seen that the young trees to thrive were in constant need of attention and protection. Food, water and protection from enemies all young trees must have or only the fittest survive. Forgetting or ignoring these fundamental principles of husbandry, it was concluded that because one could raise large trees from small ones, therefore one could to the best advantage stock wild waters with infant fish. There is no true simile at any point between the two processes. In the former case we domesticate the trees and in the latter case we naturalize the fish. These are widely divergent processes, in so much that in naturalization we omit, or at least do not extend, the protection always accompanying domestication. A fair comparison cannot be drawn between the two. A fairer comparison might be found in the colonization by man of new countries. Who among the advocates of infant fry planting would support a scheme for colonizing a new America by sending out a cargo of babies? Let us look at this simile and see if it won't parallel better than that of the orchard. The history of the early colonization of this continent and Australia contain accounts of the death from disease, enemies and murder by savages sometimes of entire communities. Truly these were "lambs placed in the lion's den for safekeeping" somewhat on the order recounted (page 83, twenty-first meeting) of planting two-pound lake trout in a lake infested by pickerel. The moral is, if you will put your lambs into lions' dens, don't think it strange if others put their sheep into a sheepfold. But, further, we see that wherever on proper lines colonization has been undertaken, success has crowned the effort, and so it will eventually prove in the naturalization of fish.

As a practical workman I wish to enter my negation to the doctrine advanced in this association in the past of the very large percentage of loss unavoidable in raising fry to yearlings. One member last year said if you have good luck with one million fry you may have 600,000 fish at the end of the year. In other words a loss of 40 per cent., and another member placed the unavoidable loss at 50 to 75 per cent. I prefer to look upon these statements as fancy born and not as the expressions of experience. Twenty-five years ago they might have held good. But to-day with proper appliances and a proper understanding and knowledge of the work a loss of 75, 50 or even 40 per cent. from fry to yearlings should be considered inexcusable. (This be it understood to apply only to the product of such eggs as have not been subject to transportation.) As touching this matter I ask your attention to the following quotation from Mr. Livingston Stone's work, "Domesticated Trout" (third edition, page 190): "I must, nevertheless, venture to disagree with them if they mean that there is any necessary inherent cause of death in the young fry which cannot be removed. Some will die, say 5 per cent., though it ought to be less than this, of weak constitutions. They are born into the world so weakly constituted that they cannot stand the wear and tear of life, and must die. I admit there may be perhaps five per cent. of these necessary, unavoidable deaths; but that the rest come into being already doomed to premature death, or that young trout have any mysterious or peculiar inherent cause

of death in them, any more than young calves, or pigs, or chickens, I do not believe. In the present state of information of the art, young trout fry may be more liable to accidents than other young domesticated creatures, and it may be more difficult to guard against their diseases, but this is another thing. Careless breeding may, and careless hatching will, produce a progeny of young trout of which 90 per cent. will die; but this is also another thing. Careful breeding and hatching will produce trout which are just as likely to live, in my opinion, as the same number of lambs or chickens; and if the young fry die it is not because of any mysterious, innate cause peculiar to them because they are trout, but it is because they were killed, deliberately killed, by external causes, just as much as lambs or chickens are killed by storms, or by parasites, or from starvation or poison. It is true that they are killed from ignorance of their wants, and not from wilful neglect, but it is the same thing abstractly—the cause of death is external and removable, and not innate and necessary. Their wants are peculiar, of course, and more occult and intangible than those of pigs and colts, and to a beginner it will sometimes seem as if they died without being diseased. But if they were as large as pigs and colts and could be studied as easily, I do not think their wants would be found to be any more mysterious or peculiar; and if the cause of disease could be magnified, so as to be observed and studied clearly, I think that no more trout would die when nothing was the matter with them.

"I am further convinced that study and experience will eventually clear this subject, notwithstanding the difficulties which surround it, and that at some time it will be known how to raise trout and make them live, as well as is known how to raise turkeys and chickens. I believe that there are energy and intelligence enough now interested in the cause to accomplish this end. I take this ground, partly because any other is unphilosophical and uncomplimentary to the intelligence of those who are studying the art, and partly because the facts of experience confirm it."

On page 149 of the "History of Howietown," Sir James Maitland, speaking of a loss of 20 per cent. in a particular lot of *S. levisensis*, says: "This is a very heavy percentage, and is probably 8 per cent. too high," and in another place he gives his losses as 11 per cent. and 13 per cent. My own experience with healthy eggs and fry is that the loss should not reach 10 per cent. These figures are not guesses. They are founded on actual counts. My method is this: In the spring about or a little before the average time of planting fry our young trout are transferred from the hatching troughs to the outdoor pools. We commence by taking out 500 of the most advanced fry and putting them into a pool by themselves. No other fry are added to them until they have been taught to readily congregate in the pool for their food. This training occupies two, three, four or five days, depending upon the fish and the condition of the weather. When they are thoroughly trained in this, a thousand more fry are added. It is expected, and rarely fails, that the 500 trained fish teach the 1,000 new fish to assemble at feeding times. Day by day we add fry in lots of 1,000 until the pool receives its quota. Now, the test of the whole matter comes in the succeeding fall, when the messenger brings his orders for so many yearling fish. Let us suppose his order calls for 5,300 fish. Then, that is just the number which we give him. But how? As a shipment of fry was formerly determined by counting a pan of 500 and estimating the balance? By no means. The fish are counted. At the Neosho Station three men ordinarily require less than two hours from start to finish in counting and loading an average carload of yearlings. The captain of the car is at liberty to supervise and check the count. As its completion he gives a receipt for the number of fish. This receipt is subject to a check in that the messenger must obtain a receipt or receipts from the final recipient or recipients of the fish for the like number, or stand the onus of having lost the fish in transit. The total of the receipts given by the messengers, subtracted from the total of the fry counted into the pools represents the loss in raising from fry to yearlings. A little while back I made the statement that this loss need not exceed 10 per cent. Let us see what this loss has been during the history of the Neosho Station. In 1890 on rainbow trout, 9 per cent.; in 1891, on rainbow trout, 7 per cent.; on Von Behr trout, 34 per cent.; on brook trout, 26 per cent.; in 1892, on rainbow trout 6 per cent. and on brook trout 8 per cent. The average of these six instances is 15 per cent. This is 5 per cent. too high, and was occasioned by the excessive loss of 34 per cent. and 26 per cent. respectively in the Von Behr and brook trout of 1891. In the report of these two lots of fish, written before this loss occurred, it was stated that they were very inferior lots of fish, with low degree of vitality, and unlikely to reach maturity. But the rainbow eggs of the seasons of 1890 and 1891 were strong and healthy, and their fry suffered a loss of only 9 per cent. and 7 per cent. respectively. The lowest loss, 6 per cent., was in the lot of rainbows raised from eggs spawned at Neosho from eggs which had never undergone transportation. I have a belief that the very best results in fishculture will be attained by hatching from eggs which have not been subjected to transportation.

The successes which have attended our methods of raising trout fry to yearlings in pools are in the nature of a guarantee or proof that in principle it is very near correct. How different it is from the practice of planting several thousand fry at one time in one place. Some eighteen years ago when we were getting ready a shipment of California salmon fry an old gentleman who frequently visited the hatchery asked, "Who's going to stay down at the river to care for those minnows and chop liver for them?" The question at that time provoked a smile; but to-day, in all seriousness, I ask it of the advocates of fry planting. Who is to take care of your fry after they are planted? In this connection it was well pointed out in the last meeting that the condition of the fry when planted was such that they must have food at once or they perish. While on the other hand the yearlings are in condition to go without food for a considerable length of time. It has frequently happened in the past, and will I fear frequently happen in the future, that a plant of fry has been dumped in a stream at some point instead of being properly scattered in the smaller streams. Two of the best writers on trout culture have hinted at the danger of this. In the "History of Howietown," this significant passage occurs (page 69): "It must never be forgotten that fry of salmon and trout do not roam in search of food, but take up fixed positions, and snatch at particles carried past by the current; and they do not forage like yearlings until they are three or four months old. Many of the failures in fishculture are attributable to this habit being overlooked, although as early as 1873 it was noted by Livingston Stone, who says ('Domesticated Trout,' page 171): 'As they continue to grow, they increase their range, and by the first of September or a little later, they take their food like old trout.'" Now, what are the consequences of these fry thus taking up a fixed abode for several months? Unless the number be small or the food be unusually abundant, some of those which escape the thousand and one dangers of the fry stage will be starved and never attain any size. But of the vast majority, what? They simply go to join the vast majority on the other side of trout life. Listen for a moment to a partial list of the destructive agencies which are waiting, watching and searching for them. But no, I won't inflict you. Their name is legion. You all know some of them, but none of us know them all. During the past four years we killed at Neosho Station, 530 predatory birds, 239 piscivorous snakes, 2,500 lbs. of crayfish, besides very many other enemies. We try to exemplify the motto that "Eternal vigilance is the price of fish." And yet we lose young carp, tench, bass and other pond fish. Lose by the hundreds, yes, thousands. Not from disease or inherent weakness, but by enemies so insidious, so

persistent, so minute, so numerous that we cannot totally eradicate them. Gentlemen, you will find it an enormous task to rear enough fry to counteract the destruction caused by natural enemies, and especially so unless all your plants are made under the best conditions with the greatest care. You will find also that the cost of distribution when your fry are thus planted to the best advantage will commence to approximate the cost of distributing yearlings. Stocking a stream with yearling fish requires every degree of careful forethought; but stocking a stream with fry demands an intimate knowledge of the stream and its inhabitants, a more careful and wider distribution of the plant, and in many cases an accompanying or prior deposit of natural food adapted to infant trout diet.

In the Transactions of the Twenty-First Meeting of this Society, on page 113, occurs the following quotation: "I have seen it stated in some of the streams of the Yellowstone, or West, several attempts were made to plant with fry, which failed, and other attempts made with yearlings succeeded. Now, the question naturally arises, suppose those yearlings do succeed and spawn there, what is to become of their fry when they are hatched? \* \* \* It strikes me \* \* \* if the fry cannot live in those streams, and nothing but yearling can, you have got to put in yearlings there every year." The foregoing remarks, no doubt, had reference to the plants of yearling trout made in the waters of the Yellowstone National Park by the United States Fish Commission in the autumns of 1889 and 1890, a concise history of which can be found in the Report of the U. S. Commissioner of Fish and Fisheries on the Explorations in Montana and Wyoming in the summer of 1891. (Senate Mis. Doc. No. 65, pages 51, 52 and 53). I do not know the authority for saying these streams had hitherto been unsuccessfully tried with fry—though possibly they had. But I have the very best authority for saying that in at least one of these streams most unfavorable conditions prevailed for stocking with fry, and in one other the conditions were adverse for stocking with yearlings. One of the streams, the Upper Gibson River, contained the blob, or miller's thumb (*Cottus bairdi punctulatus*), and in the other, the Yellowstone River, the native mountain trout (*Salmo mykiss*) was abundant. The infernally destructive propensities of the miller's thumb are too well known to need remark here. The native trout of the Yellowstone has well been called voracious, and to him has been credited the destruction of at least one entire plant of fry. Professor Everman, reporting on his reconnaissance of these waters, made in the summer of 1891, says: "At least the brook and Loch Leven trout, which were planted in 1889, spawned in 1890, as we found young of these species that could not be over a year old." Here is definite proof that yearlings planted in a stream are capable of reproducing and rearing their young, under conditions which would have, we may fairly say, been detrimental if not destructive to a plant of fry. How this was accomplished will, I think, show why it will not be necessary to annually restock a stream with yearlings because fry would not primarily live in it. That the trout do not exercise any direct parental care (one of the most potent and necessary factors in the reproductions of animals in general) I freely concede, and yet more freely that the young fry are under natural environments at all times the prey of numberless enemies. It is not asking too much to suppose that the yearlings would and do destroy, either as food or from self-protection, and in some cases from wantonness, very much of the animal life which would otherwise find a ready and acceptable subsistence upon the eggs and fry of the trout in the following year. It may be too much to state, but at least it cannot be contra-proved, that the adult trout destroys many of these enemies of their young from a sense of the necessity of the case. The yearling and the adult fish when planted in new waters in their subsistence on its animal life, and in their fight for survival, in short, in their very living in these waters prepare them for their progeny. It strikes me that in this they but parallel the only lines mankind has found practicable in colonizing new countries. The fact that a plant of trout fry in a particular stream, presenting outwardly all the conditions necessary for a happy trout life, has been barren of results should not be considered as conclusive argument that trout could not live and multiply in it. Try that stream again with enough yearlings sufficiently large to war upon the enemies of baby trout. And if the case is urgent and the stream is worthy, try it with a few two or even three-year-old veterans. Take the case of the Yellowstone waters as an assurance that the fish will attend to their own multiplication and save you the trouble of annually replanting yearlings.

The relative values of fry and yearlings for stocking purposes will probably never be determined. It is certain that they both have their uses and advantages. There are times and places where fry can and will do all that is necessary for stocking a given body of water, and there are places where yearlings will be required to produce the desired result. For one I am far from denying that very much of the magnificent result already achieved by fishculture is due to plants of fry. But, gentlemen, fry exclusively were planted when American fishculture was in its infancy; now that it has reached its majority it should stand ready to do a man's work of planting yearling fish where necessity demands, reserving its plants of fry for streams presenting favorable conditions of water and animal life. In this broad country of ours, with its diversified water systems and aquatic fauna, there are streams where fry planting will prove all sufficient, and others wherein only yearlings can succeed.

Food and cost of 28,000 rainbow trout raised at Neosho, Mo., Station from fry to yearlings, on a mixed diet of beef liver and mush, commencing when the fry were transferred to the outdoor pools, April 1, 1892, ending January 31, 1893:

Period.	Daily Allowance.		Total for the Month.	
	Lbs. of Liver.	Lbs. of Mush.	Lbs. of Liver.	Lbs. of Mush.
30 days of April.....	7.0	8.4	210.0	252.0
31 days of May.....	7.0	8.4	217.0	260.4
30 days of June.....	8.4	25.2	252.0	755.0
31 days of July.....	8.3	35.0	195.3	1,085.0
31 days of Aug.....	12.0	45.0	372.0	1,395.0
30 days of Sep.....	12.0	60.0	360.0	1,800.0
31 days of Oct.....	12.0	54.0	372.0	1,674.0
30 days of Nov.....	12.0	60.0	360.0	1,800.0
31 days of Dec.....	15.0	60.0	465.0	1,860.0
31 days of Jan.....	15.0	60.0	465.0	1,860.0
306 days.....			3,268.3	12,742.4

3,268.3lbs. of liver, at 3¼ cents a pound, cost.....\$114.39  
12,742.4lbs. of mush, at ¼ cent a pound, cost..... 81.86

Cost of food for 28,000 rainbow trout from April 1 to Jan. 31.. \$146.25

Cost per 1,000 \$5.22; or each fish cost a fraction over ½ct. Average cost per day per 1,000 was 1.70 cents.

Average allowance per day per 1,000 was 1.87lbs. of the mixture (in the proportion of 1 of liver to 3.79 of mush).

The fish were two sizes. On Feb. 11 '93, they were measured and weighed:

4,000 averaged 7 in. long, and 107.5lbs. per 1,000, or 430lbs. gross.  
24,000 " 5½ " " 42.5 " " 1,000, " 1,020 " "

28,000 yearlings weighed.....1,452lbs. gross.

A cost per pound of a fraction over 10 cents.

Food and cost of 12,000 "vegetarian" rainbow trout raised at Neosho, Mo., Station from fry to yearlings, commencing when the fry was transferred to the outdoor pools, April 1, 1892, and ending Jan. 31, 1893.

Period.	Daily Allowance.		Total for the Month.	
	Lbs. of Liver.	Lbs. of Mush.	Lbs. of Liver.	Lbs. of Mush.

31 days of Jan.....	45.0	45.0	1,395.0	1,395.0
306 days.....			374.7	9,288.6

374.7lbs. of liver at 3¼ cents a pound cost.....\$13.11  
9,288.6lbs. of mush at ¼ cent a pound cost..... 23.22

Cost of food for 12,000 rainbow trout from April 1 to Jan. 31.....\$36.33

Cost per 1,000 \$3.03; or each fish cost a fraction under ¼ct. February 11, 1893, they were measured and weighed: 12,000 averaged 4in. long, and 27.5lbs. per 1,000, or 380lbs. gross. A cost per pound of about 11 cents.

NEOSHO STATION, FEB. 11, 1893.

Measure and weight of yearling rainbow trout.

100 of the largest, mush and liver fed, 10.75lbs.....7 in. long

100 medium size " " 4.25lbs.....5.5in. long

100 of those fed on mush only 2.75lbs.....4 in. long

NEOSHO STATION, FEB. 11, 1893.

Measure and weight of yearling brook trout.

100 average size, fed on mush and liver 7.5lbs.....6 5in. long

NEOSHO STATION, JUNE 5, 1893.

Size and allowance of three-year-old rainbow trout.

1000 three-year-old trout in Pond No. 1 are supported in perfect condition on 2lbs. of liver and 40lbs of mush per day.

10 of the largest weigh.....17.5lbs.

15 of the medium weigh.....19.5lbs.

25 of the three-year-olds weigh.....37.0lbs.

Or each fish 23.6oz., making the weight of the 1,000 1,480lbs. The allowance per day is less than ¾ of their weight of the mixture (in proportion of 1 of liver to 20 of mush), costing now 19 cents. per day.

FEEDING AND GROWTH OF RAINBOW TROUT IN THEIR SECOND YEAR.

Feb. 20, 1893, counted 1,500 13-months-old extra select rainbow trout into Pond No. 2 to be raised for future brood stock. Total weight, 140.5lbs., an average of 93.67lbs. per 1,000. Average length of trout, 7in.

April 26, 1893 (65 days afterward) these trout were reweighed and found to average 260lbs. per 1,000, and to measure from 8 to 9in., being an increase in weight of 178%. During these 65 days they had been given 185lbs. of liver and 1,008lbs. of mush, costing \$9.29, or each pound of trout gained (after Feb. 20) cost a fraction over 3-5 cents.

May 20, 1893, 90 days after the fish were first put into No. 2 Pond they were again reweighed and found to average 320lbs. to the 1,000 fish, and to run from 9 to 9½in. long, being an increase in weight of about 24½%. During these 90 days they had been given 305lbs. of liver and 1,627lbs. of mush, costing \$17.01; or each pound of trout gained (after Feb. 20) cost a fraction over 5 cents.

N. B.—Prior to April 1, 1893, liver cost 3¼ cents a pound, after that the price was 4½ cents a pound. The cost of mush remained unchanged, namely one-quarter of a cent a pound.

Up to the time these fish were transferred to Pond No. 2 they had been all the time in a pool 8x22ft., among a lot of 6,000 other yearlings. The element of range so essential to the growth of fish was entirely lacking, as was also that of space and natural pasture. Pond No. 2, into which they were transferred, supplied to a certain extent these requisites. It has a water surface of about 6,000 square feet and a greatest depth of 36in. Whereas the pools had a greatest depth of only 2ft., wooden sides and bottom, and with a constant change of 55 gallons of water per minute, the maintenance of pasture under these conditions being impossible. Pond No. 2 is, for at least one-quarter of its area, less than 6in. in depth, containing considerable aquatic flora and breeding no little natural food.

NEOSHO, MO., JAN. 25, 1892.

Specimens of trout shipped from Neosho to Washington, D. C., Jan. 25, 1892, to be cast for the World's Fair.

No. 1. Male fish, rainbow trout, hatched from eggs received from Wytheville Station in January, 1890. Weight, 30oz.; age, 2 years.

No. 2. Same as No. 1. Weight, 21oz.

No. 3. Brook trout, hatched from eggs received from Northville Station Jan. 25, 1891. Weight, 6oz.; age, 12 months.

No. 4. Same as No. 3. Weight, 6.5oz.

No. 5. Von Behr trout (*S. fortio*), hatched from eggs received from Northville Station Feb. 5, 1891. Weight, 3.5oz.; age, 11 months.

No. 6. Same as No. 5. Weight, 3.5oz.

No. 7. Rainbow trout, hatched from eggs received from Wytheville Station Jan. 17, 1891. Weight, 3oz.; age, 12 months.

No. 8. Same as No. 7. Weight, 1.5oz.

"Statistical Review of Fishculture."

In the valuable statistical review by Mr. N. Borodine, printed in our issue of July 8, page 10, third column, forty-first line, for "protection" read "propagation."

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Hannaford Ventilated Boot Co.:

The ventilated rubber boots I ordered from you last fall have given great satisfaction. They do not sweat the feet. I have worn them a great deal this winter duck and snipe shooting, wading in water knee deep, and returned to camp at night with dry and warm feet, and I would say that no sportsman should be without a pair of your rubber ventilated waterproof hip boots. Very respectfully, A. H. HANNA, Attorney at Law, Austin, Texas.—Adv.

Minneapolis and St. Paul

Nov. 15.—American Field Trial Club Trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.  
Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

#### Kennel Interests in Finland.

We received last week a pleasant call from Mr. Dan. Joh. Wadén, a resident of Helsingfors, Finland. This gentleman was on his way home from a visit to the World's Fair. One of his objects in coming so far was to attend the World's Fair dog show, and he was naturally very disappointed at the postponement. Surprising to relate Mr. Wadén met no dogmen in Chicago, but on his return to New York he lost no time in seeking the FOREST AND STREAM, which journal, he tells us, is known even in far off Finland "as one of the most excellent in the world, through translations served for the Finnish public in Swedish and German sporting journals." By the way, there is a sporting journal in Finland called *Sporten, Tidskrift för Jagare och Fiskare*, edited by Mr. Alex. Kintse.

Mr. Wadén speaks English quite fluently and an hour's pleasant chat ensued on sporting matters in the far north country. The publicity given to shows and field trials in England created an interest in well bred dogs, and three dog shows have already been held in Finland. The first two were international affairs for all breeds of dogs and held in May, 1891-92 at Helsingfors. In December, 1892, a specialty show was held for the Finnish "spitz" at Uleaborg, in the north of Finland. This year, however, there will be no show.

Mr. Wadén is a sportsman and is very much interested in field trials, and wishing to get every information as to the manner in which they are conducted in this country, we furnished him with copies of field trial rules and also a W. K. C. marked catalogue of this year's dog show, so that now our Finnish friends will have no excuse if their bench shows and field trials are not conducted with all modern improvements. Mr. Wadén tells us that the first field trials held in Finland will take place Sept. 23 under the auspices of the Finnish Kennel Club (Finska Kennel Klubben). Of this club Mr. Wadén is the president. As may be imagined, there are no professional trainers in Finland, and most of the owners will handle their own dogs in the coming trials, and about a dozen entries are expected.

Mr. Wadén has a kennel of about twenty dogs, chiefly pointers, and they are from dogs selected for him by Mr. Pooley, the late secretary of the English Pointer Club. The most popular dogs in Finland are foxhounds and "harehounds," but there are few kennels in our acceptance of the term, most sportsmen owning one to three dogs. Among "bird" dogs English and Irish setters are held in equal favor with the pointer.

The game on which the trials will be run are ptarmigan and black bird, which we presume is black cock, and the country hunted over is not thickly covered; something like the Scotch moors we should imagine from Mr. Wadén's description, the cover being low underbrush or heather. He says that in passing through parts of Canada and New England on his way from Chicago he saw a good deal of country that would be suitable for the ptarmigan.

Mr. Wadén was charmed with the Fair and said it was "very beautiful," and quite consoled him for the disappointment in not seeing the dog show. He sailed last Wednesday on the Augusta Victoria for Southampton and from there he goes to Hull, Yorkshire, Eng., where he takes the steamer for Helsingfors, which is a four days steam. Helsingfors is 300 miles from St. Petersburg, Russia, eight hours by rail. Before he sailed Mr. Wadén visited the Hempstead Farm Kennels.

#### Bulldogs or Bull-Terriers?

Editor Forest and Stream:

Having read some of the articles in your paper in regard to bulldogs, I would like to take up the cudgels in their favor. Most of the prejudice against them arises from dogs kept by half-grown boys or vicious men, who seem to think that all they are for is to worry and tear other animals, and, therefore, do all they can to make them mean and vicious by setting them on everything in sight and encouraging them to fight at every opportunity.

On the other hand, I claim that any one who will take a well-bred bull-terrier puppy before he has had any chance to get spoiled, and bring him up in the right way—that is, not allow him to fight, except in self-defense, or worry other animals—I will guarantee that they will lose all their prejudice (if they ever had any) and say he is the nicest dog in the world. I also contend that he is the safest dog with children, because he is never snappish; being naturally brave, he is not easily aroused. He will stand more pounding from a child than any other dog. Will mind his own business better and never fly at any one without cause, nor will he bark all night at nothing and keep all the neighbors awake. I once owned a dog such as this and have seen several others belonging to different parties, who would be willing to testify with me. One especially fine dog of this breed is (or was) owned by Capt. Anson, of the Chicago Base Ball Club. He is said to be one of the smartest dogs in this country of any breed.

H. C. SMITH.

THOMASVILLE, GA.

[Mr. Smith unconsciously bears us out in our contention that a good deal of the bad reputation the bull-dog has incurred is due to the hazy conception most people have of the difference between a pure bulldog, a bull and terrier and a pure-bred bull-terrier. While we admit all he claims for the bull-terrier, we must remind him that the latter are not now under discussion; they must take care of themselves—which they are abundantly able to do—for the present the bulldog, pure and simple, is on the defensive.]

## The American Kennel Club.

Editor Forest and Stream:

He who would advocate changes in the constitution or the regulations which bear on clubs or dog shows may confidently expect to meet with the solemn assurance that "it is dangerous to tinker with them." Accepting that the term means "to mend," this well worn injunction has the ring of superstition, and only when such peculiar structures are absolutely perfect can it be wrong or dangerous to try to strengthen their various parts, or build on and thus provide for the natural increase and other demands of the times. But of course the line must be drawn between meddling interference and intents with well fixed purposes based on careful study of the conditions, and after an experience that is likely to beget understanding.

That the A. K. C. is not doing all that it might in the interests of those for whom it was organized and by whom it is now supported, is a conviction of mine—briefly expressed and perhaps somewhat indefinite—that has been given quite wide publicity, and very naturally I have been urged to go further and as publicly consider the remedies which, in my opinion, might rightly be applied with a good prospect of clearing the atmosphere of the existing discontent and favoring advancement in our part of dogdom. But this I am reluctant to attempt, for while convinced that the general condition of things therein might be much improved by a little judicious tinkering, I am not familiar with all weak spots or requirements; therefore, I cannot suggest a distinct line of action. However, physicians in these days are treating symptoms rather than disease, and if I keep in the same line surely no harm can result if I fail to do good; for those responsible for the welfare of the A. K. C. are not at all likely to follow advice unless it seems timely and wise. Reasoning thus, possibly there is no good excuse for declining the requests made; consequently I will hastily view the situation from my own standpoint, and mark here and there where there appear chances for improvement. And to favor convenience, as well as ready appreciation of my meaning, I will frame a few resolutions on the way. But in the very beginning let me urge that these will be in the rough and likely far from perfect, for there are but few constitutions or rules which do not have sections that can be wrongly interpreted without justification. However, errors will be harmless, for they must soon be detected by dogmen.

Conservatism is certainly highly commendable where large interests are at stake, yet the question suggests itself, is not the A. K. C. carrying this principle a little too far and thereby seriously obstructing its progress? If the answer is in the affirmative, then the constitution and rules governing clubs should be amended.

At the present time it is required of every association desiring to hold a show under the A. K. C. rules that it organize as a kennel club and become a member of the A. K. C., otherwise its show will not be recognized. To me this seems distinctly wrong, and if so a resolution something as follows deserves consideration:

Whereas, It appears that the field of dog shows is capable of enlargement through the medium of agricultural fairs, and possibly other exhibitions of like character.

Resolved, That associations as aforesaid be permitted to hold shows under the rules of this club, provided they are of creditable standing and guarantee to abide by its rules. That such associations shall not be required to organize as kennel clubs and become members of this club. That it shall be the duty of the secretary to influence by correspondence or personal interviews all associations that might wisely do so to hold dog shows, and assure them of the warm interest of this club in their success.

At this point the pertinent fact suggests itself that at some of the fall agricultural fairs there are not less than 250,000 visitors, and were a show held by one of these, more people would examine the dogs than at all shows on the present circuit.

If the foregoing resolution is tenable, then something like this would be necessary:

Resolved, That in the first paragraph of the "Regulations Governing Clubs Holding Shows Under A. K. C. Rules," in the first and second lines the following words be stricken out: "a member of the American Kennel Club."

That paragraph will then read: "Any club or association may hold a dog show under American Kennel Club rules, provided it abides by the following regulations."

It is always easy for a club of great size and working over a large territory to entangle itself when legislating on rules. And it would certainly seem that the A. K. C. had been as unfortunate when handling Article I, which is as follows:

"Applications for dates must be filed with the secretary of the American Kennel Club for approval by the executive committee or such sub-committee as may be empowered to grant dates."

"Such approval, however, shall be subject to the subsequent indorsement of the premium list as being in accordance with the requirements of the American Kennel Club."

Should not this article be stricken out and the entire rule abolished? Very many will, I am sure, say "Yes." Certainly it has occasioned no little embarrassment, and especially to the A. K. C., against which there has been much ill feeling excited by this direct and special clause. In my opinion the A. K. C. should have nothing whatsoever to do with the matter of dates, and if they conflict, the responsibility should rest on the show managements; moreover, if this club is to extend the field and encourage a considerable increase in the number of shows yearly, and that they be held with fairs, etc., it simply could never handle the question of dates. Finally, the club cannot handle it satisfactorily and judiciously even to-day, and with only a membership of less than 60 clubs. If I am right in these assertions then the following would be appropriate:

Resolved, That Article I.—in its entirety—of the "Regulations Governing Clubs Holding Shows Under A. K. C. Rules" be stricken out.

It would seem right and proper to exact of each association not a member of the A. K. C. a reasonable sum for permission to show under its rules. And this might without impropriety be termed a license fee. The question intrudes itself, should it be fixed and invariable, or might it not properly be made less for a small association with limited attendance than for a large one sure to be attended by several hundred thousand people? This does not deserve consideration now, but it may in the future, and it would appear wise to pave the way for it while we are "tinkering," for the work would likely require several months, and the club might wish to settle this question and all relating to it without delay. Consequently Article II., which reads as follows, presents itself for consideration:

"Applications for dates must be accompanied by a fee of \$25, which will be forfeited in the event of the show not being held, or failure to comply with the requirements of the American Kennel Club as set forth herein."

If the club is to charge a "license fee" this seems a good point at which to bring out the fact, and since to meet the changed conditions the article would have to be patched, convenience suggests that this remedy be applied:

Resolved, That Article II. of the "Regulations Governing Clubs Holding Shows Under A. K. C. Rules" be stricken out and the following substituted:

Every application for permission to show under this club's rules shall be accompanied by the regular license fee, and in addition thereto by \$25, which latter shall be forfeited in event the show is not

held, or of failure to comply with the requirements of the American Kennel Club as herein set forth; but otherwise it may be returned.

This resolution is based on my interpretation of the existing rule, but, of course, I may not render it rightly.

It would be well to glance at Article V., which runs as follows: "No show can be held under American Kennel Club rules at which the prize money is less than \$500."

This might prove obstructive, and just why the club should fix it I fail to understand. Certainly if it is to encourage the holding of shows, assuming that "the more the merrier," then this would likely have to come out. And really if dog owners are willing to show for small prizes, all else duly considered, it is not easy to see wherein it can concern the A. K. C. If the matter appears to others in this light then the following might be offered:

Resolved, That Article V. of the "Rules Governing Clubs Holding Shows Under A. K. C. Rules," be stricken out, and all articles which follow be properly renumbered.

Among the rules for the government of dog shows there is one which I have openly criticised. I refer to XIII. As it is now it is suggestive of strabismus. But that is not its serious fault.

There is no mistaking the fact that the frequent exhibitor soon acquires preferences for judges, and oftentimes sends his dogs on long journeys for the simple reason that a certain man in whom he has implicit confidence is to judge them. Now, is it right to confer upon show committees the power to fill vacancies without saying to the interested exhibitors even "by your leave," and especially since in many instances their selection cannot be favorable to the majority? The fair and liberal minded will scarcely answer "yes" to this question. Exhibitors enter their dogs with the understanding, fixed in black and white, that they are to be judged by certain men, and in my opinion it would be clearly wrong for show committees to foist on them whomever they may choose; moreover, the exhibitors concerned would rightly resent this unwarrantable assumption, so distinctly antagonistic to accepted rights; and as a matter of fact they have resented it, time and again, in the plainest possible manner.

At the solicitation of several prominent exhibitors I introduced at the last meeting of the A. K. C. a resolution to cover this point, and thought that it was accepted and passed after slight modification; but if so there is a serious error in the newly printed rule, which is as follows:

"Should an appointed judge be unable to fill his engagement the committee shall have the right to fill the vacancy. All the separate classes of any breed of dogs must, however, be adjudicated upon by the same judge, or judges acting in conjunction."

Here is practically the resolution which I offered:

Resolved, That the "Rules for the Government of Dog Shows" be changed as follows:

That Article XIII. be stricken out and the following substituted: "In event a chosen judge is unable to fill his engagement at a dog show, and the fact cannot be duly published before the entries for it have closed, his place shall not be filled by the show committee until after the show has opened, and a meeting of the interested exhibitors been called, and a vote taken by them on the best available men present, who shall have the indorsement of the committee. And the man receiving the majority of the votes of said exhibitors shall on that occasion act as judge for the absentee's classes."

If exhibitors wish this provision it should be made, and without discussion, for it is clearly their right. I am impelled to add a modest criticism, and since I made it in the meeting of the A. K. C. I cannot justly be accused of lack of good taste in repeating it here. It is a fact that a large proportion of the most zealous delegates at this club's meetings are members of show committees, and it is but natural that when considering questions on which they may be said to be arrayed against exhibitors, they will lean toward their own side. Now on this they may oppose the resolution because it interferes with their convenience, but in my opinion that should weigh not one jot; moreover, I am told by a member of the committee of the largest show held this year that he could not see wherein this resolution was unreasonable, nor why it should not be passed. Furthermore, that he thought it only fair, perfectly right and proper.

Any other construction of it does not seem possible. Some have hitched over the word "available." In using it I mean this: Assuming that the mastiff judge is absent, and as soon as the fact was made known to the committee they had a large card hastily painted and displayed in a conspicuous place; and that sign bore the place and hour of the proposed meeting. Now, when the exhibitors assemble, the committee say Mr. A. is absent. We have here Messrs. B., C. and D., who in our opinion are all capable, but if you do not think so look around and pick your men, unless we have serious objections to them we will agree to your choice, and he shall judge your classes who receives the majority of your votes.

Assuredly this would be easy, and who will say that it is more than an act of courtesy which every well-meaning committee will be pleased to show to the men to whom they are so much indebted for their success. Some critics have urged that it would be a troublesome matter to get the interested exhibitors together, but that is absurd. A notice that a judge is absent and the call for the meeting placed as stated, the committee is nearly relieved of responsibility, for exhibitors who will not take the trouble to attend can have no grounds for complaint if a judge against whom they are prejudiced is selected by the other exhibitors who look to their own interests.

Not impossibly the constitution would stand a bit of "tinkering." The associate members are now entitled to three delegates, and it is provided that for every one hundred members over three hundred they shall have an additional delegate.

The question has been asked, Why should a little unimportant specialty or other club composed of three or four members have one delegate, while a large important body which is continually paying revenue to the A. K. C.—that is, the associate members—has but three delegates? The criticism is made, and it will stand that this is not fair and equitable representation. Of course three small clubs of three members each could have as much legislative force as the whole associate members when it comes to voting.

In truth the associate members have not increased very much. As a matter of fact, at the time they were organized there were 275 associates, while at present there are only 303. But whereas when this branch was formed there were 36 clubs there are now 57. And since many of these are very small, and doubtless the members of some can be counted on the fingers of one hand, it is certainly not too much to ask that the associate members have at least one delegate for every fifty. Assuredly a club of this membership would be a large one, and doubtless the average is not over fifteen or twenty. Again the more associate members—whose membership is made up of our most prominent breeders and exhibitors—there are in it the better it will be for the A. K. C. And they would seem needed to balance the very large element from show committees. If this view of the matter meets wide acceptance, then the following might be offered:

Resolved, That Article XI. Section 5, of the Constitution of this club be changed as follows:

That the words "one hundred" in the eighth line shall be stricken out and the word "fifty" substituted. Also, in the next line, that the words "three hundred" be stricken out and the words "one hundred and fifty" substituted.

The method of electing officers has been the subject of much criticism and might properly engage attention. I am under the impression that at yearly elections a committee is appointed and a slate made up by it. I may be wrong here,

but no harm can be done if so. At the last meeting when the officers were elected there were about a dozen delegates present. Surely it is not too much to presume that two or three influential men might in such case, did they choose to do so, have elected an entire board to suit themselves. If such opportunity exists, it should exist no longer, nor a peg be left on which to hang a suspicion that the election rests with a few. And under the circumstances some such resolution as the following might be advisable:

Resolved, That at the September meeting a committee of five be elected by ballot for the purpose of nominating five men for each of the offices of president, vice-president and secretary, also fifteen other men from whom to choose three members of the advisory committee. That said committee shall be officially notified of their election by the secretary of this club within forty-eight hours of the same. That their duty, as aforesaid, shall be completed within six weeks of the day of their notification, or earlier if possible, and they shall report without delay to the president of this club, and at the same time send copies of said report to not less than five of the most prominent kennel papers of this country. Finally, that the list of nominees appearing in that report shall contain names of men only who have formally agreed to accept office in event of election.

Before going further let us briefly consider some of the qualities of the average dogman, who is of much better material than generally supposed. He is fairly well-to-do, intelligent, large-hearted and open-handed. In a word he is a good fellow. Yet some might call him a bit "peculiar," and they are right in so far as you can prevail on him, and you cannot drive him. His individuality is quite pronounced. He will meet you with hearty cordiality if you exhibit the same spirit; but any considerable amount of dignity does not wash well with him." In fact, as the gamin would put it, "he does not awe for a cent."

It would seem that one ingredient of the remedy which is evidently required at this time to "keep peace in the family" is an evident and strong desire to conciliate. Certainly Vanderbilt's notorious expression can never be safely applied to dogmen. They must be met fairly, courteously and very kindly always, and in fact as gentlemen. If their demands are unreasonable, patience in large amount should be exhibited, and every effort made to show them wherein they are so. And not until they will not listen to reason and be convinced when they are wrong, is it wise to tell them to seek his Satanic Majesty?

The impression is prevalent that the expenses of the A. K. C. are too heavy. Whether or not this is so I cannot testify, for I only know of the salary account, which is a trifle over \$3,100 yearly. Those who are in doubt might, of course, wisely elect, by ballot, a committee, of say five, to carefully look into the expenses and recommend cutting; if it is indicated. Certainly the expenses should be as low as possible consistent with good service, and the demands upon dogmen scarcely more than sufficient to meet the actual requirements or current expenses, for in no sense should the club be a money-making organization.

The advisory committee have been accused of being meddling and considering cases in which they should not have acted. There will be scarcely any grounds for this complaint after the next meeting, for the committee have put themselves on record and clearly defined the nature of the cases which, in their opinion, they can properly consider. And this resolution once before the executive committee, thereafter that committee must bear the entire responsibility.

The present laws governing the importations of dogs are said to be severe, and if this is true the following might possibly lead to better conditions:

Resolved, That a committee be appointed to carefully consider the laws bearing upon the importations of dogs, and if the same are found unnecessarily severe or awkward to so report to the club at its next meeting, and at the same time suggest the remedies and prepare a petition to the proper authorities.

Express companies surely are fit subjects with which to wrestle, for their charges are unjust, and if some of their subordinates were stood on their heads occasionally not nearly so many dogs would die on their hands. The chances of a remedy are indeed very small, but still it would seem that they were worth taking, and if others feel this way the following might do for a beginning:

Whereas, The charges by express companies for transportation of dogs are unreasonable and unjust, be it therefore

Resolved, That a committee be appointed to duly consider this subject and correspond with the heads of the various large express companies whom they cannot personally interview, with the purpose of securing a decrease in the disproportion now existing between charges for transportation of dogs and other freights.

Be it further resolved, That said committee shall be empowered to provide themselves with postage stamps and such stationery and printed matter as they may require in the line of this duty, and the bills for the same shall be paid by the treasurer of this club when presented with their approval.

Since it is very generally believed by dogmen, including even delegates, that the A. K. C. has a large surplus, and that the same should be expended in prizes or other ways to promote the interests of dogs and their owners, since, moreover, the notion of a large surplus is highly prejudicial and creates dissatisfaction, it would seem that this subject deserved attention, and if all the figures necessary to make the actual facts clear were given, the present conditions would be somewhat improved. And, after all, it is only right that the dogmen know exactly how their club stands, and the statements furnished be in the matter of completeness and simplicity within the understanding of all.

I have rambled far and wide, but as intimated at first, this is merely a chat with dogmen, yet I trust that here and there will appear some of the elements which can be properly included in the combination which seems demanded at the present time to quiet the feelings of uneasiness and discontent. These by the way are doubtless uncomfortable and disturbing, yet I am sure they are what physicians would term functional, and not evidences of real disease. That the dogmen have cause for complaint I have no doubt, and in acknowledging this I bear my share of the responsibility as one of the executive committee of the A. K. C. and a member of its advisory committee. But in all honesty I say to you who feel unkindly, I do not know, and I am sure that the A. K. C. does not know, all your reasons for complaint. In fairness, then, you should tell us wherein we have done and are doing wrong. This will be easy for you since the kennel press is markedly liberal and never disposed to refuse any logical and temperate criticism.

If I have hit upon some of the causes of complaint I hope that dogmen individually and collectively will duly consider the regulations suggested, discuss them freely, right them where wrong, fortify them by others, and finally instruct their delegates in the course to be pursued on each as it comes up at the next meeting.

## Queen Vic.

The litter that the now celebrated Irish setter Queen Vic has by Ch. Tim should prove of more than passing interest to the "Red" men. She whelped six dogs and three bitches, and all of them are strong and healthy. We all know the good dog that Ch. Tim is and the many victories of Queen Vic last spring stamped her as in the very front rank. Through Kildare these pups get the blood of Ch. Biz, owned by the late Mr. McIntosh, of Pittsburgh, and therefore besides bench merit it is well to remember that dogs of this strain are likely to be good field dogs, as Ch. Biz was one of the best Irish setters that ever ran at public trials. Had Mr. McIntosh lived and been able to carry out his plans the standing of the "red" in the field would probably be better than it is at this day.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## The McLin Affair.

CHICAGO, July 15.—Sportsmen throughout the country will deplore the miscarriage of justice in respect to the pariah, George McLin, who so cruelly starved some of the dogs which were entrusted to him to train. When public indignation was aroused and prosecution started, the building in which the dogs were confined was burned, and with it the bodies of the dogs both live and dead, eight in all.

The legal prosecution of McLin began on the 6th inst., and early the next morning the kennel and inmates were burned. For cold-blooded, heartless cruelty, the act of McLin stands alone. He appears to have had no moral responsibility or honesty in fulfilling his contracts with his employers. Utterly devoid of manly sentiment, of kindness, of common honesty, the dissipated loafer wound up his business career in the dog world with a succession of horrible cruelties. Withal, there was a most vicious defiance of law in burning building and dogs, aside from the inhumanity of the act.

In a letter, under date of July 11, Mr. J. M. Freeman, of Bicknell, Ind., writes me concerning the affair, some parts of which I quote. He says:

"McLin was acquitted before a Justice of the Peace yesterday, because proof enough could not be shown that on July 6, the dogs were not properly cared for. It's an awful thing to happen right here where the trials will be held. We have not heard from Mr. F. H. Perry, of Des Moines, Iowa, who owned three or more of the dogs. I think, if he could come here, he might do something. A good lawyer could surely get up a case that would send McLin to the pen."

After such a travesty of justice, as dealt out by this Justice of the Peace, Bicknell would seem to be a good place for all sportsmen to stay away from. If a community is so organized that it can find no wrong in such a barbarous act as "McLinizing" dogs, that community is not a good one for sportsmen to encourage. No one knows in what form it may be repeated. I believe that a community ought to have some strength of character, some individuality for good action, as well as the ordinary citizen should have. A community whose legal machinery is such that it could find no proof of guilt in such acts as McLin's, and acquitted him of them, though the witnesses against him were sufficient in every way, such community should be avoided by all dog owners and handlers.

Under date of July 10, Mr. J. T. Mayfield, a trainer of dogs himself at Bicknell, writes me as follows:

"They let the brute free. I wish the handlers were here to help me. The brute swore that the four live dogs were all he had. I had fifteen witnesses to swear that there were four live dogs and four dead ones, but he and his father, brothers and uncle swore that four were all he had and that they were in good condition. \* \* \* If they allow that brute to be free I will send my dogs home and quit the business. I will not be in a place or a business where that wretch is allowed."

As for Mr. McLin being in the business of training, he is not nor will he ever again be in it. But Mr. Mayfield's letter shows that there are some hard swearers in Bicknell. With such a justice and such McLins, Bicknell has a most foul element in its population. It owes it to itself to see that justice is done. If it is not done, sportsmen owe it to themselves to hold aloof from it.

On July 11, Mr. Mayfield wrote me as follows: "I have a little cooler head this morning and will try to give you the particulars of the case as it now stands. I filed the complaint on the 6th day of July. McLin had a smart lawyer who bulldozed the case from the start. The prosecutor not being here, the deputy undertook it. No evidence was allowed except what witness saw on July 6. I had six witnesses to testify and they told facts, but they did not see McLin feed the dogs on that day. He, with his father, swore that he fed them a tobacco bucket full of mush and meat, whereas he had bought no meat in the shop for weeks. I had nine more witnesses, but the prosecutor stopped the case. If I had had a good lawyer it would have been different. The people told me that the one I had was as good as the prosecutor and that there could be but one ending to the case."

"I attempted to prosecute him for arson, but found that the building had to be worth at least \$20 and insured, and that the poor dumb brutes counted for nothing legally."

"\* \* \* The neighbors wanted to arrest him for nuisance, but each said, 'I am afraid he will burn my house.' I told them that they were a set of cowards. Have I not more than a house to burn? With twenty-five dogs and their lives to protect, should not I be the one to be afraid? But I am not, McLin is a coward. You know there is no fight in such a brute. I told him he was a brute, and that he would have to take the dogs down and feed them that night, but the constable ordered them left where they were till morning."

"He could not be found after the trial. I think the owners of those dogs and the dogmen in general will not let such an act pass unpunished."

"His lawyer asked me if I liked McLin. What could I say? I told him I did not consider him a man. He made me repeat it again. What cared I when or where I said it? There was a murmur of lynch running through the room, it could be heard on street corners. If some one would have led, every one would pull except his relatives."

The action of Mr. Mayfield deserves all praise. The owners and handlers of this country owe Mr. Mayfield their gratitude and their indorsement. It should never be said that he made the struggle single-handed, or supported by a few local adherents. There was a deal of moral and physical courage shown in struggling for what was right under such circumstances. Were I an officer of a humane society Mr. Mayfield would have the best medal within the society's power of gift. Let us hope that Mr. Mayfield will not abandon dog training on account of the acts of McLin. It is the good men who should stay in. Let the bad ones go. Probably never again will dogs be McLinized.

In a letter dated July 9, from Mr. P. T. Madison, secretary of the U. S. F. T. C., I learn that Mr. Charles Proctor, Union City, Ind., owned one or more of the McLinized dogs, and that some of the dogs were entered in Derby A, which is arranged to be run at Bicknell. He further and earnestly says: "No punishment would be too severe for such a brute, and I hope to see him landed in State's prison. The dogmen of the country should contribute to a fund for his prosecution."

The owners should never rest till every legal measure for punishment is exhausted.

## The Northwestern Trials.

Under date of July 10 Mr. Thos. Johnson, of Winnipeg, secretary of the Northwestern Field Trial Club, writes me as follows: "I had a number of letters from those who had made Derby entries in the Northwestern Field Trial Club's trials, mentioning therein that they would like to enter in the All-Age Stake also, but would first like to know how their puppies were developing. The club has decided to extend the date for receiving entries for the All-Age Stake until Aug. 20."

"A report was circulated, from an unfriendly source, that the farmers in the vicinity of Morris would not permit our trials to be held on their lands. I wrote to Mr. McLowrie if any objection had been made to our holding the trials, to which he sent me the following:

"MORRIS, July 1.—We the undersigned, property owners of the municipality of Morris, agree to prosecute any one found hunting or running dogs over lands until after the field trials of the Northwestern Field Trials Club, to be held on September 4. (Signed) James Lawrie, F. McKenzie, J. W. Kastner, Robert A. Lawrie, Wm.

Wait, John M. Phillips, John Lawrie, Robert McTavish, John McTavish, Joseph Hawksworth, Albert Allright, S. J. Callom, S. McTavish, Wm. Micklejohn, James Connery and for the Menomonee Settlement, D. G. Theislin. The above names represent the owners of lands within a radius of nine miles of Morris."

"Sefton Hallam (a brother of Tom Hallam, now with T. G. Davey) leaves England this week and will bring Mr. Lonsdale's dogs and run them in our trials, after which he will have charge of my dogs. Birds are reported as having nested well and are very plentiful." B. WATERS.

Later.—McLin has been arrested and indicted for perjury. Trial set for July 31 at Vincennes, Ind. B. W.

## The Watson-Luse Protest.

NEW YORK, July 15.—Editor *Forest and Stream*: Three meetings of the Board of Directors of the National Greyhound Club having been called for the purpose of hearing read the report of the committee appointed to decide the appeal from the American Coursing Club's decision in the D. C. Luse alleged wrong entry of the greyhound Laura or Laura B, and no quorum being present at any of the meetings, I have been instructed by the president of the National Greyhound Club to send you the report of the case in question for publication.

H. W. HUNTINGTON, Sec'y.

IN THE MATTER OF THE PROTEST OF J. HERBERT WATSON AGAINST D. C. LUSE, FOR VIOLATION OF THE RULES OF THE AMERICAN COURSING CLUB.

BUTTE, Mont., March 20, 1893.—To the Hon. The Executive Committee of the National Greyhound Club: A review of the testimony in the above entitled cause discloses the following facts: That a protest was lodged by J. Herbert Watson against D. C. Luse and the greyhound Laura, or Laura B, during the running of the Great Bend Derby of 1892, on the ground that the said Laura was over age, and therefore entered in said stake in contravention of the rules of the American Coursing Club. This protest was supported by the affidavit of Arthur Massey, and that of Richard Taylor. Mr. Luse had a hearing before the two remaining members of the executive committee (he himself being the third member), at which testimony was offered on each side, the judgment of which committee was that Mr. Luse was guilty as charged. The American Coursing Club, upon the report of said committee, failed to take any action to punish Mr. Luse, and the matter was appealed to the National Greyhound Club by Mr. Luse.

The first affidavit of Taylor is unsatisfactory in that he does not state that he knew Jessamine, or that he had any knowledge that the pups he saw at Lorine's place were Jessamine's pups, except from what Massey told him, which, of course, is incompetent testimony. He further fails to state that he knew Laura to be one of the pups that he saw on that occasion, but says that he "verily believes" her

CHAS. TUCKER,

"NO PLUG HANDLERS, THESE."

S. C. BRADLEY,

J. M. AVENT,

D. E. ROSE.

to be one of them. In his second affidavit Taylor says distinctly that he does not know the pups that he saw at Horine's to be Jessamine's pups, and that he does not know whether he ever saw Laura before he saw her at the coursing meeting where this matter arose. Summed up, Taylor's testimony is simply that in November, 1890, he saw some greyhound pups at Horine's.

Massey states in his affidavit that on the occasion of his visit to Horine's, in November, 1890, he saw a litter of pups by Lord McPherson out of Jessamine, but does not state how he knew their breeding. He does not state that he saw Jessamine with the pups, or that he knew of her having been bred to Lord McPherson at a time which would bring the pups to the ages at which he saw them at that date, or anything of that kind; he simply makes the bare statement that he saw a litter of pups by Lord McPherson out of Jessamine at the time and place stated. It is true that he further states that he saw Jessamine from time to time from November, 1890, until she was shipped to Colorado, and that she had no other pups during that time, and that he saw the pups from time to time from November, 1890, up to the date of the race, but on the other hand, we have the testimony of ten witnesses—D. C. Luse, N. C. Ridenour, C. G. Newell, Elenora Neall, Harrison Horine, George Horine, William Horine, T. Langford, C. F. Wilkins and H. B. Byers—who state positively that Jessamine had only two litters of pups, one in April, 1890, and one in June, 1891; and three of these witnesses—D. C. Luse, George Horine and William Horine—all testify positively that Laura was one of the litter whelped in June, 1891, leaving out of consideration the affidavit of Louie Woodburn, who states the same thing; but his testimony is open to some doubt, as he testified to the contrary at the trial before the executive committee. To me this testimony is more satisfactory than the naked statement of Mr. Massey, as all these witnesses testify to matters within their immediate knowledge and observation, and it is more likely that one man, Mr. Massey, should be mistaken as to a date than that ten men should.

The report of the proceedings at the trial of Mr. Luse should not be considered by this committee. In the first place, it is not before them, and in the second, being a newspaper report, it is entirely too general, and the facts are too much mixed with the opinions and conclusions of the reporters.

To sum up: We have the statement of Mr. Massey for the plaintiff, unsupported by any corroborative evidence, while for the defendant we have the testimony of ten witnesses as to the dates of Jessamine's litters, and three that Laura was one of the litter of June, 1891; therefore have no hesitancy in finding for the defendant, and do so find, and advise that the judgment of the executive committee of the American Coursing Club be reversed, and that D. C. Luse be adjudged not guilty of the charge preferred against him, of running an over-aged dog in the Great Bend Derby of 1892. LOUIS F. BARTELS.

I concur in the above finding.—GEORGE MACDONOGALL.

IN THE MATTER OF THE PROTEST OF J. HERBERT WATSON AGAINST D. C. LUSE FOR VIOLATION OF THE RULES OF THE AMERICAN COURSING CLUB.

LEXINGTON, Ky., April 4, 1893.—To the Honorable Executive Committee of the National Greyhound Club: The undersigned, one of the members of the committee to whom was referred the appeal of D. C. Luse from the decision of the executive committee of the American Coursing Club, would respectfully report that he is compelled to decide that the judgment of the executive committee of the American Coursing Club be reversed and that D. C. Luse be adjudged not guilty of the charge preferred against him of running an over-aged dog in the Great Bend Derby of 1892. The undersigned is of the opinion that a decision which was rendered by gentlemen of the character and standing of C. G. Page and H. C. Lowe, who constituted the majority of the executive committee of the American Coursing Club, should not be disturbed or reversed without very clear and strong evidence of error on their part. These gentlemen composing the committee tried the case at the time the protest was made by J. H. Watson, had an opportunity of orally examining the witnesses and seeing their char-

acter and demeanor, and in the absence of any imputation of fraud or bias on their part, their decision is, under the circumstances, entitled to very great weight and respect. Necessarily a trial before this committee, separated as the members of it are by a thousand miles, and based upon affidavits of parties with whom the committee are not familiar, with no opportunity for cross-examination, must be, to some extent, unsatisfactory; but, as it is the only available means of determining the appeal, the testimony in the form of the affidavits furnished me must be considered and the rules of the evidence applied to them.

In my opinion, the testimony of Richard Taylor and Louie Woodburn should be entirely discarded as unworthy of belief. These witnesses voluntarily, at the original trial, testified to one state of facts, and now make affidavit to an entirely different state of facts. What inducements, if any, have been offered to these parties, or what promises have been made to them, the testimony does not disclose; but the evidence of witnesses of this character is entirely unworthy of serious consideration.

The statements of D. C. Luse, in his affidavit as to the number of stakes he had won, and his efforts in bringing coursing before the American people, savor of a great deal of self-adulation and egotism, even if true, and are certainly irrelevant and incompetent in the issue involved in this appeal, and the undersigned desires to say have had no influence whatever in bringing him to his conclusion in this case.

Unsworn written statements from D. C. Luse to outsiders very abusive to witnesses were improperly submitted as testimony to this committee.

The affidavits, however, of N. C. Ridenour, C. G. Newell, Elenora Neall, Harrison Horine, George Horine, William Horine, T. Langford, C. F. Wilkins and H. B. Byers, who state positively that Jessamine had only two litters of pups, one in April, 1890, and one in June of 1891; and the testimony of D. C. Luse, George Horine and William Horine that Laura was one of the litter whelped in June, 1891, must necessarily outweigh the single affidavit of Arthur Massey, although the similarity in form and language of the several affidavits makes it probable that the affidavits were prepared by the same person, and simply signed and sworn to by the different witnesses; but still, the preponderance of the testimony is undoubtedly with D. C. Luse, and, much as the undersigned dislikes to disturb the finding of the executive committee of the American Coursing Club, as above stated, I am compelled, according to the rules of evidence, to decide that their decision was erroneous, and to concur in the finding of the other two members of this committee. ROGER WILLIAMS.

## DOG CHAT.

## Newfoundlands.

It is a great wonder that some of our new fanciers do not take up Newfoundlands. We should think that puppies properly advertised, and if the breed was well shown at our shows, would bring remunerative prices. The outlay in

founding a good team would not be nearly so great as for St. Bernards, mastiffs, pointers, setters and other now popular breeds, and consequently the stock could be disseminated at moderate prices and still afford good interest on the investment. Since Mayor of Bingley's importation, and he was too old to do much good, even if there had been anything to breed to him, the only fairly good ones have been Prince George and his son, Prince Hal, though one or two fair native dogs were shown about seven years since. Myro, belonging to Mr. McCuen, was one. Still there has been no decided effort to breed Newfoundlands by importing a good class of females. Mr. Marshall, of Troy, has kept at it in a desultory sort of way, but the dogs are not shown as they should be, and thus probably do more harm than good. It has been said that the breed is not patronized as well as it might be in England, but the fact that the Newfoundland bitch White Squall was sold last month for \$1,125, shows that there is little cause for complaint over there. Furthermore, it is said that \$1,250 was refused for Master Jumbo, from the same kennel. More noble dogs, or handsomer animals for either hearth or lawn it would be hard to find than the well bred Newfoundland. The mongrel black dog that passes as a Newfoundland with the general run of people in this country has probably been the means of bringing the breed into disrepute; many of these black dogs exhibited at nearly every show are surly, and with danger signs up the visitors hurry past and Newfoundlands drop another step in popular favor. We trust there will be a change soon. Several people have been thinking of going in for them, but that is as far as they have gone yet. Whoever does take the breed up must be prepared to spend a little money at first in exhibiting and properly keeping them before the public, the dogs will do the rest, we feel assured.

## How It's Done.

Mr. Freeman Lloyd, in his "Din of Dogdom" gives a thrust at English fanciers over the manner in which they take up a new breed: "The Timbuctoo terrier has yet to be brought before them (the British public) gaze at our shows. As soon as he appears on the bench a specialist club will be formed for his benefit and the description of an A1 specimen will be printed and sent to the fancy papers. The next step will be to appoint a list of judges for this new and remarkable variety, and the magnificent features of the breed will be trumpeted forth wherever the English language is spoken. The natives of Timbuctoo will not be consulted at all; for let it be known the Englishman is the finest man in the world to instruct the foreigner as to the make and shape and general characteristics of his (the foreigner's) dogs."

## Kingston K. C. Show.

There must be the material of which good fanciers are made in those Kingston, Ont., dog lovers. In the face of two heart-breaking failures to interest the public of this pretty Canadian town in their commendable undertaking, the Kingston Kennel Club, with Mr. C. H. Corbett at their head, are determined to try it again. This time they will

hold the show the week before Toronto, and they are therefore pretty sure of a good entry. This, however, will avail them nothing if their fellow-townpeople do not evince a little livelier interest in their efforts than hitherto. At a meeting held July 10, the officers elected were: C. H. Corbett, President; W. C. Darby, First Vice-President; T. A. Carson, Second Vice-President; H. C. Bates, Secretary-Treasurer. The dog show committee was formed with the above officers and J. B. Walkem, Dr. Clark, Carl T. Ford, A. E. M. Loscombe and John P. Oram.

#### Canadian Kennel Club Meeting.

An executive meeting of the Canadian Kennel Club was held on Thursday last at the Queen's Hotel, Toronto. Dr. Wesley Mills, the president, was in the chair; others present were J. G. Michener, H. Bedlington, Dr. Niven and H. B. Donovan, secretary. Several important questions came up for discussion. One was the recent action of the A. K. C. in abrogating the reciprocal relations hitherto existing between the two clubs. The subject was earnestly considered and resolutions finally drawn up and the secretary instructed to forward them to the A. K. C. These resolutions point out the trouble which will ensue in discontinuing the old relations; extra expense and annoyance to exhibitors and the necessity of registration with both clubs; the encouragement it will give to dishonesty in dog show matters, owing to the nullifying effect of disqualification by either club, etc.

It was decided to reopen the entry list and again choose 200 dogs for the Canadian exhibit at the World's Fair. Mr. A. D. Stewart having resigned the position of superintendent, another one will have to be elected, and two candidates are now in the field—Mr. J. G. Michener, of Toronto, and Alfred Geddes, of Ottawa. A mail vote of the members of the C. K. C. will be taken to decide who shall be elected. It was settled that Messrs. Michener, Stone and Donovan shall pass on the new entries. A charge of \$1 is now to be made for each dog to cover the cost of certificate and other incidental expenses. Entries to close Aug. 15. If the Government grant of \$800 still holds good, exhibitors will be be apt to kick at this; or was the original grant expended in preparing for the June date? The constitution and rules of the C. K. C. came in for a good deal of attention, and the committee was hard at work until a late hour. Among other matters it was moved by Mr. Bedlington, seconded by Dr. Niven, that rule 8 in the proposed constitution be amended as follows: The annual dues shall be \$2, payable in advance and afterward on Sept. 1 of each year, members shall be entitled to register five dogs each year; for all over this number a fee of 50 cents shall be charged. Non-members shall be charged \$1 per dog for registering and 50 cents for listing. A list of names of members in good standing was ordered to be printed in August *Gazette*.

#### "No Plug Shooters These!"

We give this week the portraits of four noted handlers at our field trials. They are all known as "high class" men. These are the men who by kindness and proper methods of training do so much to make field trials popular; and while we have such men in the business, owners of valuable dogs need not be afraid that "McLinism" will become rampant. Mr. Tucker is well known as the man who piloted Mr. Pierre Lorillard, Jr.'s dogs to victory in so many important stakes last fall, and is one of the oldest hands at the business. Mr. Simon C. Bradley, the "dwarf," is as big in heart as he is in stature, and is a general favorite. His name is identified with Rowdy Rod, the late Harry C. and other good performers. Mr. J. M. Avent is known to every one, and has turned out more high-class performers than probably any other man in the business. He is now in partnership with that all-around sportsman, Bayard Thayer. Mr. D. E. Rose is a typical Southerner, but that he does not indulge much in the *dolce far niente* is proved by the way in which he prepares his dogs. The Blue Ridge Kennels are fortunate in having first call on his services. His victorious season in 1891 with Wun Lung, Hope's Mark and Bob Cooper will long be remembered. His dogs like him, too. The picture was taken at the Central Field Trials last year.

#### The Show at Cranston, R. I.

The building that has been made for the dog show on the Rhode Island State Fair Grounds, by inclosing the cattle sheds with a monitor roof, will accommodate 600 dogs, and the benching will be made from cedar boards. There is another building running parallel with it and the space between affords an alley-way 25ft. wide, in this the judging and exercising rings will be placed and judging done there, weather permitting, if not, rings will be set apart in the dog building. Messrs. Mortimer and Davidson have both signified their intention of carrying out their promise to judge there, the latter writing to the management, said: "I have been asked to judge at the Rhode Island show in September and I intend to do my part and with good health attending me will be on hand bright and early"—as usual, we may add. It is probable that Mr. A. H. Wakefield will be asked to take the bounds and beagles, and those who remember Mr. Wakefield in the palmy days of Little Duke and others in this successful kennel should, if he judges, flatter him with a bumper entry. Boston terriers will also probably have a special judge.

#### Dogs Poisoned.

Mrs. A. Grinnell, of Greenpoint, L. I. who showed three second prize winners at the late Pet Dog Club show, is in sore trouble over the loss of four of her Mexican hairless dogs; Pedro, also second, New York, 1887, Beauty and Dandy are three that were shown. The death list also includes a deerhound. On Sunday, July 9, Mrs. Grinnell took her dogs out for a stroll, and passing a neighbor's house the dogs were seen to pick up some meat. Shortly after they died, showing every evidence of poisoning. Mrs. Grinnell returned to the place where she saw the dogs feeding and picked up a piece of meat, which, upon examination was found to be covered with strychnine. Mrs. Grinnell had some trouble with her neighbor and this person was heard to say that he would poison the dogs. The matter will be brought to the attention of the S. P. C. A.

#### Otter Hounds for America.

When we were at Mr. E. Brooks's place at Hyde Park, Mass., last winter, he mentioned the fact that he intended getting a brace of otter hounds over from England. Now we hear that Spratts Company imported a brace for him per S. S. Europe. In the country back of Mr. Brooks's place, toward the Blue Mountains, otter have been seen in the streams, and Mr. Brooks will doubtless enjoy a novel, to this country, and very exciting sport this summer, as the Dandies will probably be drafted in to make up a scratch pack.

#### Important.

Now that FOREST AND STREAM comes out on Wednesday instead of Thursday we ask our friends and readers to bear this fact in mind and send in all news of their kennels, advertisements, &c. by Monday at the latest, to insure insertion in the current issue. We go to press on Tuesday afternoon.

#### Toronto Show.

Among the specials offered at the coming Toronto show we find that Mr. A. W. Smith helps the black and tan cause along by donating \$5 each for best dog and bitch. The

Pointer Club of America offers \$10 each for best dog and bitch owned by a member of the club; also \$10 each for best dog and bitch in open classes. The Toronto Silver Plate Co. give a trophy valued at \$25 for the best cocker owned in Toronto. Mr. Geo. Bell gives \$50 for the best spaniel sired by one of his stud dogs. The Canadian Fox-Terrier Club's specials, twelve in number, will also be competed for.

#### Death of Champion Dryad.

The celebrated bull bitch champion Dryad has followed her whilom kennel mate British Monarch to the long rest. Her death is most unfortunate for Mr. Woodiwiss's kennel interests, for besides being one of the most noted show bitches in England, having among other triumphs won the Bulldog Club's fifty guinea challenge cup eight times, she has proved herself an excellent matron. Among her progeny that have won honors are Queen Rose, German Monarch and Carrie, which we believe came over here. Dryad died in whelping, British Pedro being the sire of the puppies. She was by Don Pedro out of Ecru.

#### A Field Trial Club at Los Angeles, Cal.

At a meeting recently held in Los Angeles, Cal., the Southern California Field Trials Club was organized and Jan. 1, 1894, was set as the date to hold the trials. The officers are E. K. Benchley, Pres., and B. C. Hinman, Sec'y-Treas. The judges are R. T. Vandevort, Pasadena; D. M. Pyle, Bakersfield; J. C. Crenshaw, San Diego. The new club starts with a membership of twenty-five and bids fair to be a success.

#### National Beagle Club.

A quorum not being on hand at the proposed Beagle Club quarterly meeting that was to have been held at 44 Broadway last Monday, Mr. Appleton moved the meeting adjourn, and Mr. Schellhass, in the absence of the president, stated that the meeting would be called for the same date on which the field trial committee will be held, in about a fortnight. Messrs. Schellhass, Appleton, Bateman, Tallman, Lewis and Lucy were on hand.

#### The Bulldog Walking Match.

The bulldog match between Dockleaf and King Orry, to walk ten miles, has been made more interesting by the addition of Don Solano, owned by Mr. Ford, and Guido, belonging to Jack Ellis. The match was to take place last Monday night at 7 P. M., on a road in the suburbs of London. It was expected that the distance would be covered in two hours and a quarter, but this we should say is a rather sanguine view of the work that may not be borne out by the result.

#### The Rhode Island Show.

The premium list of the Rhode Island State Fair Association's dog show was received too late to give it extended notice this week. We find that St. Bernards, mastiffs, pointers and all setters get challenge classes with \$12 prizes, open \$10 and \$6, puppies \$8 and \$4. Other breeds \$10 in challenge, \$10 and \$5 in open and \$6 and \$3 in puppy classes. The classification seems liberal and the association offers \$15 kennel prizes in the important breeds. Entries close Sept. 4 with the association at Cranston, R. I. Dr. F. G. Sherwood is the "vet."

#### Cribbage.

It is definitely settled, Mr. H. W. Smith writes, that the crack wire hair fox-terrier Cribbage is now his property, but he will remain in England until a noted bitch, Surrey Janet, that Mr. Smith has also purchased, is bred, and they will come out together.

#### An Appropriate Purchase.

Lieut. Peary, before he left, secured one of E. H. Moore's St. Bernards to be the special protector of Mrs. Peary, during his expedition to solve the North Pole problem.

Dog catchers in our large cities are more or less a necessary evil, but when they exceed their authority, neither political pulls nor anything else should save them from just punishment. We are pleased to see that the toughs who maltreated a woman in Williamsburg, N. Y., when she tried to recover her dog after these fellows had stolen it from her doorstep, got their deserts. One man will take a vacation on the island for ten days and another for twenty-nine.

One of the striking figures in the Russian palace at Gatchina is Peter, the large Danish hound, that stretches his powerful form in the hall leading to the private apartments of the Czar. This dog is said to be one of the largest of his kind and was presented to the Czarina some years ago by her father, the King of Denmark. It is said that the Czar took a liking to the animal from the first, and never goes any long journey without him.

One of our prominent dogmen when asked how he liked FOREST AND STREAM's change of publishing day, said: "Good! but it upset my calculations altogether this week. When the paper came before I knew it was Thursday and always counted from that day, now I have another day's work to put in before Sunday."

Pterodaetyl, the noted dachshund, that should have come to this country and that Mr. Manice has been angling for some time, is now an inmate of Mr. Sydney Woodiwiss's kennels at Upminster, Essex. The price was \$750.

Mr. Pierpont Morgan's purchases in English colliedom led to trouble over commission for sales that the Collie Club claim as their due. The matter will shortly be settled by an appeal to the courts.

According to *Sporting Mirror*, Mr. Hopton, who will have charge of Mr. Gillmore's Kennels, will bring the bulldogs Cameron and Reve from England. By-the-way, this reminds us that several Englishmen have come over recently with the idea of getting places as kennel managers. We might as well say that the demand is not very brisk just now, there are so few kennels that need the services of an expert.

This journal also mentions a new habit among kennel owners of picking out a dog of a different variety for breeding purposes and mentions an instance that has come under his notice. The resulting litter of whatever breed, if fit for show, may be registered and the kennel club has no means of detecting the fraud, as they do not inquire into the antecedents of sire and dam. He then goes on to say that a certain kennel of St. Bernards had been greatly improved by the introduction of mastiff blood, and for deepening and shortening up the muzzle, securing the shadings, etc., the excuse is evident and it would be interesting to know which kennel had resorted to such means. We heard it said a year or two ago whose mastiffs were used, but the St. Bernard end of it has been well kept.

The Pointer Club will meet at Mr. John S. Wise's office, 44 Broad street, New York, July 31, at 2 P. M.

We learn that Mr. J. W. E. Clarke, the manager of the Woodlawn Kennels, has resigned and that the kennel will be dispersed. We sincerely hope this may not be the case, especially in view of the important position the kennel

now holds. The Hiltons, however, we understand, are paying more attention to the equine than to the canine part of their establishment.

Mr. Wixom has a pretty big farm at Covert, N. Y., but as he cannot feed his beagles on fence rails and fresh air all the time, he intends to clear out some of the 36 pups and 35 old dogs that the Hornell-Harmony Kennels now contain. Among the recent additions to the kennel a litter of six (three dogs) out of Velda (champion Royal Krueger ex Baby W.) by Sherry, is most welcome; the pups are large and strong, and, Mr. Wixom says, the best marked ones he ever bred.

We acknowledge the receipt of a very good photograph of Mr. M. B. Draper's (Grand Rapids, Mich.) English setter Sir Ranger on a point.

The New York St. Bernard Kennels have not had very notable good luck in their breeding operations hitherto, but the lane has a turning at last. Miss Jerome, one of the bitches Mr. Reick brought over with him from England a month or two since, has whelped eight well-marked pups (five dogs), by Duke of Maplecroft (Marvel—Princess Florence). The pups are doing well and are of good size. Mr. Reick sailed for Europe again last Wednesday and will be absent for a few weeks. It is not likely, however, that any St. Bernard purchases will be made.

Mr. William Alder, secretary of Spratts Patent in England, is dead. Mr. Alder has been identified with the company since its inception about twenty-three years ago.

Among the new "specials" this week we notice that G. O. Smith offers some trained high class English setters; Joe Lewis, trained English setter and pup, Thasmo Kennel, pointer and other breeds; J. H. Lyke, St. Bernard pups, J. Feulner, English setter pups, W. K. Purington, English setter pups and pointer Kent; C. S. Wixom, some well bred beagles; N. Billings Gordon setter pups. In the stud, G. W. McNeil's pointer Coronet.

#### KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

#### NAMES CLAIMED.

**Prepared Blanks sent free on application.**  
Schmunzel, Pomponet, Ben, Capitaine, Muffy II. and Pouffy. By Count Rudolf Palfy, Mahwah, N. J., for silver fawn pug dogs, whelped April 1, 1893, by My Boy (Muffy I—Lady Flirt) out of Nana II. (Bello—Nana I).  
Rosi, Nana III. and Top. By Count Rudolf Palfy, Mahwah, N. J., for silver fawn pug bitches, whelped April 1, 1893, by My Boy (Muffy I—Lady Flirt) out of Nana II. (Bello—Nana I).  
Lucy Gath. By J. J. Thayer, Charleston, W. Va., for black, white, tan and blue English setter bitch, whelped July 29, 1897, by Gath's Mark (Gath—Gem) out of Lucy Lee (Roderigo—Lee Gladstone).

#### BRED.

**Prepared Blanks sent free on application.**  
Nan—Reginald H. W. H. Worth's (Chicago Lawn, Ill.) Gordon setter bitch Nan (champion Argus—Laura) to his Reginald H. (Leatherstockings—Smith's Rhoda), June 17.  
Jane—Jack. S. D. Ripley's (Hempstead, L. I.) dachshund bitch Jane to Hempstead Farm's Jack, April 25.  
Hilda—Bendigo. H. F. de B. Cameron's (Detroit, Mich.) cocker spaniel bitch Hilda to Jersey Cocker Kennels' Bendigo, May 19.  
Grace Briant—Flash. Jas. Black's (Sheephead Bay, L. I.) greyhound bitch Grace Briant (Aberbrant—Grace Ridley) to his Flash (Huic Halla—Phebe Mayflower), May 25.  
Grace Albert—Flash. A. Voorhees's (Gravesend, L. I.) greyhound bitch Grace Albert (Prince Albert—Druid) to Jas. Black's Flash (Huic Halla—Phebe Mayflower), June 15.  
Fancy—Flash. M. Murphy's (Brooklyn, N. Y.) greyhound bitch Fancy (Gay City—Supplint) to Jas. Black's Flash (Huic Halla—Phebe Mayflower), June 5.  
Ormskirk Julia—Conrad II. Hempstead Farm's (Hempstead, L. I.) collie bitch Ormskirk Julia to their Conrad II., May 24.  
Duchess of Highlands—Sandford. E. Smith's (New York city) pointer bitch Duchess of Highlands to Hempstead Farm's Sandford Druid, June 9.  
Lady—Hempstead Zulu. W. W. Tucker's (New York city) collie bitch Lady to Hempstead Farm's Hempstead Zulu, June 10.  
Marguerite II—Duke of Hessen. John H. Dey's (Red Bank, N. J.) pointer bitch Marguerite II. to Hempstead Farm's Duke of Hessen, April 13.  
Woodmansterne Trefoil. Capt. Freeman's (Bensonhurst, L. I.) collie bitch ——— to Hempstead Farm's Woodmansterne Trefoil, April 2.  
Spinaway IV—Duke of Hessen. Philip Daly, Jr.'s (Long Branch, N. J.) pointer bitch Spinaway IV. to Hempstead Farm's Duke of Hessen, March 20.  
Green Mountain Lass—Woodmansterne Trefoil. Hempstead Farm's (Hempstead, L. I.) collie bitch Green Mountain Lass to their Woodmansterne Trefoil, March 19.  
Lorna—Conrad II. Hempstead Farm's (Hempstead, L. I.) collie bitch Lorna to their Conrad II., March 25.  
Hempstead Meg—Conrad II. Hempstead Farm's (Hempstead, L. I.) collie bitch Hempstead Meg to their Conrad II., April 9.  
Woodmansterne Deborah—Woodmansterne Trefoil. Hempstead Farm's (Hempstead, L. I.) collie bitch Woodmansterne Deborah to their Woodmansterne Trefoil, April 27.  
Meadowbrook Meg—Woodmansterne Trefoil. Hempstead Farm's (Hempstead, L. I.) collie bitch Meadowbrook Meg to their Woodmansterne Trefoil, April 25.

#### WHELPS.

**Prepared Blanks sent free on application.**  
Nana II. Count R. Palfy's (Mahwah, N. J.) pug bitch Nana II. (Bello—Nana I), April 1, nine (six dogs), by his My Boy (Muffy I—Lady Flirt).  
Belle of Eltham. D. C. Luse's greyhound bitch Belle of Eltham (Jester—Bit of Fashion), June 3, six (three dogs), by his Living Yet (Trales—Dick's Darling).  
Dick's Darling. D. C. Luse's greyhound bitch Dick's Darling (Cole-raine Diamond—Daylight), May 25, three (one dog), by his Norwegiau (Jester—Bit of Fashion).  
Buenretiro. D. C. Luse's greyhound bitch Buenretiro (Greentick—Cosy), May 13, eight (five dogs), by his Norwegiau (Jester—Bit of Fashion).  
Queen of the Valley. T. E. Baker's (Logan, O.) pointer bitch Queen of the Valley (Baug Graphic—Dolly), June 24, six (three dogs), by F. C. Rochester's Friend Dave (King of Kent—Babe Graphic).

#### SALES.

**Prepared Blanks sent free on application.**  
Lucy Gath. Black, white and tan English setter bitch, whelped July 29, 1897, by Gath's Mark out of Lucy Lee, by A. C. Shallenberger, Alma, Neb., to J. J. Thayer, Charleston, W. Va.  
Gaiety. Fawn Italian greyhound dog, by F. H. Hoyt, Sharon, Pa., to J. C. Carter, Manchester, Conn.  
Dolores. Fawn Italian greyhound bitch, by Winks out of Pansy Blossom, by F. H. Hoyt, Sharon, Pa., to Mrs. Moore, same place.  
Neula. Italian greyhound bitch, by Roma out of Pert, by F. H. Hoyt, Sharon, Pa., to Mrs. Moore, same place.  
Goldie. Fawn Italian greyhound bitch, by Beauty out of Bessie, by F. H. Hoyt, Sharon, Pa., to E. L. Chapman, Larned, Kan.  
Indigo. Blue Italian greyhound dog, by Tiny out of Idiom, by F. H. Hoyt, Sharon, Pa., to Dr. V. H. Stern, St. Louis, Mo.  
Bonny Boy. Fawn Italian greyhound dog, by F. H. Hoyt, Sharon, Pa., to W. Moore, Terre Haute, Ind.  
Kate. Fawn and white Italian greyhound bitch, by F. H. Hoyt, Sharon, Pa., to J. W. Mack, Newport, Ky.  
Brunette. Fawn Italian greyhound bitch, by F. H. Hoyt, Sharon, Pa., to T. P. Owens, Old Fort, O.  
Thasmo Peg. Fawn pug dog, whelped Sept. 3, 1892, by Pug Bailey out of Thasmo Bell, by Thasmo Kennels, Catskill, N. Y., to Eugene Waugh, Brooklyn, N. Y.  
Thasmo Yum and Thasmo Yum Yum. Fawn pups, dog and bitch, whelped June 4, 1892, by Pug Bailey out of Thasmo Midget, by Thasmo Kennels, Catskill, N. Y., to H. Schwarzwald, New York city.  
Dot. Black French poodle bitch, whelped March, 1892, by Brave out of Folette, by E. H. Morris, Hackensack, N. J., to J. D. Brown, New York city.  
Harte's Sally. Red Irish setter bitch, whelped May 17, 1892, by Chief of Thasmo out of Shamrock Belle, by W. Harte, St. Louis, Mo., to L. A. Schoenberg, St. Peter's, Mo.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Thompson, a member of the College of Veterinary Surgeons. Communications referred to other matters connected with Kennel Management and dogs will also receive careful attention.

R. N. B. Ovid, Mich.—I have a young foxhound 14mos. old. About six weeks ago he was taken with a twitching in his right foreleg and shoulder. It did not make him lame at first, but seemed to be very painful; he would lie and cry and is very uneasy with it. I bathed it with liniments, but it did no good; he is quite lame and weak on it now. He acts as though his shoulder was stiff. He is very nervous also, and the least excitement causes him to howl and act as though he was going to have a fit, and if not checked will start and run away and hide himself in some out of the way place. He has a good appetite and looks well. I have been giving him Fowler's solution, commenced by giving him three drops twice a day and increased one drop every two or three days, until I was giving him seven drops twice a day, when he got flighty and I discontinued it. I thought he had chorea. Will you please prescribe? Ans. Treat for worms. Continue arsenic and in addition give 5grs. of phosphate of iron twice a day.

G. E. C. Thomaston, L. I.—Robert le Diable, by Croxteth out of Spinaway, by Pilkington's Garnet out of Keswick; Garnet, by Pilkington's Tory out of his Jessie; Keswick, by Pilkington's Faust out of Faith; Croxteth, by Lowe's Young Bang out of J. C. Macdonna's Jane; by Lord Sefton's Sam out of his Flirt; Young Bang, by S. Price's champion Bang out of Davey's Luna. Mona, by Duke of Bergen out of Dora, by Sensation out of Devonshire Lass; Duke of Bergen, by Bang Bang out of Fan Fan, by champion Graphic out of Lady Belle; Bang Bang, by Price's Bang out of Princess Kate. Naso of Kippen, by Naso II. out of champion Maggie, by champion Bang out of Leache's Belle, by champion Sancho out of Fan; Naso II., by Naso out of Miranda, by Cotter (brother of General Prim) out of Miranda; Naso, by Duke out of Fairy. Kate VIII., by Donald II. out of Bell, by Dux out of Norah, by Riot out of Statter's Sappho; Dux, by Garth's Drake out of Sturgeon's Moll; Donald II., by Rock out of Fan.

J. S. M., Marlboro, N. H.—Will you kindly give me the pedigree of the pointer dog Bang Bang, by Pierce's champion Bang, for four generations, also owner of same? Ans. By Price's champion Bang out of Princess Kate, by Ponto out of Sappho, by Bang II. out of Juno, by Sancho out of Juno; Bang II. by Bang out of Belle; Ponto by Don Juan out of Juno, by Bang; Don Juan by Random; champion Bang by Coham's Bang out of Price's Vesta, by Brockton's Bounce out of Francis's Belle, by Old Sancho out of Dido; Bounce by Newcastle's Bounce out of Juno; Coham's Bang by Whitehouse's Hamlet out of Venus I., by Bird's Bob out of Gilbert's Bloomer; Hamlet by Bird's Bob out of Juno. Bang Bang was owned by the Westminster Kennel Club at the time of his death several years ago.

J. O., New York City.—I have eight bull-terrier pups, seven weeks old, four of them have shown considerable swelling on each side of the throat for the past week, and it seems to be increasing (the others are perfectly well). They seem to have a slight trouble in swallowing. I can feel that the glands are swollen. Kindly advise me what to do. They are kept in a dry place, and the mother had plenty of milk for them. They look fat and well. Ans. Apply tincture of iodine to swelling daily.

H. E. S., Washington, D. C.—I have a cocker spaniel about seven months old who has a small enlargement on his right forefoot. It is red but does not seem painful to the touch. He is fed twice a day on Spratts dog cakes, with milk and sometimes a little meat. Kindly tell me what it is and the remedy. Ans. Open the lump. Soak the foot twice a day in a solution of creolin (one to thirty).

J. W. P., Wilkesburg, Pa.—You will find Rip Rap about the best choice you could make.

New York, July 13.—Editor Forest and Stream: In your issue of July 12 appears a statement to the effect that but two cases of ascites (abdominal dropsy) have been known to have been cured. We have had numerous cases of the above-named trouble, many of which have recovered. The latest recovery we bring to mind occurred in a pug bitch last spring, owned by Mrs. Anderson, residing at 243 West Thirty-eighth street, this city. This bitch entirely recovered and had a litter of puppies during the summer. Another case was in a pointer dog. In both instances the dogs were tapped three times.

GLOVER & FRENCH.

[We are pleased to publish the above correction.]

FIXTURES.

JULY.

24-30. Hempstead Bay, Cruise, L. I. Sound.	29-30. Cor., San Fran., Masquerade and Cruise.
21. N. Y. Y. R. A. Cruise, L. I. Sound.	29. Hull Cor., Cash Race, Hull.
27. Fall River, Ladies' Day, Mount Hope Bay.	29. Royal Can., Lansdowne Cup, 40, 35 and 30ft. Classes, Tor.
28. Savin Hill, Moonlight Sail.	29. Minnetonka, club race.
29. Slippicon, 1st Open Sweep, Marion.	29. Gt. South Bay, An., Bay Shore.
29. Buffalo, An. Cruise, Lake Erie	29. Chesapeake Bay, Special, St. Michaels.
29. Indian Harbor, An., Greenwich, Conn.	29. Royal Nova Scotia, 3-raters, Halifax.

If the reports in the daily papers are to be believed, the new Cup defenders have attained a speed in their trial trips which is simply phenomenal. Jubilee is credited with passing steamboats going at full speed, and now comes the story of Vigilant sailing easily across the bows of a steamer which was going 14 knots. There is no doubt that the new quartette will surpass all previous records of speed, but when they are really racing, and it is possible to measure their actual speeds, the figures will be a revelation to the scribes who are now writing of 16 to 17 knots under lower sails and with no competitors.

PILGRIM, the last ready of the four 85-footers, made her trial trip on Saturday last, and from all reports behaved most satisfactorily. She is said to steer easily, to carry her sail remarkably well, and to go through the water very cleanly and easily.

MR. A. CARY SMITH is noted, among those who know him well, as a yachtsman who never goes out of his way to look at a yacht unless as a matter of business. Last week he paid Mr. Watson a very high compliment by breaking this rule and going over to Tebo's expressly to look at Queen Mab in the dock. He characterized her as one of the handsomest models he had ever seen.

MESSRS. OGDEN GOELET and James Gordon Bennett have presented to the Union des Yachtsmen de Cannes two cups to be raced for next year by yachts of over 20 tons, by the French rule, and those of 5 to 20 tons. The races will be sailed at Cannes in March, 1894, open to yachts of all nations.

Aquilo.

THE steam yacht which was begun at Lawley's yard last February with so much absurd mystery as to her ownership has been duly completed and delivered in New York to Mr. George A. Thayer, an old member of the Atlantic Y. C., and former owner of the Herreshoff schooner Triton. Aquilo, as the new yacht is named, is one of the fastest and finest steam yachts by the Lawley & Son Corporation, being designed by Mr. George F. Lawley. She is a composite vessel, 103ft. over all, 55ft. 6in. l.w.l., 15ft. beam and 7ft. draft. The hull is planked with yellow pine over the usual steel angles and strapping of a composite yacht. The engine space is 17ft. long and contains a triple expansion engine with cylinders 9, 14½ and 23½ by 14in. There are two Almy boilers set together, tested for a working pressure of 250lbs. The steam hole is closed by a 38in. fire door and a 3½ in. engine furnishing the forced draft. A dynamo is provided for thirty 16 candle-power lamps throughout the yacht. The owner's quarters are forward of the engines, owner's room, saloon, guests' rooms and toilet room, wardrobes, etc. Aft the engines is the galley, then the officers' mess room, officers' quarters and forecabin. There is one deck house, the forward end being arranged as the pilot house and the stern end as the dining room and companion. The yacht is well built throughout, the hull strongly put together and the cabins handsomely finished and decorated. She is rigged as a two-masted schooner.

Queen Mab.

SO MUCH has been said about the inherent weakness of the shovel bow and the exaggerated counter of the later racing yachts, as well as of the faults of modern racing construction, that the recent experience of Queen Mab is of more than ordinary interest. In the inquiry made by the Yacht Racing Association last fall, the probable performances of this type of boat at sea were discussed at length, and adverse opinions were expressed as to the forward overhang, and in fact to the model as a whole. Later on, when Queen Mab started for the Mediterranean and returned, it was stated by one yachting journal that those aboard were afraid to go to sea in her. If the long and severe passage of six weeks across the Atlantic is to be taken as a test of seagoing, it must be admitted that the little yacht has given a good account of herself and has come through a very hard experience in good shape.

As she laid on the dry-dock at Tebo's last week there was no external signs of the battering she had gone through, and in spite of the loss of her mainsail and spars the hull itself was uninjured. While the bow is not as long as that of Gioriana, it is at the same time long enough to be classed with the Herreshoff boats, and the after overhang is long and finely tapered. At the same time the copper and planking from stem head to taffrail showed no signs of wrenching or working, the seams were close, and the putty unbroken, and though there were evidences everywhere of rough handling by the sea, the hull had come through with no outward signs of damage. The decks, bulwarks and

what position it may be left in. A telltale in the passageway shows the position of the board.

The main companion is narrow and spiral as in most English yachts, opening below on a passage or steerage on the port side. Here is a sofa, toilet room and various closets, and on the starboard side the corresponding space is occupied by the owner's room. Aft this space are two staterooms in place of the usual ladies' cabin, but the fore and aft partition is now being removed, making a single room of the conventional proportions. Aft this room is a second large toilet room, and abait all, the sail room in the counter.

Forward of the companion is a large and wide saloon, the characteristics of the type being indicated in the moderate headroom, which, though ample, is less than one would look for in a cutter of this size. The floor is wide and the lockers as well. The next 7ft. of length is given up to a captain's room to starboard, and a pantry, etc., to port, the forecabin occupying the entire bow and being long and large, with headroom over the after part and of course plenty of length forward. The saloon and staterooms are neatly finished in mahogany and white pine, or its British equivalent, the panels being light frames covered with tapestry.

On deck the fittings and ironwork are very complete and elaborate. There are no channels, but merely an angle bar to keep the chain plates clear of the rail. The mast bands, pin rails, bitts, etc., are small and neat and excellent examples of good smithwork. The bowsprit, which is very short, houses in a steel box, the bitts proper being on deck immediately aft the bowsprit, a steel casting with two cir-

"VALKYRIE."

CUTTER, 86ft. L.W.L. DESIGNED BY G. L. WATSON FOR LORD DUNRAVEN. BUILT BY HENDERSON & CO., GLASGOW, 1893.

hatches were in good condition, the iron work intact, and the damage was confined to the rig. The mast and bowsprit were uninjured, but the mainsail and gaff were entirely destroyed.

The reported total capsize of the yacht, she lying keel up for four minutes, which some papers were glibly enough to announce as a fact, amounted to nothing more than a very severe knockdown when the first force of the wind and sea struck, leaving her down until the mast was level with the water, but she broke at once and the mainsail split, allowing her to right. The disaster was a serious one at best, endangering the lives of those on board and actually drowning one poor fellow, others being swept overboard and regaining the yacht with great difficulty; but so far as strength of form and the excellence of modern construction are involved, there is nothing to justify the opinions so freely expressed last winter.

The real weakness of the type at sea is in the rig, with the mast well forward, making it impossible to lie to. Queen Mab started with a cruising mainsail, the boom end just over the counter, and no trysail aboard. With this sail it was impossible to lie to, and the serious part of the voyage may be laid to this cause.

Queen Mab is a racing cutter designed last year by Mr. Watson for the 40-rating class, her length over all being about 90ft., l.w.l. 53ft. 2in., beam about 16ft. and draft about 11ft. The sail area by the Y. R. A. rule, which includes a clubtopsail of moderate size, being 4,032sq. ft. Above water she shows a bow not unlike the new Herreshoff cutters, but the after overhang is much fairer and finer, being carried out into the usual Watson counter. The topsides flare all over, giving a very large out-of-water body. Below water the keel contour is much the same as in the Fife boats Minerva, Jessica and Yama, a triangle with an excessive rake to the sternpost. From the fore end of the waterline to the level of the sternpost is almost a straight line. The midship section shows a very strong S curve, with round bilge and great hollow underneath.

The centerboard is 20ft. long, of Delta metal, an alloy of the nature of gun-metal, and used abroad as Tobin bronze is here. The weight is stated as 3½ long tons. The lower edge is of course sharpened off, but the plate is some 3in. thick. The board houses entirely within the keel and deadwood, and except the case for the pennant there is no evidence of a centerboard boat on the inside. The hoisting gear is very powerful, to the board is shackled a wire rope sheave some 10in. in diameter, fitted to slide up and down freely in the prolongation of the trunk to the deck. The pennant of ¾in. diameter wire rope, is made fast at the deck, leads down and around the sheave, and then over a second leading sheave at the deck. From this it leads to a powerful hoisting winch on the deck just abait the main companion, a combination of worm and bevel gears operated by double cranks. The gear is self-locking, so that the board cannot run down no matter

lar heads. Aft this is a Reid capstan and two compressors for the sprit well inside the gammon strap, and then over a leading sheave under the deck to a turnbuckle which is shackled to one of the angle bars which serve as bilge clamps.

The construction is very elaborate, a steel frame of angle bars sheer strakes and diagonal plates far in excess of what is called composite construction in this country, the whole sheathed with teak planking 2in. thick. All the principal fore and aft members, such as the stringer plates and sheer plates, are perforated with holes 2 to 3in. in diameter to save weight. The deck beams and gusset plates are forged in one solid piece. The yacht is being thoroughly overhauled after her voyage and new sails and spars made, the work being under the supervision of Mr. J. Beavor Webb.

Owasco Y. C.

AUBURN, N. Y.—OWASCO LAKE.

FIRST race of the season, July 4. Course: Dolphin club house to Edgewater (1¼ miles), to Long Point (4½ miles), to starting point (3¾ miles); total, 9.25 statute miles (8 miles, naut.). Weather clear and bright. Wind about ten miles per hour. Summary:

	Length.	Start.	Finish.
Bee, N. B. Burr.	.....17.04	1 15 00	3 24 50
Asp, Douglass Beardsley.	.....21.10½	1 15 00	3 32 50
Mystery, H. B. Lewis.	.....22.00	1 15 00	3 33 30
Ideways, Com. F. I. Allen.	.....31.02	1 15 00	3 43 40
Tamapsa, C. E. Thorne.	.....21.10	1 15 00	Did not finish
La Fiancee, J. M. Brainard.	.....16.00	1 15 00	Did not finish

Allowances based on waterline length. Bee is a Herreshoff boat and Asp is the Hunt 21-footer which raced about Boston last year. The race was started from the gun. Five prizes were offered. First, Bee; second, Asp; third, Mystery; fourth, Ideways; fifth, not given. Out of 14 yachts enrolled only 6 started. Regatta committee—Com. Allen, C. E. Thorne, W. R. Hopkins, N. B. Burr, C. N. Chedell. Referee, Judge John D. Teller.

A yacht club has just been organized at Mandeville, La., near New Orleans, the members being mainly residents of that city. The officers are: Com., Geo. Moorman; Vice-Com., J. Hawkins; Rear Com., F. A. Cousin; Treas., Jos. Garcia; Sec., M. J. Guerin; Captain of the Fleet, T. S. Allen; Governing Committee, W. J. Castelli, T. M. Moorman, E. L. Cousin, A. Tabary, R. Woeste. A regatta is proposed for Aug. 5 or near that date.

## New Yachts on Lake Minnetonka.

WHATEVER adverse opinions may be held in regard to the modern "freak" designs, it must be admitted the present era of radical experiments is at least conducive to progress; and that while the immediate results may not be of the best, they are throwing a light on designing which is fatal to old time conservatism, and which is likely to lead in time to far better types of yachts. Just now the tendency is distinctly toward the racing machine, but lessons are being learned from all the new departures which will enable the clubs to frame restrictions for the conservation of a moderate type of yacht if such a course shall at any time be considered desirable.

There was a time when progress was confined to the old yachting centers on the coast, the out-classed racers being sold inland, but now the West is doing its own experimenting and inventing, as is shown by the following description, from an exchange, of some of the new yachts of Lake Minnetonka. We may say incidentally that the use of cypress for planking is well known in the East, though cedar is usually preferred. The well alluded to for clearing the fin of obstructions was used last season by John B. Paine, in the 21ft. Freak.

"Among the most interesting of the local productions is certainly the boat designed by F. B. Long, and built under his instructions. She is named the C. L. C., and is owned by Geo. Cook, Lou Long and Charles Champion. The sailing length of this craft is 22ft. 10in., length over all 30ft., beam 8ft. and sail area 733sq. ft. She is built to compete with the first class sloops, and will try conclusions with the Alpha. A remarkable feature of the boat is the long keel, which is water is all of cypress, and there are no known instances where this wood has been used before for outside planking. The principal advantages claimed for it are that it is extremely light and impervious to the action of water. The statement is also made that it will not shrink or swell. The boat has also a peculiar arrangement for keeping the fin keel—far, she is a clear of weeds. It is often a difficult matter to dislodge weeds from the fin keel. Mr. Long has invented a sort of telescopic arrangement, coming up parallel with the forward end of the keel through which he looks down into the deep, and is enabled to see any obstruction attaching itself to the fin. There is an iron rod rigged in such a way as to be used in dislodging accumulations of weeds. Differing from any other boat on the lake, the C. L. C. is built decked, having no cockpit. There are two small man holes, one for the helmsman and one for the jib tender, and the rest of the boat is decked over air tight. In order to prevent the boat from filling in case of knockdowns, Mr. Long has two canvas bag arrangements, which are air tight, and fit into the man holes. No more water can get into the boat than these bags will hold, and the boat is therefore unsinkable as well as easy to right when upset. It will be a hard matter for the crew not to be in the man holes to hang on the slippery decks of this boat, but life lines have been rigged along both sides to prevent accident.

In type, the C. L. C. is a compromise between the fin and the old sloop type. Her forward lines are fine and easy, but she carries her stern well aft, differing in this respect from the usual fin boat, which has as long lines aft as forward. Mr. Long expects that this will give her good bearings, and thus offset the additional dead water that so much stern occasions. The sails are being made by Wayzata by a well known and competent sailmaker, and the material for the sails has been imported from Sweden. Mr. Long expects to have a well trained crew, and in Will Raymond he will have a most skillful helmsman to guide the new boat to victory. The craft is the result of Minneapolis inventiveness and enterprise, and it is to be hoped that she will justify the expectations of her owners, and show the Alpha a clean pair of heels.

Another new boat is the Alpha Phi, also designed by Mr. Long. She is built by Moore, of Wayzata. Mr. Long has a laudable ambition to tackle not only the first class champions, but also those of the second class, and in this pretty little boat, the Herreshoff flyer Bird will have a rival worthy of her metal. The length of the Alpha Phi is 18ft., beam 7ft. Those who have seen her say she has beautiful lines and ought to prove speedy.

Ray Moore has turned out many well known boats of the Minnetonka Yacht Club fleet, and this latest of his will certainly be heard from during the season. Another boat is being put up by the same builder for that most enthusiastic of yachtsmen, W. A. Ramsey. Mr. Ramsey is patriotic as well as enterprising, and has accordingly named his new boat the Columbia. She is built to compete with the first class cats. Her classified length is 20ft. 11in., beam 9ft. and sail area 520ft. In design she is very much like the catboats on the lake, though her lines are a trifle finer and give promise of great speed. It is evident that the old champion cats, Atlanta and Ida, will have to look to their laurels when Columbia crosses the starting line. Moore thinks he has improved a good deal on the lines of the Ventura, which boat did so gloriously well last year. The advent of this new boat will promote a healthy rivalry among the first class cats.

A new competitor in the special class of 16-footers is the Coquette, owned by Louis B. Newell. Her length is 16ft., beam 7ft. 6in. and sail area 320ft. She will be cat rigged. This boat is certainly one of the prettiest models old Capt. Brown ever turned out. Those who have watched her construction say that she is sure to make them wake up in her class, and that she is likely to give the Kestrel and Kingbird a hard tussle.

## Lake Y. R. A. Round.

ROYAL HAMILTON—HAMILTON.

LAKE ONTARIO, for all its fine weather, usually has one good blow in store for the twilight of the Y. R. A. races; in 1884 the fleet caught at Oswego, next year the wind was waiting at the west end of the lake, and drove the yachts into all the ports on the north shore, the battered fleet being some three days in making the rendezvous at Oswego. In 1890 the annual blow turned up in the middle of the regatta at Kingston, sinking Volante, giving Vreda's steel side some marks which she carries yet, and crippling others of the fleet. This year the winds favored Hamilton with a visit, bringing disaster to a number of the yachts.

The second regatta of the round was set for July 8, under the management of the Royal Hamilton Y. C., the courses being off the piers of Burlington Bay, the leeward mark being set four miles out in the lake, with a second mark at two miles. The first, 46 and 40ft. classes sailed three times over this course, 24 miles; the 35 and 30ft. classes sailed two rounds, 10 miles, the 25ft. class sailing with the four mile mark and once around the two mile; 12 miles in all, and the 21ft. class was to sail twice around the short course, 8 miles. The rules of the L. Y. R. A. class all yachts by sailing length, measured by Seawanhake rule.

The wind was moderate S.W. at the start, but in a little while it went round to N.W. and blew all day in a succession of violent squalls that brought the yachts down to one or two reefs at times, and compelled some to give up entirely. The starters were:

First class, Vreda, Onward; 46ft. class, Condor; 40ft. class, Dinah, Aggie, Zelma; 35ft. class, Alert, Cyprus; 30ft. class, Nadia, Vedette, Samoa, Volante, Erma; 25ft. class, Salola, Maud B., Nox, Mona, Clipper; 21ft. class, Caprice, Caruli, Keika, Gwendoline, Rustler, I. C. U., Wa Wa, Eclipse, I'll Away, Ethel, Thistledown, Spray.

The times of the start were: The first class started 10:30, the 46-footers at 10:40, the 40-footers 10:50, the 35-footers 11, the 30-footers 11:10, 25-footers 11:20, 21-footers 11:30.

The wind was but moderate when the leaders crossed the line under spinners, but it soon increased so that all came down to lower sails. The 21ft. class soon came to grief, Mr. Jarvis's new fin-keel Thistledown carried away her mast near the bend and withdrew, being towed in by Eysche, Ethel fouled the mark and I. C. U. capsized, I'll Away and Eclipse going to her aid. The race in this class will be resailed. The first round was timed:

Zelma..... 12 27 27 Nadia..... 2 00 00  
Dinah..... 12 35 37 Erma..... 2 12 20  
Aggie..... 12 40 40 Nox..... 1 50 40  
Samoa..... 2 28 15 Salola..... 1 57 00  
Volante..... 3 05 Maud B..... 1 57 10  
Vedette..... 1 33 55

Onward is a centerboard sloop of 22ft. l. w. l., built at Islip, L. I., in 1875, and Vreda is the first of the British 20 raters, 45ft. l. w. l., built in 1888. The cutter was far ahead at the end of the round, the sloop having two reefs down and withdrawing after completing the round. The strong wind did a good deal of minor damages, halliards parting and sails tearing, and some of the yachts withdrew. The leaders on the second round were timed:

Vreda..... 1 57 20 Dinah..... 2 27 10  
Zelma..... 2 23 31

The race finished in a heavy thunder storm, Zelma coming down to two reefs and Vreda parting her throat halliards at the finish. The full times were:

	First Class—Start 10:30	Finish	Elapsed	Corrected
Vreda.....	3 18 20		4 48 20	
Onward.....		Withdrew.		
Condor.....	46ft. CLASS—START 10:40			
Condor.....		Withdrew.		
Zelma.....	40ft. CLASS—START 10:50

Vedette.....	3 14 15	4 07 15	4 09 59
Samoa.....	3 25 44	4 15 44	4 15 37
Volante.....	3 37 45	4 27 45	4 27 45
Nadia.....	4 00 35	4 50 35	4 50 00
Nox.....	3 00 40	3 40 40	3 40 13
Salola.....	3 04 15	3 44 15	3 44 06
Maud B.....	3 08 16	3 48 16	3 48 16
Wa Wa.....	3 08 16	3 48 16	3 48 16
Clipper.....	Withdrew.		

Ripple, of the Rochester Y. C., was left at anchor in the bay, her crew being on board of Onward for the race. She dragged her anchor and went on to a sunken crib, her bottom being holed and her bows sinking, causing serious damage to her cabins. The sloop yacht Isle of Wight, owned by Wm. Jutten, of Hamilton, was also sunk by a Lake schooner which came in between the piers during the gale and struck her, carrying away topmast and injuring the hull so that the yacht sank. The races were under the management of W. Q. Phillips, association timekeeper, assisted by W. J. Grant and Charles Powis. The regatta committee of the R. H. Y. C. included Messrs. W. J. Grant, E. H. Ambrose, Thomas W. Lester, J. H. Fearnside, J. F. Monck and W. J. Wallace.

## Royal Canadian Y. C.

TORONTO—LAKE ONTARIO.

Monday, July 10.

The annual regatta of the Royal Canadian Y. C. of Toronto, the third and last race of the Lake round, was sailed in so light a breeze as to rob it of all interest. This is the fourth year that Toronto has provided such light and fluky weather for its share of the L. Y. R. A. racing. The start was very poor, the yachts being slow in working out from the bay to the line, off Exhibition Wharf, and some being handicapped over half an hour. The usual course was sailed, the 21-footers sailing inside the bay. The official times were:

	First Class—Start 10 A. M.	Finish	Elapsed	Corrected
Vreda.....	3 02 20	5 02 20	4 55 59	
Onward.....	3 01 05	5 01 05	5 01 05

Mississaurion.....	4 12 40	2 12 40	2 05 50	
Viola.....	Not timed.			

In the evening a dinner and smoking concert at the Royal Canadian club house finished up the ceremonies and ended the circuit of 1893. Compared with former years the racing is decidedly below the mark, the cruise was a short one with only three races, and comparatively few yachts took part.

## Beverly Y. C.—2d Sweepstakes.

QUISSET—BUZZARDS BAY.

Saturday, July 8.

The 188th regatta, 2d open sweepstakes, was sailed at Quisset on July 8 in a good reefing S.W. breeze. This is the first race sailed over this course, and a rather unfortunate incident occurred. One member of the regatta committee was unavoidably absent, another was looking after the race at Marblehead, sailed at the same time, and this left the club short-handed.

The printed course told boats to round Wepecket Shoal buoy, some question was raised as to depth of water there, and the regatta committee put a stakeboat a little beyond the buoy, making course round stakeboat a trifle longer than round buoy. It was supposed that all boats were notified to round the stakeboat in place of the buoy, but there were more entries than expected, and Doris and Anonyma were not so notified. Both rounded the buoys, and Anonyma protests Gynnote for not rounding the stakeboat, while Nobskn and Doris counter-protest each other, the club's protest being identical with Anonyma's, while Doris protests Nobskn for leaving the buoy on the wrong side after rounding the stakeboat on the right side. These protests will be decided next week, and this report is made subject to decision of protests.

The times were:

Raccoon, J. L. Stackpole, Jr., B. Y. C.....	11.08	1 02 01	.....	
Axe, Louis Bacon, B. Y. C.....	11.08	1 05 59	.....	
P. D. Q. R. W. Emons, B. Y. C.....	11.08	Withdrew.		

Courses: Special class, 30 miles second and third classes 8 1/4 miles, fourth class 7 miles, fifth class 4 miles.

Special class, first prize, Chappaquott; second prize, Nymph. Second class, first prize, Gynnote; second prize, Anonyma; third prize, Agawam. Third class, first prize, Nobskn; second prize, Doris; third prize, Gilt Edge. Fourth class, first prize, Dawdle. Fifth class, first prize, Raccoon. Second and third class prizes subject to decision of protests.

Judges, L. M. Clark, H. W. Carruth.

In the Beverly Y. C. race No. 197, the protest of Susie vs. Hildadee was withdrawn and Hildadee takes first and Susie second place.

We have received from Mr. Henry Gilbert, Jr., of St. Johns, N. B., three photos of an enlarged "Scarecrow," built by him from the designs published in the FOREST AND STREAM last fall. The boat is 26ft. 8in. all over, 18ft. 9in. l. w. l., 6ft. beam, and with a centerboard of 350lbs. and 400lbs. inside carried 375sq. ft. of sail, boom and gaff mainsail and jib set on a short bowsprit. The photos show every evidence of good workmanship and Clyde, as she is named, is quite a shapely little craft. Another enlarged "Scarecrow" is Thistledown, built by Mr. E. M. Jarvis, of Toronto, the design being enlarged and adapted by him to fit the 21ft. sailing length class of the Lake Y. R. A. Thistledown was in bad luck in her first race at Hamilton, losing her mast, but she was ready again a couple of days later at Toronto, beating her six competitors by a large margin. She is a veritable built-in, like the original Scarecrow, but the fin is a fixture, not fitted to hoist.

## American Model Y. C.

THE second leg for the Pfeiffer cup was sailed on Saturday, July 15, in a very strong southerly wind, the yachts making very good weather of it, carrying their small topsails and whole lower sails. Only two yachts came to the line for the first heat, Hornet arriving too late to start, but eventually starting in the second heat; Neola winning the first heat from Marguerite by 1m. 35s. elapsed, in 42s. corrected, Neola being nursed a little too much for fair sailing after rounding the stake for the finish.

In the second heat Hornet showed up and did some very fine sailing with the rest. Great disappointment was felt as Marguerite met with an accident to her steering gear after getting under way for the finish line, throwing her out of the race. From all appearances she would have made it very hot for Neola. Neola won the heat and race from Hornet by 1m. 57s. elapsed, 1m. 39s. corrected. Below is the summary:

	First Heat	Start	Elapsed	Corrected
Marguerite, H. Fisher.....	3 55 41	13 46	13 46	
Neola, J. E. Pfeiffer.....	3 55 41	12 51	12 03 1/2	
	Second Heat	Start	Elapsed	Corrected
Marguerite.....	3 52 51	11 18	11 00 1/2	
Neola.....	3 52 51	11 18	11 00 1/2	
Hornet, J. C. Meyer.....	3 53 05	13 15	12 34	

The next regatta will be on Labor Day, Sept. 3. The club has decided to hold a sweepstakes race to inaugurate it, the winner in each class to meet in a final race, with time allowance and 50% for world time an owner touches his boat while racing. This mode is very popular, and we expect a full list of entries.

FRANK NICHOLS.

## Eighth Annual Chesapeake Bay Y. C. Race.

CLAIROBNE, MD.—CHESAPEAKE BAY.

Saturday, July 6.

The eighth annual open race of the club took place off Claiborne July 6. The entries were Island Belle, 35ft. 1in. long, of C. B. Y. C., and Neptune Club of Baltimore, owner E. L. Woodside. Albatros, 37ft. long, of Tilghman's Island. Ma Belle, 35ft. long, owner Mr. Crane, of St. Michaels.

The wind was a fresh breeze from N.W. The course was from a line drawn from stake boat to wharf at Claiborne, thence to Bodkin buoy, a close reach, thence to Wade's Point, wind abeam, thence to stake boat dead off the wind. This course repeated three times, making twelve nautical miles. There will be a special open race off St. Michaels on Saturday, July 23. The following is a summary of the race:

	Start	Finish	Elapsed	Corrected
Island Belle, E. L. Woodside.....	11 55 30	1 42 00	1 42 00	
Albatros, Jno. Harrison.....	11 56 00	1 59 00	2 00 48	
Ma Belle, Mr. Crane.....	11 55 30	1 55 00	1 55 30	

## Manchester Y. C. Cup.

MANCHESTER—MASSACHUSETTS BAY.

Tuesday, July 11.

Courses from starting line in W. Manchester Harbor to black buoy off Baker's Island, leaving it to starboard to little Nast buoy, leaving it to return; distance 8 miles; weather fair; wind S.W., blowing fresh.

Length. Start. Finish. Elapsed. Cor.  
Yankee Maid, E. P. Stanley, 18.6 2 00 00 3 42 47 1 42 47  
Wraith, A. W. Higginson, 18.10 2 00 00 3 42 00 1 42 00  
Hornet, Chas. Jackson, 30.0 2 00 00 3 42 00 1 42 00  
Albatros, A. W. Craig, 21.00 2 00 00 3 42 00 1 42 00

The Wraith and Yankee Maid sailed a very close race, the other yachts were out of the from the start. Wraith and Yankee Maid tie for first place.

Regatta committee: A. H. Higginson, C. A. Cooley, A. W. Craigie. Judges: Max Sallit, J. A. Burnham, Jr., S. L. Hildekoper.

## YACHT NEWS NOTES.

It is to be hoped, for the sake of English ship builders, that it will not become fashionable to import American-built yachts into the small classes. Last year Miss Sutton brought over the half-rater Wee Winn, designed and built by Herreshoffs, and she won nearly everything she sailed for. Nothing has been heard of the boat this year, though there is nothing in the class that could hope successfully to compete against her. Miss Sutton, however, imported the Morwena, designed and built by the same firm, and this little boat is proving herself quite as formidable an opponent as the Wee Winn. Then Mr. H. H. Jackson, who built and raced the 3 1/2-rater Faugh-a-Ballagh last season with a success that placed him at the top of the season's record, went in for a "dark horse" this year, which proved to be a boat of the same class, also from Herreshoff's yard, and she has proved to be a perfect flyer in light winds. She has started in nine matches, and has been "placed" every time. All her wins, however, are not first prizes, and taking the general character of the matches in which she has raced, it does not appear that she has done much, if anything, better than Faugh-a-Ballagh had been in commission. The last named boat is the property of Mr. Hussey, of the Abbey, Crewkerne, who bought her just before the close of the racing season of 1891, but has made no show of fitting her, and she is, we hear, in the sale list.—Western Morning News, Plymouth, Eng.

A new hollow boom for Colonia has just been completed at Pollon's yard, South Brooklyn, under the direction of Mr. Driscoll, the superintendent of the yacht work of the yard. This "creation" is nothing less than a barrel 97ft. dia. long and 22in. in diameter at the middle, tapering to 11in. at the ends. The skin is in two thicknesses and is, of course, hollow, except for the moulds or bulkheads of thin stuff, spaced some 8ft. apart, on which it was built. These moulds, circular in shape, and diminishing in size to fit the taper of the spar, are first set up on stocks, like the moulds of a boat, and connected by a double set of cross braces of 1 1/2in. stuff. The first layer of planking is of matched spruce, in long lengths, 1 1/2in. thick, the joints laid in line and cheese cement, and the planks screwed to the moulds. After this layer is on the spar is rounded up and the outer layer, of 1 1/2in. Oregon pine, also matched, is put on and screwed into the inner planking. Each of the outer planks is hollowed on the inside and they break seaward at the inner ones. After the spar is finally planed up it is seized at intervals with wire rope in place of solid hoops. It is expected that the spar will be very stiff and decidedly lighter than a solid stick.

Capt. J. C. Summers, the founder and publisher of the yachting annual "Who Won," has organized a stock company under the name of the "Who Won Publishing Co.," of which he is vice-president and general manager, J. A. Harriman, president, and H. B. Thompson secretary and treasurer. The new concern

by 40 seconds in the Larchmont regatta of July 4. Katrina was originally reported as winning by 5 seconds.

The fifth annual regatta of the Indian Harbor Y. C. will be sailed on July 29 off Greenwich, Conn. The steamer Crystal Stream will leave New York foot of Thirty-first street, East River, at 7:30 A. M., following the race.

Vivian, steam yacht, recently sold by J. L. Hutchinson to Mr. Evans of New York, has been re-named Toinette. She has received an electric light plant at Lawley's.

The championship race of the Minnetonka Y. C. on July 15 was won by Mr. Burton's Onawa.

### Canoeing.

Two correspondents take exception to our comments last week on the Atlantic Division meet, but there is nothing in their statements which was not considered by us in writing as we did, after a very unpleasant personal experience, which we shared with a number of others equally desirous of reaching camp. We were fully aware, as Mr. Smith states, that the selection of the site was made hastily after other plans had failed, but the conditions at Captain's Island would probably have been much the same, a still greater distance from the railroad to the shore, and then a mile or so of water with no means provided by the committee for crossing it.

The trouble lies in selecting a site which can only be reached certainly and surely by a steam launch; when, either from lack of funds or neglect on the part of the committee, no such means is provided.

It may be possible, as Mr. Smith states, to get from Chimmoos Island to New York in an hour and twenty minutes, but on the other hand there are times when the only train during a whole long day takes an hour and three-quarters, schedule time, from South Norwalk to New York. No doubt the islands are very beautiful and possess many advantages, but under the circumstances we still consider the arrangements as very defective.

Our experience covers a longer time than Mr. Dorland's letter indicates, we were unfortunate enough to be in South Norwalk from 5 P. M. on Saturday until 9:15 A. M. on Sunday, and during all this time there was no means of reaching camp but by an open boat, starting in the rain late at night, and with no reasonable certainty of getting anywhere in the faint breeze. A boat was promised to leave for the camp at 8 A. M. on Sunday, but up to 9 o'clock it was not visible, and the necessity of reaching New York that night made it necessary to take the only train during the day. There was ample time to have reached camp on Saturday before the storm came up, but there was no boat, and by the time one was ready the storm was about breaking.

If this were a solitary instance we should not have commented on it at all, but it has been, and from all appearances is still likely to be, the regular thing to blunder over the matters of location and transportation. The exact cost of the present meet is not yet known, but it is certain to prove a very expensive camp, and in any case, enough money has been spent to have afforded, with judicious management, suitable means of reaching and returning from it.

### The B. C. A. Meet, Lough Erne.

The seventh annual meet of the British Canoe Association will begin on July 31 and terminate on Aug. 21, the camp being located at Derrycore, near Enniskillen, on Lough Erne, Ireland. The general regulations of the camp are as follows:

Friends of members and any one already a member of a recognized canoe or sailing club may join the camp on payment of 10 shillings, such subscription to be counted as the annual subscription to the B. C. A. for 1893 in case of election, application to be made to the vice-commodore not later than July 26 to Elm View, Maple Road, Surbiton, and after that time to the camp.

Any gentleman thus attending the camp agrees to abide by the rules and regulations which may be made by the camp officers.

"Married Quarters" will be arranged for near main camp if sufficient names are sent in and will be in charge of the senior married lady camping. The services of a camp attendant and a boy with boat will be at the disposal of members. A large committee tent will be erected, at which it is intended to hold a daily camp-evening, and a piano will be provided for sing-songs, etc. There will be the usual camp kitchen under the charge of camp attendant. A supply of paraffin and methylated spirits will be on sale. Members must make their own arrangements as to getting supplies at Enniskillen, but probably some of the tradesmen will call at camp for orders; milk, eggs and water can be obtained close by camp. Very few, if any, sailing boats can be hired at Enniskillen; members attending this meet are especially requested to fly the burgee and wear the badge of the association. Members are requested to bring an assortment of flags and Chinese lanterns, etc., for the decoration of the camp, and also for an illuminated procession of canoes if thought desirable. All those who can contribute to the amusement of the camp, either vocally or instrumentally, are requested to bring their instruments and music for the purpose of holding "camp-fires" during the meet. Lodging can be obtained close by the lake, at Enniskillen, at reasonable charges. There is excellent fishing to be obtained; salmon and trout are preserved, but any one can fish for pike, perch, etc. Although the camp is a fixed one, it is proposed to make several excursions up and down the lake, camping out for the night and returning the next or following day. Such arrangements will be discussed at the camp dinners and a programme posted on the camp notice board, which members can avail themselves of or not as they wish.

During the meet a B. C. A. regatta will be arranged. Letters or telegrams for members at the camp should be addressed—British Canoe Association Camp, in care of J. Arthur Irwin, Esq., Derrycore, Enniskillen. The annual general meeting of the association will be held on Aug. 10, preceded by dinner at 7 P. M., at Enniskillen. All members are particularly requested to be present.

PERCY NISBET, R. C. C., Vice-Com., British Canoe Association.

### The Atlantic Division Meet.

Editor Forest and Stream:

Kindly permit me to differ most decidedly with your comments on the location of the Atlantic Division meet at Chimmoos Island. I was one of those unfortunates who were not able to spend two weeks, but did run up from New York on two occasions to spend two or three days in camp. On both occasions there was little delay in getting to the island, and after arriving there, although we were considerably bothered Saturday and Sunday, July 1 and 2, with mosquitoes (owing to the high grass at that time on the island and sultry weather) I found the camp very pleasantly located, in good cruising grounds and amid a group of islands that I for one should be pleased to return to.

Your genial editor should bear in mind that his attempt to get to camp was unsuccessful very largely on account of the heavy rain and wind storm of that evening. Had he arrived earlier in the day he would have reached camp and formed very different ideas regarding it, and after the storm the crew of the war canoe which went over to Norwalk, unfortunately did not locate him. IRVING V. DORLAND.

Editor Forest and Stream:

Having just read your severe article on the A.C.A. meet at Chimmoos Island, I think I ought to, in justice to the hard working members of the camp site committee say a few words in their behalf. First, they had completed their arrangements to go to Captain's Island off Greenwich and at the last moment, through the pleasure of having the Captain's Island objected to the camp being located there and the committee then had to look about for another site and accepted my offer of Chimmoos Island; I too was very sorry so few days intervened before the opening day, and the committee worked hard to make the camp what it should be and provide communication with the main land, but for want of time no boat could be had for daily use to and from the depot. If I may be permitted though the pleasure of having the A.C.A. meet again at Chimmoos Island, I assure you as well as the members of the association a far pleasanter time, the grass will be cut, beaches cleared of sea-weed and the island will assume a ship-shape look, and furthermore it will be easy of access, but this time please consider the suddenness of the call and remember no other meet ever had this sudden change of all their plans to contend with, and I think you will agree with me that this was after all a pleasant camp—it is reached from New York in an hour and twenty minutes with a proper launch, and with time to secure one there need be no excuse for not finding here a perfect camping site for the A.C.A. and they are always welcome. WARREN E. SMITH.

CHIMMOOS ISLAND, Norwalk, Conn., July 14.

### A. C. A. Notes.

The telegraph cable of the G. N. W. Co. crosses Wolfe Island at Brophy's Point, and the company's agent at Kingston has promised to station an operator at the point during the meet in August, if requested to do so. This will prove a great convenience to members and will enable newspaper correspondents to send off reports more readily than has hitherto been possible.

Mr. Brophy has sent a good piano down to the Point. As there is a dancing floor on the ground this combination ought to prove a pleasing one to members.

Mr. Carruthers, chairman of the regatta committee, is fitting out his handsome steam yacht, the Marquis of Lorne, and will have her on hand in August to use in laying out courses, etc.

Negotiations are in progress regarding a boat between the camp and Kingston. An efficient service will be provided.

Subscriptions to the Prize Fund have not come in as readily as might have been expected. The list is still open.

### A. C. A. Membership.

NORTHERN DIVISION: K. A. Cameron, H. Cartwright, R. B. Crombie, R. W. Garrett, Cataqua C. C., Kingston, Can.

### CANOE NEWS NOTES.

A remarkable feat was performed on June 17 by Lieut. H. R. Sayce, of Bristol, who succeeded in crossing the English Channel in a miniature boat. The little craft has been patented by him as the Midge Pneumatic Collapsible Lifeboat, and is designed to be serviceable for fishing, shooting or sailing. The weight is under 35lbs., length 8 1/2 ft. with only 32 in. beam. It is entirely covered in with canvas, leaving just room enough for a person's body to come through, and is inflated with air by means of tubing, so as to render it unsinkable. The boat was fitted with a little foresail about the size of a woman's apron, and a still smaller mizzen, the boat when aloft having exactly the appearance of a large toy boat. Leaving the Waterloo Crescent, Dover, at 3 A. M. on Saturday morning, Mr. Sayce unfolded his boat and filled it up, which was the work of a very few minutes, and then launched it from the beach. He was accompanied by a small sailing lugger, the Four Brothers, on board of which were two boatmen. A small supply of refreshments were put aboard, consisting chiefly of biscuits and lemonade. Daylight was just breaking, and there was a light wind from N.N.E. A course was steered straight for Cape Grisnez, the party being uncertain whether they would make Calais or Boulogne. Sailing was very slow work, but the little craft behaved remarkably well. Mr. Sayce was provided with a double paddle, which he kept in constant use. The little craft entered Boulogne Harbor at 5 o'clock, the voyage having occupied fourteen hours. During this time Mr. Sayce did not once leave his remarkable little craft, which was brought back by the lugger to-day. When a breeze sprung up yesterday it did not look possible that such a toy could remain aloft, but it made not the slightest difference to her. The remarkable part of it was that she shipped no water, and when Boulogne was reached she was quite dry inside.—*Western Morning News, Plymouth, Eng.*

The Northwestern Amateur Rowing Association will, this summer, for the first time in its history of 25 years, depart from a strictly rowing programme and add a tandem and single paddling race, each under A. C. A. rules. The regatta of the N. A. R. A. will be held over the Belle Isle course, at Detroit, on Aug. 11, 12, the two days following the regatta of the National Association of Amateur Oarsmen.

## Rifle Range and Gallery.

### For an Universal Target.

MORGANTOWN, W. Va., July 12.—*Editor Forest and Stream:* I am much pleased to see the letter in FOREST AND STREAM relative to a new target and to find that all can agree as to a standard target. The German shooters have had a target, in which the circles are 3 in. apart; it has given the best of satisfaction for many years, and I have through an experience of fifteen years or more heard no complaints as to its fairness of count or impracticability for the expert marksman. This is the target, the rifle of any weight, with double triggers and a holder attached, is allowed to shoot on, and the "possible" of 250 in 10 successive shots has never been made in a public match.

A target for a standard should be one that can be easily drawn or manufactured at home or the club house, not for saving the item of buying only, but in case through an oversight the supply of targets becomes exhausted and the marksmen who go to the range on practice day have to return home disgusted and disappointed, when if a target of regular divisions in inches, instead of hundredths of an inch, was the standard it could be easily drawn with a string and lead pencil and the shooters not lose the enjoyment of their practice. I am pleased at the suggestion of a target with the rings one inch apart, and if we can have and use such a target without paying for a copyright or being obliged to purchase of one particular maker, shall vote for such target. If I am correctly informed any club or individual that should manufacture the Standard target now copyrighted by Mr. Hinman, would infringe on the copyright and it would be unlawful for them to do so.

How is it, "Y'Ratlim," can we have the inch ring target without restrictions? W. MILTON FARROW.

### Greenville Rifle Club.

The weekly outing, July 15, brought out the usual number of members of the Greenville Rifle Club, of the Hudson River Club, of Marion, N. J., paid the Greenvilles a visit during the afternoon, and helped to liven matters in the shooting house. Messrs. Dorrier and Plaisted, in the absence of Ross, had a lively race between themselves in a series of 50 shots. The totals are as follows: Plaisted 1,067, Dorrier 1,064. The following 10 shot scores are appended: Plaisted 226, Dorrier 219, Chavant 215, Mahlenbrock 210, Collins 208, Robidoux 195, Spahn 189, Dadds 182, Purks 178, Gassman 170. The weekly competition of the members of the Greenville Rifle Club on the gallery ranges continues to draw the usual quota from the several classes to the club house on each ensuing shooting night. On Friday, July 14, the following appended scores were made, 10 shots, possible 250, distance 25 yds.: J. Boag 244, Spahn 240, Purks 239, Plaisted 239, Collins 237, Chavant 236, C. Boag 235, Robidoux 235, Gotthardt 234, Dadds 228, Pfeiffer 219.

### Hartford Rifle Club.

HARTFORD, July 10.—I enclose you scores made by the Hartford Rifle Club at their regular shoot on Saturday. Standard targets, 200 yds., light good, but a brisk, changeable wind.

H M Pope.....	10	10	8	9	10	8	10	7	8	6—86
	10	10	7	9	6	8	8	11	10	—86
	7	8	8	7	9	9	6	10	9	—82

	8	8	5	7	6	9	2	5	8	—68
J C Wiseman.....	6	10	4	10	4	9	4	7	6	—64

Pope finished the series of medal matches to-day, winning a bronze medal on 10 scores of 70 or over with 82, 74, 86, 80, 79, 75, 77, 75 and 82—780; the silver medal on 10 scores of 80 or better with 83, 85, 81, 84, 87, 81, 84, 80 and 82—821; and the gold medal on 10 scores of 85 or better, with 85, 92, 85, 86, 85, 88, 87, 86 and 86—870.

H. M. Pope, Sec'y,

### New York Schuetzen Corps.

The monthly practice shoot of the New York Corps, Capt. Henry Offerman, at Union Hill Schuetzen Park on Friday, July 14, was not as well patronized by the members of the corps as usual, still it brought out a sufficient number to make the shooting house very lively during the afternoon.

H. M. Pope, secretary of the Hartford Rifle Club, of Hartford, Conn., was a visitor in the park during the afternoon.

Scores on the ring target are appended, 10 shots, German ring target: B. Zettler 215, John D. Strahmann 212, Fr. Schmidt 208, H. B. Michaelson 201, John D. Wikens 199, H. Strate 197, Chas. Grosch 192, John Bunz 192, Ph. Feigl 190, John C. Bonn 189, A. J. Christen 188, F. Facompre 181, Wm. Hahn 180, F. Plump 180, A. W. Lemcke 179, J. Schmitt 173, H. Butcher 165, B. Mayberg 165, N. G. B. Beversten 154, H. Meyn 150, John G. Thoele 151, R. Ahrens 151. Point target, 10 shots, possible 30: Ph. Feigl 18, John C. Bonn 16,

Chas. Grosch 14, Fr. Schmidt 13, H. Butcher 12, Aug. J. Christen 11, H. Strate 10, H. Heinecke 10, Wm. Wessel 10, B. Zettler 9, Wm. Hahn 8, Sam Galle 8, F. Plump 8, H. Lohden 8, John Bunz 7, F. Facompre 6, John G. Thoele 6, A. W. Lemcke 6, John D. Strahmann 6, D. Butcher 6, J. N. Herrmann 6, H. Offermann 6, Fr. Hoops 5. Red flags: Fr. Schmidt 3, Ph. Feigl 2, H. Butcher 2, F. Plump 1, D. Butcher 1, H. Heinecke 1, John C. Bonn 1, Sam Galle 1, J. N. Herrmann 1, Aug. J. Christen 1, H. Hanschen 1.

### Zettler Rifle Club.

The bi-monthly shoot of the Zettler Rifle Club, at Cyprus Hills Park, on July 16, was not as well attended as usual, only six members were on hand to shoot out the programme.

Fred. Ross was in good form and made the following appended scores: 239, 214, 219, 220, 222—1,104.

The scores of the members present are appended:	
F C Ross.....	25 18 23 24 22 24 24 24 23 22—229

	17 23 21 16 17 18 20 14 23 16—185

### Turtle Bay Rifle Club.

The weekly gallery shoot of the Turtle Bay Club, at its headquarters No. 156 East 42d Street, N. Y. city, on Thursday night, July 13, was the occasion for another lively race between the following teams. The conditions were 10 shot scores on the 25 ring target, three score to count, distance 25 yds.

J Ochs, Jr., 244 241 242—737 G E Jantzer 246 245 242—733  
J Kramper, 241 238 243—722—1449 H Walter, 240 238 232—710—1443

### New York Rifle Corps.

The Saturday outing of the New York Rifle Club at Cypress Hills Park, July 15, found only four members on hand ready for competition for the club trophies. The following appended scores were made by the members participating, standard American target: Jas. Duane, 85; Thos. Lloyd 83, 80; M. Herrington 83, 85; E. B. Barker (rest), 106, 104, 103.

### Excelsior Rifle Club.

ONLY three members of the Excelsior Club went out to the Greenville Shooting Park on Friday, July 14, to shoot in the competition for club prizes. The scores: Chas. Thomas 211, O. C. Boyce 202, L. P. Hansen 182.

### RIFLE NOTES.

We saw an illustration last week of how one is helped along in his efforts for a record. One of our riflemen started out with a 10 shot score, his first three shots were 24, 24, 24, this caused the other riflemen present to become interested in the individual, for there was an opportunity. Should he keep up the game, the record of 249 would be a thing of the past. In fact a back number. In consequence there was a chorus of admonitions to be careful. The fourth shot was 24. This last shot created a desire upon the part of some present to remove the dust from the shooter's back, which was freely indulged in. The fifth shot was a flag (25) with the marker's hat resting on the top of the staff. This, of course, was an extra inducement to the shooter to hold both his grip and his nerve. All hands present kept looking at the shooter from the stand to the loading table, and back to the stand again, accompanied with the usual back dusting and chorus of "Be careful!" With the sixth shot all were helping to pull the trigger (in their minds). The result was a 21. There was one unanimous "Oh!" long drawn out, and then the chorus came, "Too bad!" Then one individual relieves the monotony with the remark, "He's all right yet; only eight points off from a full score." But the spell was broken. Then the most of the shooters returned to their individual shooting and left the shooter to himself. His seventh shot was another flag (25), and with the flag came every individual in the shooting house to see that flag. Then came out the pencils and paper and down went the figures. Seven shots in the target only 8 points off from a full score, a possible 242; a new record in sight. Again the chorus, "Now, old man, here's your chance; hold for all you're worth; take your shot; don't pull until you're right." In fact all hands were pulling. Off goes the gun. The chorus, "What is it?" Up comes the number, 16. The record is safe. Another ambition blasted for the time being.

The captains from the several corps connected with the new Schuetzen Bund, organized in New York last month, met in the headquarters of the German-American Society, No. 12 St. Marks Place, July 14. The payment of the first installment of the initiation fee or tax assessed upon each society was in order. A general discussion over the question of the good and welfare of the association was freely indulged in by many of the prominent leaders present. That the carrying out of the proposed festival in 1895 will meet with a hearty response from the shooting fraternity through the entire country seems to be the unanimous feeling of all who have had an opportunity to post themselves by conference with riflemen outside of New York. Just as soon as the Bund has become thoroughly organized and in working order, applications for entrance to membership will come rolling in from all parts of the country.

The proposed team match between Messrs. Zimmermann, Marten and Pitschler on the one side and Messrs. Walther, Krauss and Busse on the other, which was to have been decided at the Glendale Park, L. I., on Friday, July 14, has been postponed for the present. Mr. Zimmermann's old rheumatic affliction is upon him again and necessitates his laying aside his rifle for the time being.

We have seen among the riflemen, as in other kindred sports, many occasions where individual effort has been made to make a record. With the riflemen, to make a score a little higher than has been heretofore made. These ambitions are natural, and all riflemen like to see a brother put up a big score, provided of course it is not in a contest, but his individual record or is not in a contest in which he is a contestant.

## Trap-Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

- Aug. 7-8.—Pier Gun Club tournament, at Atlantic City, N. J.
- Aug. 7-12.—Arkansas State Sportsmen's Association tournament at Little Rock, Ark.
- Aug. 9-11.—Missouri State Amateur Shooting Association, at Paris, Mo.
- Aug. 16-18.—Coney Island tournament at Cincinnati, Ohio.
- Aug. 16-18.—Interstate Manufacturers' and Dealers' Association's fifth tournament, at Columbus, Ohio.
- Aug. 22-25.—Third international live bird and target tournament, at Des-clere-shos-ka Island, Detroit, Mich.
- August.—Manufacturers' Trap-Shooting Association tournament, at Wheeling, W. Va.
- August.—Keystone Target Company, seventh annual tournament, at New London, Conn.
- Sept. 4.—Frankfort (N. Y.) Game and Fish Protective Association tournament.
- Sept. 14-15.—Riverside Gun Club's second annual tournament, at Red Bank, N. J. John P. Cooper, Sec'y.
- Sept. 26-29.—Pennsylvania State Sportsmen's Association tournament at Harrisburg, Pa. H. M. F. Worden, Cor. Sec'y.
- September.—Manufacturers' Trap Shooting Association tournament, at Columbus, Ohio.
- October.—Manufacturers' Trap-Shooting Association tournament, at Allentown and Bethlehem, Pa. (combined).
- Oct. 19-20.—West Newburg Gun and Rifle Association fall tournament, at Newburg.

1894.

April 4-6.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap at Dexter Park, Long Island.

The third of the series of team matches between the Union Gun Club, of Springfield, and the Bowling Springs Gun Club will take place at Rutherford on Monday, July 24. As each club has already won one contest, the third will be an interesting one.

## DRIVERS AND TWISTERS.

Chadwick's second midsummer shooting tournament will be held at Culver Park, Marmont, Ind., on Aug. 29, 30 and 31, and \$150 in cash and merchandise will be added to the purses. The events will be at 10, 20, 25 and 50 single targets. The programme speaks thus of the spot where the shoot is to be held: Culver Park is located on the north bank of Lake Maxinkuckee, one mile from Marmont Station on the Vandallia Railway, 33 miles south of South Bend; 33 miles north of Logansport, and 75 miles east of Chicago. It is one of the finest summer resorts in the State, with its refreshing and health-giving mineral waters, its shady nooks and cooling breezes, and its superb facilities for rowing, fishing and sporting of any kind. All who wish rest, health and comfort should attend the second annual midsummer tournament. Mr. Culver has spent thousands of dollars in improvements on these grounds, which consists of Culver Park Hotel, the big Tabernacle of San Jones and Talmage fame, innumerable pools, bowers, walks, shrubs and flowers. Come prepared to stay a week or two at the best summer resort in Indiana.

The second annual shoot of the Crescent Park Gun Club was held on July 4 at Sioux City, Iowa, live birds and inanimate targets being used. The results of the matches were as follows: Ten single clays, entrance \$1, 3 moneys: Lyon 7, Pecaut 9, Sweet 7, Burger 3, Ward 8, Hardy 6, Atkins 4, Harrison 6, Bard 7, Myers 7. Ten single clays, entrance \$1, 3 moneys: Pecaut 8, Sweet 7, Harrison 3, Bard 8, Hardy 5, Atkins 4, Myers 6, Burger 7, Ward 8, Lyon 7. Ten single clays, entrance \$2, 3 moneys: Burger 12, Hardy 10, Myers 10, Harrison 12, Atkins 9, Hunter 9, Sweet 13, Pecaut 14, Scoville 11, Lyon 12. Ten live birds, entrance \$5, 3 moneys: Bard 6, Wilson 4, Harrison 8, Scoville 7, Lyon 9, Pecaut 9, Sweet 8, Hardy 5. Miss-and-out live birds, entrance \$1: Sweet 1, Harrison 3, Lyon 1, Scoville 2; Scoville and Harrison drew first money. Second miss-and-out, entrance \$1: Sweet 3, Harrison 4, Scoville 4, Lyon 5; Lyon won. Seven live birds, entrance \$2.50, 1 money: Sweet 6, Lyon 7, Harrison 4, Scoville 4. Miss-and-out live birds, entrance \$10: Sweet 6, Lyon 5.

Live bird-shooters will be interested to know that during the second or third week in September they will again have an opportunity to test their skill and nerve on the splendid Paterson (N. J.) shooting grounds known as Willard's Park. The shoot will be at 25 live birds per man, \$25 entry, Hurlingham rules to govern, the money divisions to be as usual, with an additional incentive a trophy to cost \$50 will be put up, this to be shot down to a finish by the high guns. It is hoped that this incentive will bring entries from a number of Pennsylvania and New York experts as well as those in New Jersey. Willard's Park, in the opinions of the seventeen men who took part in the 30-bird sweep on July 6, has the finest shooting ground in the East, the field being almost perfectly level, the background perfect and with abundance of shade for contestants and spectators.

DETROIT, Mich., July 17.—Please change dates of the Manufacturers' Trap-Shooting Association, at Viedling, from Aug. 2 and 3 to Aug. 1 and 2. A large attendance is assured. The pleasant location and the \$100 a day and trophy given by the association is sufficient assurance of a good attendance. Mr. J. A. Penn writes that shooters are coming from Parkersburg, Pittsburgh, Columbus and other neighboring cities. The dates at Allentown, Pa., will be Sept. 12 and 13.—JOHN PARKER, Manager M. T. S. A.

The Hazleton Gun Club, of Hazleton, Pa., will hold a tournament on Aug. 3 and 4, the programme to include both live bird and target events. The club will offer \$200 to any two men in Philadelphia who will defeat R. T. Clayton and partner in a race at 25 live birds per man. Mrs. M. F. Lindsey ("Wanda") has been asked to give an exhibition during the tournament. The shoot will be under the management of Messrs. Clayton and Cooper. Hazleton is a town of 15,000 inhabitants and is full of enthusiastic shooters.

By some unaccountable error a curious transposition of names took place in our last issue. On page 43 were printed, side by side, half-ton portraits of Charles Smith, the famous "Dutchy," of Plainfield, N. J., and of the 19-year-old Sam and trap shot and the 19-year-old of New Jersey. Mr. Castle's name appeared under the picture of Mr. Smith and vice versa. We sincerely hope that no harm has been wrought by the transposition.

There is a rumor that William Tell Mitchell, of Lyneburg, Va., and Neaf Appar, of Plainfield, N. J., may soon come together as opponents in a match at 100 live birds each for \$250 a side. Both of these men are shooting in fine form and a contest between them would be worth traveling a long way to witness. So far as skill and nerve are concerned there is little to be chosen.

The North Park Gun Club, of Rochester, N. Y., has changed its name to the Manitou Rod and Gun Club. The new officers are: Pres., John Louden; Vice-Pres., Theodore Lane; Sec'y-Treas., T. H. McGuire; Capt., Clarence Lane. The club is ready to receive challenges from any in the State.

D. Nish has been elected secretary of the National Gun Club, of Elgin, Ill., in place of D. A. Riddle, who has removed to another town. W. J. Mann has resigned the position of secretary of the Rochester Rod and Gun Club and N. C. Fulton has been elected to fill the vacancy.

PLAINFIELD, Mich., July 4.—The following scores were made to-day by members of the Plainfield Gun Club, shooting at 25 targets each: S. B. Negus 20, O. F. Burroughs 19, J. H. Madden 19, R. L. Soule 14, S. Heath 13, F. Heath 12, C. Machemer 9, G. Gilkey 4.

PLAINFIELD, Mich., July 7.—Inclosed find scores of the last shoot of the Plainfield Gun Club, which took place to-day, each man shooting at 25 singles. S. B. Burroughs 20, N. B. Burroughs 19, R. L. Soule 19, J. H. Madden 19, F. Heath 15, S. Heath 14, J. W. Gilkey 14, S. B. Negus 13, Geo. Gilkey 9, Wm. Cox 6.

The team match between the Clifton Gun Club, of Staten Island, and the Newark Gun Club has been postponed until fall. By that time the Newarkers will have thoroughly mastered the obsolete rules under which the match will be shot.

Harry Matz writes us that the summer tournament of the Reading Shooting Association will be held at the Three-Mile House, on Aug. 15, 16, 17 and 18, both targets and live birds to be used.

C. H. TOWNSEND.

## Close Work in the Jersey League.

The members of the New Jersey State Trap-Shooters' League had splendid weather for their sixth monthly team contest, held on the grounds of the South Side Gun Club, in Newark, on Tuesday, July 11. These grounds are situated on the edge of the Newark meadows, below the Emory street station of the Pennsylvania railroad, afford a good background and on this day there was scarcely any breeze to interfere with the flight of the bluerock targets. All the shooting was done from one set of traps, this necessitating an entire stoppage of sweepstake shooting while the team match was in progress. Had there been two sets of traps as announced, there would have been many more targets thrown.

The South Side Gun Club had arranged a good programme of events, all at 15 targets each, \$1.50 entry, and these were well patronized from the commencement. I. D. Terrill and W. R. Hobart had charge of the management and did their work in good shape. The club had provided a large marquee for shelter for the shooters and in one end was a supply of soft drinks, sandwiches and ice cream. Dinner was eaten at Brater's Hotel, a couple of blocks from the grounds.

The attendance of State team shooters was good and quite a number of spectators were on hand during the afternoon. Among the visitors was the genial H. L. Edgerton, the well known expert from Williamstown, Conn., who shot in his usual great form and received a warm welcome from the Jerseymen.

The team race was for five teams of five men each, at 25 bluerock targets per man, and a hot race it was between three of the best teams, the Union of Springfield finally crossing the wire a bare break ahead of the South Side and Maplewoods. Major J. M. Taylor was referee and "Uncle Jake" Pentz scorer of the team race. Below are the scores of the day:

## THE STATE TEAM RACE.

## Coney Island Rod and Gun Club.

The regular monthly shoot of the Coney Island Rod and Gun Club was held on Wednesday, July 12, at Wadsworth Park, Gravesend, L. I. Seventeen members competed for the State district badge and extra added club prizes. The birds were not very good, hence the big scores. Dr. Van Ord won the trophy and first money, W. Lair the second, A. Rockefeller third, T. Buckley the fourth and F. McLaughlin the fifth.

A sweepstake shoot followed but owing to the birds giving out the first money was divided after three killed fourteen straight. The scores:

## Central Gun Club Tournament.

DULUTH, Minn., July 6.—The first annual tournament of the Central Gun Club of Duluth, Minn., was held on their club grounds, July 4 and 5, as per arrangements made but a short time previous. For the information of those not acquainted with the head of the lakes as a trap shooting field, where once one participates in a tournament they will always cherish a desire to return, a brief history of our flourishing young organization will not be out of place. This club was organized March 8, with 19 charter members, of whom, but few exceptions, some never saw a trap and the others were never in trap shooting contests. To-day we have nearly 50 members, and additions are being made at every monthly meeting.

Our club house and grounds, which can be reached by water in small craft or large steamers or by rail, are located seven miles from the city, in a pretty valley about four blocks from Spirit Lake, one of the picturesque lakes for which Minnesota, in the vicinity of Lake Superior, is noted, and here our members meet weekly to practice on the festive birds. How diligently they have labored and how well they have done we will leave to the reader's good judgment, by the appended full scores of our tournament, in which three-quarters of the entries were club members.

Those who took part and witnessed the shoot from outside clubs and cities were Mr. Genevey, wife and daughter, of Minneapolis; Messrs. Duke, of St. Paul; Cameron of Owen Sound, Ont.; Henage of West Superior, Wis.; Mrs. Dr. Day and Messrs. McClure and Coone, of Duluth.

The first day dawned raining hard, but those who had previously determined to take part were all on hand, and by 10:30 A. M. the rain had stopped, the tournament opened, Genevey to the score, and from the time the first shot was fired until the close of the two-days' shoot, the noise would do credit to any Fourth of July demonstration ever held in this city. It continued dark and threatening all day, but rain did not interfere with the contestants until the end of the sixth event, and only long enough then to give the boys, who were warmed up from a good day's work, a little rest and clearer sky for the last event. The day was bright in the last event, thus opening the closing day with the sun on dunes with his Spencer repeater. With a good night's rest, and dreams of all straight, the boys arose and faced an ideal sky for the second closing day of the tournament. There were many more present than on the previous day.

During an intermission several different views of the grounds with those present were photographed. The features of the day were Dr. Day's straight in the last event, thus opening the closing day with the sun on dunes with his Spencer repeater. With a good night's rest, and dreams of all straight, the boys arose and faced an ideal sky for the second closing day of the tournament. There were many more present than on the previous day.

The excellent working of the bluerock traps, which were operated by the electric pull, was the admiration of everybody, not a moment's delay was occasioned and but few birds broken, but through no defect in them, and it was not necessary to change traps during the two days.

The rapid-firing system was the manner of hustling the squads through, and it was rapid, too, to which the event clerks and scorers will testify. Too much praise cannot be given our president, Mr. J. W. Nelson, and his committee for their hard work in making the tournament such a grand success. Our visitors were profuse in their compliments of their treatment while here, and the manner in which every detail was carried out as per programme without a hitch. Altogether it was a jolly and interesting meeting, which we hope will result so annually.

Our first medal shoot, which occurred on the Thursday previous to the tournament resulted as follows: Club medal 25 singles: Dodge 19, Pearson 16, Nelson 16, Coons 14, Moore 14, Green 12, Day 11, Dewar and McDonald 9, Proctor 8. Hulberg Brothers' medal 15 singles: known angles: Nelson and Dodge 9, Pearson 7, McDonald and Moore 5, Day and Owens 4, Dewar, Proctor and Green 2, Nelson won on shoot off. These medals will be contested for on the last Thursday of each month. The club medal, if won by the same marksman in three successive shoots, becomes his property. The Hulberg Brothers' medal will be held by the holder only so long as he can defend it. Both are very handsome solid gold souvenirs and will be of interest to the club contestants.

H. L. HEISLER, Sec.

## Shooting in Florida.

JACKSONVILLE, Fla., July 5.—The Jacksonville Gun Club celebrated the Fourth with one of the most successful shoots in its history. The exceeding heat of the day did not defer the sharpshooters from firing away at the clay pigeons with a persistency truly to be admired. About a hundred people had gathered on the club grounds in Springfield where the contest began.

Quite a number of visiting sharpshooters entered in the contest, and the Forest City Gun Club, of Savannah, was represented by eleven marksmen. They were E. J. Kieffer, F. G. Jangstetter, C. A. Lamotte, John Rocker, John Ruderman, Geo. Lamphart, Geo. Shaffer, Geo. Eberwine, Jack Monahan, Wm. Davidson, and J. F. Ulmer. The others from a distance were H. Lempike, E. W. Connors and J. F. Ulmer, of Savannah; J. C. Phelps, of Charlotte, N. C.; S. Van Gilder, Knoxville, Tenn.; J. H. Mooney, Orlando; J. D. Kirkpatrick, W. R. De Witt, S. Hendricks and W. Hendricks, Green Cove Springs; Dr. D. S. Smith, of Jasper.

The scores made were as follows:

No. 1, 15 singles: J. L. Marvin 10, B. Taliaferro 9, B. H. Barnett 12, Mooney 12, Monahan 12, Fairhead 10, Van Gilder 11, Wescott 11, Rocker 13, Ulmer 13, Davidson 10, Lempike 8, Coachman 12, Reedeman 8, Kirkpatrick 2, Lamott 5, Jangstetter 11.

No. 2, 15 singles: Marvin 9, Taliaferro 14, Westcott 11, Davidson 3, Lempike 8, Reedeman 11, Woeltzen 9, Smith 9, Connor 10, Jangstetter 14, Lamott 6, Ulmer 5, Rocker 5, Barnett 9, Mooney 9, Monahan 6, Fairhead 9, Coachman 12, Van Gilder 13.

No. 3: Barnett 14, Mooney 13, Davidson 12, Wescott 13, Ulmer 10, Lempike 5, Taliaferro 12, Jangstetter 9, Van Gilder 11, Connor 7, Reedeman 7, Marvin 12, Rocker 14, Lamott 6, Woeltzen 12, Smith 6, Eberwine 3, Coachman 14.

No. 4: Mooney 11, Wescott 12, Van Gilder 13, Lempike 11, Woeltzen 6, Ulmer 12, Connor 11, Taliaferro 14, Jangstetter 13, Davidson 14, Monahan 9, Fairhead 13, Marvin 12, Reedeman 9.

No. 5: Taliaferro 10, Coachman 11, Monahan 10, Mooney 12, Woeltzen 5, Reedeman 12, Lempike 10, Ulmer 12, Connor 11, Wescott 11, Rocker 13, Barnett 13.

No. 7: Barnett 13, Ulmer 12, Taliaferro 15, Coachman 13, Van Gilder 14, Lempike 11, Wescott 11, Connor 13, Monahan 9, Davidson 14, Hendricks 10, Jangstetter 11, Marvin 13, Fairhead 10.

No. 8: Taliaferro 12, Van Gilder 10, Davidson 13, Fairhead 13, Barnett 14, Monahan 12, Connors 10, Ulmer 12, Coachman 15, Marvin 11, Rocker 14, Lamotte 11, Hendricks 4, Reedeman 10, Jangstetter 13, Mooney 14.

No. 9: Coachman 12, Rocker 12, Barnett 12, Fairhead 9, Connor 11, Lempike 10, Ulmer 13, Wescott 14, Van Gilder 11, Taliaferro 11, Marvin 12, Lamotte 11, Woeltzen 10, Davidson 14, Jangstetter 10.

No. 10: Wescott 10, Davidson 11, Ulmer 13, Barnett 12, Taliaferro 13, Jangstetter 11, Coachman 15, Marvin 3, Connor 10, Lempike 13, Fairhead 10, Van Gilder 14, Mooney 11, Monahan 11, Rocker 11, Woeltzen 11, Lamotte 13.

## North Side Gun Club.

THE members of the North Side Gun Club turned out 11 strong on Tuesday, July 11, at the club shoot at Queens County Driving Park, Maspeth, L. I. Each one shot at 7 birds for the best averages of the season. Four killed 7 straight and five killed 6 out of 7. Some good miss and out sweepstake shoots followed; in the second one the birds gave out and five divided with 9 each. The shooting of Charles Meyer was very good, not scoring a miss during the shoot. C. M. Meyer also shot well, making one miss. The scores:

M. C. Manning 5, J. Tierman 7, G. Sieme 4, H. Heyer 6, Chas. Meyer 7, C. M. Meyer 7, J. H. Menke 6, A. Duryea 6, J. H. Wahlen 6, H. Otten, Jr., 7, E. Barlow 6.

## Parkway Rod and Gun Club.

FOURTEEN members of the Parkway Rod and Gun Club shot for the three class prizes and the club's gold medal at Dexter Park, on Wednesday, July 12. Each shot at 7 birds, class handicap; three tied with 7 straight for the medal, which was won on the shoot-off by A. Botty, who also won the Class A prize. H. Bramwell won the Class B prize and A. Andrews that in Class C. The scores:

Class A, 28 and 30yds.: E. Helgans 6, D. Monsees 7, A. Botty 7, H. Bookman 4, J. Young 2, A. Walding 4, J. Bennett 4. Class B, 25 and 27yds.: T. Short 5, H. Bramwell 5, M. Ellis 4. Class C, 23 and 25yds.: A. Andrews 7, J. Woolly 5, H. LeMaire 6, H. Selover 5.

## New Utrecht Rod and Gun Club.

THE members of the New Utrecht Rod and Gun Club had a fine afternoon's sport last Monday at Woodlawn Park. It was the regular monthly shoot for the club prizes. Six entered at ten birds each, then miss and out. Three tied with ten straight and fifteen more on the shoot off, when the birds gave out and they threw the dice to decide the winner of the prize. G. W. Cropsey was the lucky one. A. A. Hegeman won the second prize after a good race and W. F. Sykes took the third prize with the only eight. The score: C. Furgueson, Jr., 25, D. Deacon 25, G. W. Cropsey 25, C. A. Sykes 17, P. Adams 16, A. Squires 15, R. R. Sweet 15, W. F. Sykes 8, A. A. Hegeman 18.

## Crescent Gun Club.

Six members of the Crescent Gun Club were present at the regular monthly shoot at Dexter Park, on Monday, July 10. The birds were a good lot and the shooting for the prize gun was very keen, no less than three making full straight scores, the best to count at the close of the season. In the sweepstake shoots the money was about equally divided. The scores:

Club shoot for annual prizes: L. Hopkins 7, C. Mohrman 4, C. Hubbell 7, W. Coulston 8, O. Hillmer 5, W. Gilman 7.

## ANSWERS TO CORRESPONDENTS.

A. M. M., New York.—Will you kindly inform me through your next issue the weight of largest pike recorded? Ans. The limit of size of this species is involved in some uncertainty. By reference to Goode's "American Fishes" we find that Continental Europe is credited by one author with an individual weighing 145lbs., which was caught at Bregentz in 1862. A Scotch specimen weighing 72lbs., and measuring over 7ft., appears to be the largest of the monsters of Great Britain. The European pike is identical with the American pike, but no such mammoth specimens as the above have been recorded from American waters. From 16 to 17lbs. seems here to be the maximum.

Property For Sale.

**FOR SALE.**  
**MEMBERSHIP SHARES**  
IN THE  
**Triton Fish and Game Club,**  
CANADA.

There has just been incorporated under the above  
title the finest fishing and gunning association in  
Canada. This preserve consists of 102,000 acres,  
having within its borders over fifty lakes and a score  
of rivers and mountain streams, all of which swarm  
with trout ranging from 6lbs. (*Salmo fontinalis*  
only). The virgin wilderness teems with small  
game. Of the larger kinds the caribou abounds.  
Moose and black bear are fairly plentiful, as also  
beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Que-  
bec, on the line of the Quebec & Lake St. John Rail-  
way, and is reached in twenty-four hours easy  
journey (by rail) from New York City. (See pros-  
pectus.)

A limited number of shares is offered to gentle-  
men of unexceptionable references.

As a summer resort for both gentlemen and ladies  
the Triton Club offers great attractions, in addition  
to the best fishing and shooting to be had on this  
continent, at a very low cost.

The shares are \$20 each, and are an absolutely  
safe investment. Intending purchasers should care-  
fully examine Sec. 4 of constitution, also pages 12 and  
24 of by-laws about membership certificates, agents,  
membership cards, route and mode of payments.

**FOR SALE.**  
**Camp Ground,**  
**SARANAC LAKE,**  
Adirondack Mountains.

Point of land just north of Sweeney Carry and  
Hotel Wawbeek, well wooded, high elevation, large  
water front, with a superb view of the country to  
the north, east and south, easy of access, and one of  
the finest camping spots in this whole country,  
containing about 45 acres. Address P. O. Box 1,980,  
Boston, Mass., for further particulars.

**TROUT LAKES FOR SALE.**

I offer for sale a portion of my Adirondack pre-  
serve, from 1,000 to 2,000 acres of land, with four  
lakes. Three log cabins on the property, good  
road to two of the lakes, easy trail to the other two.  
This property is suitable for a club or for private  
resorts. One lake is stocked with salmon trout, the  
others with speckled trout, 30,000 planted last May,  
and shall plant as many more this year. Will sell  
any one lake with a portion of the land. Address  
DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

Drum, etc. Membership limited to 20. One more  
subscriber wanted. H. A. Weeks, 74 Murray St., N. Y.

**DUCK CALLS.**

Grubb's Improved Illinois River Duck Call. The  
most natural-toned call made; easy to blow; not  
easy to get out of repair, having a fine tempered  
reed; makes it so you can call teal, woodcock and  
bluebird, as well as mallard. This is the only call  
you can do this with. Price 50 cents.

Same as above, made of red cedar, silver mounted,  
with silver reed which gives it perfect tone, \$1  
Every one warranted. Address

Routes for Sportsmen.

**A BLANK DAY.**  
BUT IT WAS NOT ON THE  
ILLINOIS  CENTRAL  
**RAILROAD.**

The sportsman of the North often has a blank day.  
Indeed, no Northern shooter knows much about  
shooting until he has shot in the South, where the  
superb natural conditions have left the game in un-  
diminished plenty in the covers.

**Don't Go After Bear**  
to the Rockies. Go to the wide river bottoms of  
Mississippi or Louisiana and you will get one.

**Don't Go After Turkeys**  
to the Great West, but to the Great South, in Missis-  
sippi and Louisiana, where the unbounded wood-  
lands hold abundance of these noble birds.

**Don't Go After Ducks**  
in the North, and work hard for days for a dozen  
ducks. Go South, to Louisiana and Texas, and  
learn what wildfowl shooting is.

**The Quail, Woodcock and Snipe**  
shooting of the South is such as the Northern hunter  
never dreamed of. A genial climate, a pleasant  
people, a six months open season, and birds until  
you want no more.

The Illinois Central Road runs direct to all this  
country, and is the only road that does.

**A. H. HANSON,**  
Gen. Pass. Agent, Illinois Central R. R., Chicago.

**GRAND TRUNK  
RAILWAY.**

When planning your annual tour remember that  
this company controls over 4,100 miles of railway  
equipped in the most approved modern style, pass-  
ing through a magnificent country noted for its un-  
surpassed facilities for sport.

**A FEW OF THE PRINCIPAL RESORTS.**  
**ANDROSOGGIN LAKES** (via Bryant's Pond or Bethel).  
—Excellent trout fishing and game, large and small, of  
every description.  
**THE WHITE MOUNTAINS** (via Gorham, N. H.)—For  
trout and varieties of game.  
**THE SALMON RESORTS** of Quebec, New Brunswick  
and Nova Scotia (reached via Quebec).

## FRONTIER HOUSE,

Morristown, N. Y. This house, located on the St. Lawrence River, is but a short distance from Black Lake, so long known for its celebrated bass and pickerel fishing.  
JAMES F. CULLIGAN, Proprietor.

## Thousand Islands. River St. Lawrence.

## MARDEN HOUSE.

Good bass, pickerel and masalonge fishing. House pleasantly located. Rates, \$2.00 per day.  
G. A. MARDEN, Proprietor.

## EARL HOUSE, Sackett Harbor, N. Y.

Accommodates 40. Excellent bass fishing. One of the best points for duck shooting in season. Located on line of Rome, Watertown & Ogdensburg R. R.  
R. H. EARL, Proprietor.

## FOREST AND STREAM

ROD AND GUN

## CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

## SUBSCRIPTIONS

Subscriptions may begin at any time. Terms: For single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: \$5 per year, \$2.50 for six months.

## ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices \$1.00 per line. Only advertisements of an approved character inserted.

Address all communications:

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York City.

## TOO MUCH IRON.

WHEN the Haytians were fighting the Haytians, last time, they sent to New York for a war ship. The contractor purchased a tramp steamer, grown old in commerce; ran her into dry-dock; fortified her with iron armor to ward off the gun shots; and put to sea, bound for Hayti. A violent storm was encountered; the steamship, overlaid with her armor, was wrenched and wracked by the waves, and went to pieces; and of all the souls who sailed in her not one was ever seen again. The disaster was due to too much iron.

When more effective game protection is demanded, not infrequently those interested think to effect it by securing a stronger statute, raising the prescribed fine of \$50 to one of \$500—piling on the armor, and with iron a-plenty converting superannuated merchantmen into men-of-war. Thus it has come about that in some parts we have game laws which are commonly spoken of as iron-clad. Some are of iron from the keelson up; but more have timber frames with an iron sheathing to make them look formidable. When these encounter stress of weather they go to pieces.

Missouri's iron-clad law to regulate the sale of dynamite and to prevent the destruction of fish by explosives has been commented upon before. Put to test, the statute has just been declared to be unconstitutional because of a defective title. It is designated as an act for "the protection and preservation of fish," whereas, the court holds, it is an act for the regulation of the sale of explosives. The failure of the law, then, is not due to the iron-clad nature of its provisions; the question yet remains to be determined whether a statute of similar import properly entitled would be a practicable and serviceable law. If otherwise, no doubt the ingenuity and acumen of Missouri legislators will be equal to the task of finding some other effective mode of putting an end to the fish dynamiter. The remedy must be devised in some way, for the evil is one not to be tolerated.

While Missouri has been studying how to get the better of its fish murderers, Michigan has been engaged in an endeavor to solve the problem of game marketing and exportation. The latest move in this direction is the adoption of an iron-clad statute, which, if ever enforced, would cause no end of trouble for a game dealer who might fall under suspicion and be brought up with a turn by the energetic Mr. Hampton.

Following the example of some other States, and a very sensible example it is, too, the law first provides that no person shall at any time or in any manner acquire any property in any game, or subject it to his dominion or control, but that under all circumstances and conditions it shall be and remain the sole property of the State. Game taken in the times and the modes authorized by law, and for the purposes authorized by law, may be used at such times and for those specified purposes, but not otherwise.

One of the forbidden purposes is shipment out of the State. If an exporter were to attempt to send out venison under a plea that it was not the meat of Michigan deer, he would find himself stopped by the new statute, for one of its further provisions is that possession of any game shall be *prima-facie* evidence that it was killed in

Michigan. To disprove this and show that it was killed elsewhere the owner must produce the testimony of the person who actually killed it elsewhere.

Nor is this the end of the evil, for further the statute reads that when the possessor has proved that his venison was killed in another State, this again shall constitute *prima-facie* evidence that it was killed contrary to the laws of that other State; the possession of such unlawfully killed game is forbidden in Michigan; and the fresh presumption may be overcome only by direct and positive evidence to the contrary.

Just how this new iron-clad law is to be enforced, and just what it is designed to accomplish, we confess we do not clearly see, but we understand that it was suggested by Game Warden Hampton, and as he is the practical agent of game protection in Michigan, he no doubt had a good reason for asking the Legislature to give him the novel statute. All friends of Michigan game protection will indulge the hope that he has over-weighted his ship.

## NOTHING FOR A SPRAINED THUMB.

TELLING of a fishing trip among the lakes of northern Wisconsin, the other day, Dr. Tarleton H. Bean related that the party put up at a hotel specially maintained for fishermen, and designed to fill their every want. One day, when Dr. Bean and his companions were fishing on the lake there came up a tremendous thunder storm. They went ashore, hauled out the boat, turned it bottom up, crawled under it to keep dry, and as usually is the case, were all thoroughly drenched. In righting the craft one of the party seriously sprained a thumb, and on his return to the hotel asked for some whisky or brandy to bind on the painful member. There was not a drop of whisky to be had, nor of brandy, nor of rum, nor a drop of anything of the kind, not even an empty bottle in which there had been a drop. The host explained that he kept a hotel for anglers, but that liquor was not in his outfit. The man with the thumb turned wrong-side-before partially forgot his pain in reflecting upon the characteristics of angling in the year 1893, when an anglers' resort was whiskyless.

After all there was nothing curious about the fact, nor anything surprising in the principle illustrated. This Wisconsin fishermen's inn is not unique among angling resorts because devoid of bar appendages. Some people drink whisky and other malt and distilled beverages, at home and abroad, in or after business hours; and when they go fishing they drink beforehand, in anticipation of their luck; during, in its celebration; and after, in joyful memory thereof. Other men do not drink whisky at home but feel that they must carry a flask or a demijohn with them when they go fishing. They constitute a less numerous class than formerly. Then there is another contingent of fishermen, and this we believe makes up the great and growing army, which, unaccustomed to the use of liquors at home, does not carry a bottle into camp nor patronize the bars of fishing hotels. In short, the average measure of the consumption of liquors by fishermen on their fishing excursions corresponds with the average measure of the consumption of liquor by men going about their every day business. The day has gone by when a fishing trip of necessity means a carouse.

The day has gone by, too, and for this the editors of at least one angling journal thank heaven, when the chroniclers of fishing trips thought it essential to make an inventory of every drink swallowed, and to record with loving particularity how good it tasted. When we come to think of it, even if a man does take his nip in camp there is no special reason why he should expect an editor to perpetuate the momentous event in cold type. The average world is not dying to learn that after landing his big fish Tom Jones took a drink. As a matter of fact, it is comparatively a rare libation that is recorded in the FOREST AND STREAM. Perusing its columns as every good State Executive should, the Governor of North Carolina might well remark to the Governor of South Carolina upon the long time between drinks therein recorded. The future student of Nineteenth Century social customs and development, who shall refer to these files for data, will never conclude from what he finds here, that the fisherman of this age was a guzzler beyond others of his day and generation.

This is not to say that sportsmen as a class are temperance crusaders and preachers of prohibition.

Some may be. Others are not. There is a certain sportsmen's club house not far from this city, where provision is made for members and their wives. Upon the approach of a public holiday, the experienced member who happens to be sojourning at the club house with his wife, knows enough to come with her to town to avoid the bacchanalian uproar impending. This is not to say that sportsmen as a class are given to revels and racket. Some may be. Others are not.

Abundant opportunity for misconception lies wrapped up in that term "class." With respect to their drinking proclivities "sportsmen" are not a "class," any more than they are a "class" as to the color of their hair or a fondness for baked beans or their religious faiths or political opinions. It is a popular error to regard the men who fish or the men who shoot as for that reason being set apart from other men in a special class, marked by common likes and dislikes, virtues and shortcomings in other things than shooting and fishing. Forty years ago, when Frank Forester was picturing the doings of his heroes in the field, the common error quite naturally instilled by his writings was that sportsmen as a class were excessively given to drink; and that Nimrod must be not only a mighty hunter before the Lord but a mighty drinker as well. Forester was not alone in ascribing to the sportsman of that day valiant prowess with the bottle. The *Spirit of the Times* was the accepted organ of the craft, and many of the writers who contributed stories of shooting and fishing successfully emulated Herbert in their chronicles of drinking achievements. An examination of the files of the old *Spirit* would show that there was abundant ground for this complaint of a correspondent whose letter was published in one of the September numbers of 1855:

Another of your correspondents goes on a hunting expedition with two or three gentlemen. His description of the sport is very exciting and makes us wish that we were of the party, but from a perusal of the introductory paragraphs you might suppose that he was about establishing a wholesale liquor shop in the backwoods, where free lunches were to be dispensed to all who might travel that way. After the day's hunt is over he tells you how the party conducted themselves, and you certainly could not be censured for saying that our friend is either given to exaggeration or else the party of gentlemen have altogether forgotten what belongs to their character. The Rev. Mr. Beecher can give us a "A Day's Fishing" without catching a trout, and some of your correspondents have given "A Day's Hunt" in most bewitching colors without killing a deer, or getting drunk. Let your correspondents always remember that the hunt—the sport—is the thing we want, not the quantity of liquor drank, the number of cigars smoked or the amount of provender which one of the party contrived to stuff into himself. (In one case an individual is described as eating for breakfast as much as would certainly serve half a dozen laboring men for a whole day.)

In spite of an occasional protest like this, the good things to drink continued to be dwelt upon with affectionate minuteness and prolixity by the *Spirit* writers, and as the public drew from that journal its notions of sport and sportsmen, it quite naturally put the man of the gun and his companion of the rod in a class specially addicted to the consumption of cocktails. Long years ago the *Spirit of the Times* gave up its shooting and fishing correspondence, and the FOREST AND STREAM stepped into favor as a substitute. Long years ago, too, the FOREST AND STREAM deliberately gave up shooting and fishing correspondence in which the bottle played a conspicuous part; and by this time it should be commonly understood by all intelligent people that the old order of things has passed away. Nevertheless so tenacious has been the popular association of a bottle with fishing and shooting, that even in these days the fisherman is astonished to find an anglers' hotel in the wilderness with never an emergency drop of whisky for a sprained thumb.

WE publish a particularly interesting article on salmon fishing in Monterey Bay, California, contributed by our sometimes correspondent, Mr. J. Parker Whitney of Boston, known among many of our fishing fraternity as one of the most persistent and experienced anglers in the country. In fact Mr. Whitney's experience with salmon and trout in hundreds of waters, extending over a period of the greater part of half a century, make him eminently qualified to present and review the novel subject he has presented. Mr. Whitney's village of buildings at the Richardson lakes, of the Rangeley waters, which he has frequented for the last thirty-five years, are well known to the visitors of that locality; and there he has passed months yearly, and his record of trout and salmon have been hardly equalled.

## The Sportsman Tourist.

### THROUGH THE HEART OF PERU.

In Two Parts.—Part II.

AFTER a six days' wait in Moyabamba we discovered that absolutely no efforts were being made to secure us peons, and that this arose, not from the pleasure of our society, but from the fact that one of our party was a physician, and as the profession of medicine was unrepresented in the place, it was thought well to allow him plenty of time to remove numerous wens and other kinds of tumors, which seemed to be prevalent in the town. By dint of united effort we finally persuaded the Prefect to let us have three soldiers, who, with an old Indian and his wife and a resident of the town who volunteered to carry a third of our load\*, we hoped would enable us to transport our luggage. The old lady was warranted to carry a stout load herself, and certainly her garments could not impede her movements, for all she wore was a single skirt reaching from the waist to the knee. Just before starting we were fortunate enough to secure the services of two more peons, stout young fellows, one accompanied by his wife, a plump girl of eighteen, with piquant face and *retrousse* nose. Her costume was the same as the old lady's, but as we had previously passed through a number of villages where all the women were attired in this way, with the addition of a quantity of blue paint on the face, we were not as forcibly impressed by the lack of apparel as we might otherwise have been.

On the afternoon of the seventh day of our stay we set out, having first presented our pleasant host with a revolver. He gave us letters to the Governors of Yurimaguas and Balsa Puerto, to the naval commander of Iquitos and to Señor Sisley, a prominent citizen of Yurimaguas, also an official order on every Governor in the whole Department of Loreto, commanding them to forward us on our journey with all due dispatch. The term "Governor" in Peru is equivalent to our Mayor, the official presiding over a town simply.

A two hours' walk brought us to Guninge. The peons and soldiers came straggling in later, the latter drunk and having neglected to bring any food. They wanted six reals (sixty cents) for plantains. We gave them. Next they demanded a chicken. Our answer was negative, couched in very forcible language. Next morning we made an early start after paying the Governor of the town his very moderate charge of three pesos, \$2.40, for our room and food, consisting of chicken, coffee, yucas, chocolate and eggs.

Our poor old Quichua† woman could hardly walk owing to tertianas, a kind of chills and fever. A liberal dose of quinine, however, enabled her to keep along. The path was very muddy, but otherwise not bad. One of the soldiers gave out. We lightened his load by degrees until he carried nothing, but still he declined to proceed. Finally, with the aid of some native rum and threats of violence, we got him to keep on his feet until our arrival in the evening at the hacienda of Señor Gomez, Jesus del Monte, the last house on our journey before reaching Salina. There we spent the night and replenished our stock of provisions. We were also fortunate enough to secure one more peon.

We made an early start next morning and found the path extremely bad. Up and down hill, in mud and water to the knees, over slippery logs and moss-covered rocks we made our way, pulling ourselves up perpendicular ascents by means of vines and projecting roots, fording one stream nineteen times, now and then getting pretty severe falls, and drenched to the skin by torrents of tropical rain.

We were now in the heart of the virgin forest. On every side were enormous trees overrun with trailing vines and with orchids here and there growing on the moss-covered limbs. In many places so thick was the growth above, that for long stretches we passed over sodden ground where the rays of the sun never fell. There was an absolute dearth of animal life; we saw no snakes, a piece of good fortune probably, since parts of this route are supposed to be infested by them, and a peon shortly before we were told, had died from the bite of one. In fact between Jesus del Monte and Balsa Puerto we saw no animal living or dead with the exception of a puma, which an Indian had just shot, using a cheap Belgian gun looking like a toy, into which he had put a round bullet. We pushed on and in the evening reached a small hut called Tambo Pinquillo. The tambo consisted of some upright sticks with boughs for a roof. No fire would burn, and we spent a wretched night with the rain dripping through the covering of the tambo.

Next morning we learned that one of the soldiers had not come in the night before. Among the things which comprised his load were 300 silver soles, my letter of credit and all of my tobacco. We sent back two peons in search of him and spent our time lying in the tambo in the dripping rain. In the afternoon, greatly to our relief, the peons and the soldier with the luggage turned up, but the rain was too heavy for us to proceed. The old Indian with his wife sat at a distance from the others and employed his time in making a wooden comb. He never exchanged words with any one, and he and his wife cooked plantains, their only article of diet, entirely apart from the rest. It is worthy of remark that all peons in this district, though carrying heavy loads through long days' journeys, subsist on the plantain alone, which they roast in the embers. Their burdens are supported upon their shoulders and kept in place by strips of bark or cloth which broaden into a band worn across the forehead, where comes the principal strain. In walking they lean heavily upon a stout stick, and I have seen a number of places in ascents and descents where holes from 3 to 6 in. deep have been cut into the soft and porous rock by the constant placing of these sticks on the same spot by great numbers of peons through long periods of time.

The following day was clear. We walked four leagues over a somewhat better trail, though we were obliged to ford four streams in their various twists and turns a score of times. We reached Tambo Chucluyaco in the middle of the afternoon and found the little tambo already occupied by some Indians, who very graciously yielded it to

us, and with their machetes or long, heavy knives, which all Indians in the interior use in place of axes, they speedily made another for themselves.

It is seldom that over one or two Indians in the party are wealthy enough to possess a machete. These precede the others on the march, lopping off small branches, hanging vines, etc. The Indians will accept only American steel for the blades, and I have been told that savages up the Marañon who cannot even count, know how to detect an American trade mark.

We made an early start the next morning and ascended an interminable hill for four hours. Twice we mounted rocks 40 ft. long almost at an angle of 45°, down which ran small streams of water; next we came to a waterfall 150 ft. high and 50 ft. in breadth. The river was too deep to ford and too rapid to swim, and could be crossed at but one place only 3 ft. above the edge of the fall, where the water became shallower, reaching half way between the knees and the waist, and where a ledge of rock running across the stream served as a brace for one foot and the walking stick, while with the other foot the traveler would have

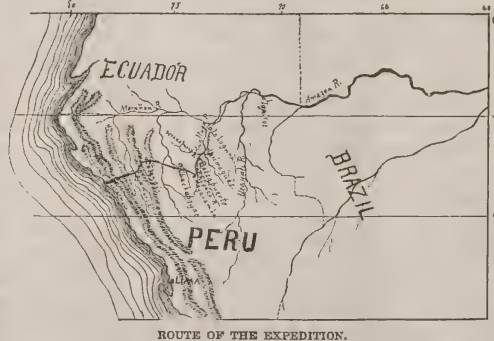

A TROPHY OF WAR.

One of these tribes, by an unknown process and without any apparent incision after decapitation, removes all traces of bone from the heads of the slain and allows the flesh to dry. Of these heads, one seen by us was no larger than an apple, and yet the features were perfectly preserved, and with the long hair had rather a ludicrous appearance.—Part I, page 51.

to work his way over. The position was a very trying one. A number of peons had been drowned at this place.

Prior to crossing, an incident occurred which might have brought my journey to an abrupt conclusion. The stream ran between high banks, and at the fall between a mass of rock on either side. This rock sloped toward the stream but at a still greater angle toward the fall, an angle so acute that a body must roll or slide into the falling water unless in some way enabled to check its progress by outside means. I reached the rock first and proceeded to descend the wet and slippery side, when suddenly my foot shot from under me and down I rolled over and over toward the middle of the cataract. At this stage, when death seemed certain, I managed to seize a projecting root of a small bush which grew in a cleft about 20 ft. down, the only green thing on the rock, and by this good

ROUTE OF THE EXPEDITION.

fortune I succeeded in checking my progress. The descent was too steep to permit me to rise to my feet, yet not steep enough to throw very much of my weight on the bush as I lay extended. My companions, thunder-struck for an instant, quickly let down a long piece of tough vine and pulled me up.

With nerves somewhat shaken we made the dangerous crossing and pushed on to Salina, a descent of six miles, so steep in places that we could scarcely keep our feet. We arrived before dark, having ten times forded the Cachiayo.\* At Salina that night I slept on a bed for the

first time in many days. It boasted no mattress, having only slats, and my body the next morning somewhat resembled the American flag, but still it was a bed, and very much better than sleeping in a puddle of water.

The following day we reached Balsa Puerto early in the afternoon, two of us getting there somewhat ahead of the rest and far in advance of the peons, one of whom had my pantaloon which I had given him to carry on account of the numerous streams to be forded. Attired in my undergarments only, I walked into the presence of the Governor and delivered our letter of introduction. He seemed slightly suspicious of us, but became more affable later on. He billeted us upon one family for a room and upon another for food. Shortly after our arrival we were joined by a Frenchman, who had drifted to the place and taken up his abode there. He was perfectly delighted to find that two of us spoke his language, one very fluently. Taking us to his house he insisted upon our joining him in drinking a couple of bottles of wine. This wine was a kind of new port from Portugal, via the Amazon, and from here on we found it where it was possible to get anything. Upon the arrival of the peons I resumed my trousers, which I think rather increased the Governor's confidence in us. One peon did not come in with the rest and we sent two men after him. His continued absence with part of our luggage, and the swollen streams, kept us three days at Balsa Puerto. At the end of this time the peons who had been sent back returned with our baggage. They had found their companion ill in the woods and had left him there, promising to pick him up on their return. We never heard what became of the poor fellow.

During our stay at Balsa Puerto our friend, the Frenchman, gave a fandango in our honor which we all attended, although I had never danced a step in my life. The ball was held in a log house with a floor of earth, and lighted by tallow candles, stuck here and there on the walls. Upon a table were numerous bottles of the rather heady port previously mentioned, and of aguardiente, the native spirits.

Besides our party there were about fifteen Indian girls, young and graceful, and as many men. The music consisted of the beat of a drum and the voice of the drummer. The dancing begins by two girls approaching the men with whom they wish to dance and slowly waving their handkerchiefs; the men rise instantly, also handkerchief in hand, which, during the dance, all wave in unison, with graceful movements of the body, somewhat resembling the motions of the East Indian Nautch girls. When the dance is completed the men select partners in a manner similar to the girls and the figure begins again. During all this time the girls who are not taking part in the dance are filling tumblers of port, from which they take perhaps a mouthful and then send them to the men whom their choice dictates, the recipient being expected to drink considerably more than the fair one to whom he is indebted for the wine. At first the young and supple Indian girls let us severely alone, but at length the wine began to have its effect and finally as many as three glasses reached me at once, while six soft, dark eyes looked at me ready to return my salute when the wine touched my lips (I shall confine myself to my personal experience at the ball). I was having a most enjoyable time drinking my port and watching the dancers when, to my intense horror, a young girl advanced and waved her handkerchief before me. I looked appealingly at the Frenchman. "You must do it," he whispered, "to refuse would be a deadly insult, and would be promptly resented by her male friends." Oh horrors! I have as much ear for time and tune as a cow and can dance about as gracefully, and the idea of making a spectacle of myself was simply appalling. I drained a glass of port and arose to my feet and the dance began. It was justly watched with intense interest by the entire room and lasted a veritable eternity. Finally it ended, and with a long, deep sigh of relief, I returned to my seat beside the Frenchman. The music stopped and there was an expectant pause. "Now, you must select a lady," said my friend. "Good gracious! was the agony to be endured again? 'I'll take the same one,' I said, 'perhaps she has learned my style.' 'Oh, no,' replied he, 'that would be too marked an attention; it wouldn't do.' Nervous by another glass of port I walked over to a beautiful girl of about fifteen, who in the most embarrassed manner declined. It was immediately explained, however, that no insult was intended, and that timidity alone prevented her from joining in the dance; my next attempt was more successful, and at length I was free. I returned to my bench and was watching the dancers, when suddenly the larger part of those present ran pell mell out of the room, and at the same time some one, as I thought, lifted up the end of my bench and very nearly threw me to the floor. I looked around to see who had taken this liberty. I was alone. In a minute or two the guests came straggling back, and to my inquiry as to what had occurred, my French friend answered, "An earthquake." This broke up the ball.

On the afternoon of the fourth day at Balsa Puerto we made a start down the Cachiayo. Two dugouts, one 35 ft. long for ourselves, propelled by four Indians, and one 10 ft. shorter, with three to handle the paddles, for the luggage, furnished our means of conveyance. We reached Esperanza after dark and slept on the floor of a little hut, our rest being somewhat troubled by swarms of rats. In the morning we bought 25 lbs. of salt fish for the men and an abundance of native rum; for while in America "money makes the mare go," here in the heart of Peru aguardiente is far more efficacious. The banks of the rapid Cachiayo are tropical in the extreme. Bananas, towering palms and trees of hard wood, interlaced by a matted mass of vines, form an impenetrable barrier of foliage. Flocks of screeching parrots and gorgeously-plumed macaws, with here and there curious looking birds of the heron family, hovered over us, all contributing to make a scene never to be forgotten.

About mid-day we turned into the less swift Paranas. Before dusk the scene fairly beggared description as we lay in our canoe on piles of blankets, lazily gliding down the stream in the blue and pink sunset. The half-clad Indian paddling at the bow, the steersman seated in the stern, the air filled with flights of parrots, noisily seeking their roosting place among the lofty palms. Long after dark we reached Muniche, a town of six houses.

Making an early start next morning at about 1 P. M., we turned into the Huallaga and an hour later reached Yurimaguas. The principal houses of this town are built in a square, the pavement being raised about a foot

\* A full load sometimes exceeds 100 lbs.

† Native Indian.

\* Yaco is the Quichua for "water," and nearly all the names of rivers in this section terminated in it; as Pumayaco, the tiger water, etc.

from the street and inclosed by a fence. Those wishing to enter a house or a shop must go to a gate at the end of the street and walk up inside. The paling is put up to keep out the cattle that frequent the plaza. In spite of warnings as to poisonous fish, fever and other terrors, we took a dip in the river. It seems there is some danger of pirañas,\* a species of fish which bores through the flesh to the bone. I have seen ugly scars from these wounds.

In the evening we delivered our letter to the Governor, who promised to have a "balsa" constructed for us. The native balsa consists of a number of logs of wood so light that nails will not hold, bound together with a species of vine. In the center a house is built of poles covered with plaited leaves and floored with cane, large enough to accommodate the party. In the rear a table with a layer of earth on top serves as a fire-place for all culinary needs.

The next morning we called upon the Governor again, and found that nothing had been done. The procrastinating spirit of these people can be best illustrated by a little incident. Early in the day a woman called upon us and explained that she was suffering from a tumor, that there was no doctor in the place, and that she had learned that there was one in the party. Our physician examined the tumor and found that a comparatively slight operation would effect a cure. This he explained to the woman, who replied that she would call round the next day. "But tomorrow we shall have left," said he. "That's too bad," answered the woman; "I should like to have it removed to-morrow." We passed the day in idleness, smoking cigarettes of Tarapota tobacco.

On the following morning we discovered that no steps had been taken toward the construction of the balsa. We called upon the supine Governor, and showing our order from the Prefect of Loreto, supplemented by another from the Minister of War in Lima, we peremptorily demanded that something be speedily done. The orders worked like a charm, and the Governor, apparently pretty well aroused, went to work at once. He got out the police force and promptly seized four Indians belonging to a neighboring tribe living on the river's bank and confined them in jail. Next he set his policemen at work on the balsa, which was speedily completed. Then the officers of the law escorted the four Indians from the calaboose to the balsa, managing to lose one en route, who broke away and took to the woods. The Governor assured us that when caught he would receive fifty blows and undergo imprisonment.

Our crew was nearly nude, having their faces covered with achote, a crimson paint, and wearing tightly bound around their waists strips of snake skin, while suspended from their neck were alligator teeth pierced through the center. The skin and teeth are worn as charms against snake bites and drowning. Nothing but the quintessence of laziness could have caused these gentry to be averse to making a short trip where liberal pay and abundant food were assured them. But such is the Peruvian Indian; and such, I may say with equal truth, is the Peruvian.

About noon we took leave of the Governor, and having promised not to report him, started on our journey. Oh, what luxury to have nothing to do! After our long ride and the hardships of the walk, how delicious to recline on the balsa in the moonlight and blow clouds of smoke from our cigarettes.

The succeeding day we spent gliding down the Huallaga, every now and then shooting at, and uniformly missing, large cranes a long distance away on the river's bank. In the afternoon two of us got into a small dug-out, that the Indians had brought along for their return, and paddled along the shore. The men seemed much astonished to see me paddle from one side, as the custom in this region is to change at each stroke when paddling singly. My friend shot a few strange birds looking like very small vultures which the Indians cooked and greedily ate. Our Indians did very little paddling, but were ever ready to accept aguar-diente and cigarettes. The next morning the sun rose bright and clear upon the banks of the Huallaga. I got into our canoe with a companion and paddled along the shore, which here and during the rest of our journey was covered with trees, around and between which grew such a dense mass of vegetation, such a solid tangle of vines and parasitical plants that to effect an entrance would have been impossible without heaving one's way step by step. My companion shot two fine cranes, and a large duck of a species unknown to us.

In the afternoon we arrived at La Laguna. Our Indians whose term of service ended here (having been paid in advance) took their canoes and promptly started home, perhaps fearing another Governor with his police force. We secured four Indians after about five hours' delay, myriads of mosquitoes assailing us through the afternoon on our trip down the river. During the night we entered the Marañon, which we had seen as a tiny stream early in our journey.

\*Also called caneros.

The following day my companion and I had an adventure which might have terminated seriously. We paddled away from the balsa in pursuit of a duck which we wounded and chased for some time. After securing our game we looked for our raft. It was not in sight. We paddled rapidly down stream and shortly came to a place where the river divided into three branches. Still no signs of the raft. We took the middle course, and after a time were convinced by the diminished speed of the current (about three miles an hour on the Marañon and Amazon) that we had taken the wrong channel. To return against the current was not to be thought of, and after two hours' hard paddling through slack water we came to a small natural canal running through the woods. This we followed for a time, and presently came out on

DOWN THE CACHIYACO.

Drawn by A. Tholey.

the open river. But where was the balsa, above or below us? If above, we must wait. If below, every instant was precious, as night was coming on and we were in a perfect wilderness. My companion was unskilled in the use of a paddle and I was worn out by long exertion, heat and excitement. At length we pushed on, choosing a point near the bank where the current was most swift, but filled with the branches of trees and sharp-pointed snags. One of the pointed stakes, through a miscalculation in steering, made an ugly rent in my nether garments, without, however, touching the skin. At length far below we spied a speck on the surface of the water, which might possibly be our balsa; and such it turned out to be. We had been absent five hours and found the rest of the party greatly relieved to see us.

The next day we reached Parinari, from where our In-

and nights, characterized by the same superb weather, interspersed here and there with tropical rains of an hour's duration. During this time we passed the town of Nauta, where the Yucayali flows into the Marañon. We often varied our diet by eating the flesh of fat parrots made into a delicious soup. These birds flew in large flocks above the balsa and it seemed a shame to kill creatures of such gorgeous plumage.

Iquitos\*, where to our great regret our journey by balsa ended, is the capital of the Department of the Bajo Amazonas, which borders upon Brazil. It had 1,357 inhabitants at the time of our visit, and was once quite an important place, being the Peruvian Naval Station on the Amazon. The only room we could secure had a puddle of stagnant water in the middle and no window. This was out of the question, and we proceeded to deliver our letter to Captain Smith, Sub-Prefect of the Department, who took us all in and gave us a room with looking glass and table. Such magnificence fairly turned our heads, and to be in keeping we shaved and donned our first linen shirts in many weeks. Captain Smith was of English descent, and was married to a charming English woman. During our nine days' stay in Iquitos, they did for us everything that lay in their power, frankly telling us that it was impossible to procure such food as they could wish, and that we must content ourselves with the dishes of the country; this of course we were only too glad to do. The menu during our stay consisted either of turtle steak, tasting like veal, or the meat of the manatee, or sea-cow; with yucas, the native potato of very delicate flavor, and turtle eggs, in lieu of butter. For dessert we had plantains fried in sugar and bananas with cheese, after the Brazilian fashion. During dinner a large parrot stood by the captain's plate helping itself to some dainty morsel from time to time and thrusting its head forward to be scratched. At dessert the first day, the bird paid me a visit and rewarded my attempts to be friendly by a sharp bite on the finger.

Captain Smith lived in a cool, airy house which was at all times comfortable, as the thermometer at Iquitos stands within 5 degrees of 80° all the year round. Mrs. Smith had as a maid a young girl about 17, with dark blue, or rather violet eyes, and a superb head of flaxen hair; her complexion was dazzling and the effect produced was all the stronger, inasmuch as for months we had seen nothing in the shape of women beyond sallow Peruvians and the more swarthy Indian maidens. She belonged to that mysterious tribe, fast decreasing in numbers, remnants of which are still found in the interior of Peru; as fair as the fairest Saxons, all trace of their origin is lost. Are they the last of the Incas, the race that ruled the Indians when Pizarro came? Who can tell? This young girl spoke some English, and I made many opportunities to talk with her and quite won her heart by giving her a number of pictures of assorted saints that had been left over from our trade with the Indians.

Everything in Iquitos was upside down. The town depended wholly upon salaries from the government, which for two years had been paid in certificates of indebtedness. There was not a particle of specie in the place, and all debts were allowed to accrue until they amounted to a good round sum, when they were liquidated if at all by the certificates (which usually were for about one hundred soles each) at fifty per cent. discount. The town was in a ferment of discontent.

One day our party with our host, accompanied by John Parker, an Englishman, fourteen years resident in Iquitos, started for the cabin of the latter, some eight or ten miles up the river. A large canoe paddled by four stout peons carried us there in a couple of hours. We killed a good sized alligator en route. These animals were very numerous, and apparently had never before heard the sound of fire-arms, as they lay perfectly still until struck, while shot after shot was fired. Upon our arrival

we were welcomed by Mrs. Parker, a full-blooded Indian, who took a good look at us and remarked in Spanish, "Why, they are quite like Christians," her ideas of North America being very vague.

It was here that I first drank masato, and I may add that my first drink was the last. Neither Smith nor Parker touched it, but I am ever ready to experiment. After I had drained a glass (the taste resembled butter-milk) they explained the process of manufacture. In the evening women, as a rule old and ugly, since the younger ones have usually something better to do, sit around a tub and chew yucas. They expectorate into the tub and the saliva, when fermented, constitutes masato. What a powerful lever in the cause of temperance were whisky manufactured in this way. None slept that night, owing to the mosquitoes.

At 4.30 A. M. we started for a point where we had some fine parrot shooting. Next our four peons with machetes cut a pathway through the solid tangle of vines into a small pond, which we poisoned with bar-

ON A BALSA.

Painted from description of author by A. Tholey.

dians, after receiving two dollars apiece for the journey, were to return to La Laguna. It takes six or eight days to paddle back against the current, and during this time they live upon fish which they harpoon. We found the Governor away from home, but the chief citizen of the place promised to procure us Indians and presented us with two bunches of bananas, each banana being about the size of one's finger and of the most delicious flavor. The skin was so tender that it broke like the skin of a peach.

After a wait of a number of hours four Indian boys of not over fourteen years of age were shoved on board and we started. The poor little fellows seemed frightened to death, but their fears did not prevent them later on from going soundly to sleep. Awakening them was of no avail, and during the rest of the trip my companions and myself kept regular watch at night. There was but one danger to apprehend, that the raft drift among the snags near shore, which pointing up stream at an acute angle, could very readily inflict a serious wound.

From Parinari to Iquitos was a journey of three days

\*490 miles from Yuramaguas.

basco. Barbasco is a root, which pounded in water causes the water to assume a milky appearance, and imparts to it the property to intoxicate fish, which then skip around the surface of the pond and are readily speared from canoes. We half filled a small dugout, the fish being of various species unknown to us.

We returned to Parker's and breakfasted off a portion of our spoils, and soon after started for Iquitos, taking a short cut through a small creek. Never had I seen such a sight before. Enormous trees rose on either side, while graceful palms overhung the water's edge. Parrots, macaws, toucans, herons and cranes flew in every direction; woodpeckers, with crimson breasts and greenish backs, darted in and out among the trees, while kingfishers as small as swallows with plumage like burnished copper flashed here and there in the sunshine. The vines trailing in the water from overhanging trees were alive with little birds with heads of yellow and of scarlet, and the whole air was noisy with the chattering and twittering of the feathered tribe. It was a scene never to be forgotten.

Upon our return to Iquitos we found that the small steamer which was to take us down the Amazon had arrived. It brought the news, via Brazil, that Captain Smith's brother, Colonel Smith, whom we had met in Lima, had been elected to represent the Bajo Amazonas in the Peruvian Congress. The tidings had spread through the town and a crowd soon surrounded the sub-prefecture, and after three rousing cheers an Indian stepped forward and made the following speech, which was certainly brief and to the point:

"Long life to our new Deputy. Long life to our Sub-Prefect. Aguardiente for the boys."

Two days later, taking the steamer, we started on our twenty days' journey down the Amazon.

CLARENCE BLOOMFIELD MOORE.

## DANVIS FOLKS.—XII.

### Waiting for Tidings.

NOTWITHSTANDING the prolonged revels of the previous night, several neighbors dropped in at the shop in the Linter the evening of the following day to learn of any news of the ravager of Joel Bartlett's flock. Sam had not yet returned from his quest, and while they awaited his coming with different degrees of patience, they fell very naturally into the accustomed ways of the old shop.

Solon Briggs took his seat behind the stove. Joseph Hill seated himself with laborious care on the chair of most doubtful stability. Antoine sat on the floor with legs crossed after the fashion of Turks and tailors. Pelatiah perched uncomfortably, as became his state of mind, on the corner of the shoe bench. With the autocrat of the little realm on his leathern throne, the social pipes alight, Pelatiah ruminating his innocuous cud, they could hardly realize that the old familiar intercourse had suffered a three years' hiatus.

Uncle Lisha yawned over his work till he pounded his thumb with a misdirected stroke, and then while he sucked the injured digit, impatiently cast aside hammer, awl and lasted shoe.

"Consarn it all," he grumbled, "carummuxin don't sarve so well wi' seventy odd as it does wi' twenty odd year. Jest one night on 't hes made me sleeper 'n a Quaker meetin', but when I was Peltier's age I c'd go it eight nights in a week an' work busy's a bee all day. Dumbd if I try tu work. Seem's ef 'twas 'bout time for Sam tu come hum."

"I should raly like to know what specie of savagous beast has been a deevastatin' Joel's sheep."

"Probably," said Joseph, venturing to tilt his chair on its front legs to enable him to spit at the stove hearth, "it's a wolf er suthin'." The chair gave a creak ominous of collapse, and he carefully readjusted it to its complete if precarious support of his weight. "Seem's ough this 'ere chair was a little mite more weewaw 'an it uster be," and he leaned cautiously to one side and the other to inspect the spreading legs, "but I don't know as it is," slowly bending forward for a general survey of them, between his spread knees, "I guess it'll stan' a spell."

"I wish 't you'd bust the tarnal ol' thing, Jozeff," said Uncle Lisha, with nervous impatience. "It's squeaked an' it's squeke till I am sick an' tired of it."

"It best was, you'll soet where Ah'll was, Zhoseff, den it ant da danger for fall off or broke up you sit, ant it?"

"Judgin' f'm what I hear," said Uncle Lisha, after watching the chair with a hope of the fulfillment of his wish, "I s'pect it's a wolf. It's ben a good spell sen there's ben one on 'em round these parts. It's a massy the varmints ain't so thick as they used tu be. When I was a boy you c'd hear 'em a yowlin' up on the maountain, most any night, 'nough tu make yer back freeze. Naow an' agin, they used tu kill folks, I s'pose. I never knowed o' their killin' anybody fer sartain, but some on 'em 'lowed they killed Cephas Worth an' eat him clean up, an' then agin, some callated they didn't."

"Haow was 't?" Pelatiah asked agape, the swab where-with he was greasing his boot, arrested half way between it and the pot of neat's foot oil.

"If it waint 'at I got feelin's for ye," said Uncle Lisha, regarding his employment with some severity of expression, "I wouldn't allow you tu waste that precious intement on none o' Clapham's store boots. That aire was made for honest boots, but it don't signify, ile away. Why the way on 't was, ye see Cephas was sugarin' way up on the aidge o' the maountain a mild f'm hum. He hed him a shanty an' kerried up provisions tu last him tew three days an' wouldn't go hum on'y 'bout oncte in so often, jest puttin' in his best licks makin' sugar, when there was a big run o' sap. Well, it run all along one spell, nigh onter a week, an' he didn't come hum, an' his wome'n begun tu tew about him, 'cause it waint no gre't sugar weather an' she knowed his virtuals must be all used up, 'cause he was hearty tu eat, an' bimeby she raouted out the neighbors tu go an' look him up. An-other thing 'at made 'em oneasy about him was 'at the wolves was turrible sassy that spring, an' they'd hearn 'em a yowlin' up in the neighborhood o' Cephas's camp oncommon, so up they went, Beedy along wi' the rest on 'em. Obedience her name was, but they all called her Beedy. When they come to 't, the shanty was hove higher an' yon, an' tore tu flinders, an' not a sign o' Cephas on'y a piece o' kwit, an' a dozen bones gnawed clean. Some was cock sure they was his'n, an' some hed the 'daubts on 't, an' there was some sprinkle o' blood an' wolf tracks all round thicker 'n spatter, an' ev'rything

clawed and chewed, 'ceptin' the tub o' sugar. Beedy hed it kerried hum an' sol' it off spry. I s'pose the' was a kin' of a skeery flavor tu it, made folks hanker arter it."

"Wal, Beedy took on dreffly an' hed a tantrybogus fit on 'caout o' Cephas bein' killed an' eat up by wolves so 't there waint 'nough on him left fer a fun'al, scacely. But she made 'em peek up the bones an' they took 'em hum an' there wa' quite a respectable fun'al considerin' the remains, wi' preachin' an' prayin' an' cryin'. An' Beedy, she hed a grave stun sot up an', twixt hoin' an' hayin', she pulled up stakes an' went off somewhere, said she couldn't stan' it tu stay where she'd suffered such a loss. But there was lots o' folks 'at didn't believe the' was no 'casion fer a fun'al. Cephas was turribly in debt an' his creditors a threatenin' tu jail him—the 'useter jail folks fer debt in them times—an' he was awful scared o' bein' shet up, an' so they callated he'd jest made a show o' bein' clawed an' chawed an' eat up, an' hed cleared out an' Beedy'd gone tu fin' him. An' the' was others at stuck to 't he'd raly been killed. I do know the rights on 't, mebbey he was an' mebbey he waint, but tew three year arterward the' was a peddler, name o' Treuman Weeks, 'at useter travel over three four States, come round here an' he tol' tu the tarvern 'bout a feller 't he staid with way out in York State 'at faound out he'd ben in these parts an' enquired turrible particlar 'bout everybody in Danvis. But the nub on 't was the feller said he'd lived in Vermont forty year, a warrin' with God and wild beasts till they beat him an' he'd gi'n up an' put out ther' tu 'scape 'em. The feller's name as he gin it the' didn't nob'dy remember, but the peddler said he'd allers remembered the name the feller called his wife, 't was sech a odd saounding one, Beedy. Puttin' this an' that together, folks s'mised 'twas Cephas Worth, but I d' know. Why on airth," turning and peering out of the broad, low window, "don't that Samwel come along hum?"

"Dat mek me rembler," cried Antoine, hastening to improve the first opportunity offered him to speak, "baout one mans in Canada—"

"Consarn that everlastin' man in Canada," Uncle Lisha growled.

"But Ah'll wan tol you baout it an' baout de loup garou

SMALL BOY AND BIG TROUT.

dat was be mans wen hee'll min' to an' wolfs wen hee'll min' to."

"Antwine, shet yer head. Samwel's comin' an' he'll hev suthin' with a tellin'."

The noise of stamping feet was heard on the doorstep and Samuel entered. All eyes were turned inquiringly upon him, for he wore the triumphant air of one who bears important tidings.

"Wal," Uncle Lisha laconically voiced the impatience of the audience.

"Arter a good deal o' sarchin', I faound the track an' follered it tu a spruce cobbler a mild east o' Joel's, an' I callate he'll lay up there till he gits hungry agin. I've tol' ev'y body 'long my way hum, an' neow you fellers want to start right straight out an' pass round word to ev'ybody to rally in the mornin' an' meet at Joel Bartlett's. S'posin' Solen an' Joseph notify the folks up their way an' Antoine them up his'n, an' Peltier daown west, an' as soon's I get a bite o' suthin' tu eat I'll go over to the store where there'll be a lot a loafin' round 'at I can send word to heaps o' folks. It's airly in the evenin' an' the's time tu raoust about a party 'at 'll make it lively for the ol' wolf. Turn 'em out, Uncle Lisher."

The visitors arose to depart, Antoine sighing as he went.

"Bah gosh, Ah'll hope it aint one loup garou. I'll goin' tol' you 'bout dat, firs' chance Ah'll gat of it."

"Make it a p'int tu stop in' Varney's an' tell him 'bout the wolf hunt, Peltier," Lisha whispered, as he followed his visitors to the door. He watched them depart their several ways in the moonlight, and then looked up to the star-bejeweled sky.

"It's clear as a Christian's conscience an' not a breath a stirrin'. I s'pose I might go out an' holler the news in the doo' yard sot some on 'em c'd hear it. But I might skeer the wolf an' so I guess I'll go tu bed. It'll be a good day for the hunt, Sam." ROWLAND E. ROBINSON.

### "PODGERS'S" COMMENTARIES.

I SEE you have taken up the case of the alligators and lament their gradual destruction. For the life of me I can't see anything worth preserving in that ugly brute of a saurian, nor can I find any bond of sympathy in my soul for him. Of course he has a right to live if he can manage it. Between the darkies hunting his hide and the tourist who bangs away at him from the deck of a steamboat he has a pretty lively time of it. It is the darky that is most to be feared, as he creeps upon him and shoots at close quarters, while the Florida tourist seldom hits anything.

I think I have a latent prejudice against the alligator from my having lost many a duck by him when shooting in the South, as he has a sly way of rising just under the duck and absorbing him as you essay to pick up your bird.

If you can point out any redeeming qualities the beastly thing has I will in a spirit of justice give him due credit, but to my eyes he appears at his best converted into a club bag, with nice gilt lock and trimmings. I think he would be reconciled and proud to see himself in a show window or the hands of a pretty woman. It is a very rare case of such supreme ugliness converted into things of such beauty.

On the whole, I think it justifiable to bag the alligator to get the alligator bag—and I shall not mingle any crocodile tears with you over his extinction, inasmuch as I am already looking forward to the cheapening of the article to acquire one.

### Small Boy and Big Trout.

I notice you have struck in on fish stories again with illustrations of catches as confirmatory proof of the truthfulness of the statements; not a bad idea, and it suggests sending you the photo of a big fish and a precocious small boy. You will observe that it is a trout—a veritable trout—a veritable boy and a veritable pipe. It is merely a sample of many that have been and can be caught in a stream 'way back, a private reserve and preserve, I may say, simply because few fishermen will take the time and trouble to go so far as a two days' journey by rail to get to it, so it is virtually a preserve that few reach.

The fish exhibited is not of my catching, but that of a friend who is both a fisherman and a camera fiend, hence backs up his fishing with the photos.

It is a mutifying and lamentable condition of things, when fishermen have fallen into such a moral estimate as to be required to back up their statements in this way; but pot-fishermen have so demoralized the calling that it seems to be necessary apparently.

### Grizzly Bears in California

are almost things of the past, and nearly extinct, but now and then an old fellow pops up to get popped at, as was the case a few days since down in Kern county. An old fellow that had been hanging around the locality for several years, doing no little damage to sheep and young stock, and cunningly eluding all attempts at capture, but met his fate at the hands of a couple of hunters a few days since. It was a running fight lasting many hours and required over thirty shots to kill him. The caliber of the rifles was .32, showing that however effective that caliber may be for ordinary game it won't do for large. Old grizzly scarcely minded the first dozen shots, although some were found to have penetrated and even passed through the heart, and also several through the head, which fact shows the failure in effect of such a light ball or the toughness of the grizzly. It, however, proves most conclusively that if you are after grizzlies you had better use a heavier arm, or the chances are the grizzly will be after you, and it was in the present case very remarkable that the one in question did not turn upon his assailants as usual when wounded. Possibly he did not consider a .32 bullet a sufficiently serious matter to justify until too late.

PODGERS.

## Natural History.

### SOME OF THE WAYS OF BEARS.

VERY few people know that bears take to water naturally. They roam over the mountains and through the forests, dig open rotten logs for ants and worms, and secure all the hornets nests they can, tear them to pieces and eat the young grubs; pick and eat all the berries of every kind they can find, and would seem to belong to the exclusively dry land animals.

The fact is otherwise. They love the water, not, perhaps, as well as do the moose and deer, but better than most dry land animals. They are very fond of fish. I am not prepared to say they are epicurean, and choose what we esteem game fish, such as the salmon varieties, but as far as I know a fish is a fish to them large or small, and of whatever kind, and they show more cunning and instinct, if not reason, in capturing fish than many city chaps I have seen about the lakes.

I once came suddenly upon a very large bear in a thick swamp, lying upon a hollow log across a brook. I found after he had left that there was a large knot hole through the shell of the log, and he had run his paw through the hole, holding it in the water until he felt a fish, when he would close his paw on it. Thus he had secured quite a string of fish. The old fellow had been so interested in his sport that he did not notice me until I had got very near him, so I could see just how he managed his sport. After I had watched his movements awhile he finally discovered me and made off on a double quick into the dense underbrush, and, as luck would have it, I had no gun with me that day, and perhaps that may account for my being here writing about it now.

This brook was fairly alive with little trout, red-side suckers and black suckers, so our bear let himself out on this sport—he did not eat their heads. There was quite a pile of the log. I suppose the oil on his paws attracted the fish and baited them even better than a fly hook, and his toe nails were his hooks and sharp ones too, and once grabbed the fish were sure to stay.

Bears also catch frogs in these forest brooks and drink of the pure cold water in the hot summer days, and love to lie and cool themselves in the cozy pools, so they frequent the lowlands of the forest and follow the winding brooklets for pleasure as well as for food, and make deep paths, which every bear happening to go that way will follow. They often cross narrow places in lakes and rivers. They are good swimmers and appear to love to take a turn in the water. I once saw one swimming across from the main land to Students Island in the Moose-lumaguntic Lake, just a streak of his back showed above the water, looking like a floating log on the water. Some I have seen with the head only above the water. I account for this difference by the condition the bear is in—if he is fat he will more easily float, if lean he sinks deeper in the water. Some bears when shot in the water will sink at once to the bottom, and only rise when the gases accumulate, which is generally in ten days or two weeks. Others float when dead. I cannot account for these phenomena. We may all be allowed our opinion. What do you think about it?

If you row your boat up to a bear in the lake he will try to get hold of the boat or the oars and will capsize you if you do not look out. There should be two persons to capture bears in a boat—one to row and the other to

shoot, or to keep the bear from the boat, for he will surely try to get on board.

I have heard old hunters say, if you place an oar across the back of the bear's neck he would drown himself by putting both his forward paws up over the oar, holding his head under, and being unable to release himself, will drown.

An old hunter by the name of Leverett shot a bear swimming in Cupsuptic Lake from his boat, and rowed up to him to take him into the boat; and as he took hold of the fur of his back, the bear opened his mouth to bite. Leverett then let go, snatching his arm away, when the bear immediately sank out of sight and he lost him; but going that way some ten days later, the bear had come to the surface, and Leverett cut off the bear's nose and secured the bounty, but the fur was spoiled. When a boat approaches a bear in the water, the bear will open his mouth very wide, gnash his teeth together and make a loud mumbling, growling noise, enough to frighten almost any one. When a bear gets caught in a trap, he will make for water if possible, and if it is deep enough will drown, whether purposely or accidentally I cannot tell.

I knew a party from Boston who were rowing up the Magalloway River and had Joe West for guide. When some seven miles up river they saw not far ahead an old mother bear and three cubs swimming the river, and by hard rowing cut them off before they reached the shore.

The party shot the old bear and the guide jumped overboard and secured a cub alive before they got to shore, the others they had to shoot, as in the melee they reached the woods. They had quite a circus and like to have upset the boat. It is always best to keep a cool head, but we may think what we should do in certain emergencies with wild beasts, but when the time actually arrives and it becomes a reality, the thing looks differently and we most likely become excited and use so little common sense as to be ashamed of it afterward.

J. G. RICH.  
BETHEL, Maine.

### THE BABY CARIBOU.

I LEARN that the story of a baby caribou following up a farmer's heifer, which I gave in the FOREST AND STREAM a couple of weeks ago, is really true. I have a letter from Brother Gilman, of the Aroostook Pioneer, declaring that the story is true, and saying that two of his trusted men—the photographers mentioned below—have seen the caribou; that the little fellow is alive and well, and also inviting me to come down, and he will take me to see the natural wonder. I fear I have done Brother Gilman an injustice in presuming to doubt an item in so reliable a paper. Later I have a letter from the farmer himself, a respected citizen of Moro, who writes: "Yes, the caribou story is true, or nearly true. The 29th day of last May my son, while looking at our cattle, saw a very queer looking animal sucking our heifer, that never has had a calf. At a distance it looked like a rabbit, and it was about the size of a large rabbit when found. It was about a day old from appearances. It seemed weak for want of food and could just stagger around. He brought it home and sent for me. In the meantime my folks had sent the boy for a rubber in order to feed it from a bottle, but before he got back it had drank nearly a quart of milk without a rubber and seemed much stronger. It followed the boy around the yard and around the room. It made a noise, a grunting sound, or something like a duck—*haunk* or *auuk*—without using the lips, probably using the tongue slightly, the noise being made in the throat. We felt that we were in rather an awkward situation, it being close time on such animals. Two ladies called one evening, just as the cattle were being driven into the yard. Among them was the heifer. Immediately the little caribou went for her again and sucked I should think five minutes, the two ladies clapping their hands and laughing at the sight. They said: 'Keep it by all means, and feed it.' This we have done. We thought that if it sucked the heifer it might suck our old cow. She is very gentle. I had killed her calf in the spring and my little girl had got another and put on her. I had killed that also. The cow let the little caribou suck about a fortnight, but as the little fellow grew stronger it would put both feet against her bag and butt, causing the cow to look around in astonishment. I feared she might hurt the little fellow, so we did not bother to let it suck, as it took so much attention three times a day. We now feed it milk three times a day. It seems to be all right and healthy. I lead him down into the woods, and he will play and caper, but at the least noise he will start for home. It is a buck caribou, the horns are just coming through. Mr. Mansur and Mr. White, of Houlton, called the other day and took his photograph.

J. FRANCIS CHASE.  
The letter is a good one, and Mr. Chase will have the gratitude of the readers of the FOREST AND STREAM for it. Later some more facts concerning the little fellow will be very pleasing to sportsmen and lovers of natural history.

SPECIAL.

### BIRD NOTES FROM FLORIDA.

#### Feeding Habits of Ospreys.

ATLANTIC, Fla.—I have been very much interested lately in observing a number of fish-hawks who come over every day from the west bank and beyond of Indian River, and after a long or shorter trip to the ocean, wing their flight homeward, each bearing a fish in his talons. They cross two rivers, the Indian and Banana, each at least two miles wide at this point, and the narrow strip of land which forms the south end of Merritt's Island. These rivers swarm with fish far easier to obtain, it would appear, than to catch them in the ocean. So it would seem that the hawk prefers the flavor of a fish from the sea to one picked out of the Indian or Banana rivers. If this is not the reason, what is? For he comes a long distance and must shun many a tempting opportunity to catch a fish on the way. It goes to show much of intelligence and what may be called a cultivated appetite even a fish-hawk can possess.

#### Disappointed Buzzards.

Another incident occurs to me, which at the time afforded a great deal of amusement to a friend of mine and myself, who were for nearly an hour witnesses of how even a bird may be mistaken in his reasoning from the results of his ordinary observation. It occurred last winter near New Smyrna, on the Halifax. Among the numerous islands that make the river so picturesque was

one not far from the shore, which was in reality only a sand bank, between which and the shore the water at low tide was very shallow. Across this water a single cow had strayed, looking for the few tufts of marsh grass that were scattered over the otherwise barren surface of the sand banks. Meantime the tide began to rise, and so the cow having eaten all the grass in sight stood still, as if waiting for the tide to fall that she might regain the shore. Suddenly, from out the sky, a buzzard appeared; and wheeling around, alighted close by the meditating animal.

As all who have observed these birds know, the alighting of one is the signal for all his far-sighted companions sailing in the blue sky for miles around to accept this as an evidence of a feast at hand to which no invitation to join is needed, and so from every quarter they came until more than fifty by actual count stood around that meek-looking cow evidently waiting for her to die, or else astonished that she should be in that place if not already dead.

And so they waited, and some of them slowly walked around while the greater number stood perfectly still with an air of patience comical to see. After a while, however, it seemed to dawn upon some of them that something was wrong, and after waiting and watching for more than half an hour one or two, after taking a last observation, and concluding that the cow was not likely to die very soon, took flight and disappeared. In a few minutes another and another followed, and so one by one, a disappointed lot, they all left except four or five, who were apparently determined to see the thing out, and we finally left them to keep company with the cow until she should conclude to wade the deep water to the shore. It may have been a spot where the currents were accustomed to float and strand dead animals, and so the buzzards reasoned that any animal appearing there alive or dead was their meat. We were not able to find out about it, but certainly no more ludicrous exhibition of disappointed expectations was ever shown by a company of birds.

### Game Bag and Gun.

"Game Laws in Brief." June, 1893, revised. Game and Fish laws of all the States, Territories and Provinces. Correct, reliable, handsomely illustrated. Published by the "Forest and Stream." Sold by all dealers. Price 25 cents.

### ADIRONDACK DEER LAW.

WHATEVER may be the differences of opinion with regard to the deer hunting laws between the advocates of hounding, jacking or still-hunting, and those opposed to one or more of these methods, there is a remarkable uniformity of sentiment on one point, at least so far as those most interested are concerned. All who are uninfluenced by purely selfish considerations, agree that the season as at present begins too soon and ends too soon. The general opinion seems to be that hounding should be extended through the month of October, and twenty days taken off the beginning of the season to compensate.

Through the eastern Adirondacks, in Essex county, for example, the writer has been accustomed to hear an almost universal condemnation of the present season ever since the law has been in force. This sentiment has become so strong in places that the native hunters of the better class will not hunt during the first part of the season, unless to accommodate non-resident sportsmen. Their reason for hunting, in addition to the sport, is to obtain meat, and they do not believe in killing for the mere pleasure of the sport. Experience has taught them that a deer killed in the fore part of the season is as likely as not to prove unfit for food. If it runs any distance before the dogs it becomes heated, and is likely to spoil in a few hours. Moreover, most of the hunting is done at a distance from the settlements, and in warm weather it is practically impossible to get the meat out untainted.

Mr. Carl Pickhardt of New York tells me that a few years ago thirteen dead and decaying deer were lying beside the road between Newcomb and Schroon River. They had been killed in the early part of September by one party, probably from Port Henry, who attempted to take them out in their wagons, but the weather, which had been cool, turned suddenly warm, and every deer they had killed spoiled and had to be dropped by the way. And this only represented a portion of the waste allowed by a law ostensibly passed in the interests of protection and economy of the game supply, a law which allows the deer to be killed but which does not allow them to be eaten, which operates in the interests of the few and against the needs of the many.

Taken alone the above is an unanswerable argument against the present season. It cannot be answered and no attempt is made to answer it. The only argument ever advanced in favor of the law as it stands is the purely selfish one of the hotel keeper or man who finds it most convenient to be in the woods in August and September. No one who cares for his game after he has got it, which includes all true sportsmen, wants the season to open when it does. The head, hide and carcass of the deer are none of them prime till a month after the date of the legal commencement of the season, Aug. 15, and the sport of hunting is not to be compared with that of the latter part. In hounding, which for all intents and purposes is hunting in the Adirondacks, the early season is hard on the starters, dogs and deer alike. There is not the snap and energy or the exciting chases of the October day.

Moreover, in many localities it is said that an early season lessens the future supply because the deer killed are almost entirely does. In the region of high mountains the does are said to be on the low lands and near water at the commencement of the hounding season, while the bucks, whose horns are not yet in condition, are on the very tops of the mountains. The result is that the does are started and killed while the bucks escape. And when the does are killed their fawns either die or grow up stunted and poorly.

Later the bucks come down from their retreat in search of the does, and then the big deer are killed. But in parts of the woods that are much hunted the injury done the supply by the early hunting is irreparable.

There are few complaints against the length of the season, and the law as it stands is conceded to be vastly better than no law at all. The supply of deer all through the mountains has undoubtedly increased of late years. But while good in that it puts an effective check upon in-

discriminate slaughter, the present law is, to say the least, open to improvement as regards the time of the open season. Why is it that this faulty law is allowed to stand when New York neither finds it acceptable to her people nor after the precedent of neighboring States?

There is no State in the Union climatically or physically similar where the season opens so early or closes so early as in New York. In Maine the deer hunting season begins Oct. 1 and lasts till Jan. 1. In New Hampshire the season opens Sept. 1, is the same with the exception that hounding is allowed only from Sept. 15 to Nov. 1. In Pennsylvania, with the exception of Pike county, where the season closes Dec. 1, deer may be killed from Oct. 1 to Dec. 15. In Wisconsin the month of October is open season. Even throughout British America, including Quebec, Ontario, Manitoba, Northwest Territories, etc., which are as a rule much colder than New York, in no case does the season open so soon. Only in some of the Southern and Western States, where the game laws have never received much attention, and where there are few restrictions against killing at any time, may a parallel be found to New York's unseasonable season.

The reason generally given to explain why this faulty law remains is that it is due to the political influence of the hotel men in the Western Adirondacks, where they have much water and jack-shooting. No doubt there is something in this explanation, but on a recent journey through the lake region, I was told that the hotel interests were not to blame, and that hotel men and guides alike strongly condemned the early season. The onus was thrown upon either the owners of private parks or the ruling party in the State Legislature. Nine out of every ten men I talked with wanted the season put later, and these men included guides and hotel keepers alike—the most representative class of the native population. Unfortunately the Adirondack "back counties" send representatives to the State Legislature who are of another political faith from the dominant party, and who consequently cannot always have things as they want them.

There is a nigger in the woodpile somewhere, and the present law is a disgrace to the State. J. B. BURNHAM.

### MOOSE HUNTING IN 93.

#### Editor Forest and Stream:

A gentleman called here a few days since who is going to Nova Scotia moose hunting in September. He was greatly interested in some heads I have here, particularly one of a moose, and said: "I am going to stay in Nova Scotia until I get one." I cautioned him against telling his guide so, as the latter might make the trip a long and expensive one. I found he was going to grounds, which I had previously hunted, and advised him to engage at once a certain Indian whom I think is the best man he could have for that section. Were I going to the same region I should get this particular member of the Mic-Mac family. He knows the ground thoroughly, is a keen hunter, and, unlike most of his tribe, is a hard worker. Heretofore I have had good luck with him, and feel sure I could add another moose to my score should I go with him. In a letter he says: "If you want to kill another moose come here and take me. I can find them, and I know you will kill one if you get a chance; we kill one sure."

I think, however, I have had enough of moose hunting, during the last three years I have killed three and have let others go without shooting at them. There are plenty of sportsmen who have never killed a moose and who want to. Moose are getting scarce in the places I have been notwithstanding some of the reports of how they are increasing. There are still some to be found, and if a man will go where they are and is willing to rough it and is not easily discouraged, his chances are good of getting shots. I am willing to give sportsmen any information I can about the grounds I have hunted. I will say now that I do not know of a place where you are perfectly sure of getting one or where you can find them without some hard work.

I think there are now more moose in Nova Scotia than in any other place which can be reached in the same amount of time. Large bulls, however, are getting scarce, and those left are very wary, and it is very difficult to get shots at them either by calling or still-hunting. Hunting parties are very numerous and often interfere with each other when calling. On a still morning when calling you are likely to hear others doing the same in different directions. Calling is also overdone, and the moose hear so much of it that they have become very suspicious.

In the part of Queens county where I hunted the country was almost entirely bogs and timber; the ground was quite soft and a moose would leave a plain track almost everywhere. I saw more tracks and signs of yards than in any other part of the Province. In Digby county, where the gentleman I speak of intends going, the ground consists of bogs, barrens and timber, and is perhaps as good as can be found. You are liable to see moose at any time traveling around the edges of the bogs and barrens, and the latter are good places to look for bears. I saw five in about a week when I was there.

Last fall I hunted in Shelburne county, near the head of the Shelburne River. My reason for going to this part of the Province was on account of its being more remote and not overrun by so many hunting parties. True enough, we were not troubled in this way as on previous trips, but also we did not find the game we wanted. The ground was almost entirely barren, with patches of small bushes; in fact, there was not cover enough for moose to stay in. Our guides said that moose did not stay in that region, but traveled across it a good deal, and many were killed when doing so. It was very evident they were not traveling in that section when we were there. In fact, it was the poorest moose hunt I ever had in Nova Scotia. There is some satisfaction to me in seeing plenty of signs of the game I am after, even if I cannot get a shot. I would often say to myself last fall (after spending the night anywhere from two to five miles from the main camp and turning out at daybreak on a frosty morning to listen to my caller, when there were no indications that there was a moose within five miles of us), "What a fool you are to travel so far and to work and expose yourself in this way when you do not want another moose." After staying out twelve nights I got a shot, and killed what is probably my last moose. Had I never killed a moose, I should stick to it till I did, if it took five years. A it is, I am satisfied to stop.

C M, STARK,

DUNBARTON, N. H., July 17.

### Connecticut Deer and Mongolian Pheasants.

MR. COLLINS spoke especially of the law passed by the last Legislature to protect deer in the State. Many had laughed at this law as useless as there were no deer in the State. He said that there were a number in Connecticut. They swim the Sound from the New York shore where they are more plentiful. Not long ago a deer was shot while swimming the river at Glastonbury, and it floated down the stream. Deer are often seen in localities along the Sound shore.

He also spoke especially of the Mongolian or Chinese pheasants of which there are soon to be a considerable number liberated by several gentlemen who have been breeding them in this vicinity. A law was also passed by the Legislature of '93 protecting these birds. They are brought from China, are very hardy and are excellent eating. Noah Wallace, of Farmington, now has four cocks and eight hens. The eggs are hatched out by bantam hens, and they are as easy to raise as are turkeys. They take to the woods as easily as ducks to the water. A number of men hereabouts have pooled issues, are raising the birds and will liberate them as early as practicable.—*Hartford Post interview with Game and Fish Warden A. C. Collins.*

### Washington Woodcock.

WASHINGTON, D. C., July 15.—A member of a certain gun club here in Washington not long since took a dozen half grown woodcock to a dealer in Center Market. He was told never to bring such stuff (small-sized birds) there again.

Can any of the oldest inhabitants remember a prosecution for the illegal killing and selling of game in this city? The case referred to above is one of the worst we have heard of recently, and the miscreant should be brought to justice.

A full grown woodcock was caught a few days ago in a yard on Sixth street Southeast, between A and B streets, by a cat. This locality is an old portion of the city, fully built up, and the presence of the bird there is a mystery.

BART.

### Winter-Killed Quail.

BALTIMORE, July 20.—I have just returned from a trip through eastern shore of Maryland and Virginia, also portions of Delaware. While there I learned that quail had fared quite badly during the past winter, many coveys being found frozen. Rabbits met a like fate. It appeared that the further south I went on the peninsula the greater was the destruction, probably owing to the rarity of such severe weather as visited them last winter. Some of the farmers and resident sportsmen humanely fed and sheltered the birds, enough being protected in certain sections for "seed." Birds wintered fairly well in the western and northern sections of the States mentioned, being used to severe weather and better able to withstand it.

MOUNT ROYALL.

### Wisconsin Logging Camps and Deer.

FROM an eminently trustworthy source I learn that deer are killed now in large numbers in northern Wisconsin regardless of legal restrictions. The deer are now in the red and frequent the waters to escape the annoyance of the heat and flies, so that their slaughter is easy. The great logging camps ignore the game law entirely. Their isolation in the wilderness and common guilt make the collection of evidence almost impossible. Deer are very plentiful in northern Wisconsin, according to reports from that section. Their destruction is also great. My informant says that but a small part of a deer is used by the loggers. The best part of the hindquarters is reserved and the rest is thrown away. And thus is the deer following the wild pigeon and buffaloes.

B. WATERS.

### New York Close Seasons.

FOLLOWING are the close seasons for game as fixed by the law of 1892 and amended in 1893. The seasons are of general application except in counties specified:

**Deer.**—Nov. 1-Aug. 15. Protected at all times in Ulster, Greene, Sullivan and Delaware counties. Hounding forbidden Oct. 11-Sept. 10; and at all times in St. Lawrence, Delaware, Greene and Ulster counties. Only one carcass may be transported, accompanied by owner. One person may kill only two deer in a season. Fawns may not be killed at any time.

**Black and Gray Squirrels, Rabbits.**—Jan. 1-Sept. 1.

**Wildfowl.**—Web-footed wildfowl (except geese and brant), March 1-Sept. 1; may not be killed between sunset and daylight.

**Quail.**—Jan. 1-Nov. 1. Protected at all times in counties of Genesee, Wyoming, Orleans, Livingston, Monroe, Cayuga, Seneca, Wayne, Tompkins, Tioga, Oneida, Ontario, Steuben, Cortland and Otsego for a period of five years.

**Woodcock, Ruffed Grouse, Partridge, all Grouse.**—Jan. 1-Aug. 15.

**Snipe.**—Wilson's or English snipe, plover, rail, mud hen, gallinule, grebe, bittern, surf bird, curlew, water chicken, bay snipe, shore bird, May 1-Sept. 1.

**Wild Birds.**—(except game birds named and English sparrow, crane, hawk, crow, raven, crow-blackbird, common blackbird, kingfisher) protected at all times.

**Robin.**—Protected at all times.

**Meadow Larks.**—Jan. 1-Nov. 1.

### Local County Close Seasons.

**Allegany.**—Ruffed grouse (partridge) may not be hunted with a dog, in Birdsall and Rushford, for 3 years.

**Columbia.**—Woodcock, ruffed grouse, partridge, any grouse, Dec. 1-Sept. 1. Quail, Dec. 1-Nov. 1. Black and gray squirrels, rabbits, Dec. 1-Oct. 1.

**Dutchess.**—Hare, rabbit, Jan. 1-Oct. 1. Woodcock, partridge, Jan. 1-Sept. 1.

**Livingston.**—Mongolian ring-necked pheasant protected to Dec. 1, 1895. Ferrets for rabbits or hares forbidden for two years from May 2, 1893.

**Madison.**—Woodcock, partridge, squirrel, Jan. 1-Oct. 1.

**Otsego.**—Forbidden to kill woodcock or partridge with dog for five years from May 1, 1893, in Burlington or Pittsfield.

**Putnam.**—Requires \$10 license fee from non-residents to shoot game.

**Sullivan.**—Woodcock, Jan. 1-Sept. 1. Ruffed grouse, partridge, Jan. 1-Oct. 1. Hares, Jan. 1-Sept. 1. Quail, Jan. 1-Nov. 1. Ferrets forbidden.

**Wayne.**—Woodcock, ruffed grouse, partridge, any grouse, Jan. 1-Sept. 1. Plover, rail, mud hen, gallinule, grebe, bittern, surf bird, curlew, water chicken, bay snipe, shore bird, March 1-Sept. 1.

**Yates.**—Ruffed grouse, partridge, woodcock, Jan. 1-Oct. 1. Quail to Nov. 1, 1897. Non-resident license fee, \$10.

**Long Island.**—Wildfowl (except geese and brant), May 1-Oct. 1. Snipe, plover, etc., Jan. 1-July 1. Quail, Jan. 1-Nov. 1. Woodcock, Jan. 1-Aug. 1. Ruffed grouse, partridge, hare, rabbit, black and gray squirrels, Jan. 1-Nov. 1. Deer, except Nov. 10-Nov. 10 inclusive.

Week before last FOREST AND STREAM celebrated its twentieth birthday, and in doing so told the story of its birth and subsequent development. As a paper it occupies a field all alone by itself, for it is the only one in the world covering the several departments of the forest, field and stream, and yet making each as complete as if a publication by itself.—*Albany Times-Union.*

## "FOREST AND STREAM" AT THE FAIR.

### British Guiana.

British Guiana has a large space near the northwest corner of the main floor of the Agricultural Building, and is particularly novel and interesting. Large logs set on end close together form an inclosure to the exhibit. The logs make quite a forestly exhibit in themselves, being specimens of the various wood grown in the forests of British Guiana. Many kinds take a most beautiful polish, are very dense and hard, and the grain of some of them is very beautiful. All the names of the woods are meaningless to the average American. Here are some of them: Letterwood, kakaralli, eta palm, cabucalli, tooro palm, kantaballi, yellow sanders, paddle-wood tree, moraballi, towaranero, pakoorie, black greenheart, monkey-pot, locust souari, tonka bean, purple heart hoo-booballi, hackia, crabwood, yellow citronaballi, wamara, wallaba, waibaima, siki-siki-danna, oolu, kooriky, togelkop, and dozens of other kinds.

Cassa bread, made of mandioc root, rice of many varieties in and out of the husk, coffee, cocoa beans, and canned fruits of strange kinds—strange to the people of the Temperate Zone at least—gave a fair idea of the food products of the country.

Bark fibres, apparently of good quality and color, had names no less strange than the different kinds of wood. There were wadadua, wadara, kakaralli, cocoanut, palm, bamboo, wina and mahoe fibres, and silk grass and hemp, the latter being a necessity wherever there are sheriffs or vigilantes.

But the animals of the country were no less numerous in variety than the woods. An ant bear or young anteater and the little anteater both appeared to have full ant eating powers. Monkeys there were in more kinds and varieties than could be imagined by the most delirious imaginer. They were in size from that of a common squirrel to the size of a big cat; and, in colors, they were yellow, black, brown, mixed, long and shorthaired; but every one had the same air of sober benevolence so characteristic of an aboriginal ancestor.

An iguana, a monster lizard, a weird creature with a lot of natural passamenterie growing down its back and around its neck, is said to be a rare good tidbit for the table. Its looks are against it, but probably the looks could be corrected by proper cooking, as I imagine it looks better cooked.

A tapir and jaguar formed a large centerpiece to the exhibit, and a cayman or great alligator, with a mouth which could speak volumes all at one time if it could but speak, was a most impressive sight.

Here and there in vacant places between the upright logs of the inclosure, were placed stuffed wildcats of many varieties, though none of them were large. Raccoons of different kinds, peccaries, ocelot, wood deer, manatee or water cow, armadillos, hacka tiger, common otter, broad-tailed otter and young opossum, spiny rat, vampire bat (a vegetable eater, and not a blood-sucker as falsely represented) made a most interesting collection. There were birds of many kinds, bright and dull plumage. A few varieties of ducks were the only kind of interest to the sportsman.

The fishes, too, were represented in variety, and most of them had a most uncanny appearance. One kind, the baghea, of the salmon family, had teeth fully an inch long, shaped like canine teeth, yet the fish when alive would not weigh over 5lbs. or 6lbs. The visitor will see many other weird things. Bugs of monstrous size and shape, crabs, forest rodents (some of them as large as an average-sized Italian greyhound), tiny deer, etc. There also are some beautiful specimens of handicraft, made of feathers, fish scales worked into artificial flowers, delicate rice and shell work. It is astonishing how many beautiful things can be made of such common material.

Domestic utensils, primitive weapons, etc., are shown.

### The Bowditch Manufacturing Co.

In Section E, near columns 27 and 28, Entresol Hall, Transportation Building, I noticed two models of steamboats made by the Bowditch Manufacturing Co., one the Robert Fulton, built in 1814. That steamboat was the first one which ran on Long Island Sound. The other one, the John W. Richmond, was built in 1838, and was a famous Long Island steamer. These models are in the exhibit of the Providence and Stonington Steamship Co.

### Messrs. Stewart & Binney's Exhibit.

The exhibit of this firm (successors to Edward Burgess) is in the gallery, columns 36 and 38, Section E. It consists of a number of models of famous yachts, among which are the Jathiel, Fancy, Gossoon, Harpoon, Puritan, Tomahawk, Constellation, Volunteer, Sirocco, Mayflower, Merlin, Shearwater, Papoose and Jamboree. To the yachtsmen these beautiful models are both instructive and interesting from association with great events.

### Montgomery Ward & Co.'s Exhibit.

In my perambulations about in the World's Fair Buildings, I noticed exhibits of the firm of M. W. & Co. in the Transportation Building, columns 11 and 12, aisles X and Y, and in Sections 105 and 169 E in the annex of the Agricultural Building.

## New Publications.

### "The Wilderness Hunter."

It is satisfactory to be able to welcome in Mr. Theodore Roosevelt's "The Wilderness Hunter" (Putnam's) a noteworthy and valuable addition to the very brief list of good books on American big game hunting. Most books on this subject are marred by two very serious faults. On the one hand the thirst for blood, the butcher spirit, appears often uppermost in the writer's mind, and he seems to rejoice in enumerating the number of his victims and in describing their dying struggles. More tiresome, though not so offensive, is the repetition in such a volume, of the camp jokes, which, however amusing they may be to those who hear them for the first time, and in the light of the circumstances and surroundings, enjoy them, fall directly flat when they come under the eye of the reader, who knows only so much of the people or the events as he can gather from a brief and often ill-written sketch. Such offences against good taste and good literature are not to be found in Mr. Roosevelt's books.

The qualities which we hope for in the author of a book of this character are eyes open to see and a soul to appreciate nature. If to this we add the happy gift of telling what he has seen so that others may see and feel with him, we are likely to come very near to a perfect book. The open eyes and the appreciative spirit are a large part of the equipment of the real sportsman. To these qualities of brain and heart add a good physique and experience and training in woodcraft and we have the ideal sportsman, who, after all, is only a gentleman trained in a special way. He may not have the polish of the cities nor wear good clothes, or, on the other hand, he may be in appearance the most exaggerated dude to be found on all the length of Fifth or Commonwealth avenues, but if his heart is right, the gun, the rod, the rifle or the shaps will even all things up, for in camp in the West clothes do not count, and one man is just as good as another if he shows that he can do a man's work. Your true democracy is found on the plain and in the mountains. A man such as this does not dwell with gusto on the amount of meat that can be eaten in a given time—even by a hungry hunter—is limited, and to kill without an object is surely not sportsmanlike. We recall the case of a friend who on a two months' hunting trip in the mountains expended only nineteen cartridges.

In many cases then, the hunting trip is made and the rifle carried nominally to get game, but really to furnish an excuse for the outdoor life that the hunter all so much longs for. The inherited fetters of civilization bind us all so fast that we must have a definite object in view, even for our vacations. It may be nothing more serious than to catch trout out of some special stream, to go by canoe down a particular river, to kill a few head of game or to climb a certain mountain, but we must have an object, some end to be attained. Few young or middle-aged men, who have much energy, would care to spend their vacation sitting on a hotel piazza. But given the object—this certain thing to be accomplished—the young man of the present day is likely to throw himself into it heart and soul and to carry it through with the same earnestness which he usually devotes to the so-called serious pursuits of life.

Mr. Roosevelt is sufficiently known by his earlier writings as a keen sportsman, and one who looks at sport of whatever description from the best standpoint. His book on this subject, "Hunting Trips of a Ranchman," was a charming volume, and the same man of the present day, the "Ranch Life and the Hunting Trail." To the present work he brings a ripper hunting experience, and a literary style even more attractive than in his earlier works. There is a freshness and a breezy out-of-door flavor about it that calls up vividly to the mind the high dry country where the cattle range, and the lofty crags where the sheep graze, and the ruggedness of the mountains. The imagination can see under the starlight the cattle bedded, with the night herders riding round them, the little clouds rising up out of the north, hear the cow punchers singing and calling in the denser darkness, the rising of the uneasy herd, and then see the blinding flash and hear the rush and roar of the stampede. Or we lie in camp high up on some mountain side, by the tumbling stream, and as we wait for sleep grow listless and weary to the bone. In the distance the pines, the nearby sounds of small night creatures, and the distant whistle of the bull elk. As Mr. Roosevelt tells it, it all seems very real to us, and for the moment we forget all about the printer, the desk, the copy and the rattle of the carts in the streets outside, and mingle again in all the old scenes, with the good horse between the thighs and the old way of saying that it is better to take care of oneself than to get caught in the leg. There is delight in having these scenes so vividly recalled, but there is pain too.

Mr. Roosevelt has killed all the different varieties of big game commonly found in the United States, and he devotes one or more chapters of his book to each species. From peccary to moose and from buffalo to big wolf, they are all described and many interesting details given of their habits, and of the exciting times he has had when hunting them. He also gives, incidentally, many graphic pictures of life in the cattle country and in the mountains. He is as keen to detect the points of interest in a new type of man as in a new species of game, and has an eye too for the small creatures of the forest, the mountain and the plain, and tells us something of how they live. In fact the book is notable for its excellent proportion and balance. It is written throughout with real art, and yet so simply that in reading it we feel doubtful whether in writing it art, balance or proportion were at all considered.

Mr. Roosevelt's book is an admirable one, yet we do not agree with all the views that he expresses. For example, on the first page of his chapter on the whitetail deer we think that—by implication at least—he does that cunning animal very scanty justice. It is true that "it is an inveterate skulker and fond of the thickest cover," but this, to our mind, is only another way of saying that it is better able to take care of itself than other game, and so, that a greater degree of skill is required to hunt it successfully. To say that "it usually has to be killed by stealth and stratagem and not by fair, manly hunting," is, to our minds, to misstate the case. What is all stalking of large game but stealth and stratagem—the successful matching of the hunter's craft against the keen senses and inherited alertness of a wild animal ever on the watch against danger? The whitetail is "easily slain in any one of half a dozen un-sportsmanlike ways," and yet we think that there is no feat of hunting more creditable than to kill by the fair, manly stalking, that Mr. Roosevelt so heartily approves a cunning old whitetail buck. It is not easy to do this, for of all the hoofed game on this continent the whitetail is the shrewdest, keenest and most difficult to circumvent. But when it has been successfully accomplished, there is more satisfaction in the killing of half a hundred stupid elk. We believe that Mr. Roosevelt thinks so too. Of course such methods as water-killing, crusting, jack-hunting and the like, do not enter into consideration by sportsmen.

There is abundant humor in this volume, and the chapter entitled "In Cowboy Land" is full of good and characteristic tales of the cowboy and his life. The most amusing is the account of how when a trail outfit struck a three-days-old town, the cowboys after a night of revelry cut the court house (a tent) up into "pans."

"The Wilderness Hunter" presents a series of accurate pictures of outdoor life in the West, and these pictures are so cleverly drawn that the book will be interesting to the reader whether he is familiar with such scenes or not. He who has taken part in such scenes and who has read the volume, be stirred over and over again by old-time memories.

The book is elaborately illustrated by twenty-four full-page engravings drawn by Remington, Frost, Sandham, Carter Beard and Eaton and by a multitude of appropriate head and tail pieces. In paper, type and binding it is very handsome.

An edition *de luxe* of the volume is promised in the fall.

### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Forest and Stream's

exhibit at the World's Fair will be found in the Angling Pavilion of the Fisheries Building. You and your friends are invited to visit us.

### Minneapolis and St. Paul

# Sea and River Fishing.

"Game Laws in Brief." June, 1893, revised. Game and Fish laws of all the States, Territories and Provinces. Correct, reliable, handsomely illustrated. Published by the "Forest and Stream." Sold by all dealers. Price 25 cents.

## SALMON FISHING WITH FISH BAIT.

THIS is a comparatively new method of fishing, and one which salmon fishermen are almost entirely ignorant of.

Little is known of the salmon after its exodus from fresh water. We all know the habits of the salmon after it returns to the stream where it was hatched, and where it playfully disports itself in the pools and running waters. It returns in its prime, fresh from the invigorating briny depths, and from the time it reaches the fresh water it goes without food, even for months, until it again returns to the sea, when lean and lank from its long fasting, it soon recuperates and adds fresh weight.

Of the spawning habits of the female we are familiar, also of the young life of the smolt or parr, which, remaining in the stream of incubation for from one to two years, takes to the sea, where it rapidly gains weight, and returns the following year to the fresh water as the grilse, weighing from 3 to 9 lbs.

But it has been a sealed book as to the life of the salmon in the sea, its wanderings, its habitat, its methods of feed-

not too large, or over 6 in. in length, is put on whole, otherwise it is cut diagonally, making two baits.

Some of the fishermen use a spread as followed in smelt fishing, in this instance being of stout steel wire, 4 ft. long with 5 or 6 ft. of line on each end of the spread, two lines and hooks. The salmon seizes the bait and hook and is pulled in alongside the boat without ceremony, where it is either yanked in or gaffed. Fully half of the salmon hooked are lost by the careless manner of handling, and about two baits are stripped to a salmon hooked. About once in twenty or thirty times two salmon are brought in at one time. I have reason to believe that at times when salmon first come in and in schools that the fishermen catch doublets often in succession.

My first experience was in going out with two fishermen in their boat, and in witnessing their method. The boat I was in secured three salmon by the hand-lines, the other boats did better, some taking as high as eight or ten, about a hundred salmon were taken by the fifteen boats out that morning.

I could find no record of taking the salmon with rod, excepting that of my friend, Mr. A. L. Tubbs, of San Francisco, from whose information I was induced to look up the fishing. His rod fishing is the only one I have heard of as applied to the salmon in salt water, and I have seen no other during my fishing except that of Mr. Simpkins, of Boston, who accompanied me on one of my fishings, and who succeeded in catching one of the largest salmon I have ever seen caught here, weighing 32 lbs. I equipped myself in San Francisco with the best I could get, two cheap bamboo trolling sea bass rods

flounders of 5 and 8 lbs. In a dead calm the fishing about ceases, as with trout in trolling; but with a return of the breeze the fishing takes on again. The method of taking forcibly reminds me of the trout. Shyly at times, and again boldly; sometimes striking several times at the bait, and with following up and striking at intervals of a few seconds; at times biting off half the bait and in following up for the balance; and in one instance following up the bait, with frequent half-decided action, until the bait was within 10 ft. of the boat, and then fiercely seizing it while I had the line in my hand. It proved a close call in a double sense, as the fish was a heavy one of 25 lbs., and carried the line out of my hand and the sinker attached, which rested in the boat, and very nearly got away with my whole outfit. I fortunately still held my rod in hand, and although I payed out nearly the whole of my 600 ft. of line, the fish was well hooked, and in fifteen minutes was brought to gaff. In boldness and general action the salmon have reminded me constantly of trout—paying but little attention to the boat, occasionally passing in sight within a few feet and striking on the surface at an occasional small fish, and at times going entirely out of the water in pursuit.

For experiment I tried the spoon, but fancied I did not do as well as with bait, although I caught two salmon with it. I also tried the spoon with fish bait, catching one that way; but believe the fish bait alone to be the best. The salmon upon being opened seem to have more squid inside than other fish, although at times full of sardines, and oftener with anchovies. Sardines are, however, the best bait, and squid but indifferent, while I have had some success with smelts and young shad. At one time out of bait, I used a strip of salmon belly, which did well enough to catch two salmon.

As I have my salmon rods for fly-fishing, I shall later on try a little surface work with the fly, but I do not anticipate much success, still I believe they will take under favorable circumstances, when they are as plentiful as I am informed by the fishermen they are outside the harbor at times in deeper water, when the fishermen have sometimes observed several salmon at a time, even up to a dozen in number, following the bait up almost to the boat's side.

The fishing in the harbor is in more or less turbid water, with a depth of from 6 to 10 fathoms, while outside the bay, in deeper water, it is clearer, and the salmon can be more distinctly observed. I am informed by the fishermen that at times the salmon are so plentiful a few miles beyond the harbor that they are enabled to fill their boats in a few hours. These occasions, however, are rare, and where the salmon are found plentiful one day they may not be found the next. It has been usual, however, for the salmon to remain about and in the harbor for several weeks each year, although they skip their annual visits occasionally. The small fish, which the salmon follow into the harbor, come in countless numbers, often in large, moving masses, and their presence is indicated to the fishermen by the hovering sea gulls, pelicans and other predatory birds. These are seen busily at work on the salmon grounds, and often indicate the most favorable places for fishing. While the salmon evidently come in schools at first, it would appear that they scatter more or less about, instead of remaining together, although they mass more or less when in the vicinity of large schools of small fish. The fishermen are more or less guides for each other, and may be scattered over a square mile without doing much in catch. Presently one or two commence hauling in, which congregates all the others in the vicinity, and the fishing goes on merrily for a while. Then a scattering takes place again, and a regathering afterward. Still I have found about as good success in passing up and down in certain localities, as in following the fishing boats.

The average time I have found necessary to fetch my salmon to gaff I should estimate at eight minutes, occasionally less, and sometimes fifteen or sixteen minutes. I believe, however, I am more rapid in landing salmon and trout than the average fisherman, many of whom take more than half an hour with a salmon and ten or fifteen minutes with a two-pound trout. I have never, except in very rare instances, been more than half an hour in landing a salmon with a fly-rod, and though I have taken, I may safely say, during over thirty-five years of annual trout fishing, many thousands of trout weighing from two to over eight pounds, I have never to my remembrance been so long as fifteen minutes in landing a trout unless from an outside hold.

My later fishing, however, has required a little more time, as I have pursued it with a light ten-ounce steel rod eight feet in length. I have found it, notwithstanding the prejudice I had against steel rods, to be almost perfect for the fishing and altogether superior to the cheap bamboo rods which were the only trolling rods I was able to get. More than half of my catch has been done with the steel rod, and while I have strained both of the bamboos the steel rod is as correct as at the commencement. It is also much lighter and more flexible, and I would have no hesitancy in taking a trial with it over a sixty-pound salmon or a sea bass of the same weight. The market-fishermen, as I have previously observed, lose fully a half of the salmon they hook, it is a straight overhead pull and no give except that which is compelled by want of strength. The line and hooks are strong and the fishermen have no time to wait. If the salmon are plentiful they do not much mind the losses, which often occur from neglect in using the gaff. With the light rod the fish, if hooked, is seldom lost. I brought in several with skin holds, which would not have held for a moment in hand fishing. One salmon which I caught had been on one of the market-fishermen's line, and had a torn out hook mark in his mouth and a cruel gaff cut between his ventral and anal fins. The gaff cut was nearly three inches long and had penetrated nearly to his other side, and was too serious to have ever healed up again.

The fish was a large one, of about 21 lbs. in weight, and in fine condition, although the gaff cut was evidently two or three days old. The wound had evidently made but a slight impression on the appetite of the fish, as it struck fiercely and fought hard. The cut is conspicuously shown in the photograph accompanying this article, seen in one of the front salmon. I found the salmon which exhibited the most gamy qualities to do their fighting near the surface, seemingly to disdain any depth after once being brought up, and to often make an almost complete circuit of the boat. Certainly a more beautiful sight than a salmon exhibits with his brilliant colors, as he strokes along with his powerful tail, near the surface in the clear

MONTEREY SALMON.

Taken by Mr. J. Parker Whitney, of Boston, at Monterey, Cal., June 23, 1893, with a 10oz. rod. Seventeen fish. Weight, 274 lbs.

ing and varieties of food. How far it wanders away from its native stream, and its sea life we know little of.

We know the unerring instinct so-called, which guides the salmon from his sea wanderings back through the pathless ocean to the pleasant pools of its infancy. But it may well be doubted if it is instinct which guides the salmon on his return, or if the sea is pathless. The scent of the salmon family is keen, perhaps not surpassed by the most favored of the canine tribe. That sense of smell, which in animals so far surpasses that of the human race, that it may almost be accounted a new sense with them, is probably possessed by the varieties of salmon, trout and other fishes in perfection; and it may reasonably be presumed that the outreaching odors of streams, each peculiar and distinctive, extend by the currents of the ocean for perhaps hundreds of miles from the shores. These currents, permeated more or less, constitute to the denizens of the deep routes as familiar perhaps as landmarks on the shore to the animal race.

To those interested in the king of fishes, the salmon, the harbor of Monterey presents an opportunity of peculiar interest. Here the salmon is found in pursuit of its natural food, and exhibiting many features which give an insight into the ways which have been so mysterious before.

As an old fisherman of many years experience with salmon and trout, I have become intensely interested. The method of taking the fly by the salmon in fresh water is different from that of the trout, although the game qualities are alike. I am, however, struck by the similarity of the two fish in feeding, by the salmon in salt water, of the method of striking the bait, and of following it up, and of other features which would have attracted my particular interest, even if I had not known of the existing relationship. Almost yearly the salmon come into the Bay of Monterey, as well as that of Santa Cruz, and a few other places on the coast, where they sometimes remain for months, and pursue their feeding as other fish do, and where they are readily caught with fresh fish bait.

I have lately had the great pleasure of taking a few core, and for the benefit of those who, like myself, have been in the habit of taking these noble fish with the fly, I will give the result of my experience.

When the salmon strike in about the bay, and generally near the shore, which occurs here about the 10th of June, they do so in the pursuit of squid, sardines, anchovies, smelts and other small fish, and their presence is first indicated to the fishermen by the occasional disturbance of the surface water by the small fish in their efforts to escape. This is a signal for the Italians, Portuguese and other market-fishermen to go out for them, which they do in both sail and rowboats. These men all fish for the market and waste no time in sentiment. They are equipped with stout cotton lines sufficiently strong to pull a salmon hand over hand. A stout sea hook is used with a sinker weighing half a pound. The line is about 200 ft. in length, the sinker is attached a short distance above the hook, and the line is payed out about 100 ft. from the boat, and in the slow sailing or rowing, which is about the same speed as followed in trolling for trout, the bait sinks down twenty odd feet. The sardine or small fish, if

of 14oz., and 9 ft. in length. My additions were light sea bass linen lines No. 18, 600 ft. long. No. 4-0 Kirby hooks, the hooks I had soldered to a short link of strong brass wire, to which were attached three more additional brass wire links with swivels between, adding to the wire above the shank of the hook a small brass wire projection without barb, to hold the bait-fish head in position, long 1 lb. lead sinkers with holes in each end. These with a multiplying reel completed my outfit.

I found my heavy sinker a great disturbance in playing the salmon, so after my first salmon I attached the sinker with a short cord to my line some 35 ft. from the hook, tying with a peculiar bow knot, so that it could be easily pulled off as I brought my salmon near the boat. This I found to answer admirably, being the same method I have pursued for years when trolling in summer for trout in deep water. The heavy sinker is necessary to get the hook down 30 or 40 ft. from the surface, and I have frequently used for trout in trolling as heavy a sinker as required for salmon in Monterey Bay. So I brought into requisition the same method I have followed in deep water trout trolling, of removing my sinker by a simple pull, which relieves the line of all weight but that of the salmon and gives complete opportunity for play. It is not difficult to fetch the salmon up where the sinker can be reached from the boat side.

This is accomplished by allowing the fish to sink down and play slowly about, rowing the boat over him, keeping up a gentle pressure on the rod. The game commences when the salmon is brought toward the surface. Then the salmon will frequently strike off on the surface in a straight line several hundred feet. In two instances I have trembled for my line, being compelled with all the strain I dared to put on to allow the fish to take out within 50 or 100 ft. of all I had, although the boat was being propelled as rapidly as two men could row toward the fish. But it has been rarely that I have payed out over 400 ft.

Not so often as in fresh water does the salmon leap out of water, and seldom more than two or three times.

My daily catch has averaged nearly 8 fish and given most exciting sport. The careful weight of 69 salmon caught I find to be 1,133 lbs, or almost 16 lbs. each; the smallest was a grilse of 5 lbs. and the largest of 30 lbs.

All my catches have been in the early morning, starting out at 4 o'clock and getting back to the Hotel Del Monte in each instance but one for lunch. The exception was an all-day fishing, when I secured 18 salmon, weighing 286 lbs.

As with trout, I have found the morning the best, and after 10 o'clock the fishing falls off. Two or three miles of rowing has been required to reach the fishing ground from the Monterey pier, and the fishing ground I have found, so far, to extend over an area of about two miles long by a mile wide, although I have no doubt that the salmon could have been found out two or three miles beyond that limit. I have caught in addition to the salmon brought in, half a dozen rockfish, called bluefish by the fishermen, but not bluefish as known East, weighing about 5 lbs. each; also two codfish of 5 or 6 lbs. and two

water and bright light, never gladdened the heart of a fisherman. We all know the dangers to which the salmon is exposed in fresh water, and from which but few survive, as it is doubtful if but very few if any ever return from the upper streams which they ascend after the spawning season, at least when such upper waters are far removed from the sea. If they have the exposures in the deeper waters of the sea which follow them in the shoal water of Monterey Bay, their lives are indeed beset with constant risk. I saw daily in the bay on the fishing grounds, the enemies and consumers of the salmon at their deadly work in the form of seals, porpoises, sharks and cow fish. One day when I was out, which was very foggy, I was startled by the uprising of a curiously peaked hump, two boat lengths ahead. It seemed to me like a boat's end elevated with a black cloth over it, but a moment later revealed the half of an enormous bewhiskered sea lion, which raising itself half out of the water, revealed a form which must have weighed at least a ton. In its mouth was a large salmon which it had evidently just caught. The insatiable appetite of these monsters of the deep, of which hundreds abound in the vicinity, would indicate that they are not slow to avail themselves of the salmon invasion. Well, I thought, the part which man plays in the devastation of the salmon in the sea, is but trifling compared with that which occurs from their natural enemies beneath the waters. One of my oarsmen told me that the sea lions at times made great havoc with his fish nets, as well as all the fish they contained.

He told me also that one day as he was hauling in his salmon he found his haul temporarily checked, after which, in completing his haul, he found half his salmon bitten off by a seal, and shortly after saw the seal swimming off with the half of a salmon in its mouth.

On the Pacific coast there are five distinct varieties of salmon, some of which are not highly esteemed for food. Of the latter it is probably because they are not of the spring run, but autumnal fish, and deteriorated by being out of condition.

Those of Monterey Bay are of the highest class, the king salmon or quinnat (*Oncorhynchus tshawytscha*). These are of the Sacramento, San Joaquin and Columbia rivers. As an article of food they are probably of more importance than all the other fish of the Pacific coast.

In the Columbia River the average weight is 22lbs. In the Sacramento River the average is 16lbs. Occasional instances are quoted of from 60 to 100lbs. In addition to the enormous quantities which are seined on the coast and in the rivers for immediate eating, there are annual packs from the Sacramento, Columbia and up the Yukon, of fully 1,500,000 cases of 48lbs. each, representing fully an annual pack of more than 70,000,000lbs., or some 4,500,000 fish. There is no apparent diminution in quantity. The other varieties of salmon are known as the blue back (*O. nerka*), which weighs from 5 to 8lbs., which predominates in the Fraser and Yukon rivers; the silver salmon (*O. kisutch*), weighing from 3 to 8lbs., which is found in nearly all of the salmon rivers of the coast; the dog salmon (*O. keta*), from 8 to 12lbs., found in the Columbia and Frazer rivers; the hump-backed salmon (*O. gorbuscha*), found in the northern streams. The latter is the smallest salmon on the coast, seldom running over 3 or 4lbs. The salmon of the Pacific coast differ but slightly from the general salmon family, the difference being in an increased number of gill rakers, as well as glands about the stomach, and the number of rays in the anal fin.

The quinnat or king salmon is as perfect in form, color and activity as any salmon could possibly be. Its silvery gleaming is as brilliant as any of the salmon family. On the sides of the head it has a distinctive coloring, a peculiar metallic lustre of a pale olive cast, that which might arise from a mixture of lead and silver highly burnished. A feature which has strongly attracted my attention has been the changing colors of the quinnat in salt water. With every changing angle of the sunlight the flashing, iridescent hues have varied with kaleidoscopic rapidity, from the deepest olive green to a light green, and a gleaming white to a silvery, and from a dark brown to black, and then so neutral as to be lost for a moment from view. Changed indeed are the salmon, or the few which survive to return from the spawning season in fresh water to the sea. From the day of estuary passage a falling off in every respect commences. Food is no longer sought or taken. The silvery sheen and iridescent hues slowly disappear. The stomach and its auxiliary glands shrink away to one tenth of the normal size. The color gradually changes to black. The flesh becomes dry and insipid, and if the fish ever returns to the sea after a long passage to the headwaters of its stream, it comes in a sadly demoralized condition, with its fins and tail worn away, bruised, blotched, distorted and often blind. It is not probable that the salmon is a very deep water fish, or that it goes far from its native stream, but seeks its food from the small fish which keep the vicinity of the shores. The fact that they are seined every month of the year on the Pacific coast, to a considerable sense evidences this.

It is clear that the salmon of Monterey Bay are those which belong to the Sacramento or San Joaquin River group. Their average weight confirms this, and that they are not of the Columbia River. The distance from Monterey Bay to San Francisco Bay, into which the Sacramento and San Joaquin rivers pour, is about ninety miles. Monterey Bay and that of Santa Cruz, a few miles north, and at some of the sounds and bays north on the coast, are the only places known where the salmon is found engaged in taking his food, and where it can be caught with fresh-fish bait. It certainly presents a favorable opportunity for studying the salmon in its normal condition, in its prime, engaged in seeking its natural food. Here its manners and peculiarities can be examined with ease and some knowledge obtained of the class of food upon which it best thrives. All this can be obtained and the salmon brought to gaff in his superior condition before the advanced condition of the organs of reproduction have reduced its delicious flavor or weakened the vigor of its efforts.

It may be claimed by those fishermen who are so wedded to the artificial fly that trolling with a spinning anchovy or sardine is not the proper deceit for the king of fish, but it may be a question if such a view is not of the fanciful and fantastic order, rather than the resulting conclusions of the experienced all-around fisherman, who disdaining an unfair advantage over his game, does not decline the acceptance of a lure, which may to an extent compensate his victim for the risk which it undergoes.

MONTEREY, July 19.

J. PARKER WHITNEY.

## SALMON ANGLING IN THE HUDSON.

A GREAT many times during the past ten years I have written in FOREST AND STREAM about salmon in the Hudson, but it has been about planting salmon fry, or yearlings, or the capture of salmon in shad nets, or something of that sort, and never until this time have I been able to use the caption that I do now, which means killing salmon with the fly. In former years a few, very few, salmon have been killed on spoon bait when the fishermen were seeking other fish below the dam at Mechanicville, but I believe that until this year not a single salmon has been killed by fair angling with a fly in the Hudson River. There was an account—rather misty, to be sure—of one being taken with a fly a few years ago in the tidal portion of the river, but I think the story was never taken seriously, and last year it was reported that three or four or five salmon were killed with the fly at Mechanicville, but I inquired about the details of the capture, and found that the fish were taken by trolling a hook or hooks on which a bunch of deer's hair was fastened to make what is called in the South a "bob" or "mop," and this does not properly come under the head of salmon flies. When I was at Mechanicville with Mr. R. C. Lowry early in June I know that he left with Mr. Pratt salmon leader and flies (black-dose and Jock-Scott, I think), that he might try the fish when the water was right. It was not to be expected that the fishermen there would all of a sudden understand fully about salmon fishing, and they were not prepared with proper tackle. Mr. Pratt was quick to avail himself of the opportunity to try the salmon and was among the first to kill a salmon with a fly. The following is the score of salmon killed at Mechanicville up to the date of writing. The fish marked with an asterisk were killed on a fly, as Mr. Pratt assures me, and those not so marked are said to have been killed with a fly, with the addition of a piece of salt pork on the hook.

Date.	Fisherman.	No.	(Weight— Lbs. Lbs.)
June 20, W. H. Vandenberg, Mechanicville.....	1	11½	
June 23, T. L. Pratt and H. S. Miller, Mechanicville.....	2	*9¼	*10¾
July 7, Louis Boucher, Mechanicville.....	1	9½	
July 13, Louis Boucher, Mechanicville.....	1	8½	
July 14, Louis Boucher, Mechanicville.....	1	16½	
July 14, Chas. H. Wilson, Troy.....	1	10½	
July 18, Louis Boucher, Mechanicville.....	2	17½	8
July 18, Dr. R. D. Bloss, Troy.....	1	*9½	
July 18, T. H. Dutcher, Troy.....	1	10	
July 18, Oscar Barnes, Mechanicville.....	1	8	
July 18, T. L. Pratt, Mechanicville.....	1	*12	
July 18, Albert Barnes, Mechanicville.....	1	10½	
July 19, W. H. Vandenberg, Mechanicville.....	1	*10¼	
July 19, E. A. Starks, Mechanicville.....	1	10	
July 20, Platt Burk, Mechanicville.....	1	8½	
July 20, Oscar Barnes, Mechanicville.....	1	9½	
July 20, Name not given.....	1	12	
July 21, F. J. Tompkins, Lansingburgh.....	1	10¾	
Total.....	20	202¾	

I am not to blame because a salmon which has appeared in several newspaper items as being captured by another angler does not appear in the foregoing list, or more correctly the fish is in the list although the angler's name is not. This is explained in this extract from a Mechanicville letter: "Mr. Blank is a thorough fisherman, and has been here a number of times, but has not killed a fish yet, though he tried faithfully to throw his fly over the back of a rising fish on Friday and hook him, but was unsuccessful. I saw him doing this and he also told me that he tried it. The fish he took away with him, mentioned in inclosed newspaper clipping, is one that Louis Boucher killed."

Whatever others may do, there should be no excuse for one who pretends to be a fly-fisherman and attempts to foul-hook a rising salmon. Kill them fairly or let them go for some one who will! Another gentleman writing to me on this subject says: "You should come down here and see how the salmon are caught, and doubtless you would get points that would enable you to write a chapter on 'pork-eating salmon.' If you should bring a camera you might get something for FOREST AND STREAM to reproduce. You should have first a photograph of the cast—a gang of three hooks and one or two flies tied to the leader above them, and on the points of the flies a small piece of salt pork. One piece of pork goes a long way, for the salmon are taken on the gang."

Mr. Dutcher was credited in a Troy paper with killing a salmon of 20lbs., and if this was so it was the largest salmon killed at Mechanicville, and I sent there to make sure before I included it in the score. My correspondent writes under date of July 21: "The 20lbs. fish you have in your list credited to Mr. Dutcher is the 17½lbs. fish caught by Mr. Boucher. Mr. Dutcher bought it. The salmon caught by Dr. Bloss was an honest catch. I saw the fish rise to the fly, and as I landed the salmon I was in a way to know. There is great excitement here over the fishing, and I think there were at least fifty anglers here yesterday from out of town. The majority fish at one place, from the bank, and not less than seventy-five people were fishing there yesterday in a space of about 300ft., and this afternoon I will have them photographed. E. A. Starks, of this place, hooked a fish yesterday morning below the bridge at 6:15 and lost him at 8:25 within 100ft. of the dam. The fish did not break water at all or show himself in any way, and I am of the opinion that it was a large sturgeon, for it did not act in the least like a salmon. When they got to the dam the men were exhausted, and the fish seemed to be on the bottom stirring up the mud, and when they reached for him with the gaff he broke away."

"Mr. Starks also hooked a salmon this morning early and sent to the hotel for me to come and help him land the fish. I came down and found Mr. Starks and his friend and his boat on one side of a ledge and the salmon on the other. I took Mr. Starks into my boat and then got the fish into deep water, where he was played for 30 minutes and lost. Mr. Starks was using an 8oz. rod, and the fish had played the men out, but was as lively as ever when it got away. There are a great many fishing to-day, but not a fish has been killed yet." I had written so far when I received a message stating that a 10½lbs. fish had been taken on the 21st by Mr. F. J. Tompkins, of Lansingburgh, and I have added it to the score.

The result at Mechanicville, as shown in the score, demonstrates that Mr. Lowry, whom I quoted in FOREST AND STREAM, June 29, was wrong in his theory, which was acquiesced in by Mr. Ramsey, of Montreal, that salmon would not rise to the fly so far from salt water. They will rise, because they have risen and been killed in a sportsmanlike manner, and I have no doubt that in a short time, with tackle better suited for salmon fishing,

all who engage in the sport will abandon methods adopted perhaps in the excitement of the moment, and adhere only to legitimate fly-casting.

Last week the New York Fish Commissioners had the fishway at Mechanicville cleaned out and put in working order, so that the salmon can now proceed up stream should there be a freshet in the river. The break in the Troy dam undoubtedly permitted a large number of fish to run up to Mechanicville, and now that the dam is about repaired it is hoped that means may be found to place the fishway in working order also.

Mr. Rogers, of Amherst, Nova Scotia, inventor of the Rogers fishway, in use at Mechanicville and Thomson's Mills, wrote me that he would pay for cleaning the fishway of drift, which should not have entered them if the slats provided had been kept in place, but the Fish Commissioners have made a personal outlay by Mr. Rogers unnecessary. There are good pools above Mechanicville, and another year anglers will have more room to display their skill in tempting the king of game fishes to his destruction with rod, reel and fly, cast in an orthodox manner, for if a salmon will rise to a fly baited with salt pork, it will rise to the fly without the pork. Pork is not a factor in fly-fishing for any kind of fish.

A. N. CHENEY.

## PORK BAIT FOR SALMON.

FOR those who are credulous as to what salmon eat and what they take for bait, I beg to refer them to the following statement contained in the Troy Times of July 15. It is a bit of solid testimony which wipes out hypothesis and conjecture at one stroke. It is to this effect: "Of the four or five big salmon caught at Mechanicville [Hudson River] this year, pork was the bait with which each was captured."

Now, most anglers who are interested in the subject actually believe that salmon in the rivers will take no lure but fly, and that they eat nothing at all in fresh water. Doubtless they have gathered these notions from irresponsible writers of angling books, or possibly they may have inherited them from a goodly line of piscatorial ancestors who had generations before them been ridiculed by dilettanti anglers who affected to be "gentlemen sportsmen," into eschewing the vulgar bait because it was "not the correct thing." None of these, I dare say, have ever thought of testing rising fish with bait of any kind, yet bait-fishing was the primitive method, just as it was for trout long since. We in America are behind the times. Let me quote from a Scottish journal which prints the comments of a resident observer. It says:

"More than ever is bait-fishing becoming the vogue now in Scottish salmon rivers. Not so very long ago an angler detected in the act of using any other lure than the fly would, in most districts, have been looked upon as a pothunter and poacher, and shunned by true sportsmen accordingly. Now, however, with the march of progress, *tempora mutantur*, and the minnow, prawn or worm is unblushingly mounted, and salmon and trout are killed by men who know as much about fly-fishing as does a jackass."

These fishermen are merely reverting to original methods. Reversion is always warring against progress, and thus history repeats itself. For all who are credulous as to what salmon eat, and what they accept for bait, I beg to refer them to pages 37-42 of my last work, entitled "The Salmon Fisher." Views of anglers on many points will undergo a change as soon as ever popular errors are controverted and corrected.

CHARLES HALLOCK.

HADLEY, Mass.

## Fishing in Lake Champlain.

WESTPORT, N. Y., July 19.—For the last few years, by adopting the St. Lawrence methods and using live bait, I have had no trouble in making good catches of black bass, wall-eyed pike and pickerel. I have not the least doubt that anybody keeping run of fish as St. Lawrence boatmen do would find the fishing compare very favorably with that out of Clayton. We run more to pike and less to pickerel than they do there, and I find the black bass about the same. Black bass will take a fly readily early in the season, and then go into deeper water and need live minnows to tempt them. The pike and bass run about the same weight and feed on the same grounds. You are apt to find them off any of the points along the New York shore in from 10 to 30ft. of water on the rocky ledges.

Seven miles from Westport, at the mouth of the creel on the sandbar known as the Drop-off, there is an excellent ground for all fish, and from there south on the Vermont shore there is always a good chance of taking good pickerel and bass. A reef about a half mile south of Button Bay Island on the Vermont shore four miles from Westport is another fine ground, and Barber's Point, on the New York shore two miles from Westport, a fine pike ground with a good bass shore for several miles to the south.

I have taken a bass of 6½lbs., but they are not plenty over 2lbs. Pike run about same weight. Pickerel up to 10lbs., but not common over 4lbs. Chub minnows are abundant in New York streams and a demand would insure abundance of bait at reasonable figures.

There are few fishermen here who know the grounds, but there are one or two available boatmen who do know them well, and I have no doubt that any one knowing the habits of fish would find sport sufficiently good to repay them well for breaking in a boatman and contending with the difficulty of getting new men to understand what is wanted.

I regret to say that dynamite has been much too freely used in these waters for a number of years, but with stopping of blasting flux limestone on lake shore I hope cartriges will become less accessible and a method of fishing so destructive to all interests be discontinued. This is an abuse our game protectors seem unable to cope with, and wherever it occurs one may expect to find dead bottom and the best of grounds ruined for several years. I saw no signs of dead fish last summer and hope we may soon see the end of it.

T. L.

## Tarpon Weights.

ST. AUGUSTINE, Fla., July 16.—A letter from my friend, Capt. John Smith, an old fisherman, of St. James City, on the Gulf Coast, tells me that the largest tarpon caught last month was 6ft. 11in. long, and weighed 195lbs.

JOHN VEDDER.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Camp "Forest and Stream."

MUKWANAGO, Wis., July 11.—Three years ago J. B. H. and myself blundered on Phantom Lake, about eighty-five miles north of Chicago, when we were purposing a summer camping trip along the Upper Fox River. We pitched the first "Camp FOREST AND STREAM" on a high knoll upon the east shore, and there abode in peace and plenty for two weeks. Last year I sought for a new place for J. B. H., in whose honor the yearly trip is made, and who, being past three-score years and ten, could hardly take a rough woods journey. Strive as I might, I could not find in all this region so lovely a spot as this bit of Waukesha county, with its pure springs, its hardwood timber, its beautiful rolling hills. So we returned and made a second camp upon the bluff adjoining our first one, upon which, alas, a summer cottager had cast his eye. Again we had our season of content, and again poured libation of much coffee to the spirit of Phantom Lake. Once more the year rolled around, and J. B. H., who lives in placid Iowa, clamored for his yearly trip to a country wilder at least in its look. Again I sought for a new spot to please him, and sought in vain for one to equal the old one. Not even the famous Madison Lakes seemed fit in the eyes of the Chief-with-Two-Stomachs, who was courier in our quest for a time. Oconomowoc, Geneva, Delavan, Twin Lake and all the Fox Lake system—none of these would do. We sat in council and voted again for Phantom, where we had good water and big bass.

Camp '93.

So here we are again, on the west shore this time, and much dismayed, for out of the ashes of our last year's camp-fire there has sprung a \$30,000 summer hotel, and in the tiny lake the whistle of a beastly little steamer shames the crowding hills. We can forgive the hotel, for we know Chicago must have breath in summer; but we cannot forgive that absurd, asthmatic and utterly abominable steamer. I fear we shall have to go further north next year. Even the size of our little lake has proved no protection, and it has been nearly gobbled, as so many others hereabout have been gobbled utterly, by the girl who giggles and the young man who wears a sash.

Nevertheless we are here far from the sash and the giggle on our side of the lake. Here it is still quiet and untrodden. No hand has lopped a tree on the west shore of Phantom, and the turf has never felt a spade. We have dug us a new spring at the foot of the bluff. Great oaks line the path we have worn up to the high top of our hill. At the top there is a wide Druid circle, now clothed in short blue grass and clover. Above this the oaks try to touch hands, but cannot quite. Back of us more woods, in front of us the water, the hated hotel quite out of sight, the loathed steamer for the most part unheard—thus lies Camp FOREST AND STREAM for '93, the prettiest of all our camps, and as sweet and clean a place as ever caused rebellion in the heart of a man who kicked at sitting down to write copy when he wanted to go fishing. Our two little tents front toward the morning sun, which cannot reach them till it is mid-morning. We have hardwood sidesticks to our little fire, a fine new table at least two feet square, and—luxury almost too much—this year we have two lazy-back camp chairs of the sort which fit any figure. This morning at breakfast we saw two gray squirrels foraging near by, and last night at supper we watched a hungry bass which was pursuing with murderous intent a frog among the rushes near our landing. So it is wild enough, and quiet enough, and good enough for anybody.

The Choosing of the Coffee-Stick.

The cookery of the camp should be no hap-hazard matter, but should be, as all other camp economy, ordered with all regularity and due observance of form. There should be a place for each utensil about the fireplace, and it should never be left elsewhere. The table should never be moved except in case the sun shines upon it too directly. The camp ax should have a local habitation. No chips should scatter over the door-yard of the tents, neither any straw litter the floor of the canvas house. Loose-ended camping is a perpetual disgust and there is no comfort in it, but the camp proper is a constant delight.

In the camp proper there is always a coffee-stick, to be used for no other purpose but in setting the coffee-pot on and off the fire. Under no conditions can the coffee-stick be used to poke the fire, nor must it be used about the fire except sparingly, and only when there need be more coals raked up against the coffee-pot. One coffee-stick should last throughout the entire camping trip, and it should never be destroyed or injured, nor should it be replaced by any other stick. It is the medicine stick of the camp, potent for good or evil. Its choice should therefore be made with care and due formality. In a cabinet at home I have the coffee-sticks of our former camps, gnarled and charred it is true, but strong medicine still to conjure up pleasant dreams. This year we have chosen for the high function of coffee-stick a slender but tough one, with knotty knob upon the end to catch the bail of the coffee-pot. It makes excellent coffee, and since we have installed it there has not been even a headache in our camp. True, during his first evening in camp the Chief-with-Two-Stomachs by mistake took the coffee-stick to stir the fire and burned it nearly in two, but this he did in ignorance of the fact that it was the coffee-stick. This was a bad omen, but the Chief having made apology for what was ignorance and not carelessness, we hope that all may yet continue well, and that the coffee-stick of '93 may never bring up memories of aught but large fish and pleasant days.

About the Fish.

As to the fish, we have plenty of them. The waters hereabout are fished continually, but not expertly. Using frogs we have always taken large bass here. In 1891 J. B. H. took the largest bass I ever saw, and one which I think must have weighed between 8 and 10 lbs. Last year the Chief caught one that weighed 6 lbs., and three that weighed over 5 lbs. each, all in one afternoon. This year I killed one that weighed 5½ lbs., and we have had several already that have weighed over 3 lbs. These are all large-mouths, and our big ones were until lately taken in the creek and mill-pond near by, and not in Phantom Lake proper, where the bass run small, though very fine and sweet.

In our wanderings we fell upon a little lake back in the woods, about 40 acres in size, a perfect gem of a lake, and set handsomely deep down among hills robed in oak and cedar in singular contrast. This lake we learned was called Giller's, or Gillar's or Gilliar's, or Gillard's, or Diller's, or Dillard's lake, we never could learn which. It was bought last year by Mr. Asa Craig, of Mukwanago, who keeps up the traditions of earlier owners, and did not permit a boat to be put upon it. To us the lake looked much like bass. We sought out Mr. Craig, stated the case to him frankly, and received his assurance that the lake did not only have bass in it, but mighty big ones. He furthermore was so courteous as to tell us to take our boat over and try it for a day. This to strangers was a favor they had no right to expect, and we valued the privilege highly.

Yesterday we made our trip to Mr. Craig's Lake, and to this we owe one of our most delightful experiences here. We took seven bass, all good ones, and one of them weighed 6 lbs. 2 oz. The fish of this deep and cold lake were all full of game and fight. They struck hard and ran far, and gave us all we wished to do. As for the big fellow, he afforded the most spectacular fight I ever saw made by any bass, and was as lively and full of ginger as any youngster, while his great weight and strength made him a dangerous customer indeed. He fell to the Chief's rod, who seems unable to catch any but big bass, and that calm philosopher for the time seemed galvanized into a state bordering upon excitement, though he handled his rod with a coolness and skill which alone could have made him victor in the war. We struck the fish near the lily pads, but a few strokes of the oars took us out into deep water, and here we had the prettiest session ever was. Even the stout casting rod could not kill the fish in less than ten minutes, and I know there never was a small-mouth that made a better fight or a longer. He employed all the tactics known to the bass family, pulling, yanking, sawing, sulking and running long and far. Four times he went high out of water, mad as a hornet, fins up and head shaking, and once he got under the boat in spite of us, but the rod clung to him, and at last we got him in. He was a beautiful, clean, bright fish, with nothing of the dull rusty color usual in heavy big-mouth bass. He was a regular bright bronze green, in all the handsomest bass we ever took in this section, and by odds the hardest-fighting bass I ever saw. The Chief and I are thinking that, with our two bass of 5½ lbs. and 6 lbs. 2 oz., we are apt to have a good comparison to offer the winner of the prize offered by the Natchaug Silk Co. for the heaviest bass caught on their lines, even should not our top fish take the big-mouth prize. We are using the Natchaug lines, and if they were not right we could not have broken the bass record for this county twice in our first week here this year, for the conditions of the fishing here demand the most trustworthy tackle. At the hotel (the Phantom Inn) our fish lie in state on ice, and attract the populace, who say they never knew before that there were such big fish about here. They don't know how to fish, that is what is the trouble with them. As for us, we think we know where we can catch a bigger one yet.

The White Man's Buffalo.

The Indian utilized all parts of the buffalo. The white man uses all parts of the swine. Not the ox, but the plain hog, is rightly to be called the white man's buffalo. The camper-out rarely takes along too much bacon. Fish, birds and game, fruits, soups and relishes may appeal and later pall, but nothing can wither the charm of bacon, not too brown but still just brown enough. It is good for three meals a day—in camp, nowhere else—just as buffalo was always good to the Indian. They are cooking some bacon now, about twelve feet from where I sit, and it makes me mighty uneasy. \* \* \*

How to Cook a Bass.

There are many ways to cook a big-mouth bass, and he is more or less good in any one of them. You can, if you are rather new yourself, try the brown paper, or green leaves, or clay-bake method, or you can broil your bass, or spoil it on a stick. At cooking a big-mouth bass J. B. H. surpasses any Delmonico, whether of the city or the wood, and this is the way he does it. In the first place, he will not cook any bass except those taken from pure, cold water. We call the lower end of Phantom Lake our ice box, and when we want fish for breakfast, to eat and not to weigh, we go over there the evening previous and catch two or three little fellows, about a pound and a half each. These we keep alive on the stringer until we reach the cool green bank by our spring. There J. B. H. kills and carefully cleans the fish, and salts them in a covered tin box, keeping them cold over night. In the morning he washes them clean of salt and fries them till they are brown in half a skilletful of extract of bacon freshly prepared thereto. The fish are cooked thoroughly, the test being the easy admission of a fork tine through every portion. They can not be hurried, and the fire must be just hot enough. The fish are seasoned before cooking. Prepared in this way we find that the bass have no musky flavor and do not taste of grease in the least. They are sweet, perfectly hard and firm, nutty, and not in any degree of that unpleasant fishy taste which so often characterizes the restaurant or domestic fish. This is a practical, easy and good way to cook bass in camp. You can not get so good results in town, perhaps, because there you can not get so perfect fish. Nothing is more unpleasant than a "fishy" taste, but these fish do not taste of fish at all. I think perhaps the soaking in salt improves them.

A Half-Dozen a Day.

We have taken in all since our arrival here I presume thirty or forty bass. Before I left town, I remember, I heard of one sportsman who was killing sixty a day. We cannot eat so many, and out of the six or eight bass we take when we go out fishing, we find it necessary to give away all but two or three. J. B. H., who is past 70, and is active and vigorous yet, does well on the doctrine of moderation. I cannot see that sportsmanship would suffer under that doctrine. At any rate, J. B. H. says about half a dozen bass a day are enough in a week's camp, and what he says goes here. E. HOUGH.

909 SECURITY BUILDING, Chicago.

LITTLE ROCK, Ark., July 20.—Bass fishing in Arkansas is very fine just now. I took last evening in an hour's time 12 beauties. On the trip I landed 24 black bass with "Johnson's fancy" fly. JOS. IRWIN.

BOSTON FISHERMEN.

Mr. L. R. Howe and Mr. E. C. Hodges, of Boston, went after salmon to the northwest branch of the Miramichi a few days ago, and it is rumored that they struck the fish they were after the first day. If such is the case their fortune is better than that of most of the sportsmen who have been in that region of late. Mr. Joseph Jefferson, the veteran actor, and Mr. A. H. Wood, own the southwest branch of the same stream, and Mr. Jefferson visits the stream every season for salmon fishing. It is now understood and is no secret that a party of Boston gentlemen are negotiating for the Northwest Branch, and doubtless their efforts will be successful.

It may be a sin to go sailing after bluefish on the day between Saturday and Monday and it may not be; so a number of my Boston friends cannot claim that I have called them sinners, since I have not published their names. But it may be added that a good many boats and boatmen were chartered for that day (July 23) in Buzzards Bay, at Hyannis, at Martha's Vineyard and at Nantucket.

Mr. John B. Drake, for a long time in the fruit business in Boston, died on Tuesday, July 18. He has for many years been a visitor to the Maine and New Hampshire trout waters, though of late years he has found it very hard to get away from his business. But all the time he kept up his interest in such matters.

Another member of the long-to-be-remembered Eugene Clapp party, to the Rangeleys, is gone. Mr. Horace Haskins died at his residence in Somerville, Sunday, June 16. He was 64 years of age, and had been a member of the firm of Haskins & Montague for 41 years. Rarely has he missed his annual trouting trip with the Clapp party, and a more genial gentleman and a greater lover of angling never lived. Only Mr. Wadsworth and Mr. Paine are now left of that party.

Sportsmen will also be pained to hear of the death of Mr. Warren Rawson, of Arlington, Mass. Mr. Rawson was one of the pioneer gardeners of that town, from which business he amassed a handsome fortune. He was one of the most practical men of the stern New England type, but he never forgot his annual trouting trip to the Rangeley waters. At Camp Beamis was his favorite trouting place, where he early became a warm friend of Capt. Fred C. Barker. He dearly loved to spin his trout yarns, among which was the one of taking three trout on one cast, one morning at Bemis. This story was given in the FOREST AND STREAM two or three years ago. Mr. Rawson was of the sturdy Rawson race of Oxford county, Maine, having been born in Paris, in that county, 72 years ago. It was one of the pleasures of his life, as well as his annual fishing trip, to visit the humble home of his boyhood. He was never ashamed to acknowledge that he had begun at the very bottom of the ladder; in fact, he has often been heard to remark that he began in business for himself not worth 50 cents. Later in life his charities were many, often to poor widows and orphans of his native town. He had lived in Arlington over 50 years, of which town he was a prominent citizen. SPECIAL.

FISHING LIGHT IN CANADA.

REPORTS from almost all the Canadian salmon rivers show a great falling off in the catch this year as compared with previous seasons. Even the far-famed Restigouche has failed to yield anything like its usual quota of sport, while the various north shore salmon streams were too low during the whole of last month—the temperature of the water having risen to nearly 70°, that few fish could be induced to rise. A number of both American and Canadian anglers have already returned disappointed with their season's sport. The Trinity was almost the only exception to the general rule this year among the north shore streams, Messrs. Edson, Fitch and J. D. Gilmour having slightly exceeded their catch of last year upon it. Mr. Brackett took but five fish this year in the Marguerite, one of which was over 30 lbs. in weight, however. About the largest fish killed in Canadian waters this season so far was a salmon of 48 lbs., taken in the Grand Cascapedia by Mr. C. B. Barnes, of Boston. It is quite evident that the unfavorable character of the weather, and not any diminution in the number of salmon in Canadian waters, is responsible for the small catches of fish by anglers. The net fishing in the mouths of the streams was never more abundant than this year, and large quantities of fish have been seen through the all too clear water lying in the pools of the various rivers. Sea trout fishing is just now yielding good sport in the Saguenay River in the vicinity of Tadoussac.

In the various trout fishing preserves in this Province, and especially in the waters of the Triton Club in the Batiscan Valley, and in those of Lake Edward, large fish continue to be taken despite the recent heated term, but usually in the vicinity of cold springs. Mr. Eugene McCarthy, of Syracuse, and Mr. Curtis, of New York, have since fishing the Triton tract had good sport with trout in La Belle Riviere, near Lake St. John. Messrs. Brewer and Merriam, of Springfield; Bryan, of New York, and Campbell, of Plattsburg, have been very successful in their trout fishing upon the waters of the Amabish Club, in the Lower Metabetchouan, and Messrs. Bryan and Campbell have followed up their sport there with a day or two among the ouananiche of the Grande Discharge. No less than 300 ouananiche were taken last week in the Grande Discharge by a party of three American anglers.

Some fine catches of large fish are also reported from the vicinity of Isle Maleine, some seven miles below Lake St. John. Mr. E. J. Myers, of New York, has just had some magnificent fishing for ouananiche at the Fifth Falls of the Mistassini, whence he returned to Roberval on Saturday to take Mrs. Myers up the river. Trout fishing is now good both in the Ouiaichouan River above the falls, and also in the Ouiaichouaniche, a day or two's journey back from Roberval. The usual rush after heavy fish by anglers ascending the large northern tributaries of Lake St. John may be looked for early next month. As this territory with its network of lakes and rivers becomes better known, it is likely to become the favorite summer and autumn fishing and camping ground for both American and Canadian anglers. E. T. D. CHAMBERS.

QUEBEC CITY, July 17.

EAST SAGINAW, Mich., July 21.—I spent two days at the Pere Marquette Club waters last week. Black bass fishing was good; trout were not taking the fly well but were gorged with shrimp and caddis worm, so we did not get many. M.

## THE CHICAGO FLY-CASTING CLUB.

THE club held a regular meeting in the Grand Pacific Hotel, Chicago, on the evening of July 18. The president, Mr. Geo. W. Strell, presided. Seven members were present. The minutes of the last meeting were read and approved. Mr. W. H. Thurston's resignation was accepted. The secretary reported ten or twelve inquiries in respect to World's Fair tournaments of the club, from New York, Vermont, Maine, Indiana, Michigan, Kentucky, Iowa and Illinois. A balance of \$226.09 was reported on hand, out of which \$101.54 is deducted for an overdraw on account of the Walton House, which sum will be refunded. The Walton House cost \$594.54, and \$30 additional for the pier. Of this sum, \$275 have been raised and \$100 more subscribed. The shortage is placed at \$259.54. Some schemes for raising the money to meet this shortage were proposed. One was that each member should contribute 10 cents, then each should write to two of his friends, those two to two friends respectively, and so on in geometrical progression until the fourteenth series, when the debt would be exceeded by the receipts. This was objected to on the score of its charitable aspect. In the dog world, I do not think it would be practicable for material reasons; first, because after the third or fourth series had been passed there might be some compound vicarious friend who did not have two friends of his own, and in any series there might be a good friend whose dimes were not present, or whose giving was absent. Mr. Clarke proposed that the members pay what they could and trust to sportsmen's generosity to pay the balance. Mr. Smith suggested that the club get what revenue it could by renting space in the Walton House for advertisements. He further made a motion that the chairman of the executive committee draw up a statement of the Walton House fund and learn from such members as had offered contributions how much they would contribute. By motion, the president and chairman of the executive committee were appointed to select for the house and place thereon such sign and inscription as would identify it and designate its purpose. The one informally considered was as follows: "Chicago Fly-Casting Club's Fishing House. A fac-simile of the Izaak Walton and Charles Cotton fishing box on the River Dove, England."

It was carried that a photograph of the club house be made for the frontispiece of the constitution and by-laws, rules, programmes, etc. It was carried that the four hundredth birthday of Izaak Walton be honored by the club with a picnic and banquet, at Momenoe, on the Kankakee River, \$1 per plate and \$1.50 for round trip railroad ticket. Members are privileged to invite their gentlemen friends.

Arrangements will be made if possible with dealers in sportsmen's goods to secure exhibits to be placed in the house, with Mr. Wilkinson in charge to practically illustrate as an expert the manner of using rods and tackle.

B. WATERS.

## OREGON NOTES.

PORTLAND, Ore., July 18.—*Editor Forest and Stream:* As anticipated by many, the arrest and prosecution of our cold-storage game dealers by our fish and game protector proved a farce. The precedents suggested by FOREST AND STREAM for consideration by the powers that be, if ever presented or even considered at all, seem to have exercised little or no influence on the deliberations of those whom our people have selected to construe the laws and administer justice. Addison says: "There is no virtue so truly great and god-like as justice;" and it may be possible that justice in these particular cases is so god-like and of such a transcendently superior quality, that not only laymen but some lawyers may be excused for not being able to apprehend the point or appreciate the justice of the adjudication. Strange things are continually happening out here in Oregon; as for example, the exhibition given by our last Legislative Assembly, which so nearly upset the mental equilibrium of Editor Reynolds, compiler of the *Game Laws in Brief*, when he undertook the job of reconciling its "Acts." The days of miracles are past, and Mr. Reynolds cannot reconcile these "Acts" any more than he can reconcile oil and water. The best thing to do with them is to dispose of them in job lots to the highest bidder without guarantee and without recourse.

I would like to ask "Podgers" to state the extent of his observations on the matter of salmon feeding in fresh water. I am satisfied from his published expressions that he believes that they do feed; and probably there is no other man in the United States, who has had better opportunities for observing. I believe that salmon feed while in fresh water, notwithstanding the positive assertions of the most eminent ichthyologists in the country and the dicta of the U. S. Fish Commission, and I have heretofore published some facts that seem to bear me out in the assertion. To-day I received a letter from Mr. W. H. Lewis, of eastern Oregon, something like 500 miles from the ocean, from which I quote regarding this subject: "By the way, I told you I would keep my weather eye open for proof of salmon taking food while in fresh water. In the month of April last, in North Fork of Meacham Creek, above Wilbur Station, Thos. Whittingham shot and killed a 3ft. salmon; and when opened, in its stomach was found a trout about 4in. long. This was in presence of Charles Overly and D. Dickinson. Whittingham is now working on section at Wilbur, and Overly is section foreman at North Powder." Mr. Lewis told me last spring, that he had seen the stomachs of many salmon with food in them and then promised to procure for me the affidavits of men to the same effect. When received I shall ask FOREST AND STREAM to give me a hearing.

This will probably go of record as the coldest year in the history of Oregon. Most certainly will this be the case unless the fireman soon begins to pile in his combustibles and poke up his fires. So far it has been something more than five degrees below the coldest ever before known. As a natural consequence the mountain streams have been full and cold all through the spring and early summer so that now, when fly time proper is upon us, we find the streams full of fine fish. We hear good reports from every direction. The pan-fisherman (bad luck to him), has not been "in it" this year, and for once the fly-fisherman is happy. Next Saturday Mr. J. Robert Mead, Billy Newman (the "Billy") of happy

memories,) Mike, my wife and myself leave for a two weeks' vacation in the Molalla country. I'll bet that we have a good time.

S. H. GREENE.

## FLY-CASTING RULES.

## Chicago Fly-Casting Club.

I.—All competitors shall be members of the club. All competitions shall be managed by the tournament committee, who shall elect a captain to enforce its orders.

II.—All rods used by competitors must be singlehanded rods and not exceed 11ft. in length, and all casting shall be done single-handed only.

III.—Competitors may consult their own inclinations in the choice of casting lines; but such lines must not be knotted or weighted; one knot for fastening line and leader shall be allowed.

IV.—Competitors shall use a single gut leader of not less than 6ft. in length.

V.—The flies used by competitors shall be furnished or approved by the tournament committee. One fly only, of not larger than No. 5 size, shall be used.

VI.—The members of the tournament committee shall appoint a timekeeper at each contest, whose duty it shall be to allot the contestants their respective turns, time the duration of each competitor's casting, and observe that the rods and tackle are at all times during the contest in accordance with the rules and requirements of the club, and that each competitor when casting does not advance beyond the marked boundary.

VII.—Three members of the club shall be appointed as judges by the tournament committee. Their duty it shall be to decide the merits of the cast in accordance with the rules. Any member making remarks to the judges, or detracting their attention in any way while the contests are in progress, or the attention of a member while casting, shall forfeit all rights and be suspended for 30 days. The decision of the judges shall be final.

VIII.—The contests shall consist of three events, namely: 1, fly-casting for distance and accuracy combined; 2, long distance fly-casting; 3, black bass bait-casting for distance and accuracy combined.

IX.—The judges shall suspend from the contests, for the day on which it occurs, any member found guilty, in their opinion, of conduct unbecoming a gentleman.

## Events.

No. 1. Fly-Casting for Distance and Accuracy Combined.—The casting shall be done at three 6in. buoys, 45, 50 and 55ft., 5 casts at each buoy; 15 casts at 55ft., and 5ft. further for every additional ft. The distance of the fly from the buoy at each cast shall be added together and divided by 3; the total shall be deducted from 100, which shall be the percentage. The one having the highest percentage shall be declared the winner.

Each contestant shall be allowed not over 30 seconds in which to extend his line. Time shall be called on the back cast.

Should any emergency arise not covered by these rules or the general rules of event No. 2, the judges shall be allowed to use their discretion in settling the matter.

No. 2. Fly-Casting for Long Distance.—Each contestant shall be allowed 5 minutes in which to cast for distance. He shall stand upon a given marked point and make his cast parallel with a line of buoys placed in the water at measured intervals. The length of the casts shall be measured from the end point of the cast to the spot reached by his fly. The competitor who makes the longest cast shall be adjudged the winner. No other than fair overhead casting shall be permitted. Switch or roll casting shall be barred. Should any competitor whip off his fly he shall replace it with another one. No cast shall count when the fly is missing. In case of a tie, the contestants whose scores are tied shall contest 3 minutes more.

No. 3. Black Bass Bait-Casting for Distance and Accuracy Combined.—The casting shall be done on land, in a straight court 30ft. wide, a tape line running the full length equi-distant between the boundaries.

(1) Only practical fishing tackle allowed, otherwise no restrictions.

(2) All casts shall be made single handed, that is with one hand only.

(3) The weight cast shall weigh 1/2oz.

(4) Each contestant shall make five casts for record, three trial casts being first allowed.

(5) The average of five casts shall constitute the record.

(6) Casts shall be measured as follows: If within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line, one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 126 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed.

(7) The general rules for fly-casting, where they do not conflict with these rules, shall apply.

No. 4. Black Bass Casting for Distance.—Whenever the tournament committee so decide, an event for record only may be added, to be known as long distance black bass bait-casting.

## Potomac Notes.

WASHINGTON, D. C.—Black bass fishing has not been so good between the city and the Great Falls. Further up the river it has been better. A veteran angler says that there is too much bait in the river in the way of live minnows, making the fish independent of the half dead offerings of the hook and line fishermen.

One of our fishing clubs is about to erect an establishment on the Potomac at Harper's Ferry.

Brother Mohler experienced a new kind of milk shake last Sunday. He drank the milk first and had the shake an hour later. The can from which he had a glass of milk was emptied and from the bottom there rolled out an innocent little salamander some three or four inches long, dead, and apparently not quite so fresh as the milk. Then Bro. M. experienced his shake, lost his supper and the glass of milk.

This little salamander (*Spelerpes ruber*) is known as the "spring-keeper" in Virginia, is protected by farmers as of good to their springs, freeing them from insects, etc., and is generally common from Maine to Nebraska, east of the Alleghenies south to the Carolinas.

BART.

## The Fisherman's Delight.

THE novel device consists of an attachment which can be affixed to a fishing pole and which indicates or records every nibble as well as a bite. The line runs over a dial journal in such a manner as to raise or lower the dial, thus pointing out not only the number of nibbles but the variety of fish desiring to leave the water. All the fisherman needs to do is to look at the indicator when he hears the alarm bell, and if the fish is of such variety and size as he desires he simply pulls it out and sets his hook again. If the variety or size does not suit him he simply "presses a button and the fish does the rest." The whole is neatly inclosed in a glass case. On the opposite side is another indicator showing the weight of the captive fish. The device recorded 40lbs. on the trial test as applied in the presence of witnesses and in the Okaw's murky waters. The device may be seen at any time by calling upon the inventor, Robt. Sattley. River rights for sale.—Bethany (Ill.) Echo.

## Fishing at "the Cape."

HERE'S a record of one day's fishing at the Cape. On Thursday last, John Wallace, of New York, captured 58 bass weighing 58lbs.; his son, Allen Wallace, caught 60 weighing 59lbs.; Winfield Brewster came in with 150 bass, 120lbs. in weight; John Fisher was the next man, with 102 in number, weight 93lbs.; Geo. W. Weeks, of New York, was also lucky, taking 98 which weighed 98lbs.; E. Bender also came in with 36 exceedingly fine ones. These are only a few of the good catches that are made daily. Surely we are correct when we say that for good bass fishing come to the Cape.—Cape Vincent (N. Y.) Eagle, July 19.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

FINE VIEW, Clayton, N. Y., July 18.—The largest fish of the season was captured by John Young opposite Fine View about 8 this morning, when a 30-pound muscullonge was landed after a hard battle with the gamy fish. John Young is the captain of the Gad About, a yacht owned by Hon. George N. Kennedy, of Syracuse, ex-Justice of the Supreme Court of the Fifth Judicial District, who is now at his cottage at Thousand Island Park. The engineer of the yacht is C. P. Knight. They started out along this morning to get some minnows, and the captain had his line out while they were opposite Fine View. A big muscullonge came along and gobbled the Gardner M. Skinner bait, mistaking it for a breakfast feast of flies and angleworms, and then there got himself into trouble. The hook caught the old fellow firmly in the jaw, and his presence at the other end of the line was soon felt by the captain, who began to pull in on his line. He came along the first 50ft. peacefully, but afterward he resisted and showed fight, taking a plunge toward the bottom of the river. The captain played with him for a long while and finally got him up near enough to the surface of the water so that they clubbed him over the head with an oar and stunned the big fish. Just as they got him alongside the yacht the hook became unfastened from his jaw and the fish was at liberty to glide away, but before he could collect his wits he received a stunning blow from a club and was then easily hauled into the yacht. The white flag was then hoisted on the yacht, a signal that a muscullonge had been captured, and the Gad About steered away for Thousand Island Park with her big fish and proud captors. The yacht Ella, owned by J. W. Oliphant, of Brooklyn, sighted the white flag on the Gad About and ran alongside of her to see the catch. One of the passengers on the Ella offered Capt. Young \$10 for his prize, but he refused. This muscullonge tipped the scales at 30lbs., is 4ft. 3in. long, and has a girth of 19in.—Troy Times.

SHELDRAKE, N. Y., July 17.—Messrs. Peter Clark and James O'Neil, of H. B. Claffin & Co., N. Y., caught forty very fine pickerel and black bass. Largest weighing 4 1/2 lbs., mostly all run nice size. Ed. MISNER.

LITTLE ROCK, Ark., July 17.—On the afternoon of 15th inst., J. M. Pemberton in Old River, fourteen miles from this city, took three bass at one cast. They weighed 2 1/2, 3, 3 1/2 lbs. How's that?—\$4 lbs. at a cast? Jos. W. IRWIN.

NEW RUSSIA, N. Y., (Westport), Essex County, July 19.—Black bass and trout biting good. W. H. Scheper, of New York, caught on July 17 forty-five brook trout in the A. M. On July 18 twenty-one bass, weight from 1 to 3lbs. each. Fishing promises to continue good.

LAVERTY BROS. (Hunters' Home).

MR. J. L. MUNN, of the Saranac Club, Adirondacks, caught three lake trout July 8 whose aggregate weight was 48lbs. Their respective weights were 12lbs. 11oz., 16lbs. 8oz., and 19lbs. They were caught trolling off Johnson's Island in the upper Saranac. Mr. Munn's guide was Hi Benham.

CORTLAND, N. Y.—E. Robbins and a friend have just returned from a short fishing venture in the Adirondacks, near Mud Pond. Here is what they say concerning the trip: "It's great work at the end of a fly-rod up there now. The first afternoon we fished along a stream that was fairly alive with trout, the sport of pulling out the fine gamy fellows soon got monotonous, and we went to shooting at a mark. Fishing along that stream was just like digging potatoes. There wasn't enough chance for horse play and sizing up the scenery. We could have caught wagon loads of trout had we cared to."

M. C. H.

CAPE VINCENT, N. Y., July 21.—The bass fishing is as good as ever, as you will see by the following:

C. T. SACKETT.

BERTHOUD, Col., July 17.—Just returned from a trout fishing trip up Big Thompson Cañon. Fishing only fair. Fishermen too plenty. In a day and a half I caught fifty-three, largest 4lb. In years past I have taken three to four hundred in two to three days at same place, all nice ones. Best fishing to be had now near here is on the Little Sault Paudrie, some forty miles in the mountains.

A. A. KNOTT.

LAKE MEMPHREMAGOG.—A friend writes me of the fishing at Owl's Head, Lake Memphremagog: "The fishing for lake and brook trout is very good. Recently two lake trout were caught weighing, respectively, 17 and 18 1/2 lbs., by still-fishing, the grounds being previously baited. In trolling yellow perch quite frequently take the spoon and are of quite good size. The trout are in deep water and it requires some little patience to catch them."

S. T.

## On Chippewa Point.

MESSRS. C. HERBERT, Anthony and Charles Beebe, of Gouverneur, N. Y., spent a week in camp last March upon the banks of the St. Lawrence River, in quest of ducks, which fly in great numbers at that season of the year, when the ice is breaking up. With Ed. Senner and Eb. Forrester as guides, they walked across the ice on Chippewa Bay, hauling their "duffle" on sleds, two miles to the "Point" on which the camp was pitched amid a grove of trees, which protected them from the cold winds which sweep along these shores. The bow-house was located on Broad-Bill Island about fifty rods from camp, and was a most natural one of rocks, needing only a few branches of pine to make it a perfect blind. Chippewa Point commands an uninterrupted view up and down the river.

Ducks can be seen coming in a long distance, following the open water, and few were the flocks that sailed by unnoticed, the decoys. Many who escaped the contents of the shotguns were brought down by the Winchester of Ed. Denver, who, by the way, is known as the best wing shot on the river, and Forrester is not far behind in his line. The party secured a good variety of the birds, among them being redheads, whistlers, broadbills and a few sheldrakes. Wild geese were seen flying high and a pair of bald eagles flew majestically down the river. The accompanying illustration of the camp was taken by Mr. Anthony, an amateur photographer of considerable merit.

CHIPPewa.

#### A New Indiana Association.

RIVERSIDE, Ind., July 17.—The following clipping from a local paper will give the news this week. Lots of jack salmon (we so call them) are being caught. I will send you photographs soon of several fish taken: "State Fish Commissioner P. H. Hirsch, of Columbia City, was in Attica Saturday, he having been called here to look after some violations of the fish law, which have been practiced on Pine Creek in the vicinity of Rainsville and on the Wabash near Portland for the past two months. Evidence has already been secured sufficient to bring about several indictments at the next meeting of the grand jury. At the suggestion of the Commissioner a fish and game association has been organized in this city within the last few days. The purpose of this organization shall be to prosecute any persons violating the fish laws of the State. Any person who assists the organization by furnishing evidence which leads to conviction will receive a reward of \$10 from the association. It shall also be the purpose of the association to stock the streams with fish, and have been assured the assistance of the State Fish Commissioner in all matters necessary to bring about the enforcement of the laws. Arrests have recently been made at Crawfordsville by a similar association, and wherever they have been organized they have proven a valuable protection to the fish in the streams."

J. E. FISHER.

#### The Missouri Dynamite Law Fails.

ST. LOUIS, Mo., July 20.—*Editor Forest and Stream:* The Missouri dynamite law proved so obnoxious that no attention was paid to it except to bring a test case before one of the circuit courts to have the law decided unconstitutional, and it was very promptly decided so, on the ground that its title did not properly describe its object; it being entitled an act for the protection of fish, when it was in fact an act to regulate the sale of dynamite. It has met the fate predicted by your correspondent. Legislation of so severe a character as this law can not be enforced.

From the tone of H. Clay Ewing's letter it seems he thinks me opposed to legislation protecting the fish, but it is not the case. No one is fonder of landing bass with rod and line, nor more opposed to their wanton destruction than I am, and the law was attacked solely because its uselessness was foreseen.

It may be surmised that a business interest was the cause of the attack on the law, but every one familiar with the subject knows that the quantity of dynamite used for killing fish is too small to be worth a moment's consideration, and three-fourths of what is used for that purpose is stolen from legitimate users of it.

O. H. HAMPTON.

#### Waban Notes.

WELLESLEY, Mass., July 20.—The fishing up our way has been remarkably poor for the first part of the season, but is now improving very much. I went up to the lake last evening and caught a fine string of very large yellow perch. The big ones are away out in deep water.

Last summer I put a number of white perch in our lake, but this fish must have been in there before, as several large white perch were taken from the lake early this season, and all I put in were small ones. I want to see them plentiful there, for they are, to my thinking, one of the best fishes we have, both for sport and for the table.

We had a good laugh at a friend's expense the other day. He was sitting in a boat watching his little girl fish with his new split-bamboo rod, when a large bass took hold and pulled the rod from the child's hands and put off with it to the bottom. The rod and reel being heavy did not rise, and *pater familias* spent a half day dredging before he recovered the tackle. The bass had made his escape.

After seeing the Fair we will meet in Arkansas, in which State we mean to camp out and rough it until we are tired of collecting and fishing.

S. F. D.

### Fishculture.

#### Pennsylvania Fish Commission.

GOVERNOR PATTISON has appointed the following State Commissioners of Fish and Fisheries: Henry C. Ford, of Philadelphia; H. C. Demuth, of Lancaster; John Gay, of Greensburg; Fred W. Ebel, of Harrisburg; S. B. Stillwell, of Scranton, and Louis Streuber, of Erie.

Two changes are noted, Messrs. Welschons, of Pittsburg, and Powell, of Harrisburg, retiring from the Commission, and Messrs. Gay and Ebel taking their places.

The retiring officers were both active members of the board, Mr. Welschons being corresponding secretary and Mr. Powell treasurer, besides being especially energetic in a justifiable crusade against the pollution of the Susquehanna and her tributaries by coal culm and other refuse.

## A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in a Brief," but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.  
Sept. 5 to 8.—Kingston (Ont.) K. C., at Kingston. H. C. Bates, Sec'y.  
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park. D. C. Collins, Sec'y.  
Sept. 19 to 22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.  
Oct. 8 to 9.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec'y.  
Nov. 21 to 24.—New Jersey K. C., at Newark. Dr. W. F. Seidler, Sec'y.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. E. D. Adams, Sec'y, Winnipeg.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 15.—American Field Trial Club Trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

#### Appointment of Substitute Judges.

IN THE CASE OF AN ADVERTISED JUDGE NOT FULFILLING HIS ENGAGEMENT, SHALL THE COMMITTEE OR THE EXHIBITORS CHOOSE THE SUBSTITUTE?

#### Editor Forest and Stream:

The A. K. C. has no member or friend who wishes it continued success more than myself, or one who better sees the good it has done and the power it is in the kennel world to-day.

There has been grumbling by meddlesome parties of no weight; their writings filled so much space in the sporting papers, nothing more. They generally originated from those who wanted to run the club their own way, or their dislike to some of its officers. The dire calamities which they predicted would happen to it only made themselves more open to ridicule.

All dogmen and friends of the A. K. C. will read Dr. Perry's letter and say there is something in what he says. It is the first time a letter has been given to the kennel press criticising the A. K. C. honestly and freely. I am sure the Kennel Club will accept the Doctor's wish "to mend" in the same spirit as it was given. The Doctor rightly considers the importance of the various country agricultural societies. I am sure they could easily be induced to hold regular yearly bench shows if it could be done without too much red tape. I as well as others must perfectly agree with him when he says:

Whereas, It appears that the field of dog shows is capable of enlargement through the medium of agricultural fairs, and possibly other exhibitions of like character.

Whereas, Were more shows held by the associations formed for the purposes aforesaid, the interest of dogs and their owners would be greatly promoted, the attendance at them being usually very large.

But I cannot quite agree with his third, though I may not see it as he does:

Whereas, The interests of the breeders and exhibitors of this country, either individually or collectively, cannot be advanced by the existing rule that every association must be a member of this club before it can hold a show under its rules.

My belief is, anything that is worth having is worth asking for. I think the rule requiring them to organize as a kennel club might be modified in some way. I have had considerable experience at some of the county and State fairs. If you establish a rule that they can hold a dog show under the Kennel Club rules, then pay or make application afterward, it would be a mistake in my estimation. After a show is over it would be difficult to get anything done for the protection of the exhibitors; it is but just that they become members of the Kennel Club and abide by its rules. Exhibitors will not patronize them unless they are governed by the Kennel Club rules and these wins count.

Make the form of admission as easy as possible, encourage them by every means in your power. I live in the neighborhood of four large county fairs. At two the daily attendance averaged 30,000 people. There is always a small show of dogs of recognized and unrecognized breeds. The managers are waking up to the fact that if they could give a first class show it would add greatly to the attractions.

At my suggestion two of the largest societies proposed to give a first class Kennel Club show this fall. One of them applied to the Kennel Club for admission and dates for their show, but the application for membership, not being made out as required, it was returned for correction. But it requiring possibly another meeting of the society to arrange the details it was never returned to the Kennel Club. Besides, as there were previous applications for the same dates claimed in Canada as for both these societies, the agricultural societies concluded to postpone their intended shows until another fall, then I confidently expect to see two or three first-class Kennel Club shows in this section. Had there been no question about securing the dates there would have been at least two first-class shows this fall. Country fairs should be allowed to hold a show under Kennel Club rules on their regular dates. First require them to join, then allow them to hold the show whenever they choose, and do not require them to make application six months before the proposed show.

All exhibitors will agree with me, I think, that the rule allowing the committee to select whoever they choose for judge, in case the one advertised could not serve, is unjust to the exhibitors. They make their entries with the promise of having a certain judge officiate, and it is but just that if another is to be appointed they have a word to say. Article XIII. should be changed as proposed by Dr. Perry.

In regard to the present laws regarding importing dogs, if I am not much mistaken it was enacted after several consultations and by the recommendation of some of the leading dog breeders, I cannot remember just who at present. Is it not better as it stands than patched up so that mongrels could slip through?

When the good Doctor attacks the express companies he chooses a fit subject with which to wrestle. There is a universal feeling among all dogmen that they are unjustly treated by the express companies. I am sure the feeling would not be so general was not justice with us. If you see the officers I am sure you will find them jolly good fellows and the committee will have a pleasant remembrance of their visit. By all means let the Kennel Club foot the bill for stamps, etc. The express companies will tell them they are carrying dogs at a loss, which is true as far as the dogs go. No reduction will be made. If the express companies would only meet us half way and agree to discharge and never employ a messenger in whose care a dog was injured through his carelessness, it would create a better feeling as far as

the dogmen are concerned. If a complaint is made no attention is paid to it. If we pay double rates we have a right to expect our dogs to at least receive humane treatment. For my part I do not so much object to the double rate if it would insure proper care and attention. But it is not just, after we have paid for extra care and dispatch, that we should have our dogs set to one side, or smothered, by some careless official.

Only last week I shipped a valuable mastiff bitch to Canada. The trip should have occupied less than one day, but instead it occupied two. She was somewhere, no one knows where, and when she arrived she was taken from the box seemingly breathing her last, in other words nearly smothered. Only by the best of care and attention did she recover. Of course it will do a permanent injury to the bitch. Had she been received by almost any other party she would not have been brought round. As it stands now, the express company received double rates for the care they gave her, and the owner has besides a long bill to pay the veterinary. The messenger or whoever was responsible still enjoys his situation with the same chances to do the same thing again. There have been cases where a dog was smothered through the fault of the shipper, but this one was in splendid condition, nine-months old and shipped in a light new box made especially for hot weather, with one side open as far as possible. By all means appoint a standing committee for this work, consisting of the most persuasive sort of fellows in the club. Instruct them to keep up the "wrestling" and to report progress.

J. L. WINCHELL.

FAIR HAVEN, VT.

#### Editor Forest and Stream:

In regard to the substitution for Article XIII of Bench Show Rules of A. K. C. proposed by Dr. Perry, I beg leave to submit FOREST AND STREAM the following considerations: Above all, allow me to assure Dr. Perry of my hearty indorsement of his proposal, it being equitable to both contracting parties; exhibitors and bench show officials, protecting as it does either party against having an objectionable judge foisted on them. With Dr. Perry I can say that I believed such or similar proposed change had been accepted at the last A. K. C. meeting, until I saw the printed report to the contrary; but, on the whole, I cannot see how any fairer way could be suggested to avoid future trouble on this point.

I am fully in accord with the best part of Dr. Perry's able suggestion, especially as regards the representation of Associate Members. I may except, perhaps, his ideas about election, or rather, the making up of a slate for election, of officers, it being simply impracticable, to my mind, as he will find no fitting man for such offices willing to serve in such lucrative (?) positions, where all is diligent and sometimes most unpleasant work, but very little honor, unless that being "nagged" at is honor. I repeat, he will find no man to lend his name for nomination under the proposed conditions, at the same time be quite reconciled to being defeated, because only one can be elected.

I may be wrong, but I should decidedly object to being nominated were I put in such a position. I give it, of course, only as an illustration, having resigned from all clubs I belonged to; and I am convinced that you will find most fanciers, who are in it for fancy's sake only, to hold the same view.

There is one point on which I should like to hear the opinion of such an able framer as Dr. Perry and also of others, viz.: How to stop the discreditable jockeying by stuffing or starving dogs up or down to proper weight in heavy or light-weight classes? my own proposal—"To compel a dog 18 months and older to remain thereafter in its then declared class"—having been rejected at the last A. K. C. meeting.

This is a very important point, and is conducive to much funny business at every show just before judging, when handlers and owners can see what they have to compete against.

Everybody of course will indorse Dr. Perry's suggestions concerning "importation" and "express charges," and if future committees should be more successful than former ones it will be a thing much wished for; but I am afraid it is a matter of great doubt at present.

I do hope that Dr. Perry's logical and able proposals will bring forth, as he desires, a fair and unbiased discussion without underlying personal motives, because the rules fairest to all will also be fairest for each individual honest exhibitor and fancier.

G. MUSS-ARNOLT.

TUCKAHOE, N. Y., July 22.

#### Editor Forest and Stream:

In regard to Dr. Perry's resolutions, I should like to say that the A.K.C. will be sure to do the wrong thing; whenever they have the choice of two roads they always take the wrong one. They have always been notorious for doing foolish things, and it would not do for them to pass any laws that would benefit breeders and exhibitors. I see the A.K.C. has some thousands of dollars in the bank, but since it was organized it never gave one cent to improve the dogs of America. The A.K.C. should help the doggy interests and not blow in our money for law suits. I used to pay \$5, but found it was like pouring water into a rat hole, the rats got a drink and it did not hurt the hole.

If a club advertises a judge, many will make their entries because they have confidence in the judge, and they expect he will be there. We pick our judges and only show under certain men, because we have tried them all and found many wanting. It is public talk that a judge got the stomach ache just to give another man a chance to work off a grudge against exhibitors he did not like. Exhibitors should of course vote on who present would be acceptable. Then if any exhibitor did not like the one appointed, the show should be made to return his entry fees.

J. OTIS FELLOWS.

HORNELLVILLE, N. Y., July 22.

#### Editor Forest and Stream:

Respecting the appointment of a dog show judge to fill the place of a judge who is absent from the show where he has been advertised to act, in my opinion, the rule should be left as it now stands, as very many of the large exhibitors do not attend the shows, but send their kennel men. Even if all the exhibitors did attend, and the choosing of the judge were left to them, it would only give an additional opportunity for rankling and ill-feeling, of which there is altogether too much now.

The dog show committee appoint the judges in the first place and have the show in charge. They make the different classes and pay the prizes, and if the judge fails them it is their province to fill his place.

H. W. SMITH.

WORCESTER, MASS., July 20.

At the meeting to be held by the Kenmore Coursing Club, at Goodland, Kan., which we drew attention to recently, there will be the Goodland Stakes, for 16 or more all-age greyhounds, entrance fee \$20 for members, \$25 for non-members; \$100 of the citizens' cash and 50% of entrance money to the winner; \$50 cash and 50% of the remainder of entrance fee to the runner up; balance of entrance money to be equally divided between dogs equal at the finish. Then there is the Kenmore Derby, for puppies under 18 mos. Entrance \$10 for members and \$12.50 for non-members; winner gets \$50 cash and 50% of entrance money, 50% of balance of entrance money to runner up, and balance of entrance to those equal at the finish. Entries close night of Oct. 16. Dr. Van Hummell last fall told us that the country round Goodland was excellent for the purpose, and expected that a good meeting could be brought off there.

## POINTS AND FLUSHES.

(By a Staff Correspondent.)

## The Northwestern Field Trials.

CHICAGO, July 22.—In a letter to me dated July 15 Mr. Thos. Johnson, Winnipeg, writes as follows: "Mr. Brailford cables me to enter in our All-Age and Championship Cup, Mnsa, winner of the All-Age Pointer Stake at the late Pointer Club trials. I expect that Hallam has started with Mr. Lonsdale's dogs for Manitoba ere this." Everything auspiciously points toward a successful trial for the Northwestern Field Trial Club.

## The Northwestern Beagle Club of America.

In a letter from Mr. Louis Steffen, secretary-treasurer of the club, he writes, under date of July 17, that the prospects for a successful trial are excellent. The date selected, November 1, is at a time of year when the rabbit crop and grounds are at their best. Mr. Steffen, in behalf of the club, invites all beagle fanciers to become members. The initiation fee is but \$5 and the annual dues \$3. The secretary's address is No. 781 Thirty-eighth st., Milwaukee, Wis.

## McLin.

The young man who so recently distinguished himself by coarse brutality to dogs in his charge, which he had under pretense of training them, is in a fair way to meet the legal punishment he so earnestly merits. It is most gratifying that the people of Bicknell did not let the matter rest after a farcical justice trial in which McLin was acquitted. I do not know the attainments of the justice in question, but I feel certain that he is possessed of an intellect of incandescent brightness and a sense of justice and humanity such as apertains to the demagogue.

The following excerpts from a letter dated July 16, written to me by Mr. J. T. Mayfield, explain themselves:

"I have made another attempt to secure punishment for the wretch, and he is now in the county jail. His bond is \$500, and I think he will be unable to secure a bondsman. The warrant for his arrest was based on the charge of perjury. The trial is set for July 31, before the Mayor of Vincennes. He will be bound over for trial. We (Joe F. Balmer and I) thought best to hire an assistant prosecutor. We engaged a good one.

"It will cost us not less than \$200 to carry this case through court, and may be more. What we want, if it is possible to obtain, is a small contribution from each sportsman who feels disposed to assist. We also urgently request the owners of the dogs to be at the trial July 31. We want them to testify to the number of dogs they had in McLin's charge, and hope that they will be present.

"I promised the constable a fee if he would catch McLin. He ran McLin fifteen miles across the river and brought him back from where he was hidden in White River bottom. It is a State case, and there are no fees for the officers."

Mr. J. M. Freeman, of Bicknell, who is also active in the case, under date of July 18 writes as follows: "McLin is now in jail where he will remain until the 31st inst., when he will have his trial before Mayor Miller, of Vincennes. The charge on which he is now held is perjury and cruelty to animals. We have secured the best criminal lawyer in southern Indiana to help the prosecutor. It will cost some money to give the case proper attention, but I feel that the dog owners will be willing to help us out. We have agreed to pay the attorney \$50 for the preliminary trial and \$50 more if it goes to the circuit court, and there will be other expenses which will have to be met. Mr. Mayfield has just received a letter from Mr. F. H. Perry, in which he says he will attend the trial."

That the people are aroused to earnest action, the following letter from Mr. P. T. Madison, secretary of the U. S. F. T. C., still further attests. He says:

"In his trial at Bicknell, Geo. McLin was acquitted of cruelty to animals, the charge on which he was tried. He swore that he only had four dogs in his hands this year. It is positively known that eleven dogs were sent to him, and only one has been taken away. McLin is now in jail, having been re-arrested last Saturday. The charges are cruelty to animals, perjury and arson. There is no question about the perjury, the penalty of which, in this State, is three to fourteen years.

"McLin hired Lawyer Pritchett, of Vincennes, to defend him in his Bicknell trial, promising to pay \$20 for his services. When McLin was acquitted he walked out and failed to pay his lawyer.

"Pritchett is now employed to prosecute this case, and the dogmen must pay it. Contributions are in order and should be sent to J. M. Freeman, Bicknell, Ind.

"Mr. D. C. Bergundthall gave \$10, I gave \$5, J. M. Freeman \$5, John T. Mayfield \$5, John Gude \$5, Dr. J. McDowell \$5, J. A. Balmer \$5.

"On my visit to the ruins of McLin's kennel I saw the charred remains of eight dogs. It is sickening to think of."

The sportsmen of this country should not ignore the opportunity to contribute to the prosecution fund of such a cause. Any sum, however small, will be a help, and, if the sportsmen respond numerously, small sums will make a sufficient total. Those who are interested in dog training, and more particularly trainers and handlers, should particularly avail themselves of the opportunity to contribute to the prosecution fund.

In view of recent developments I owe the people of Bicknell an apology for my remarks last week, and for the same I tender an apology to them. When in the justice trial McLin was acquitted, there was nothing in the reports to indicate that further action against him would be taken. It seemed to me that such apathy and inaction as the reports implied, by a town which had received so many material benefits, and was to receive more next fall by the presence of the U. S. F. T. Club, was in itself an offense. I am heartily glad that such is not the case. Had the matter rested with the decision of the learned local cadi, there would have been cause for complaint against the townspeople of Bicknell. As it is, there is none, and I beg leave to withdraw my strictures of last week on them.

Mr. C. C. M. Hunt, of Palmyra, N. Y., has been in Chicago some days recently doing the World's Fair. He sat in the Vienna village, Midway Plaisance, one afternoon eating Frankfurter sausage with a friend. The sausage was supposed to be imported, hence cool and refreshing. After eating a few mouthfuls Mr. Hunt gravely said: "This tastes too much like native. I do not believe it is registered in the A. K. C." B. WATERS.

900 SECURITY BUILDING, Chicago.

## Flaps from the Beaver's Tail.

TORONTO, Canada.—Mr. T. McKay Robertson writes me that his recent cocker importation, Green Craft Nellie, is in help to Red Obo. Something good should result from this union, Nellie's breeding being of the best. Her winnings include seconds at Pembroke, Carmarthen and Aberdeen, firsts at Pontardulis, Naubeth, Cardigan, where she also won the special against 67 competitors.

Mr. Hugh Falconer has added another of Mr. Winchell's mastiffs to his kennel, in H. R. H., a young bitch, by Beaufort's Black Prince out of Winchell's Bess.

A correspondent writes me asking if wins at Canadian shows this year will count in the A. K. C. records, to which I may say distinctly that they will not, the A. K. C. having

decided that in future that club will not recognize wins at shows under C. K. C. rules. This of course does not refer to any winnings in the past, but dates from the date of dissolution of the then existing agreement. On the other hand, winnings under A. K. C. rules will not count as records at Canadian shows.

Dr. Wesley Mills has received letters from several of the most prominent dogmen in Canada congratulating him on his nomination to judge pointers at the World's Fair and urging him to accept.

Some weeks ago I noticed the purchase of a new St. Bernard dog, Refuge V., by the Bowmanville St. Bernard Kennels. It appears the dog, an orange and white, with dark shadings, was put on board an Allan liner in charge of the steward, a deck cabin passage having been taken for the dog's accommodation. On the arrival of the steamer at Montreal the dog was so sick that he had to be sent on a stretcher to the Veterinary College. When he left England he was a typical orange and white, but the sea voyage so metamorphosed him that he arrived a mongrel with no white at all. Here is where the extraordinary part of the tale comes in. It seems evident that a worthless dog was exchanged for the original dog, when or by whom is unknown, and the former probably given a soothing dose a short time previous to the arrival of the boat in Montreal, as he died but a few hours after his removal. I understand the case is now in the hands of the proper authorities for investigation. H. B. DONOVAN.

## Coursing at the Golden Gate.

A MORE than ordinarily interesting coursing event took place July 2 and 4, at the Ocean View Park, San Francisco, Cal. The occasion was the meet of the Golden West Coursing Club, and many well-known Californian greyhounds and lovers of the leash took part in the sport. The interest taken by the public out there in coursing is shown in the fact that about 4,000 people were present on Sunday, the first day. The well-known and able judge, Mr. John Grace, held the flags, and his no less able coadjutor, Mr. James Wren, handled the slips and as usual gave satisfaction.

The first to the slips was the crack Valley Queen and Cleverness, the former owned by J. J. Edmond, and the latter by J. M. Kelsy. The ground was in good order and the hare a strong one, and after a capital course the red flag went up, showing Valley Queen the winner. The next brace were P. Tiernan's Glen Farron, a past master in the game, and W. Dalton's Blue Boy. Glen Farron proved himself easily the best stalling off some great spurts on Blue Boy's part. T. J. Cronin's White Rustic proved altogether too fast for Mr. Lenahan's Menlo Lass in the next course, though the latter ran a splendid course. J. O'Shea's Salvator had no chance with T. J. Cronin's crack Depend On Me, who practically did all the work. After a short course between D. D. Roche's Dolly Varden and H. J. Gerdes' Judge Morrow, Dolly gained the verdict, and P. Tiernan's Long John and T. J. McHugh's Maggie M. had a long course before the flag went up for Long John. The rest of the first round resulted as follows:

W. Ford's Pennyroyal beat Al Stead's Nattie.  
D. D. Roche's Dan C. beat J. J. Edmond's Vida Shaw.  
T. J. Cronin's Dottie Dimple beat J. Perigo's Wee Lassie.  
P. J. Canavan's Examiner beat D. D. Roche's John Mitchell.  
T. J. McHugh's Sculptor beat J. O. Shea's Nellie Get There.  
E. P. Kennel's Eureka beat J. Perigo's Longfellow.  
T. D. Nolan's Dark Rustic beat James McCormack's Dashing Wave.  
James McCormack's Little Rose beat T. J. Cronin's Jack Dempsey.  
D. D. Rooche's Mountain Hare beat George Dougherty's Peter Jackson.  
T. J. Cronin's Fairy beat A. Stead's Stonewall Jackson.  
E. P. Kennel's John W. beat W. E. Wadham's Twilight.  
J. M. Kilsby's Billy the Masher beat P. D. Nolan's Sting.  
J. M. Kilsby's Plumas beat E. P. Kennel's Extra Pale.  
The day was nearly spent when the first round was completed and it was found impossible to run off more than a few of the ties, which resulted as follows:  
Valley Queen beat Glen Farron.  
White Rustic beat Depend On Me.  
Long John beat Dolly Varden.  
Pennyroyal beat Dan S.  
The rest of the ties were postponed till July 4, on which day a Consolation Stake was also arranged for.

On Tuesday, Independence Day, the crowd was equally large and there was considerable betting. Eventually in the

## Third Round.

Valley Queen beat White Rustic.  
Long John beat Pennyroyal.  
Wee Lassie beat Sir John.  
Fairy a bye (with Valley Queen, and outpointing her).

## Fourth Round.

Long John beat Fairy.  
Wee Lassie a bye.

## Final.

Long John beat Wee Lassie.  
The stake amounts were \$100 and cup to first, \$75 to second, fourth and fifth \$20 each, and the next five \$5 each. In the Consolation Stake Longfellow, after beating Glen Farron, ran through the stake and gained the verdict over Dottie Dimple in the final after a very exciting course, on which a great amount of money changed hands on the result.

## The Toronto Show.

THE premium lists for the Industrial Exhibition Association's fifth annual international bench show of dogs, to be held at the city of Toronto, Sept. 11 to 15 next, are now ready for distribution and can be had by applying to the secretary, C. A. Stone, 82 King street, East, Toronto. The list contains 192 classes, over \$3,000 are offered in cash, besides specials. Sweepstakes are provided for greyhounds, pointers, English, Irish and Gordon setters, collies, bull and fox-terriers, field and cocker spaniels and beagles, and are for American-bred dogs, any age, which have not won public money. Challenge classes are provided for mastiffs, rough and smooth-coated St. Bernards, great Danes, deerhounds, greyhounds, foxhounds, pointers, all the setter classes, collies, bulldogs, bull-terriers, Irish, Dandie Dinmont, Scotch, Skye, black and tan, smooth, wire-haired, fox and Yorkshire terriers, poodles, Clumber, field and cocker spaniels, dachshunds, beagles (two classes) pugs and King Charles spaniels. Thirty-three kennel prizes are offered, ranging from \$20 to \$10. A selling class is also provided for and a rule which reads that in any class made for dogs and bitches, should there be any more than six entries the classes will be divided and extra money given: C. A. STONE, Sec'y.

## No Field Trials for New England.

Editor Forest and Stream:

At a meeting of the New England Field Trial Club, held in Boston, it was voted not to run the field trials as advertised next fall. This action was taken because of the poor condition of the game and grounds of the club.

TAUNTON, Mass., July 17.

WM. M. LOVERING, Sec'y.

## DOG CHAT.

## Are Foxhounds Courageous When Alone?

The opinion is advanced by the London *Spectator* that the courage of the foxhound in isolation is not shown to the same extent as when in company, and that no hound will attack a fox with the determination of a terrier. Yet the passive courage of the foxhound is immense. To see, speaking of English hunting, lagging hounds come up through a field of horsemen, to watch the pace with which they charge the thickest hedges and the endurance they show during a long run, will convince most of this. An instance is related, as showing that combination supplies courage, of a pack of English foxhounds that were taken to France for wolf hunting. When a wolf was put up each hound as he caught the scent dropped his tail between his legs and refused to follow. When, however, some French hounds, used to the game, had been added to the pack, the foxhound hunted eagerly. But now they ran with their bristles up—to kill, not to eat. The fox they regard as a dinner; not so the wolf. The same may be said of many dogs who have not been regularly entered to the game they are expected to bring down. Old champion Mac, the deerhound, made a sorry exhibition when he saw his first wolf, but soon afterward became one of their fiercest foes.

The English foxhound is the highest development of speed, strength and endurance. Ten miles to the meet, an ordinary experience, five hours' hunting at an average of ten miles an hour, during which two foxes are run down, and ten miles before supper, is but an ordinary day's work. It is not an exaggeration to say that many a hound could cover 100 miles in a day without being greatly distressed. But for this he would need companionship. Alone he would tire sooner than a slim-legged pointer or setter, whose steady gallop over grass or heather is another marvel of animal endurance. In this relation it would be interesting to prove what the English hound, with his long training of association, would do if he had to go it alone, as so many of the foxhounds of this country habitually hunt. Marvelous tales have been told of the endurance, courage and tenacity of purpose of the American hound when hunting alone, and if one could depend upon their authenticity they would go some way to prove the greater ability of the two breeds in this direction. Of course it is impossible to compare the carefully bred, well nurtured, "packing" hound of the old country with the hounds which pick up a living in our mountainous fox-hunting districts. It could, however, we believe, be easily shown that the American foxhound does not require company to show his best traits. Some of our old fox-hunting readers could probably throw further light on this interesting subject.

## As Another Man Sees It.

Not every one is imbued with a love for dogs, and it is sometimes good to turn from the fulsome praise that dog lovers in general pour over their favorites in generous doses, and hear the opinions of other, no less intelligent, people who don't see things just as we do. A writer in the *Dallas* (Tex.) *News* says that the dog if sufficiently civilized "would no doubt prove a transcendent blessing, but he is not prepared to say that even in his unpolished state he is an unmitigated evil. In a great majority of instances—and this is a country in which the majority rules—the dog could be dispensed with and the world still move—with less noise, hydrophobia and tamales, no doubt, but move nevertheless. "Wherever a man is or has been and blown six fingers off with giant powder, there has been the dog also to hearken unto the seeming danger of the situation and flee unto a haven of safety and there fulfil his mission as man's protector and bark until the welkin rang. History would be incomplete with the dog not in it—as incomplete as the household of the poor man deeply involved in debt. But the dog is in history, and that sharply, and to expunge him therefrom would be no less difficult than to remove him from the living present with the limited number of hoe handles at our command. There are many kinds of dogs, from the majestic St. Bernard down to the plebeian brindle pup, all varying in minor detail, but possessing certain indestructible and corresponding attributes that tend to constitute them one homogeneous family, among which are the acute sense of smell, the capacity for sustaining effort in nocturnal barking match and the propensity for smelling unlike crab-apple blossoms when he gets wet. Men no doubt owe much to the dog for his faithfulness and fidelity, but the fact should not cause us to lose sleep, for he will ultimately collect the debt if his appetite holds out and the doors are not securely shut. But for the dog the flea would have been lost in the shuffle and the bird hater would have been an unknown quantity. He has preserved the one through the vicissitudes of the past, and promises to lead the other to loftier heights in the future."

## A Martial Dog.

One of the most interesting bits in the representation of the defense of Rorke's Drift at Tattersalls, Chicago, is the fox-terrier Paddy, belonging to Lieut. Rawson Turner. Paddy marches in with the column and does not fail to pay a visit to the commissariat tent as soon as it is pitched. When the bugle sounds the alarm, however, Paddy is on the alert, and after one dismal howl at the bugler for disturbing him, he joins the company and trots about inspecting everything as if he knew all about it. When the Zulus advance and the firing begins Paddy is in his element. He rushes out at the dusky warriors, barks at them and snaps viciously at their heels, keeping this up until the "cease firing" is sounded, and the Zulus retire in dismay. Paddy is quite to the manor born. When the soldiers under Gen. Stewart were marching across the desert in the land of the Nile to rescue Gen. Gordon, Paddy was born, Jan. 15, 1885. His mother was carried in a bucket, and though his eyes were closed his ears soon became accustomed to the noise of conflict. The fight at Abu Klea, in which poor Capt. Burnaby was killed, took place the day after Paddy's birth. His next appearance in action was at the battle of Gamazeh at Suakim. His third engagement was at Torki, on the Nile, and he once more came out of the fray unscathed. When he left the regiment he was presented with a medal and three clasps for the three actions, and the Khedive's star. He is a regular attendant at parade, and in his own way inspects the men. He shares the antipathy which most soldiers feel for the bugle at reveille, and whenever it sounds he answers with a dismal howl.

## Toronto Dog Show.

Although some time since FOREST AND STREAM published some particulars of the premium list of the above show, the receipt of the regular premium list reminds us that it would be well to draw attention again to the good things provided. While the amount of prizes in some breeds has been curtailed, other classes have been added so that the list is about on a par in value with that of last year. Mastiffs and St. Bernards get \$15 and diploma in challenge classes and \$15, \$10, \$5 and \$3 in the open division, puppies \$7 and \$3, and novice class \$10, \$5 and diploma in mastiffs; St. Bernards \$7, \$3 and diploma. Great Danes get a challenge prize of \$15, open classes \$10, \$5, \$3 and diploma, puppies \$7, \$3 and diploma. Those breeds having challenge prizes of \$10 and diplomas are "Scotch staghounds" and greyhounds, bulldogs, bull-terriers, black and tan terriers, beagles, fox-terriers, wire and smooth. Open classes in these breeds get \$10,

\$5 and diploma, except fox-terriers, which have a third prize of \$3. Pointers, all setters and collies get \$10 and diploma in challenge and \$15, \$7, \$3 and diploma in open classes. Spaniels, always a great feature of this show, are provided with classification No. 1 of the A. S. C. Field spaniels have in challenge \$10 and diploma, open classes \$10, \$5, \$3 and diploma. Cocker get the same in challenge but \$10, \$7, \$3 and diploma in the open classes. Most of the remaining breeds get \$5 challenge prizes and \$7, \$3 and diploma in the open. Kennel prizes are given by the association for best kennels, ranging from \$20 to \$10, and by a number of specialty clubs, notably the Greyhound, Pointer, Spaniel and Fox-terrier clubs. The association also offers other inducements such as \$30 to the agent or person having the largest number of entries in his charge, and \$20 to the one having second largest team. The largest Canadian entry in charge of one exhibitor or agent gets \$10, and the association offers its medal, value \$20, to the owner or kennel showing the largest number of dogs at the show. The rates and privileges on the railroads we have already drawn attention to. American exhibitors sending dogs by express must fill out a certificate that clears the customs, the dogs going in on bond of the Association. All dogs from this side must now be listed in the C. K. C., and this costs 50cts. a dog. The regular entry fee is \$2, and entries must be sent in by Aug. 31, to Mr. C. A. Stone, 82 King st., Toronto. The judges are: C. H. Mason, Philadelphia, Pa.; Mastiffs, St. Bernards, great Danes, Newfoundland, greyhounds, bulldogs, bull-terriers, fox-terriers, collies, poodles, Scotch terriers, black and tan terriers, pugs, King Charles, Blenheims, Prince Charles, ruby and Japanese spaniels, and the miscellaneous and selling classes. John Davidson, Monroe, Mich.; Pointers, English, Irish and Gordon setters, bloodhounds, Irish terriers, Dandie Dinmont terriers, Bedlington terriers, Airedale terriers, Skye terriers, Yorkshire terriers, toy terriers and Italian greyhounds. A. Clinton Wilmerding, New York city: Irish water spaniels, Clumber spaniels, field and cocker spaniels, retrievers. A. C. Krueger, Wrightsville, Pa.; Beagles, English and American foxhounds, harriers, Scotch staghounds, wolfhounds and dachshunds.

Pacific Coursing Club.

The Pacific Coursing Club is probably the largest coursing club in the world, as it boasts upward of 700 active members, which is expected to be materially increased this season. They have sent a challenge to Australia to course 16 dogs against those of the antipodes, and expect an answer every mail. In the event of an acceptance arrangements have been made, it is said, to distribute \$3,000 in prizes. The club held a meeting July 6 and elected the following officers: President, Henry Hull; Vice-President, P. D. Nolan; Second Vice-President, J. Dean; Treasurer, M. W. Kerrigan; Secretary, James W. Darragh; Executive Committee, P. E. Canavan, O. W. Lewis, J. Cranston, P. Ryan, J. McCracken and Dan Toland.

Wolves and Coyotes in Montana.

Mr. W. P. Turner, of Lucille, Mont., is doing good work for the cattlemen in his district. He is a ranch owner himself and has a team of greyhounds and deerhounds, and with them he is perceptibly diminishing the wolves and coyotes that infest the Marias range. Recently he had 22 wolf and 171 coyote skins punched, and this represents the work of his dogs so far this year. While there are hundreds of these pests left yet, the cattlemen are gainers by Mr. Turner's activity in this direction, and the effect will be apparent in an increased calf crop hereafter.

Death of Donald.

The well-known St. Bernard Donald, owned by Miss H. E. Cushman, Franklin Park, near New Brunswick, N. J., has joined the great majority. The cause of death is not known. Donald was an immense dog, and was one of those dogs that really did touch the beam at 35in. or a little more, and weighed over 200lbs. His last appearance was at New York in 1892, when he won second to Sir Bedivere, beating Lord Melrose. His size was his chief attraction, for he was deficient in St. Bernard type and character. He was imported about 1890, and was over five years old. A dispatch states that a funeral service will be held over the dog when he is buried.

Bull-Terriers Change Owners.

Mr. Chas. L. Symonds has purchased from Mr. H. A. Harris, North Wilmington, Mass., the well-known bull-terriers Prince Gully and Mermaid, and they will be included in the coming sale of the Anglo-American Kennels. Mermaid is now in whelp to White Wonder and the union of these two good ones should prove exceptionally happy in its result. Prince Gully and Mermaid, it will be remembered, were brought over in the early spring, having been purchased in England by Mr. Raper.

Death of Honor Bright.

We are sorry to hear of the death of such a good greyhound as Honor Bright, and so soon after his advent to this country. He was run over on the railroad. Honor Bright was imported by Messrs. Toon & Symonds before New York show, this year, and won first and special for best in the show under Mr. Raper. Then he was purchased at that show by Mr. H. Nelson, owner of the Maybrook Kennels, who showed him at Boston, winning first again. He was bred by Mr. Skinner, whelped in August, 1890, and was by Stripes of Honor out of Beatrice.

McLin Prosecution Fund.

We trust that all field trial men, especially, although the cause appeals to all dog lovers, will help the Bicknell sportsmen, Messrs. Mayfield and Freeman, in their efforts to put McLin where he justly deserves to be. Two hundred dollars should be easily raised by those who wish to see such men made deterrent examples of. Further particulars of this brutal affair are found in "Points and Flushes."

Transfer of Pet Dogs.

The King Charles spaniel Royal Roy, a winner of several prizes in America, and who was imported from Mrs. Forder's kennel, with his mate Twinkle, has been purchased from Mr. August Knoblach by Mr. E. H. Morris, who has the Union Pet Dog Kennel, at Hackensack, N. J. We understand that Roy will in future be exhibited as Union Roy, taking Mr. Morris's kennel prefix.

N. E. F. T. Club's Trials Off.

It is a most regrettable fact that the New England Field Trial Club will not hold their trials this fall. The abandonment of the event will be a great disappointment to a large number of New England sportsmen whose dogs have been undergoing preparation. Mr. Lovering, the secretary, writes us that the club needs a little more time to turn itself and then will put forth every effort for 1894. The decision not to have the trials this year is final.

Apropos of some of the bottails now being shown in this country as such, Mr. Freeman Lloyd, a well known authority on the breed, in speaking of the old English sheepdog says: "But I must say in many instances of late I have seen prizes given to dogs of very indifferent texture of coat, and in type

far removed from what was originally intended. I do not like to see these poodle-like dogs on the bench. Interested in the breed as I have been for several years, I have always been taught that the quality of coat was a considerable desideratum. Some judges to-day entirely ignore this, and so long as they have a frame with a lot of stuffy hair covering it to look at they are pleased to make awards, and think they are recognizing the qualities of true specimens of this breed. I am aware that most of the bottails of to-day have a poodle appearance, but that does not alter the fact that it is the incorrect type." We owned one of these dogs while living in Monmouthshire, on the borders of Wales, and it was said to be a capital specimen, though entirely different to those shown at Wissahickon both in length of body and texture of coat, and it was a real bottail into the bargain. It resembled in a great degree the picture of Sir Cavendish published in this country some three years ago. A cleverer dog with cattle and sheep a man could not wish to have, and he was smart enough on his legs to keep his original owner's humble larder well supplied with ground game.

World's Fair Show.

One of FOREST AND STREAM's representatives in Chicago called on Mr. Buchanan last week, and in his absence saw his secretary. The latter stated, as his opinion, that the date for the World's Fair show would not be changed. There had been no action taken on the matter nor on judges to fill vacancies.

National Beagle Club of America.

A field trial committee meeting will be held at A. K. C. rooms, 44 Broadway, New York, Monday, July 31, at 3 P. M. The classes, judges, prizes, etc., for the coming year will be considered, and a full attendance is expected.

American Coursing Club Meeting.

It has been decided that this meeting will commence Oct. 24, at Great Bend, Kan. Mr. E. H. Mulcaster, who judged last year, has again been invited to raise the flags.

English Setter Importation.

Mr. Geo. O. Smith, of Wheeling, V. Va., has imported through Spratts Co. the English setter Gambit.

Spratts Co. have imported for Mr. E. K. Austin, Flatbush, L. I., a winning bull bitch. Also a hutch of rabbits for Mr. J. Bernard, of Utica, N. Y.

Mr. A. D. Stewart has arrived in England, and according to *British Fancier*, is now inspecting kennels in "Bonnie Scotland."

We note that Mr. McNeil offers his pointer Coronet for sale this week. This dog was broken by Mr. S. C. Bradley and is said to be a capital all round dog. Mr. McNeil's reason for selling is that he thinks him entirely out of place in the city.

That is a queer case Mr. Donovan mentions in another column in regard to Refuge V., the St. Bernard. We have often wondered that more cases of this sort do not occur, as opportunities for such exchanges must be ample. It is to be hoped this particular one will be thoroughly investigated.

Mr. McMahon, of Far Rockaway, L. I., is another sufferer by the poison fiend, losing his pointer Duchess and St. Bernard Rex, July 20. Whether it was the work of spiteful persons or burglars is not known.

Another elephantine St. Bernard has been brought out in Scotland. Mr. W. S. Clarke is the lucky owner. He showed it at Carlisle show and calls him Gold Finder. "Segusian," in *Scottish Fancier*, says he is just about the best in the United Kingdom at present. Mr. Reick is in Europe now, but perhaps he will rest on this and let Col. Ruppert have another go.

A rather shabby trick was played on a judge in Scotland recently. A well-known man was asked to judge at a show in place of the appointed judge, who was ill. He wired back "Coming," and at considerable expense went to the show, where he found he had been hoaxed. It seems certain people had spotted him as the writer of a letter to the *Scottish Fancier* objecting to the appointed judge as incompetent, and they wished to see if he would act himself if asked to judge all classes. The matter has been placed in the hands of the authorities and there is fun ahead.

In our business columns Mr. Joe Lewis places his well-known English setters, champion Paul Gladstone and Viscount, and Italian greyhound Spring at stud. Breeders in Connecticut should avail themselves of this opportunity to secure some of the best blood in English setterdom.

We have received the Constitution and By-Laws and Running Rules of the Northwestern Beagle Club, lately formed. They are practically the same as the National, and have therefore been commented upon before. All beagle men will be pleased to hear of the formation of this club and the progress it has already made.

It is probable that Mr. Symonds will continue the North-field Kennels with George Thomas still as manager. Mr. Toon is the defaulting member of the combine. His business interests in England require too much of his time.

We are again compelled to hold over the continuation of "Type of Great Danes;" several letters on Dr. Perry's A. K. C. resolutions must share the same fate.

The pointer bitch Abington Juno sold by Mr. Fred Inglis, of Abington, to Mr. C. T. P. Smith, of Bristol, is intended for exportation to America, so *Stock-Keeper* (Eng.) says. This pointer won firsts at Glasgow and Ayr, Scotland, shows.

The Detroit dog Toledo Bee will run in the All-Age Stake at the Manitoba trials. It will be remembered he won at the International trials at Chatham, Ont., last year. Monk of Furness Sting will run in the Derby. It seems to be becoming fashionable to send dogs up to Manitoba to get in shape for the later trials. The season begins earlier in that region than elsewhere, and as the country is good the dogs are able to get into nice shape and develop speed for the trials later on. Mr. J. M. Avent has gone up there with a goodly string of new ones.

Mr. Albion L. Page's kennels at Stanley Park, N. J., look almost deserted, he having sold off most of his kennel of deerhounds. We saw, however, a capital-headed dog by Bruar out of Lufra that will speak for himself when he is shown. He is not quite two years old now. His name is Lochiel. A bitch, Minna, was nursing a litter of five vigorous pups by Lochiel, two days old.

A rather peculiar case came before the English Kennel Club recently, and as a result an exhibitor at the late Pet Dog show, H. Hartell, is disqualified for two years. He sent insulting letters to the secretary of the show demanding the return of his entry fees because of a judge's partial conduct in the ring, as he claims. He insists that Mr. Tom Ashton

awarded a prize to one of Mrs. Foster's dogs half an hour before the class was judged. He says he saw Mr. Ashton write something in his book when the dog was shown him in the hamper, and then heard him say, "You are all right." Unfortunately for this accuser he could not prove his charges, having no witnesses, and for sending insulting letters and a postal card he was disqualified. In reading of this and other cases passed upon by the E. K. C., we are reminded that it would be well if the letters, charges, etc., read and passed upon by our advisory committee, should be made public in the A. K. C. *Gazette*, so that the dogmen at large could judge whether those whom they elect to office are doing their duty properly.

Mr. Winchell, of mastiff and bloodhound fame, has arranged all the photographs of his noted dogs in a large frame and this in turn has been photographed, making a very interesting sort of pocket edition of celebrities.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

*Al De Ber Eclipse*. By Al De Ber Collie Kennels, North Attleboro, Mass., for light sable and white rough collie dog, whelped June 9, 1893, by Archie L. (Roderick of Ruthven—Airedale Duchess) out of Pansy Blossom (Maney Trefoil—Spilled Miss).

BRED.

Prepared Blanks sent free on application.

*Queen of the Valley—Friend Dave*. T. E. Baker's (Logan, O.) pointer bitch Queen of the Valley (Graphic's Bang—Dolly) to F. C. Rochester's Friend Dave (King of Keat—Babe Graphic), April 23.

*Dot II—Metchley Wonder*. Jr. Maple Grove Kennels' (Logan, O.) collie bitch Dot II. (Christopher—Active) to their Metchley Wonder, Jr. (Metchley Wonder—Barby Rose), June 18.

*Flossie May—Metchley Wonder*. Jr. Maple Grove Kennels' (Logan, O.) collie bitch Flossie May (Randolph—Maple Grove Luath) to their Metchley Wonder, Jr., May 10.

*Maple Grove Lady—Metchley Wonder*. Jr. Maple Grove Kennels' (Logan, O.) collie bitch Maple Grove Lady to their Metchley Wonder, Jr., May 12.

*Patient—Bendigo*. B. Alton Smith's (North Attleboro, Mass.) collie bitch Patient (Charlemagne—Patience) to J. Pierpont Morgan's Bendigo (The Squire—Bertha), June 25.

*Martiana—Al De Ber Eclipse*. B. Alton Smith's (North Attleboro, Mass.) collie bitch Martiana (Scott—Robert's Fly) to Al De Ber Collie Kennels' Al De Ber Eclipse (Archie L.—Pansy Blossom), June 24.

*Rose—Marengo II*. B. Alton Smith's (North Attleboro, Mass.) Chesapeake Bay bitch Rose to his Marengo II (Boatswain—Wheeler's Glady's), June 16.

*Hilda—Bendigo*. H. F. de B. Cameron's (Detroit, Mich.) cocker spaniel bitch Hilda to C. F. Backus's Bendigo (May 25).

*Rochelle Sultana—Monarch*. R. H. Erdman's black and tan terrier bitch Rochelle Sultana (Broomfield Sultana (Broomfield Sultan—English Lady) to Dr. H. T. Foote's Monarch (Halifax Charlie—Neil), May 4.

*Dora Dott—Kent Elgin*. A. W. Bealer's (Atlanta, Ga.) pointer bitch Dora Dott (Meteor, Jr.—Belle S.) to T. T. Ashford's Kent Elgin (King of Kent—Vera Bang), July 18.

*Jessica—Mainstay*. G. W. Amory's (Boston, Mass.) pointer bitch Jessica (Beppo III.—Sal) to his Mainstay (Mainspring—Barmaid), May 15.

WHELPS.

Prepared Blanks sent free on application.

*Pitti Sing*. T. T. Ashford's (Birmingham, Ala.) pug bitch Pitti Sing (imported Othello—Jule), June 18, six (five dogs), by A. F. German's imported Drummer (Bruce—Patience).

*Mack's Juno*. T. T. Ashford's (Birmingham, Ala.) pointer bitch Mack's Juno (Rex Morgan—Fleet), June 10, eleven (six dogs), by his Kent Elgin (King of Kent—Vera Bang).

*Luck of Raby*. T. T. Hillman's (Birmingham, Ala.) pointer bitch Luck of Raby (Brown Stout—Jauntly D.), June 17, six (four dogs), by T. T. Ashford's Kent Elgin (King of Kent—Vera Bang).

*Lassie Jean*. T. W. Jewell's (Montgomery, Ala.) pointer bitch Lassie Jean (champion Poultry Sec—champion Fan N.), June 24, twelve (seven dogs), by T. T. Ashford's Kent Elgin (King of Kent—Vera Bang).

*Jessica*. G. W. Amory's (Boston, Mass.) pointer bitch Jessica (Beppo III.—Sal), July 17, eight (four dogs), by his Mainstay (Mainspring—Barmaid).

*Lotta*. R. H. Erdman's (Janesville, Wis.) black and tan terrier bitch Lotta (champion Sir Wallace—Lively), May 16, four dogs, by his Rochelle Sultan (Broomfield Sultan—Meersbrook Maiden).

*Lulu Gladstone*. H. C. DeFuy's English setter bitch Lulu Gladstone (Dan Bryson—Grace Bryson), June 11, nine (three dogs), by his Dakota Chief (Qui Vive—Betтина Bondhu).

*Whittle*. R. H. Foote's fox-terrier bitch Whittle (Warren Ratter—Warren Daytime), May 25, seven (six dogs), by R. F. Mayhew's Brittle (Brick—Vamp).

*Meersbrook Maiden*. Rochelle Kennels' black and tan terrier bitch champion Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress), June 10, seven (five dogs), by their champion Broomfield Sultan (champion Broomfield Turk—Broomfield Belle).

SALES.

Prepared Blanks sent free on application.

*Dazzle—Flurry IV*. whelps. Sable and white collie bitches, whelped March 24, 1893, by B. Alton Smith, North Attleboro, Mass., one each to Seminole Kennels, Chestnut Hill, Pa. and J. L. Lincoln, Jr., Chicago, Ill.

*Kent Elgin—Mack's Juno whelps*. Pointers, whelped June 10, 1893, by T. T. Ashford, Birmingham, Ala., a liver and white dog to J. J. Laughran and a black and white bitch to Thad. Mullins, both of same place.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. B. C.—Write to W. W. Titus, Waverley, Clay county, Miss.

R. B. D., South Bend, Wash.—Under the circumstances you could not do better than feed the dog at noon. Evening is usually the best time.

A READER, Lenox, Mass.—I have a pointer bitch 14 years old, that was bred four times when she was young. I bred her last spring to a pup about a year old, but she did not prove in whelp. She is very healthy and lively. Is it possible for her to have pups at her age, and should I try another dog? Ans. We fear she is too old. However, you can try again, and see that she has four or five services.

T. B. G., Blacksburg, S. C.—Will you kindly advise me what to do for my Irish setter bitch. She has pups five weeks old, has been doing well until the last ten days. She has no appetite, does not seem to be sick, but will not eat. Ans. Give the following:

R Pot. bicarb..... 3 i

Tr. gent. co..... 3 ii

Aq. ad..... 3 vi

Mix. Give one tablespoonful three times a day.

R. E. M., Bellefontaine, O.—My pointer bitch was due to whelp May 13, but missed. She made milk as though for large litter. Her teats are yet very large and full of milk. About two weeks before her time was up she began to get very fat, and is so still, although she gets but one feed of table scraps each day. How can I reduce her in weight, as she weighs over 70lbs., though only of small build? Will the milk hurt her in any way? Ans. Feed once a day on lean meat (raw in preference to cooked), with a little bread. Give more exercise, also give an occasional purgative. No.

J. B., Jersey City.—I have a young cocker spaniel bitch, two years old, which has, I believe, a slight attack of mange. The hair in the neighborhood of the tail is coming out and a sort of scab has formed; she is rolling and scratching all the time. Would you kindly publish in your next issue a remedy for this? Ans. Apply the following dressing daily. Sulphur sublimed, 6oz.; oil of tar, 5oz.; cottonseed oil, 40oz. Mix together and apply. Also give this mixture:

R Mag. sulph..... 3 i

Ferris iodide..... 3 i

Acid sulph. dil..... 3 i

Aq. ad..... 3 viii

Mix. Give one tablespoonful twice a day.

T. E. D., New York City.—I have a fine Irish setter dog, about two and a half years old and very large, weighing 61lbs., though very thin,

He has not been well for a year past and I do not know what the trouble is. He frequently vomits up his food as soon as he eats it. His mouth is always dripping with saliva and he will refuse food for a day or two at a time. Gets grass often and seems trying to find a certain kind. Gets plenty of exercise, running loose. Gets little meat, never raw, and plenty vegetables. Ans. Examine mouth and teeth; see that they are all right. Treat for worms and then give this mixture. Feed well, giving raw meat at least once a day. You might also give a little codliver oil twice a day.

Ferri. phosph. . . . . } aa 31.  
Tr. nucs vom. . . . . }  
Mix. Give one tablespoonful three times a day.

G. M. Tuckahoe, N. Y.—Kindly offer in following cases advice as to whether I should bother with the animals or if there is chance of recovery: 1. Pointer dog, 8 mos., absolute paralysis, result of distemper. Have blistered whole length of spine from occiput to root of tail, and administered medicine prescribed by you. Eats, has regular passage and urinates. No change whatsoever. 2. Four months' beagle pup had excruciating pain like rheumatism in right shoulder. Applied camphor and chloroform, gave morphine and kept in hot bath for three days, but did not help. Then got all at once chorea, and after three days more identically the same condition as pointer—paralyzed, only aggravated by twitching. If the beagle had distemper it did not show; but treated her for it about a month ago, and she seemed to be all right till she commenced limping. Ans. 1. With regard to the pointer, if there is no chorea present, stop the pills for a few days and then commence again. In addition to all this use galvanism. 2. The beagle will never completely recover. The paralysis may disappear, but the chorea will always remain, though it may become less in time.

Strychnin sulph. . . . . } gr. i  
Ferri phosph. . . . . }  
Ex. ergot . . . . . } aa 3 ss

Mix and make 30 pills. Give one three times a day. Should there be any return of the chorea at any time, stop the pills for a few days and then commence again. In addition to all this use galvanism. 2. The beagle will never completely recover. The paralysis may disappear, but the chorea will always remain, though it may become less in time.

## Yachting.

| 14. Cor., San Fran., Closing Day.           |  |

Quite a stir has been created in New York, and especially within the New York Y. C., by the receipt last week of a letter from some source not yet announced, conveying the news that Viking (see Wen, dur), the holder of the Cape May Cup, had surrendered it to Valkyrie, and that Navahoe would have to meet the challenger for the America Cup in a battle for the less important trophy. In default of fuller and more positive information it is hard to believe that Lord Dunraven has taken upon himself the defense of another trophy at a time when every effort is required for the races on this side. Valkyrie has apparently left the racing fleet, but whether to fit out for the Atlantic passage or for the racing at Cowes is not yet known. The time is getting short, however, for further racing in England, and if she is to sail against Navahoe the race must come off very soon.

The possibilities of such a race are numerous and perplexing. It is quite likely that in any continued series of races in British waters Valkyrie would prove a winner, but only one race is to be sailed for the Cape May cup, and it is quite likely that fluky weather or an accident to one boat or the other may decide the result. Should Valkyrie win, no great harm would be done, but should she be defeated, even by an accident, the interest in the America's Cup races would at once disappear, while if the race should show that she was really inferior to the American boat, her defeat on this side would not only be assured, but her owner and his crew would have a most disheartening task ahead, to make a voyage of some 6,000 miles with the certainty of defeat ahead.

The four American yachts are now in the hands of their owners and skippers and sailing regularly day by day, but no two of them have yet come together, and it will be several weeks yet before an opinion can be formed as to their relative speeds. The British quartette, however, has now been out for two months, during which time many alterations and repairs have been made, and the yachts have been worked up into pretty fair racing form. The two Watson boats have fared best in that they have required less alteration than Calluna and Satanita, but the latter two are now showing up much better than at first. Satanita in particular has proved a very fast boat. While it is impossible thus far to say which is the best, it is certain that Valkyrie has won for herself a good record, and if she has not proved herself incontestably the fastest no other of the four has yet done so. The following summing up by *The Yachtsman* is very close to the mark:

"The conclusion of the Clyde meetings brings us to nearly the middle of the normal British racing season, and yet no very definite opinion can be formed as to the respective merits of the four new first class cutters. The Clyde matches have for the most part been devoid of the interest attaching to fairly contested races, sailed in true winds, yet enough has been seen to make it clear that the Satanita is a vastly improved vessel, and it seems probable that before the season is over she will have created an enviable record.

"Calluna has not, however, so far asserted what many believe to be her real speed as to greatly modify the opinions formed of her on the Thames. The open waters of Belfast Lough—one of the finest courses in the United Kingdom—may perhaps furnish a decisive test.

"Valkyrie has, on the whole, been the most successful vessel of the lot, her total winnings up to the present time being represented in filthy lucre by the handsome sum of over £700. It may fairly be taken that the Valkyrie, even if we had the liberty of selection, would be chosen unanimously for the purpose of competing for the America's Cup. She will possibly be called upon to meet a craft of quite a different type in the States, e. g. if one of the hulls in view is to defend the Cup. If, however, the Herreshoffs have the honor of turning out the successful Yankee candidate, the Valkyrie will meet a craft of very much her own pattern."

THERE is a possibility that the looked for meeting of the quartette of Cup defenders may not take place after all on the New York Y. C. course, and that a bit of useless red tape may again stand in the way of something which every one wishes to see. One of the four, *Pilgrim*, is owned by a syndicate, several of whom are members of the New York Y. C., but she is at present in the name of Mr. Stewart, her designer, who is not a member. By the rules of the club she cannot compete in any of the cruise races, and from present appearances she will have to wait until the Corinthian sweepstakes, after the New York cruise, before she can race with the other three. Being built practically for the use of the New York Y. C. in defending the Cup, it will be a serious injustice if she is not admitted on equal terms to all races in which her mates take part.

THE question of the mutual relations of newspapers, reporters, clubs and committees has been under discussion for some time in New York, and a great deal of nonsense has been written on both sides, prominent among which is a recent editorial in the *Journalist*. An interesting phase of the question is involved in the recent reports in a daily paper of the cruise of one of the larger clubs. In these reports the whole story of the cruise is centered in the performance of one yacht, a craft possessing no pretensions to speed, but which has led the fleet, on paper, from port to port. This method of newsgathering has not been entirely unknown in previous cruises of the club, but this year it has been carried to an excess. There can be no question of the folly, to say nothing of the unfairness, of such false reports; the only question is, who is most responsible for them, the reporter who writes them or the yachtmen who indorse them, tacitly or otherwise, when they might easily stop them. In the present case it is quite possible that there may yet be a sequel to the lengthy yarns which have amused outsiders by their absurdity and angered the owners of other yachts by their unfairness.

### Colonia.

How much has been lost to yachting through the stoppage of international races owing to the action of the New York Y. C. in 1887 will never be known, but it is probable that one ample and productive field for experiment has been passed unheeded during the last six years, and that many opportunities have been lost in the sudden jump to the fin-keel that has characterized the present revival of racing in the large class.

Although all of the Cup defenders from 1885 to 1887 were centerboard boats, Mr. Burgess was a strong believer in the keel, and with the rapid improvement of keel yachts which took place in 1889 and 1890 it is quite probable that he would have essayed a large keel yacht had not the class been destroyed by the new deed of gift. In the ordinary course of events, following the success of *Minerva*, *Gloriana* and *Wasp*, the chief features of the present revival of the 85ft. cutters would have been the development of the American keel out of large size. The introduction of the fin-keel, however, has changed all this, and the building of an 85ft. keel cutter to defend the America's Cup has attracted no special attention. Much has been written about Colonia, but no more than would have been the case had she been a centerboard boat like *Vigilant*, and much less than if she had been a Herreshoff boat like *Puritan*.

It is now eight years since New York yachtsmen journeyed down to the Erie Basin to inspect the first large keel cutter of recent times, *Genesta*, which was docked there in the latter part of August. We, in company with many others, sat on the coping stone of the big drydock through nearly all of a hot day, and watched the successive waterlines as they revealed themselves in the gradually falling water. Considering the rule and conditions under which she was built, *Genesta* had much to recommend her model, and with a few alterations, by virtue of depth all over, including the forefoot, a flat side to leeward and another to windward, it seems quite probable that she could hang on, although of moderate draft in proportion to her length. In spite of her failure in light winds she made a very creditable showing to windward in the last race as compared with a remarkably good centerboard boat, *Puritan*.

The next representative of the keel class, *Galatea*, first seen out of water on the balance dock at the foot of Pike street, in 1889, was much like *Genesta*, but of greater displacement and inferior in model, as her subsequent performances demonstrated.

Still a year later and we spent another day on the hot stones of the Erie dry dock, watching the form of *Thistle* as she was slowly left by the falling water and wondering, as we noted her away forefoot, moderate draft and very round side, how she could hold to windward as compared with *Genesta*. From the rail down the bilge, under the floor and around the bottom of the keel, were round lines and surfaces that seemed meant to induce the easy flow of water athwart ship and to give a minimum of lateral resistance, as events proved to be the case.

The latest fashion of keel, exposed for several days last week on Downing & Lawrence's railway, has nothing common with either *Genesta*, *Galatea* or *Thistle*. It is unlike the plank-on-edge or the wider cutter, and is far more on the bread tray order, the body of the boat, which may be considered as apart from the keel, showing a rather round section, very long ends, and long, clean and fair diagonals. Below this hull is the deep fin, an integral part of the hull in construction, but nevertheless in effect a fin or appendage. Compared with the older cutters named, *Colonia* relies for stability on much more beam, 24ft. extreme, and also on lower ballast, her draft being under 16ft. as against 13ft. in *Genesta* and *Thistle*, while the

lead keel itself is of a bulb shape, disposing of the weight at the lowest possible point.

As to lateral plane, a comparison is hardly possible with the older boats; the hull proper is of a form that can be easily driven, in spite of round and full waterlines, and the fin itself is effective to a degree never approached by the flat-sided cutters, and certainly not in *Thistle*. That reduction of surface friction which was sought in *Thistle* through the rounding off of all angles and flat planes is attained in *Colonia* by the cutting away of the deadwood at each end, leaving only the deep fin amidship. That the yacht will be weatherly cannot be doubted, but at the same time it is a question whether she will be as weatherly as *Vigilant* with her big centerboard or the two fin keels. In looking at her and remembering the scot side must carry as compared with other large keel boats, one instinctively wishes that the keel could be dropped still lower. It is quite possible that the lead is low enough for all purposes of stability, but when it comes to lateral resistance the proportionate depth between her and *Wasp*, of half her length, is very great.

While full in the waterlines, *Colonia* is decidedly finer than *Wasp* at each end, but still she may be described as an enlarged copy of that famous boat. The forward overhang is long, especially as compared with the stern, but by virtue of these long ends the fore and aft lines are clean and easy. The stern itself is not handsome, the after end of the deck is elliptical and the plating merely meets it; but it is probably as serviceable as a fair tapering counter would be. The deck is very roomy and attractive, a fine place to work on. The planking stops about 6ft. from the stern-head, leaving the steel deck exposed. To this steel deck are riveted two large steel rings or short tubes, in which the bowsprit houses. The fid is of steel, held by two heavy braces rivetted to the deck at the stern-head. Abaft the bowsprit is a Providence capstan. The deck is fitted with cleats in all places where they can possibly be needed. Special forgings are fitted for the main runner, preventing the deck from being upset with turnbuckles. The pin-rail around the mast is of steel tubing. On each side of the main boom is a small winch for the topsail sheet, attached to the boom at the strap of the gooseneck.

Below the yacht has good head room fore and aft, the forecabin is light and roomy and the galley and pantries are large and well arranged. The middle portion of the yacht is given up to one large room, the sails being piled in the center while on the sides are hammock cots for a dozen of the crew. One corner of this room is bulkheaded off for the captain's room. Abaft this large room is a small saloon at the foot of the main companion, with a state room on each side, and further aft is the ordinary ladies' cabin, extending across the yacht. The overhang is used as a boatswain's locker. The small saloon and the stairways will be used by Mr. Rogers and those interested with him in the management of the yacht. The joiner work is plain and light, and no elaborate finishing has been attempted. The new boom has been completed at Poillon's and Mr. Lov's riggers have done some neat work in the wire seizings, which are spaced from 2 to 4ft. apart. The boom was shipped last week and the hull was painted white, white above and green below, by Mr. David Clark. The yacht was launched on Friday and returned to New York on Saturday. Poillon's have also made a new mast, in reserve, which is still at their yard.

### Capsizes.

THE sloop yacht *May B.*, of the Pavana Yacht Club, of Jersey City, was struck by a squall yesterday afternoon and capsized off Highland Beach. On board the yacht were Mr. J. W. Bolen, Mrs. Bolen and their young child. The accident was witnessed by a large crowd of people on shore, and a party composed of Percy McGonigal, Harry Mears, Wm. D. Emery and Philip Lynch, all connected with a bathing house there, immediately went to the rescue of Mr. Bolen and family. When the vessel was capsized, they found Mr. Bolen and the child clinging to the side of the boat, but Mr. Bolen was unconscious. With considerable trouble she was taken out and brought ashore in an examining her, pronounced her condition as not serious.—*New York Herald*, July 19.

The owner of yawl *Alice*, of Philadelphia, who is a summer resident of Philadelphia, and who shipped to this port from Philadelphia on schooner *Mount Hope*, a small sloop yacht of the skink type, with pattern commonly called a "skip jack," she is a pretty little yacht, and was brought around this way, it is understood, to do some racing in Buzzards Bay.

The little craft was rigged with spars by Johnson & Howland and was then taken down to Beetle's yard on French avenue and hauled out on the railway. She was ready for a trial spin Saturday and her owner made sail on her in the afternoon with a good southwest breeze which came in puffs across Clark's Point. The yacht was tacked back and forth and did quite well considering that several who saw her start off thought she was not ballasted enough.

When off Eleven Foot Bank Buoy the yacht got a heavier puff than usual and she started to heel and sank, throwing the owner out. Several small boats in the vicinity were quickly on the scene to rescue the amateur yachtsman. The steamer *Cygnat* also came upon the scene just as the man was rescued.

The boat seemed to float a little at the bow and she was towed into the beach at Beetle's and hauled out and made dry, and yesterday she sailed for Mattapoisett in company with yawl *Alice*.—*New Bedford Mercury*, July 19.

With but an hour's warning a gale swept out of the northwest yesterday afternoon near 5 o'clock and churned the sand from the bottom of Lake Michigan. Over two dozen yachts were caught out on the lake, and one was overturned, drowning four of its nine occupants. Another yacht, the *Seashell*, did not arrive up to a late hour last night, and its owner said that he thought it had gone to the bottom without doubt. The little lateen-rigged boat, *Chesapeake*, was caught by the blow two miles out in the lake north of the waterworks crib. On board were a party of seven men and two women. They had ample warning of the gale, and as they did not have time to run for shelter they furled their sails and prepared to weather the blow. Their boat was an open one, light in construction, but they could pursue no different course. The heavy north wind struck the boat, but under bare poles it seemed likely to weather the storm. Suddenly the ropes holding the sails became unfastened and the sails spread out to the wind. The little craft gave a lurch and rolled over, throwing the occupants into the water. Five of them managed to get hold of their boat, which was turned bottom side up, and clung to the centerboard and wreckage until they were taken off by the tug *Volunteer* of the Duluth line. Four were imprisoned by the capsized boat and drowned. Five were injured.—*Chicago Tribune*, July 20.

The yacht in question was a *Chesapeake* Bay buckeye, presumably without ballast.

### More Scarecrows.

DURING the past week we have heard from two more Scarecrows built, one in England and the other in Port Townsend, Washington, 6,000 miles apart, from the design in the *FOREST AND STREAM*. The former, named *Picaron*, is a 1/2-rater, the design being reduced to make a model of 6ft., with a sail area of 185ft. gives the required measurement. The little boat is owned by Henry E. Bayly, of Exmouth, England, owner of *Buccaneer*, *Spankaddil*, *Scaramouch* and *Jack o' Lantern*, and Mr. G. A. Passingham, and was built by W. E. Hodge, of Dartmouth. The *Yachtsman* says of her: "The 1/2-rater *Picaron*, built by Hodge, is just completed and looks a little beauty. She made a trial trip on Saturday (July 1) and seemed to hold of the harbor well, though not properly cased. Her sails are being made at Laphorte's, and if they arrive in time, the *Picaron* will sail in Wednesday's match. It ought to be a good race between her and *Semibreve*."

*Picaron* is built specially for racing, and her construction is probably much lighter than any of the others of the model. Her keel is 4 1/2-1 1/2, keelson of the same dimensions, frames of American elm 2 1/2-1 1/2, spaced 6ft. apart, eight number 2-1/2 inch planing 3/4 in. before finishing. The complete hull weighed before launching, but 315lbs., and the fin and bulb 560, the boat trimming exactly to her waterline with her crew of two on board. The fin has been cut away on the fore side to reduce the surface, but the bulb is of the proportionate size of the original. The sail plan has a lug mainsail and a jib, the latter set on a sprit about 18 in. outboard. The lug mainsail is very nearly identical in form with the leg of wind of the first Scarecrow. The mast is 15ft. deck to head, and the boom 14ft. 6 in. Owing to a delay in receiving the sails the boat missed some of the early races, making her debut on July 5, her new sails being bent in the morning before the start. She not only defeated the three boats in her own class very easily, but beat the 1-rater *Moharane* in the next class.

The Washington boat was built by the Port Townsend Boat Factory of Port Townsend, Wash., the manager, Mr. F. R. Perrot, enlarging the design to make 21ft. l.w.l. for the class, 20 to 25ft. sailing length. She carries a 5ft. 5ft. deep and with a bulb of 360lbs., and has a sail plan of 500sq. ft. The cockpit is but 4ft. long. The boat is over-rigged, but has proved to be a very good weather boat, and on May 25 by 9m. On July 4, in a good breeze, she was overpowered, being well at first but being unable to carry sail when the wind freshened.

The New Yankee Doodle.

NONE of the later high-speed steamers have created more interest than the little Buzz, designed and built by C. D. Mosher in 1887; and taken altogether, the achievements of this, the smallest of such craft, have hardly been surpassed. After making a record of a mile in 2m, 13s. in comparatively shoal water on the narrow Schuylkill River last year under her new name of Yankee Doodle, she met with a rather sudden and inglorious end, being set on fire by the dropping of a lantern in her boiler space while at anchor down the Delaware River one night last fall. Her owners, who were off on a shooting trip, escaped in the yawl, but the yacht was burned and sunk.

The original boiler was designed by Mr. Mosher, of the locomotive type used in torpedo boats; but at the time that Yankee Doodle made her first runs on the Schuylkill it had been replaced by a new pattern of tubulous boiler patented by Messrs. McBride & Fisher, of Philadelphia, the McBride brothers being the owners of the yacht. The construction is shown in the accompanying cuts, the dome lying athwartships, instead of fore and aft, as in other boilers of the same general type.

Whatever speed record the new Yankee Doodle may make in the future, she will always be remarkable from the fact that her hull was in the short space of three weeks, and a very satisfactory trial trip was made at the end of the fourth week. Last spring it was decided to search for the wreck in order to use the engine and boiler in a new boat, and it was finally located by a diver beneath a scow load of mud which had been dumped upon it. When finally raised, the machinery was found in excellent condition, no changes being necessary; but the owners decided to replace the tubes, otherwise the engine and boiler are the same as in the original boat.

"YANKEE DOODLE" No. 2.

The hull was designed by Mr. Fisher and the Messrs. McBride, and is 71ft. 6in. over all, 7ft. beam, 3ft. depth, and draws 6in. forward, 13in. amidships and 19in. aft. The keel is a single stick of Oregon pine, 70ft. long; the ribs are of selected white oak, sided 1in., moulded 1 1/4in. and spaced 5 1/2in. The planking is of selected Oregon fir, 3/4in. thick, and the fastenings are phosphor-bronze screws, of which 8,000 were used. The deck is of 1 1/2in. Spanish cedar, tongued and grooved. The planking is carvel-laid, but in place of the usual cotton caulking a flat ribbon of copper is forced half into each plank, making a seam that is very strong and stiff and perfectly watertight.

The small cut, from the Philadelphia Record, gives an idea of the general appearance of the yacht. The model is entirely different from the later Mosher-Gardner launches, being practically double-ended, or canoe-shaped, instead of being carried out flat at the stern. The lines are clean and fair, and from such trials as have been made thus far under the disadvantages incident to all new yachts, the boat promises to be very fast. The dimensions of the original Buzz were: Length over all 50ft., beam 6ft. 6in., depth 3ft., draft 9in. forward and 16in. aft. The engine, used alike in the old and new boats, 8x8, double cylinder inverted vertical, with piston valves 3in. diameter and 7sq. in. of port opening, the reversing gear being a modification of the Porter-Allen. The piston rods are of 1 1/4in. steel, and the total weight of the reciprocating parts is 33lbs., the entire engine weighing 703lbs., and the total weight of engine, boiler and connections, including the screw, being under 4,700lbs. The displacement of Buzz was 3 1/2 tons. The original Mosher boiler was 32in. diam., 5ft. long, with 250 brass

chinery was found in excellent condition, no changes being necessary; but the owners decided to replace the tubes, otherwise the engine and boiler are the same as in the original boat.

Thursday, Aug. 10—New London to Newport.  
Friday, Aug. 11—Race at Newport for cups presented by Captain Ogden Goelet.

Saturday, Aug. 12—Newport to Vineyard Haven.

Sunday, Aug. 13—The fleet will remain at anchorage.

Monday, Aug. 14—Vineyard Haven to New Bedford.

Tuesday, Aug. 15—New Bedford to Newport.

At Newport there will be a race for cups presented by Captain J. J. Astor.

During the cruise there will be the usual races for the owl and game cock colors, and a race for naphtha launches.

The regatta committee will furnish details for the races from port to port, and other racing events. By order of the commodore.

GOUVERNEUR KORTWRIGHT, Fleet Captain.

The leading feature of the cruise will be the meeting of the four new 85-footers, Vigilant, Colonia, Jubilee and Pilgrim, the quartette being united for the first time in the Goelet cup race on Aug. 11. It would be a matter of gratification to many if the four were entered in the opening race of the cruise, which this year, by way of novelty, will take place off Glen Cove, Conn. Morgan having presented the cups and arranged the race so for the benefit of the members and friends of the club who are unable to be present later at Newport. Vigilant and Colonia will probably be with the fleet at the rendezvous, but the two Eastern yachts will not be likely to come further west than Newport, reaching there in good season for the Goelet cup race. It is hardly likely that the big boats will accompany the fleet from Vineyard Haven to New Bedford and thence back to Newport, and it is

quite possible that none of them may go further than Newport, waiting there for the return of the fleet and the special races which follow for the Astor cups and that of the Corinthian Y. C. None of the four are likely to try to visit New Haven with the fleet, and it is very likely that the racing runs of the cruise will be neglected by them, and that their racing will be mainly about Newport.

If this is the case it will rob the cruise racing of its chief interest, and will afford additional proof, if any is needed, of the desirability of encouraging a smaller class, such as the 70ft., in which the absolute draft, though proportionately great, shall still be within such limits as to permit the racers to accompany the fleet.

It is hard to say at this time what the prospects are for the regular cruise racing, but in the schooner classes, from the largest down, there has been sufficient vitality and excitement, though of a mild kind, to justify the hope of a general turnout of the various classes.

Dauntless, Ramona, Brunhilde, Coronet and the other big ones are all racing this year: the 90ft. class is fairly certain of a good fleet, with Alcaea, Emerald and the older boats, and the new boats Ariel, Elise Marie and others will keep alive the racing in the smaller classes.

Dauntless, Ramona, Brunhilde, Coronet and the other big ones are all racing this year: the 90ft. class is fairly certain of a good fleet, with Alcaea, Emerald and the older boats, and the new boats Ariel, Elise Marie and others will keep alive the racing in the smaller classes. Iroquois is tied up and cannot be raced in the club during her owner's absence, and Marguerite has been sold out of the club, which rather cripples an important class.

The outlook among the single-stickers is by no means promising; there is not a class from the 70 down to the 40ft. which is not practically dead, but at the same time there is a chance that the owners of the many good but out-built boats, in the 40 and 45ft. classes especially, may appreciate the opportunity for good sport which the racing runs afford, and avail themselves of it. Apart from the racing, there is every prospect of a large general turnout of yachts at Glen Cove to

Sanford for the three 40-footers, Awa, Moccasin and Choctaw, and one by James Weir, Jr., for the larger sloops, Penguin, Athene and Roamer. As the 40ft. cup was given by Vice-Com. Sanford, he entered his own yacht, the 40ft. sloop Rival, with the larger boats, instead of with the forties. The start was made at noon, but the three forties were handicapped, the times being:

Athene.....	12 00 03	Moccasin.....	12 05 00
Penguin.....	12 02 18	Choctaw.....	12 05 00
Roamer.....	12 03 22	Awa.....	12 05 00
Rival.....	12 03 40		

The Moccasin was handicapped 37s., Choctaw 3m. 50s., and Awa 4m. 8s.

The course was to the Bug Light in Gardiner's Bay, the wind being light S.W. Rival is the smallest and oldest boat of the lot, being built by John Munn in 1883 for Mr. John H. Dimon, a centerboard sloop of very good model for those days. She did good work from start to finish, and beat the new forties as well as the larger boats of her own type. She is but 38ft. 8in. l.w.l. The times were:

FOR THE COM. SANFORD'S CUP.			
	New London	Bug Light	Elapsed.
Awa.....	12 05 00	Light.....	4 18 20
Moccasin.....	12 05 00	Gardiner's Bay.....	4 20 20
Choctaw.....	12 05 00		Not timed.

FOR THE JAMES WEIR, JR.'S CUP.			
Rival.....	12 03 40	4 15 50	4 12 44
Penguin.....	12 03 18	4 19 54	4 17 37
Roamer.....	12 03 22	4 28 36	4 26 14
Athene.....	12 00 38	4 31 20	Disqualified

Athene went the wrong course and was disqualified. On Wednesday the fleet ran across to Newport in a very light breeze and there disbanded.

The fleet of the Larchmont Y. C. sailed on Saturday, July 15 on the annual cruise, reaching New Haven that night. On Sunday the fleet sailed to New London and on Monday to Newport, arriving at midnight in a fog and calm and being obliged to anchor outside the harbor. The fleet numbered about 25 yachts, among them being: Dauntless, Ramona, Katrina, Atlantic, Phantom, Victor, Gevalia, Southern Cross, Tigra, Winona, Nonpareille, Peri, Mistral, Flash, Nixie and Vision. The others were not timed. The steam yachts Jessie, Thyra and Ladoga.

Considerable rivalry exists between the big schooners Dauntless and Ramona, and the former has recently had her canvas thoroughly overhauled by Sawyer with good results.

The fleet of the New Rochelle Y. C. started on the annual cruise on July 15, with Com. Andrus in command in the flagship Sasqua. The South Boston Y. C. also sailed on July 15, the destination of the cruise, which will last two weeks, being Boothbay, Me.

A Long Cruise.

THE little steam yacht Niobe made fast to the dock in a slip at the foot of Randolph street viaduct yesterday afternoon, and completed a cruise of over 6,000 miles. She was built in St. Louis and is owned by Will D. Campbell. On board are Charles A. MacKnight, engineer; O. H. Harpham, pilot; F. L. Mowder, Allie Cullinaine, and Frank Booth, steward. The Niobe is a small boat to start on a cruise like the one she has just completed, being only 38ft. long and 10ft. beam. She is run by kerosene, having a water tube boiler and compound engines.

The Niobe left St. Louis last October and started for New Orleans. Arriving there early in the winter, the party spent their entire time cruising around the coast and visiting the smaller lakes which abound in Louisiana. They lived aboard their boat all the time, and dined sumptuously on the game, oysters and fish, which southern Louisiana affords so plentifully. Arriving in New Orleans again early in May, the Niobe was headed up the Mississippi River on May 11. The trip up the Father of Waters was a leisurely one. Every town and city on the route was visited and thoroughly inspected. The members of the party have four pneumatic bicycles aboard, and at each stop these were brought out, and the sight-seeing done with comfort. When the mouth of the Illinois River was reached the Niobe was headed up this tributary, as the party wished to visit the World's Fair. When near

THE McBRIDE & FISHER STEAM GENERATOR. Patented November 29th, 1892.

tubes, the heating surface being 357sq. ft. and the grate surface 9sq. ft., the working pressure being 150lbs. A Sturtevant blower driven from the main shaft was used in connection with a close ash pit for the forced draft.

The McBride boiler has 8sq. ft. of grate surface, 900sq. ft. of heating surface and 204 seamless drawn steel tubes of 1in. outside diam. The boiler weighs 3,075lbs., the grate bars 79lbs., and the total weight with water in is about 2,500lbs. Only the tubes are exposed to the fire, the steam drum, downflow pipes and waterlugs being outside the casing. The makers claim that the boiler can make steam from cold water in two minutes and that priming is impossible.

The propeller shaft is 2 1/2in. diam., and fitted with ball bearings for the thrust and a very ingenious universal joint. The inboard section of shaft being parallel with the keel, allowing the engine to be placed low down, while the after section rises 1 1/2in. to the foot, coming out at the heel of the sternpost. The balanced rudder is hung forward of the wheel, the rudder shaft being on one side of the propeller shaft. The propeller is 34in. diam., 5ft. 10in. pitch and has two blades. It was designed by the Messrs. McBride. The engine turns up 500 to 550, at which speed it runs without material vibration, and the boat does not run out forward. The hull was launched on June 22, being carried down to the water by 150 men. The energy and push which has characterized the work thus far give promise of some gratifying results when the yacht is in perfect running form.

Club Cruises.

THE season of club cruises is now well under way, and most of the ports between New York and Vineyard Haven are enjoying the visits of the various club fleets. Among the cruises of the past week are those of the Atlantic, Larchmont, New Rochelle, South Boston and Corinthian of Philadelphia. The cruise of the New York Y. C. will begin early next month and the following order has been issued by the newly appointed fleet captain, Gouverneur Kortwright:

GENERAL ORDERS No. 2. Flagship May, July 15.

The squadron will rendezvous at Glen Cove Harbor on Monday, Aug. 7.

On the same day a race will be sailed for cups presented by the commodore.

In the evening the commodore will be pleased to see the captains and their guests at an informal reception on board the flagship at 9 o'clock.

The programme for the cruise, weather permitting, will be as follows:

Tuesday, Aug. 8—Glen Cove to Morris Cove.

Wednesday, Aug. 9—Morris Cove to New London.

meet the new commodore, and of a very large fleet in the wake of the May fleet port to port. The steam division of the fleet is likely to be larger than ever.

There has been some talk in the East of an extension of the cruise to Marblehead in order that the Eastern yachtsmen may enjoy a sight of the four new boats; but such an event is hardly possible, as the time is too short, and too many important races are to be sailed about Newport and New York. It is very unfortunate that the new boats in this country cannot be ready for racing before the middle of the season, as matters are now some \$300,000 will be expended in the construction of four yachts whose racing life will begin on Aug. 11 and end about Oct. 11, or barely two months; after this the four are practically useless, as in the event of the continuance of the class next year they would undoubtedly be out-built. It is time that the clubs, the New York in particular, took some steps toward the earlier arrangement of all international races, so that building might begin as early here as in England, the new yachts racing there in the last week in May, while here they are barely ready by August. The advantages which accompany this earlier preparation are too obvious to be overlooked any longer.

The annual cruise of the Atlantic Y. C., which began on July 15 with a rendezvous at Gold Spring Harbor and ended on July 20 at Newport, was a very pleasant and successful affair, the fleet meeting fine weather and good breezes from first to last. The yachts of the fleet were:

Schooners.—Water Witch, Com. David Banks; Grayling, Latham A. Fish; Una, J. Fred Ackerman; Vidette, H. F. Munn; Lydia, Henry W. Banks; Siren, J. K. Emmett; Loyal, B. Frank Sutton.  
Sloops.—Rival, Vice Com. J. G. Sanford; Sasqua, Rear Com. A. P. Ketcham; Awa, C. E. Cameron; Choctaw, T. L. Arnold; Moccasin, N. D. Lawton; Daffodil, James R. Whiting; Tigress, James Weir, Jr.; Penguin, George E. Brighton; Daphne, A. W. Booth; Athene, Charles A. Rich; Concord, H. C. Room; Rover, J. S. Manning; Roamer, S. D. McElroy.

The first run was to Black Rock, the fleet getting under way at 10 A. M., and running before a nice S.W. breeze, passing the fleet of the Larchmont Y. C. also just starting on its cruise. In getting under way Loyal, sloop, was in collision with the steam yacht Trophy, damaging the steamer's rail and stanchions, the schooner's bowsprit going aboard without ceremony. The fleet anchored between 1 and 2 P. M. The next day, Sunday, divine service was held on board the flagship, after which the fleet got under way for Morris Cove, 15 miles distant, anchoring at 3 P. M. The sail on Monday from Morris Cove to New London was very slow, the wind being light, and the fleet reached harbor late in the evening.

Two cups were offered for the run of Tuesday, one by Vice-Com.

the canal the water was found so foul that it foamed in the boiler and interfered with the smooth working of the machinery. So a cask was put aboard and connected with the boiler and all water used for steam was stored in this improvised tank. Mr. Campbell reports the water all the way down the canal as being in horrible shape.

The Niobe might be termed a cabinet, for she is full of drawers and lockers from stem to stern. Not one square inch of space is wasted, and in spite of so many lockers the cabin is large and comfortable. The sides of the cabin are flush with the rail of the boat. The windows are fitted so as to be water tight and can be taken out in a few minutes and stored away. The lockers along the sides of the cabin make comfortable bunks, and the lockers themselves hold the bed clothing. The floor can be taken up, and under it can be stored supplies for a long cruise. The kerosene burner does not make as much heat as a coal fire would, and so the heavy bulkheads are left out. Along the side of the engine-room are closets and lockers containing tools for repairs in case of breaking oil, and the other necessities of an engine-room. The absence of coal bunkers economizes space here. In the forward cabin two bunks are arranged along the sides, while another one can be made overhead, just under the ceiling. The floor of the pilot-house is raised to a level with the deck, and this space is taken up with a wardrobe. On the roof the canoe is lashed and also the bicycles. Mr. Campbell has many mementos and souvenirs of his trip in southern waters. Among them are several oyster shells, whose size may be imagined from the fact that three of the bivalves made a meal for the entire party. "Our trip has been very enjoyable," said Mr. Campbell yesterday. "We have taken our time in coming up, so that the time consumed can not be taken as a sample of what the Niobe can do. We will remain in the city quite a while, and see the Fair. Chicago Inter-Ocean.

Hull Y. C. Cruisers' Race.

HULL-BOSTON HARBOR.

Saturday, July 15.

THE cruisers of the Hull Y. C. was sailed in a strong S.W. wind, that was more than the little boats wanted. Course No. 6 was sailed, the times being:

Corrected.			
Santa Maria, J. J. Souther	1 19 20	Joker, B. Tilton.....	1 23 15
Vandal, Fred Brothers.....	1 22 03	Wapiti, P. F. Folsom.....	1 23 10
The prizes were Santa Maria \$15, Vandal \$10, Joker \$5. Judge, E. O. Norton.			
Vandal uroove her mainsheet and was thus delayed. Santa Maria is a new "knockabout," designed by Stewart & Binney			

## Savin Hill and Dorchester Clubs.

Saturday, July 22.

On Saturday last the Savin Hill and Dorchester Yacht Clubs, located opposite each other on Dorchester Bay, sailed a union regatta in good weather and with the classes well filled. The day was clear and warm with a fine S.W. wind, which fell dead near the finish, an easterly breeze coming in to bring the boats home. Some of the boats carried two reefs at the start, wind was strong most of the time. Romance sailed at 22ft. l.w.l., leaving only Exile and Thrush in the 21ft. class, the former winning very easily. The times were:

SPECIAL CLASS.			
Length.	Elapsed.	Corrected.	
Exile, J. F. Small.....	20.03	1 31 08	1 01 16
Thrush, C. E. Bockus, Jr.....	20.10	1 39 30	1 09 44

Baby, J. J. Carr.....	12.08	0 55 05	Withdrew.
Crab, W. P. Whitmarsh.....	14.00	0 55 05	Withdrew.

Dorothy protests Romance, Icon, Midget and Egeria protests Arab, so the winners are not yet known.

The judges were Messrs. Rice, Davenport, Smith, Fox and Robinson.

## Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, July 22.

Two races took place on Saturday at Oyster Bay, one for naphtha launches and one for the Roosevelt Memorial cup. The times being as follows:

Naphtha launch race, cup presented by Colgate Hoyt. Inside harbor course, club float to Cold Spring Light, to Moses Point buoy and to club float, 4 nautical miles; weather fair; wind moderate; tide, ebb; one-gun start at 10:59.			
Length.	H.P.	Elapsed.	Cor.
ft.		m. s.	m. s.
Belouin, C. W. Wetmore.....	10	38 07	38 07
Vixen, G. W. Bullock.....	10	38 47	38 47
Elsa, Jacob Smith.....	25	40 20	38 08
Jeannette, Girard Foster.....	35	37 44	34 04
Tide, Colgate Hoyt.....	35	38 21	34 41
Isis, C. R. Agnew.....	30	38 43	33 11
Underhill, F. T. Underhill.....	21	50 28	37 56
Mormad, Sydney Chubb.....	21	did not finish.	

Elsa won. The race was a handicap. Belouin and Vixen were handicapped by a bad start and further by imperfect condition, Vixen having a bent shaft and Belouin a broken pin.

Alfred Roosevelt Memorial Cup, first annual race. Courses, Bell Buoy triangle, Bell Buoy to Center Island Buoy (about 1 mile close reach), to Lloyd's Neck Buoy (3-mile run), to Bell Buoy (2-mile beat), repeat: 12 miles, naut. Weather fair, warm. Wind W., stiff breeze. Tide, ebb, slack, flood. Start at 1:10.

Handicap.			
min.	Elapsed.	Corrected.	
Indolent, S. V. R. Cruger.....	05	2 21 02	2 16 02

SPECIAL CLASS.			
Helen, F. Pfund.....	19.08	1 35 10	1 00 10
Tike, J. Leveridge.....	Withdrew.		

The judges were Messrs. C. W. Heath, L. J. Lang and J. B. Smith.

## Hempstead Harbor Club Annual Regatta.

GLEN COVE, LONG ISLAND SOUND.

Saturday, July 15.

The annual open regatta of the Hempstead Harbor Club was sailed on July 15, in a strong southerly wind, and though many of the entries did not start a good fleet turned out, and the race was a success. The cabin boats sailed under the Seawanhaka rule and the open boats under a measurement of length plus 1/2 overhang. Unlimited crews and shifting ballasts were allowed as usual in the open boats. The courses were:

Starting across a line drawn between two stake boats anchored off the club house, thence around spar buoy on easterly end of Execution Reef, leaving same on starboard hand; thence around spar buoy off Matincock Point, leaving same on starboard hand; thence across finish line off club house, 12 miles.

For all boats 18ft. and under.

From starting line around spar buoy on easterly end of Execution Reef, leaving same on starboard hand; thence across finishing line off club house, 7 miles.

The strong wind brought a number of boats to grief; Lohengrin

capsized and Concho withdrew to help her, Giggie parted her halliards and withdrew, and Tom God lost her rudder but was steered to a finish by her crew. The Clapham boat Chippewa made the best time, beating the fleet very easily. The official times were:

CLASS A—CABIN SLOOPS, 30FT. AND NOT OVER 35FT.			
Start.	Finish.	Elapsed.	
Idleran, W. Southwick.....	1 10 00	3 49 34	2 39 34
Chippewa, T. C. Field.....	1 10 00	4 10 00	3 00 00
CLASS B—CABIN SLOOPS, 25FT. AND NOT OVER 30.			
Chippewa, T. C. Field.....	1 10 00	3 29 42	2 14 32
Iona, W. H. Woodcock.....	1 10 00	3 32 00	2 43 00
Beatrice, W. F. Herbert, Jr.....	1 10 00	Withdrew.	
CLASS C—CABIN SLOOPS, 22FT. AND NOT OVER 25.			
Susie W., A. T. Duryea.....	1 10 00	3 56 25	2 46 25
Wahnetta, H. E. Doremus.....	1 10 00	3 59 32	2 49 32

Lark, E. G. Unit.....	1 20 00	2 54 00	1 34 00
Tom God, I. Cozzens.....	1 20 00	3 14 43	1 54 43
Presto, H. Watson.....	1 20 00	Withdrew.	
Meadow Hen, W. Hicks.....	1 20 00	3 08 55	1 48 55

The regatta committee included Messrs. I. R. Coles, chairman, Ward Dickson, Samuel Hewlett.

## Corinthian Y. C., First Championship Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 15.

The seventy-first regatta of the Corinthian Y. C., of Marblehead, was sailed on July 15, being the first championship race. The wind was strong S.W., with a sea, and all the boats were reefed. The times were:

SECOND CLASS.			
Length.	Elapsed.	Corrected.	
Susie, W. W. Keith.....	2 38 28	2 38 28	
Ariel, James Bennett.....	Disabled.		
THIRD CLASS.			
Reaper, H. P. Benson.....	2 23 37	2 20 23	
Reaper, G. L. Cochran.....	2 23 37	2 23 24	
FOURTH CLASS.			
Koorali, R. C. Robbins.....	1 14 10	1 14 10	
SPECIAL CLASS A.			
Kelpie, W. Bassett, Jr.....	1 21 31	1 14 31

Teal, C. F. Lee.....	1 33 30	1 21 30	
Edith, T. M. Wood.....	1 21 13	1 13 13	
Kraken, Percy Chase.....	1 19 00	1 19 00	
Bonita, C. O. Hood.....	1 17 22	1 10 22	

Knockabouts.

Betsy, Theodore Jones..... 1 17 52 1 11 52  
Nina, E. Y. C..... 1 18 01 1 14 01  
Pinta, E. Y. C..... 1 13 38 1 09 38  
Susan, H. Taggard..... 1 13 07 1 09 07  
Olaf, F. O. North..... 1 20 39 1 17 39  
Frances, G. H. Wheeler..... 1 18 40 1 12 40  
Jane, C. W. Parker..... 1 15 55 1 10 55  
Bob, Harding..... 1 24 27 1 24 27  
Carl, C. H. Foster..... 1 15 06 1 15 06

Ariel parted her peak halliards and withdrew. Freak parted her jib tack just as she neared the finish line a short distance astern of Reaper. The winners were: Second class, Susie, \$10 and a leg in the championship; third class, Reaper, \$10 and a leg; fourth class, Koorali, \$10 and a leg; special class A, Keewaydin, \$15 and a leg; special class B, Bonita, \$10 and a leg; Edith, \$7, and Kraken, \$7.

## Sippican Y. C. First Championship Race.

MARION—BUZZARDS BAY.

Saturday, July 15.

The first championship race of the Sippican Y. C. was sailed at Marion on July 15, in a strong S.W. breeze. The winners were: First, second and third catboat classes. All the boats started reefed. In the second class Gynnote gained from the start and Venture soon withdrew, leaving her to finish the course alone.

The best race was in the third class. Tycoon had a good lead at the end of the first leg to windward, and Doris was well up with Nobsca, but running home Nobsca outran the fleet and won handsly. Buzzard did not seem to understand that the starting time was taken from the gun and started three minutes late. With a good start she would have beaten Puzelle.

In the fourth class Cat and Edith did not have full crews and Squall had things all her own way. When Edith was about half way on the second round, one of her crew lost his hat, and she withdrew to recover it. Then she was about six minutes behind Squall and two minutes ahead of Cat. The scores were:

SECOND CLASS, COURSE FIFTEEN MILES.			
Length.	Elapsed.	Corrected.	
Gynnote, W. E. C. Enstis.....	23.3	2 21 32	2 00 39
Venture, J. D. Jenney.....	23.10	Withdrew.	
THIRD CLASS, COURSE EIGHT MILES.			
Nobsca, A. A. Beebe.....	19.11 1/2	1 38 22	1 13 42
Tycoon, J. L. Stackpole, Jr.....	19.10	1 29 50	1 14 50
Doris, John Parkinson.....	19.8	1 31 25	1 16 25
Puzelle, G. A. Shepley.....	19.8	1 33 10	1 18 11
Buzzard, A. B. Shepley.....	19.11 1/2	1 35 05	1 20 23
FOURTH CLASS, COURSE SEVEN MILES.			
Squall, J. G. Palfrey.....	16.11 1/2	1 33 40	1 06 25
Edith, J. Whiting.....	16.3	1 31 45	1 15 30
Edith, J. Whiting.....	17.0	Withdrew.	

Judges: J. C. Palfrey and F. W. Palfrey. Legs for championship won by Gynnote, Nobsca and Squall. E. F. Raymond has been elected secretary in place of G. G. Van Rensselaer, resigned.

## White Ladye.

Mr. OGDEN GOELLET, for some years owner of the schooner yacht Norseman, has chartered for period of five months, with privilege of purchase, the steam yacht White Ladye, owned for the past year by Mrs. Langtry, and the yacht is now in this country. Mr. Goellet has already had her under charter during the spring in the Mediterranean.

The Ladye Mabel, as she was originally named, was designed by W. C. Storey of London and built by Ramage & Ferguson of Leith, where she was launched on Jan. 12, 1891. The owner is Lord Ash, and the hull is of steel, with five bulkheads, the scantling exceeding the requirements of Lloyds, and extra strength being provided, as the yacht was intended for long voyages. She is 20ft. extreme length, 27ft. 2in. beam, and 16.45ft. depth of hold. Her engines are triple compound, 18, 27 1/2, and 47 1/2 h.p., and she has one very large single ended steel boiler with four furnaces, the working pressure being 160lb. The rig is that of a three-masted schooner, with pole masts. Her tonnage is 933, Thames measurement. There is one large deck house, and forward the yacht is elaborately fitted up with the usual saloons and staterooms, while in addition to the officers' and crew's quarters are other staterooms, the bachelors' quarters. The yacht is fitted with every modern appliance, electric lights, steam steering gear and capstans, ventilating fans, hot water pipes, etc. She was purchased by Mrs. Langtry last year and made her first voyage in the Mediterranean last winter, putting into Lisbon after some severe handling by the sea in the Bay of Biscay.

## Cypress Planking.

Editor Forest and Stream:

We have noticed an article in FOREST AND STREAM of July 22 in regard to cypress planking as follows: "The planking under water is all of cypress and there are no known instances where this wood has been used before for outside planking. The writer of that article is mistaken for we have built from 34 to 350 boats planked with cypress, the boats ranging from 34 to 35ft. in length, requiring about 300ft. to each boat."

HIGGINS & GIFFORD.  
GLOUCESTER, MASS., July 21.

## Royal Nova Scotia Yacht Squadron.

Though boasting of a comparatively small racing fleet, the Royal Nova Scotia Yacht Squadron numbers plenty of keen sailer, men, and racing plays quite an important part in the season's work. The record of the racing thus far is as follows:

Saturday, June 10, Capt. L. G. Russell's cup and squadron prizes. Race sailed, but all yachts competing were disqualified for the non-observance of club rules. The race to be resailed at a date not yet fixed.

June 17, 9 1/2 miles, weather fair, wind moderate south, starting gun 2:30.

Lenore, cutter, A. F. Buckley.....	27.00	1 59 13	4 29 13
Etienne, sloop, Rear Com. Butler.....	28.00	2 11 25	4 41 25
Valkyrie, sch., Lieut. H. E. Marsh.....	28.10	2 19 00	4 42 00
Mentor, cutter, R. R. Kennedy.....	29.00	2 37 20	5 03 19
Hildred, sloop, H. S. Jones.....	29.04	Did not start.	
Albatross, sch., F. K. Warren.....	32.06	Did not finish.	
Youla wins Lord Alex. Russell's cup (final win) and \$10, Wym \$10, Etienne \$5. Officers of the day: Vice Com. James W. Stairs and C. O.			

## Beverly Y. C.

The 199th regatta, third open sweepstakes, was sailed July 22, at Monument Beach in a strong S.W. wind. In second class Gynnote started off with the lead and held it. At windward mark Anonyma broke her boom in gybing, but kept on. All but Gynnote shook out reefs and Mist tore her sail so badly that she withdrew. Lestriss parted mainsheet. Gynnote, with a long lead, took things easy and did not shake out reefs. This proved a mistake, as the difference in the time of start and allowance gave prize to Ulla, subject to Gynnote's protest on her measurement.

In third class Gilt Edge was dismantled soon after start, but the other three made a very pretty race; Doris started 23s. ahead of Nobska and gained a little in windward work, but lost running home, completing first round with a lead of 45s. In beating back to Pines she lengthened her lead to 80s., but in the 1 1/4 mile run home Nobska reduced this to 23s. and won.

Nobska cannot point anywhere near the other boats, but reaches through the water faster than any 20-footer even in the bay.

## SECOND CLASS.

	Length.	Elapsed.	Corrected.
Gynnote, W. E. C. Eustis, B. Y. C.	23.09	1 55 41	1 43 02
Ulla, W. H. Winslip, B. Y. C.	22.08	1 56 37	1 41 37
Anonyma, F. L. Dabney, B. Y. C.	23.08	1 57 34	1 43 39
Agawam, J. G. Young, Jr., B. Y. C.	23.08	2 00 41	1 46 56
Mist, Geo. H. Lyman, B. Y. C.	23.09	Disabld.	
Lestriss, J. Crane, Jr., B. Y. C.	22.08	Withdrew.	

	Length.	Elapsed.	Corrected.
Nobska, A. A. Beebe, B. Y. C.	19.09	1 47 14	1 31 52
Doris, J. Parkinson, B. Y. C.	19.08	1 47 53	1 32 26
Puzzle, Wm. Amory, B. Y. C.	19.08	1 49 34	1 34 07
Gilt Edge, D. L. Whittemore, B. Y. C.	19.07	Dismasted.	

## FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Dawdle, R. S. Hardy, B. Y. C.	16.08	1 13 46	1 01 52
Cygnat, R. B. Fenner, Falmouth, B. Y. C.	16.10	1 14 51	1 03 07

Winners in Class 2, Ulla first, Gynnote second, Anonyma third; Class 3, Nobska first, Doris second; Class 3, Dawdle first. Prizes in second class subject to remeasurement of Ulla. Judges, J. G. Paley, W. Lloyd Jeffries.

The protests have been decided as follows: The buoy being the mark named in the intended cruise, and only a portion of the boats told of it, the intention of the station of that buoy remains the mark, and prizes are awarded to Gynnote, Anonyma and Agawam in second class, Doris, Gilt Edge and Puzzle in third class, Nobska being ruled out. Doris's second protest is disallowed. As, however, Nobska went round boat by order of regatta committee in charge, sailed longer course and came home first, and is ruled out for an error of the club and no fault of her own, a special prize of equal value with first prize is awarded her. For this Anonyma's prize is made equal with first prize, as it is possible the extra distance may have lost her the race.

W. L. J.

## Manchester Y. C.

The Minot's Ledge cup race was sailed on July 22. Course, from starting line in West Manchester Harbor to Egg Rock, leaving it to port, thence to Graves Whistling Buoy, leaving it to port, thence to Marblehead Rock, leaving it to starboard, thence to starting line; 29 miles. Weather, fair; wind S.W. and N.W. No time allowance—yacht for yacht:

	Length.	Start.	Turn.	Finish.
Yankee Maid, E. P. Stanley	18.08	8 20 50	12 20 02	2 42 01
Albatross, A. W. Craig	21.00	8 30 02	12 24 03	2 49 59
Wraith, A. W. Higginson	18.10	8 30 01	12 40 11	2 50 01
Hornet, Chas. Fackson	19.11 1/2	8 30 10	Withdrew.	
Suip, E. A. Boardman	16.10	8 30 03	Withdrew.	

A very good start was made, the Wraith and Albatross getting away well ahead of the bunch. On the first leg of the course the race was lost and won, and the winner has to thank the weather as when 5 miles of the first leg was over the Wraith was leaving the Yankee Maid 2 miles. For the Wraith and Albatross stood together. At last they split tacks, the Wraith going out after S.W. wind while Albatross and Yankee Maid stood in shore after the N.W., which prevailed in the air. The yachts rounded the first mark as follows: Yankee Maid, Albatross, Wraith. Suip had carried away her jib and Hornet her peak halliards, and both had withdrawn. Balloon jibs were set and carried till the yachts rounded Misery Island, when spinnakers were set to port.

Albatross protests Yankee Maid not rounding Marblehead Rock, decision has not yet been made but race will probably be resailed. Regatta committee: A. H. Higginson, A. W. Craig, Chas. A. Cooley. Judges: Max Scull, J. A. Burnam, Jr., P. T. Collins.

## Eastern Y. C.

On Aug. 28 the Eastern Y. C. proposes to hold at Marblehead a special race for schooners of the first class (over 75ft. l.w.l.) for a handsome cup, to be called the Weld cup, given in memory of the late commodore, by Mrs. Wm. F. Weld. Four yachts must start to make a race.

At the same time, there will be prizes for second class schooners, and for all classes of sloops, where three or more start; the amounts and classes, with other details, to be fixed at an early day.

The committee hopes to have a large list of entries in all classes, and especially the first class schooners, in recognition of the liberality of the gift.

On Sept. 2, the fleet will probably rendezvous at Marblehead for the annual cruise, and sail to the westward.

## A Prize for Model Yachts.

## Editor Forest and Stream:

I am very much interested in model, or miniature, yachts and their racing, as much can be learned from the little fellows that is of use in designing larger craft. That has been my experience, at any rate. I wanted very much to see the regatta of the American Model Y. C. that was sailed on Prospect Park Lake on Decoration Day, but another engagement prevented, and now I would like to make a proposition to this club, if possible, to arrange another race. I have had about nine years' experience in building and modeling boats, and lately have made several miniature yachts, all fast. My last one, some 45in. long on deck, made a 1/4-mile run in a stiff wind and high sea in a little less than 10m., close hauled. I would like to offer to the American Model Y. C. as a prize, to be sailed for some time during the month of August, a miniature yacht 50in. long on deck; the model will be fully rigged as a sloop, and to be finished very finely with light deck and mahogany trimmings. I build my models from lines, and frame and plank them the same as a large boat is built, using bent oak for frames and 1/4in. cedar for planking, screws being used for all fastenings. The shape of boat is on the same principle as Bouncer or Chippewa, but with round bilges, and more nearly resembles the finkeel boats, which are on much the same idea. I will guarantee that the boat will be a good one in every way, in fact, as good as I can build so far as work goes; I offer a boat I would not duplicate for \$50. I would like to see an inter-club race sailed at Prospect Park, with representative boats from some of the other model yacht clubs invited and competing, and should think it could be arranged.

GLENWOOD LANDING, L. I., July 18. G. G. CLAPHAM.

## YACHT NEWS NOTES.

A handsome naphtha launch belonging to C. H. Moss, a member of the Stock Exchange and a resident of Perth Amboy, N. J., disappeared on Wednesday night from her moorings at the Perth Amboy Y. C. Mr. Moss informed Inspector McLaughlin of his loss, and Detective Sergeant Hanley and Wade were sent out to look for the boat. After investigation along the river front, they got a clew from James Fleming, dock master at the foot of East Fifth street. Mr. Fleming was hailed on Thursday by a man in a launch, who wanted to sell the boat. The man said it was a deserted launch which he had found drifting, and he would like to sell it for \$250. Seeing at once that the boat was worth much more, Fleming accepted the offer, giving the man a \$2 bill to bind the bargain. On learning this, the officers explored the river for the boat, and finally found it tied up to the school ship St. Mary's, off the foot of East Fifth street. Asleep in the stern was the young man. When arrested he described himself as James Morris, 21 years old, of Newark. He said at first that he had owned the yacht for two years, but afterward broke down and admitted that he had stolen it from Perth Amboy and had been cruising about in solitary grandeur since then. At Jefferson Market Court yesterday he was remanded. The launch is valued at \$1,000.—N. Y. Sun, July 15.

The annual regatta of the Indian Harbor Y. C. on July 20 will be open to yachts of the following clubs: New York, Larchmont, Atlantic, Seawanhaka Corinthian, American (of Rye), Corinthian (of New York), New Rochelle, New Haven, Riverside, Field and Marine, Stamford, Douglaston, Knickerbocker, Hempstead Harbor, Sea Cliff, Horseshoe Harbor, Corinthian Mosquito Fleet, Staten Island, Cedar Point, Bridgeport Boating Association and the clubs of the New York Yacht Racing Association. It will be sailed in accordance with the racing rules of the Indian Harbor Y. C. under the direction of the regatta committee. The yachts will be classed by waterline length, the cabin yachts being measured by the Seawanhaka rule, and the open boats sailing on l.w.l. plus one-third overhang. The start will be made at 11 A. M. off Little Captain's Island. The regatta committee in-

cludes Frederic S. Doremus (chairman, 20 Nassau street, New York), Frank Bowne Jones, Richard Outwater. The steamer Crystal Steam has been chartered for the use of the club members and their guests, and will leave from pier foot of East Thirty-first street, New York, at 7:30 A. M. on the morning of the regatta. The steamer will land at the steamboat dock, Greenwich, at 10:15, and the Indian Harbor Hotel dock at 10:30, and will accompany the yachts over the course, returning to New York after the race.

Lloyd's Yacht Register for 1893 has just been received in New York, and is the same useful volume as usual. The list of yachts contains the names and particulars of 6,817 vessels, of which 3,417 are owned in Great Britain and 293 more in British colonies. Of the first number 2,603 are sailing vessels and 814 steam. The total tonnage of the sailing vessels however is but 59,643 tons, while the steamers show a total of 35,413 tons. The list shows quite a large number of yachts built this year in Great Britain, though many of them are of small size. The book is compiled with the usual care and the various tables are very well arranged. The rules for building are published in a separate smaller volume. The number of names of American owners among the permanent subscribers shows the estimation in which the register is held here. It is issued under the supervision of A. G. Dryhurst, the secretary of the society, and Mr. Thos. Congdon, of No. 1 Whitehall street, New York, is still the principal surveyor for the United States, and the New York agent of the society.

The Morgan boat shop at Noak has turned out to the last stage of completion two lobster boats that are a novelty in their way and embrace some very clever ideas. The boats, named respectively Bo Peep and Mizpah, look like the ordinary 30ft. jib and mainsail lobstermen that sail from that place in pursuit of the palate-tickling shellfish, but differ from them in the fact that they have a little boiler and engine in the cabin attached to a screw. Smokestacks would be in the way, so the mast is made of steel and hollow, and through that the smoke from the fire finds its way up some 25ft. to the open air. Any one who has tried knots that pulling lobster pots by hand is pretty hard work. So the crew of this craft just connect the line attached to the pot to the engine, then it is simply press the button, the screw does the rest, until about two miles of line come up and finally the ensnared lobsters. The boats promise to be a big success.—New London Day.

At the dinner of the Imperial Yacht Club in Kiel on July 9, Emperor William announced his intention to found a Hohenzollern prize to be awarded annually at the club's regatta. The conditions of entry will be that the winning yacht shall be built within the year since the last race in a German shipyard from German materials and after German designs. According to the size of the victorious yacht, the prize would be 4,000, 3,000 or 2,500 marks. The Emperor has already founded a Meteor Goblet prize for an annual race between Kiel and Travemuende. The competitors will be yachts of the first and second classes. The owner of a first or second class yacht can become owner three times by winning three of these races. The two prizes take their names from the imperial yacht Hohenzollern and the Emperor's racing yacht Meteor.

The Royal Canadian Y. C. sailed a race on July 15 for its skiff class, the wind being fresh S.W. at the start, falling during the race. The times were:

	Start.	Finish.	Elapsed.
Ole Girl	3 00 00	4 25 39	1 25 39
Viola	3 00 00	4 40 27	1 40 27
Uneasy	3 00 00	4 43 34	1 43 34

The Toronto Skiff Sailing Club sailed a race for the 19ft. class on July 15, the times being:

	Start.	1st Round.	2d Round.	3d Round.	Last Leg.
Ethel	3 10 00	3 53 50	4 44 15	5 24 20	5 45 06
Rambler	3 10 00	3 55 50	4 46 45	5 31 50	6 03 15
Zephyr	3 50 30	4 45 50	Withdrew.		

The next race will be sailed on Saturday, July 29, and will be for 16-footers.

Far up in the northwestern corner of the United States, in Port Townsend, Washington, a yacht club has just been organized by the aid of the Key dock Y. C. The club starts with 60 members, the officers being: Commodore, John Barneson; Vice-Commodore, Frank Perrott; Rear Commodore, J. A. Bartlett; Fleet Surgeon, C. M. Baldwin; Measurer, C. J. Leighton; President, J. B. Libby; Vice President, B. A. Burnett; Secretary, J. W. Jones; Treasurer, A. C. Phillips. The regatta committee includes K. T. Mayo, F. L. Macondray and J. R. Mason. The club will hold races throughout the season.

The new Fife 20-rater Zioita, which from all accounts was intended for a fast cruiser rather than an out and out racer, is showing good speed and is likely to take a foremost place in the 20 rating class. Another new 20 is just completed, the Lady Honor, designed by C. E. Nicholson for Lord Dudley and described as a bread tray. Mr. Nicholson has been very successful in the smaller classes, making quite a hit last year in the 5-rater Dacia, but the new boat is his first venture in the larger classes.

Yampa, schr., is now under charter to Wm. C. Whitney, of New York.

The Knickerbocker Y. C. sailed a special race on July 15 for the cabin cats of Class F which did not finish in the June regatta. The wind was fresh from S.W. The times were:

	Start.	Finish.	Elapsed.
Melita	3 24 00	5 00 20	1 36 20
Willard	3 23 30	5 23 20	1 59 50
Torino	3 23 30	5 25 00	1 51 30

H. J. Gielow has completed the designs for a cruising 25-footer for Rev. Lindsay Parker, of St. Peter's Church, Brooklyn. She will be 36ft. 6in. over all, 24ft. 8in. l.w.l., 11ft. 6in. beam, 10ft. 3in. beam at l.w.l. and 3ft. 8in. draft. The interior will give a good deal of room, being carefully arranged.

Mr. Edgar Scott, of the steam yacht Sagamore, has purchased of Summers & Payne a handsome new half-rater designed by Arthur E. Payne and just completed. The boat will hang at the davits of the steam yacht and be used for sailing and racing.

Mr. F. W. Flint, of Larchmont Y. C., has given a cup costing \$100 for cabin catboats of 25ft. l.w.l. and under with a second prize of \$50 if five start, the race to be sailed off Larchmont on July 29.

Wild Duck, steam yacht, J. M. Forbes, has returned to Boston from her cruise to Chicago. The trip occupied nineteen days, and two weeks were spent at the Fair.

Whitewings, sloop, of Toronto, was partly stove in while entering the Tuscarora River on July 4, and is now at Buffalo for repairs.

Desiree, sloop, has been chartered through Hughes's Agency to Edwin B. Sears, of Buffalo.

## Canoeing.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

## FIXTURES.

JULY.	AUGUST.	SEPTEMBER.
15-30. W. C. A. Meet, Ballast Island. 29-Aug. 5. Owanux, Camp, Mer-29. Red Dragon, Delaware River.	11-12. N.W.A.R.A., Canoe Races, 11-26. A. C. A. Meet, St. Lawrence Detroit.	2. Orange An., Arlington, N. J. 4. Holvoke. Fall, Holvoke, Mass. 4. Ianthe, An., Passaic River. 16. Red Dragon, Delaware River.

This is a world of trouble and sorrow, and now it is the editor's turn; he has again come within range of Mr. Vaux's sarcastic pen. Mr. Vaux's opinions as to the infallibility of the A. C. A. officers are well known to our readers; but as regards the facts which he mentions in support of them we must differ with him, having been present at the early meets at Lake George. Through the earnest efforts of Mr. Bishop and other officers and members of committees the arrangements in the first two years were specially good. As the Interstate Commerce law was not then in existence, much work was necessary to obtain reduced rates and free carriage of canoes, but the arrangements then made will compare favorably with any later ones. Through Mr. Bishop the canoeists were boarded at Crosbyside for the nominal charge of twenty-five cents per meal, and in the second year, on Lorna Island, a log house was built as headquarters, mess shed built and run, with a fairly good table, the noon meal being taken at Crosbyside. The Association fortunately had not then ac-

quired a luxurious taste for tent floors, and none were provided, but the general arrangements of mess, railroads, etc., were very satisfactory.

One source of trouble in the case of the late meet was that some of the officers and committeemen for whom Mr. Vaux speaks did little and others did nothing, so that those who, including the Vice-Commodore, really did work, had their labors doubled or trebled, and even then much was badly done. Without attempting to argue as to the exact responsibility of unpaid officers, we still maintain that it is unfair to the members who attend the meets to start them on their journey in the belief that certain arrangements have been made, leaving them in the end to find that whether, for good reasons or bad, the plans of the officers have miscarried, and that they must get to camp as they can. This was done at Bow-Arrow Point in 1887, at Stave Island to a certain extent in 1889, at Jessup's Neck in 1890, at Willsboro Point in 1891, and yet the Atlantic Division profited nothing by the experience. If it is necessary or desirable to locate the camp in a distant place that men must reach by their own efforts, then they should be notified in good season of the exact state of the case, and the phantom steam launch which none can ever find should disappear from the programmes of the transportation committee, where alone it has existed.

The latest announcement of the transportation arrangements from the American side to the A. C. A. camp promise poorly, as the steamer will only run five days a week, omitting the very days which are most important, Sunday and Monday. The Saturday night trains from Boston, New York and Albany, carry more men to the meet than on any other day, and naturally all will wish to go by way of Clayton, as the shortest and most convenient. This route is now out of the question on two days of the week, both going and returning. The route via Cape Vincent is slower and involves the waste of some hours at Kingston, and a late arrival in camp. A man who leaves New York at 7 P. M. can be in Clayton by 5:30 the following morning, and it ought to be possible for him to cover the remaining 15 miles in a couple of hours and have his tent pitched by 10 A. M.

The sailing war canoe is a new departure, but the Crescent Athletic Club has just purchased one with two sails.

AFTER the very full and voluminous reports which our Western correspondent has furnished for two years of the Western Canoe Association meet, we were prepared for a glowing account of the glad return to Ballast Island in the Columbian year. It was with something of a shock that we read the brief telegram from Mr. Hough, which we print in full. Such a meet can do little good to the Association, and it now remains for the new officers to set to work earnestly to put matters on a better footing for the future. After the experience of last year in a new location, many were opposed to the return to Ballast this year, but the matter was forced by a few who threatened that if the meet were held anywhere else they would not play. As events have proved, it was unfortunate for the Association that the majority submitted to this sort of argument. The West is a big place, and the Western Canoe Association might be a great deal bigger than it is if a wise and liberal policy had been followed from the start.

## The Atlantic Division Meet.

## Editor Forest and Stream:

Two recent editorials in your paper have scored the officers of the Atlantic Division for various offenses in connection with the division meet, and I deem it a good chance, with your permission, to get in a whack at them myself. Not being able to attend the meet, naturally I was very anxious to hear all about it, and I turned eagerly to your paper for the full details of the doings and races. Imagine my disgust at the first editorial I read, but an editorial on bad management, and the next week's issue carried on the managerial discussion and omitted all news. Some officer is to blame for this, and I want the responsibility placed. Those who did not attend the meet, and many of your canoeing readers did not, are vastly more interested in what the officers and men did do at Chimmion's Island than in what they failed to do.

Another point: In the army the officers are in command and are obeyed. When any disciplining is to be done they do it. In the A. C. A. the members discipline the officers, the members' wants and wills are law and the officers are unpaid servants, I may say slaves. This is all wrong. We must get officers who can command and not make excuses and ask for pardon and mercy. Can't a man be found who will stand up and really govern the members, and not meekly do as he is told, and if the task imposed is greater than he can bear, apologize for not being superhuman?

The fault is all with the officers and always has been. They have been indulgent parents and the child has been spoiled. What can you expect under such circumstances? Even the editors have been indulged to such an extent in former years that if they are placed out of reach of an electric button for a few hours at a local meet they feel there is criminal negligence on the part of those in command, and there is no hesitation about saying so.

Contrast what was expected by the members of the officers in the early days at Lake George. The dues were the same then that they are now. There were no transportation committees, and each man got to camp the best way he could—he generally paddled there. There were no camp site committees to furnish tent floors and landing skids at cost. There was no caterer and each man cooked his own food—and provided his own supper as best he could. There was no ladies' camp, in fact, nothing but an island which three of the members owned and allowed the A. C. A. to use. Did the members kick? Perhaps they did, but not the officers. If things went wrong they kicked themselves. It is about time the abused officers turn and do a little kicking themselves, and I for one hope the first man they jump on with both feet will be the one who is responsible for the lack of a report of the meet—the columns of FOREST AND STREAM.

NEW YORK, July 22. O. BOWYER VAUX.

## Western Canoe Association Meet.

BALLAST ISLAND, Lake Erie, July 24.—There are 20 canoes here, but the interest is not intense. Only one officer of the association, the secretary, is here. No complaints even this are undisputed. The racing has developed no very great interest. F. B. Huntington, of Milwaukee, won the trophy race. Nat. Cook, of Chicago, won the Longworth cup. Emil Hansen, of Milwaukee, won the Gardner cup. The latter race concluded late Saturday. The weather is pleasant and there is a good sailing wind. The attendance is from Milwaukee, Detroit, Cincinnati and Dayton mainly. Chicago has only one canoe here. This seems an off year and much discussion prevails as to causes and remedies. At the annual meeting only 17 members were present. O. A. Woodruff, of Dayton, O., was elected commodore, F. B. Huntington, of Milwaukee, Vice-Commodore; L. K. Liggitt, of Detroit, Rear Commodore; James Gardner, of Cleveland, Secretary-Treasurer; Executive Committee, T. J. Kirkpatrick, of Springfield; G. B. Ellard, of Cincinnati; S. B. Mettler, of Jackson, Mich. Mr. E. Hough, of the FOREST AND STREAM, was elected an honorary member. The question of allowing standing rig in Class D received discussion.

E. HOUGH.

## A. C. A. Transportation.

According to the latest arrangements the Empire State does not run from Clayton to Kingston on Sunday or Monday. Members coming to camp via N. Y. C. or R. W. & O. will therefore go via Cape Vincent on those days.

The times of leaving New York and arrival at Clayton, Cape Vincent and camp are as follows: Via Clayton: Leave New York 7:30 P. M. (except Saturday and Sunday), arrive Clayton 5:45 A. M. Leave Clayton 9:50 A. M., arrive Brophy's Point 11:30 A. M. Via Cape Vincent: Leave New York 9:15 P. M., arrive Cape Vincent 9:50 A. M. Boat leaves Cape Vincent on arrival of train reaching Kingston about 12 M. Leave Kingston 4 P. M., arrive Brophy's Point 4:30 P. M.

## A. C. A. Membership.

EASTERN DIVISION: Charles T. Rogers, Boston, Mass. Northern Division: A. J. Watson, W. H. N. Taylor, A. F. Rooney, Cataract C. C. Kingston. Central Division: Wm. R. Nichols, James Burton, John C. Houghton, Dr. Wm. Halles, Albany, Albany, N. Y.; Colton Woolworth, Castleton, N. Y.

**Excelsior Rifle Club.**  
This club is out with programmes for its third annual prize shoot, to be held in Ambruster's Park, Greenville, N. J., on Friday and Saturday, August 25 and 26. There are 15 (cash) prizes on the ring target from \$50 to \$25. 10 prizes on bullseye target from \$20 to \$5. The regular weekly practice shoot the following scores were made:  
Ward.....22 19 22 15 22 25 24 21 23 21—214  
P. Hansen.....21 25 24 17 20 19 20 19 12—200  
Wm Weber.....21 21 20 21 20 21 14 17 19 24—198  
Hughes.....19 18 15 17 23 20 16 19 22 16—181  
Distance 300 yds.; German ring target.

**Rifle Notes.**  
The New York Central Corps, Capt. A. Richter, will hold a two days' festival in Washington Park on Wednesday and Thursday, Aug. 3 and 4.  
The New Jersey Schuetzen Association will hold a festival and prize shoot in Ambruster's Park, Greenville, N. J., on Monday, Aug. 7.  
The New York City Corps, Capt. C. Rehm, will hold its monthly outing and practice shoot in Washington Park on Friday, July 28.

**Turtle Bay Rifle Club.**  
The weekly shoot July 21, was devoted to a team match between six members of the club; 10 shot scores, 3 to count:  
E. Jautzer, 247 244 243—734 J. Ochs, Jr., 246 244 245—735  
Walter, 240 246 240—726 O. H. Plate, 239 239 235—713  
Krampert, 232 240 241—713 J. F. Cberle, 234 236 239—699—2147

# Trap-Shooting.

All ties divided unless otherwise reported.

## FIXTURES.

If you want your shoot to be announced here send in notice like the following:

- Aug. 7-8.—Pier Gun Club tournament, at Atlantic City, N. J.
- Aug. 7-12.—Arkansas State Sportsmen's Association tournament, at Little Rock, Ark.
- Aug. 9-11.—Missouri State Amateur Shooting Association, at Paris, Mo.
- Aug. 16-18.—Coney Island tournament at Cincinnati, Ohio.
- Aug. 16-18.—Interstate Manufacturers' and Dealers' Association's 10th tournament, at Charlotte, N. C.
- Aug. 22-25.—Third international live bird and target tournament, at Des Chêres-les-Ka Island, Detroit, Mich.
- August.—Manufacturers' Trap Shooting Association tournament, at Wheeling, W. Va.
- August.—Keystone Target Company, seventh annual tournament, at New London, Conn.
- Sept. 4.—Frankfort (N. Y.) Game and Fish Protective Association tournament.
- Sept. 4.—Endeavor Gun Club tournament, on Al Heritage's grounds, Marion, N. J.
- Sept. 14-15.—Riverside Gun Club's second annual tournament, at Red Bank, N. J. John P. Cooper, Sec'y.
- Sept. 26-30.—Pennsylvania State Sportsmen's Association tournament at Harrisburg, Pa. H. M. F. Worden, Cor. Sec'y.
- September.—Manufacturers' Trap Shooting Association tournament, at Columbus, Ohio.
- October.—Manufacturers' Trap-Shooting Association tournament, at Allentown and Bethlehem, Pa. (combined).
- Oct. 19-20.—West Newburg Gun and Rifle Association fall tournament, at Newburg.

## DRIVERS AND TWISTERS.

The annual summer tournament of the Reading Shooting Association to be held at Harry Matz's Three-Mile House, Shillington, Pa., on August 15 to 18 inclusive, should attract a large attendance, judging from the programmes of events. Each day there will be six 10-target events, 20 targets, 15 target events, \$1.50 entry; one 20 target event, \$2 entry and one 25 target event, \$3 entry. On Tuesday and Wednesday each there will also be an event at 50 targets, \$5 entry. On Thursday there will be an event for teams of three men, each at 25 targets per man, \$7.50 entrance per team, and on Friday one for teams of six men each, 25 targets each, \$10 entry per team. The new Keystone expert trap and Keystone targets will be used. All shooting will be rapid-fire, known traps and angles, two sets of traps to be used. The team races will be open to teams from any regularly organized gun club in the country, all shooters to reside in the State where their club is located. In each team race \$10 will be added to the purse and \$5 will be added to the purse in each of the 50-target events. The shooter making the longest run of breaks during the tournament will receive \$5, and \$3 will be given for the second longest and \$2 for the third longest string.

The fourth annual tournament of the Union Rod and Gun Club to be held at Milford Center, O., Aug. 9 and 10, promises to be a big success. Applications for programmes are coming in fast and we have every reason to believe that there will be fully fifty shooters present. At the last tournament there were over forty. The programme is now ready for mailing and will be gladly mailed to applicants. The programme announces ten events each day, the entrance ranging from \$1 to \$3. Expert traps will be used, sprung by electric trap pull, and \$1 handicap will be used, thus placing all shooters on an equal footing. The grounds are among the finest in the State, with plenty of shade in rear of score and an open background. This shoot will positively be held, rain or shine, as there will be ample covering to protect shooters from sun or rain. Milford Center, O., is located on the P. C. O. & St. L. and C. C. C. & St. L. R. R., twenty-eight miles from Columbus and Springfield. For programme and other information address C. W. Toony, Irwin, O., who has the management of the tournament.

The committee in charge of the Pier Gun Club tournament to be held on Young & McShea's Pier, Atlantic City, N. J., on August 7 and 8, have announced the following attractive programme: First day, 10 targets, \$1 entry; 15 targets, \$1.50; 10 targets, \$1; 20 targets, \$2; 10 targets, \$1; 50 targets, \$5; 10 targets, \$1; 20 targets, \$2; 15 targets, \$1.50; 5 pairs targets, \$1. Second day, 10 targets, \$1; 15 targets, \$1.50; 10 targets, \$1; 20 targets, \$2; 15 targets, \$1.50; 10 targets, \$1; 20 targets, \$2; 15 targets, \$1.50; 5 pairs, \$1. Shooting will begin at 9 A. M., each day, one-half a cent per target will be paid (or average money each day in events 2 to 9 inclusive. "Old Father Time" Rainbow Thurman will be general manager and hustler.

The Sheboygan (Wis.) Gun Club will hold a tournament on Aug. 4 and 5. The first day's programme includes five 10-target events, three 15-target events and two at 20 targets each. In one of these latter a purse of \$40 is guaranteed. On the second day there will be four 10-target events, three at 15 each and three at 20 each, one of these latter with a \$50 guarantee. On the third day there will be four events at 10 targets, three at 15 targets, two at 20 and one at 25 targets. In one of the 20-target events there will be \$75 guaranteed.

The Myrtle Park Gun Club of Irvington, under whose auspices will be held the August tournament of the New Jersey Trap-Shooters' League, has fine grounds within ten minutes walk of the Irvington Hotel. On the day of the shoot they will have a stage running between the hotel and the grounds. The September shoot, which will end the series, will be held under the auspices of the Boiling Springs Fish and Gun Club, at Rutherford.

Wheeling, W. Va., will be the center of attraction for target shooters on Aug. 1 and 2, when the Manufacturers' Trap-Shooting Association will hold a tournament on the grounds of the Island City Gun Club, on Wheeling Island.

The Eighth Ward Shooting Association, of Reading, Pa., which has shooting grounds on the north of the city, has elected Harry Schwartz President, Albert Yeager Secretary and Geo. M. Rhodes Treasurer.

The Climax Gun Club will hold a two-days' tournament on its grounds near Fanwood station, N. J., in September. One day will be devoted to targets and one to live birds.

The Lake Geneva (Wis.) Gun Club will hold an open to all tournament, Aug. 11 and 12, during the annual regatta of the National Association of Amateur Oarsmen.

The Charlotte (N. C.) Gun Club anticipates a big attendance at the tournament of the Interstate Manufacturers' and Dealers' Association, on Aug. 17 and 18.

After the Hoffman-Canon match at Marion Mr. Canon offered to make another 50-bird match for \$200 or more a side, but Mr. Hoffman declined for the present.

The North Reading (Pa.) Gun Club has elected the following temporary officers: President, Daniel Smith; Secretary, Bert. Chadwick; Treasurer, I. S. Clous.

The Yellowstone Gun Club, of Livingston, Mont., will hold a tournament on Aug. 4 and 5, and on the 6th will run a fishing excursion up the Yellowstone River.

The Columbia Gun Club, of Lancaster, Pa., have secured new grounds at Chickie's Park, where they will erect a club house.

Leavenworth, Kans., is to have a gun club, with finely equipped shooting grounds and a modern club house.

C. H. TOWNSEND.

## Hoffman Defeats Canon.

On Friday afternoon, July 21, about one hundred lovers of trap-shooting gathered on Al Heritage's grounds in Marion to witness a match at 50 live birds each between Wm. S. Canon, the one-armed shooter of Newark, N. J., and John W. Hoffman, of German Valley, N. J. The match had been made several weeks before, Mr. Hoffman being the challenging party, the match being made through the trap editor of Forest and Stream, who acted also as stakeholder. Several months previous to this the two principals had taken part in a live-bird sweep on John F. B's grounds and got into a tie, which Mr. Canon proposed they should shoot off, niss-and-out. Mr. Hoffman declined to do this, whereupon Mr. Canon expressed dissatisfaction at being obliged to divide the purse. Mr. Hoffman did considerable thinking over this, and being rather sensitive, he concluded that Mr. Canon had cast a reflection upon his skill and nerve, and the challenge resulted. The match was under Hurlingham rules, for \$100 a side, loser to pay all expenses.

The start was announced for 1:30 P. M., but upon reaching the ground and opening his gun ca. Mr. Canon found, much to his disgust, that he had left his fore-end at home. The only thing to do was to send for it, so Mr. Wm. G. Hollis, the well-known Harrison member of the Newark Gun Club, volunteered to take a trip to Newark to get it. Now, the Port and Newark Railroad is in the lower portion of Newark, while Mr. Canon's domicile is in the extreme upper portion, so that Mr. Hollis did not get back to the grounds until close to 4 o'clock. In the meantime the crowd had good naturedly passed the time without murmuring at the delay. In the party were J. L. Smith, of Hackettstown; Charles Smith and Dan Terry, of Plainfield; E. O. Geoffrey, W. G. Hollis, G. L. Freche and C. M. Hedder, of Newark; "Uncle Ben" Bowers, of Jersey City, and T. W. Morley, of Paterson. Alderman Keogh, of Marion, presided over the lunch and refreshment counter. Al Heritage and J. L. Smith furnished the birds, which were, with a few exceptions, as fine a lot of summer birds as we have seen for many a day. But few had to be flushed, and even these, once they caught their wings, proved to be strong flyers. The majority were prompt to start, and a large number were possessed of the knack of doing some ugly tricks.

The start was made at 3:42 P. M., "Uncle Jake" Pentz being referee, Major J. M. Taylor and C. H. Townsend scorers; Dan Terry was trapper and Al Heritage, Jr., handled the birds. Canon was first to the score and he opened by losing a fast right-quartering incomer which put on all the curves known to science. Hoffman opened by killing a hoverer. Canon went along and lost six out of his first ten birds, Hoffman gained two. Canon seemed to be slow, the first half of the race ended with 20 kills for Hoffman against 14 for Canon. On the second half Hoffman got on a ragged streak and killed only four out of his first ten. Canon killed eight and thus got within two birds of Hoffman. The handicap, however, was too heavy and Hoffman pulled out the bird, bringing the gun to 32. On the last round Canon killed 31 birds and Hoffman 30, Canon thus losing the race on his first seven rounds.

Neither man was up to his usual form, this being particularly true of Canon. Hoffman is weakest on birds bearing to the right, the score showing that of the 14 birds he lost 9 took this flight. The difference in the style of the men is very marked. Hoffman leans far to the front, with his right arm and shoulder dropped, brings the gun to his shoulder for a shot, drops the butt perhaps half calls "pull" and instantly brings the gun to his shoulder. Canon, on the other hand, stands erect, with the butt of the gun held between the right arm and breast, and after calling "pull" does not throw the gun to his shoulder until the bird is on the wing. Having only one arm with which to control the gun it invariably leaves his shoulder upon the discharge of the first barrel, rendering it extremely difficult to put in a second barrel. He does so, however, in great shape, and some of his second barrel kills are phenomenal. In this race he not only had the handicap in regard to arms and losing 6 out of his first 7 birds, but had as well the hardest birds as a whole.

Both men did some fine killing, the particularly good ones being as follows: Canon, 4th, fast bird, went to fence; 10th, 11th and 17th, twisters and fast birds; 19th, very fast and a fine second barrel kill; 34th, fine first on fast bird; 45th, awfully fast bird, hit by second at full H. Hoffman, 5th, a hot one and a fine first; 18th, elegant second on a fast bird; 30th, ditto.

The score of the shoot follows. Both men shot at 90 yds. rise:

Trap score type—Copyright 1898, by Forest and Stream Publishing Co.	
1 3 1 5 3 2 3 3 5 3 4 3 1 3 1 5 3 3 4 1 1 3 3	
W S Canon.....0 0 0 2 0 0 1 1 2 1 2 0 2 2 2 2 1 0 0 1—14	
4 2 3 1 1 4 2 3 3 3 5 2 4 1 2 3 5 4 3 2 4 4 3 4	
H S Hoffman.....1 2 0 2 2 0 0 1 2 1 2 0 2 2 2 2 2 2 2 2—18-32	
4 1 3 4 2 3 2 3 2 5 4 3 2 5 3 3 4 4 4 3 5 1 5	
J W Hoffman.....1 1 0 2 1 1 2 0 2 1 2 0 1 2 1 1 1 1 1 1—20

A few birds were left after the match, and these were shot off in a miss-and-out, \$2 entry, the result being as follows, Geoffrey and Canon dividing the pot:	
Geoffrey.....221225 O Smith.....1110	
Hoffman.....0 J L Smith.....1110	
Canon.....1212230 Hollis.....0	
Morley.....110 C. H. TOWNSEND.	

## The Climax Monthly Shoot.

The rapidly growing Climax Gun Club, of Union County N. J., held its second monthly shoot on Tuesday, July 18, at Brenner's Grove, South avenue, Fanwood, a dozen members being on hand. The day was intensely hot, and the splendid shade trees which surround the hotel were a boon to the shooters, as were the comfortable hammocks. Herr Brenner had a small assortment of cooling lemons on hand, beside which he supplied the shooters with cold lemonade, to which all hands did full justice. The club shoot was an interesting one, and first place was tied for by the limit man and one who shot at 30 targets.

The scratch men shot at 25 each. The scores:	
J Darby (35 shot at).....011011101101101110101010011—23	
A Frenz (33).....010010011011000011101100001—15

## Union Hill.

The summer monthly shoot of the Union Hill Gun Club was held at their grounds at Gutenberg on Wednesday, July 19, 10 live birds each for club medal of 1st and 2d class—won by N. Linsley, 1st class. N. Crusius, 2d class. Mr. Crusius, the baby member, shot remarkably well for the first time at live birds, and also the first time as a member of a gun club. Messrs. Waller and Volk, who were off in the shoot, tied for the leather medal. Match at 25 and 25 yds., 10 live birds: C Woolmington.....201102211—7 P Sullivan.....000211231—7 F W Binder.....101010110—8 J Berkley.....001210101—8 J W Jler.....000010101—8 M Linsley.....10111111—9 J Woolmington.....00010102—4 N Crusius.....0100111130—6 A J Volk.....001020030—3

## Garfield Trophy Shoot.

## Two Minnesota Shots.

ST. CLOUD, MINN., July 18.—The first of the series of three events between Mr. William Thielman, of this city, and Mr. C. N. Lafond, of Little Falls, the marksman, took place at Little Falls yesterday. The shoot was 100 singles each, unknown trap, the man who pulled the traps pulling any one of the three he chose to. The shoot was won easily by Thielman, he making a score of 91 to Lafond's 88. Quite a crowd witnessed the defeat of the Falls man, and the next event of the three will take place in this city Thursday, July 27. Each is for \$25 a side. The following is the score by innings:

## FRONTIER HOUSE,

Morristown, N. Y.

This house, located on the St. Lawrence River, is but a short distance from Black Lake, so long known for its celebrated bass and pickerel fishing.

JAMES F. O'LEIGHAN, Proprietor.

## Thousand Islands. River St. Lawrence.

## MARSDEN HOUSE.

Good bass, pickerel and masacalonge fishing. House pleasantly located. Rates, \$2.00 per day.

G. A. MARSDEN, Proprietor.

## EARL HOUSE, Sackets Harbor, N. Y.

Accommodates 40. Excellent bass fishing. One of the best points for duck shooting in season. Located on line of Rome, Watertown & Ogdensburg R. R.

R. H. EARL, Proprietor.

## FOREST AND STREAM

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

## CORRESPONDENCE.

Subscriptions may begin at any time. Terms: For single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of new dealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: \$5 per year, \$2.50 for six months.

## ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words for the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by money, or they will not be inserted. Reading notices \$1.00 per line. Only advertisements of an approved character inserted.

## DOLLARS AND CENTS.

THE Yellowstone National Park is to-day the center of large game abundance in the United States. If a circle whose radius is 200 miles be drawn about a center where the boundary lines between Idaho and Montana meet the border of Wyoming, it will include more of the great game of this country and in richer variety than any other similar area within our borders. Nearly a dozen species occur in more or less abundance here, and if the integrity of the National Park is preserved will continue to be abundant long after sportsmen of the present generation have been gathered to their fathers.

Without considering the Park, which is useful as a source of supply, there are still many localities within the territory referred to where game is sufficiently abundant to afford hunting which will satisfy the most ardent rifleman; but that game is decreasing with shocking rapidity on account of the absolute disregard of the game laws which is shown by hunters who kill for hides and horns, either for the general market or to supply taxidermists. This matter is one which on sentimental grounds touches all sportsmen, but for the citizens of Montana, Wyoming and Idaho it has a nearer interest. It touches or soon will touch their pockets.

The hunter from the East who wishes to spend a month or two hunting big game in the Rocky Mountains is well aware that nowadays he cannot do this for nothing. He knows that he must pay his guide, his packers, his cook; that he must hire from five to ten saddle and pack horses; that supplies of food must be purchased from the stores of the town from which he starts out. For all these things coin of the realm or good greenbacks must be exchanged. After the intending hunter has corresponded with the man who proposes to furnish the outfit and has got his prices, he tots up the figures and realizes that besides his railroad fare, sleeping car and other expenses of reaching his starting point, he will have to spend from \$400 to \$1,000 for the trip.

Now the average man desires to receive some value for his money. Just as if he pays a fair price for a pair of shoes, he wants to feel sure that they will last a reasonable time, so if he hires a guide and outfit for a hunt, he wants to feel a certain confidence that he will see some game. If he is after elk he will not spend his good money to go into a country from which owing to the depredations of illegal hunters the elk have all been killed off. If he corresponds with an honest guide, who will set before him a fair statement of the game conditions, he is likely this summer to find the prospects for game very much less than they were a few years ago, very different from the notions which he has gained from books and from newspaper articles, most of which refer to the more or less distant past. Thus the intending excursionist is likely to be discouraged and to turn his thoughts in other directions, while the conscientious guide by his honesty loses the work which might have yielded him a fair profit. People who are thus discouraged are likely to go to Canada or else to some point where other guides promise great things in the way of game.

It need hardly be said that it is a good thing for any town to have a stranger come within its borders and

spend \$500 or \$600, which, but for this visit, would not have been put in circulation there. It is not only the railroad which brings the stranger, and the guide who takes him out, that are benefitted, but the hotel where he stops, the store where his provisions are bought, the saddler where he purchases his spurs, and every other store is benefitted. The money which he spends passes from hand to hand, and helps each man in the community to pay his debts or in some way add to his comfort. It is a lubricant which makes the wheels of trade run so much the more easily in this particular place.

It might be thought that people like those dwelling in the new States of the Rocky Mountains would realize all this, and would see that it was for their interest to attract within their borders as many people of this class as possible; that it is more for the benefit of the State and of the community to have a man spend several hundred dollars for the sake of getting half a dozen elk, deer or sheep, than it is to have one of their own citizens earn and spend \$15 or \$20 in the same way, but in violation of the law.

We have no doubt that every head of wild game killed by an outsider brings into these States \$100, while the illegally killed game brings in little or nothing.

The citizens of these States should look at this matter purely from a business point of view, from the standpoint of dollars and cents. No people in the world are keener business men than the citizens of these communities or quicker to see a business point. Is it not worth their while as business men carrying on affairs in the towns of these new States to consider this question and to take an active interest in having the game laws enforced, and in frowning down all violations of it? The business men can influence the newspapers, and in a short time public opinion can be so altered that men who have been accustomed to violate the law would no longer do so, finding themselves in danger of prosecution on the one hand and on the other without a market for their skins.

Such a change would put an end to the violations of the law encouraged by certain taxidermists who put a premium on illegal killing by purchasing specimens which they know have been secured in violation of the statutes.

Although no statistics are at hand, it may be safely said that the money spent by hunters in past years in the three States named has mounted up into the hundreds of thousands of dollars; but this will not continue unless there is big game enough left to attract the hunter. Nowadays we hear almost as much about men going to Canada or Newfoundland for moose, deer and caribou, as we used to about those who wanted elk, sheep and antelope in the Rockies.

The residents of the new States should not allow the goose which has been supplying them with golden eggs to be killed by their law-breaking fellow citizens.

## SNAP SHOTS.

THE correspondent who writes of the relations of farmers and town sportsmen undoubtedly represents with substantial accuracy the views of some people who are not in sympathy with sportsmen nor with our fish and game protection codes. Nevertheless, there is not room for a wide difference of opinion on most of the points he makes. We will all agree that the sportsman's right to trespass and to tear down fences is dubious, and that a farmer has an unquestioned right to save himself from ruin by destroying the game that is eating him out of house and home. And we will all agree that it is exceedingly unfortunate that game and fish laws should be regarded with disfavor as being class laws, intended for the sole benefit of the town sportsmen. On the other hand, and there is abundant reason for satisfaction here, this mistaken notion of "class" legislation is sorely on the decline. The farmer, the land owner, the dweller in rural districts, the community at large is coming to a clearer understanding of the truth that game protection is for the common good of all. The country philosophers who hold the doctrines expressed by our correspondent are less numerous than formerly. Their contentions have no basis in the principles of the protective system; but they do borrow some color from the misdoings of arrogant sportsmen. The laws were never intended to shield the "hogs" who break down fences. They were and are designed to save a game supply for the reasonable benefit of decent people, who wish to shoot and fish, whether those people live in town or in country, and whether they are living now in 1893 or shall be living by

and by in 1950. The one end and design and aim and purpose and object of the game laws is to keep alive a stock of game. If farmers suffer from the raids of fence-breakers, let them enforce the trespass laws. The rowdiness of a few or of many should not condemn all.

A campaign against the all-swallowing pound nets of the New Jersey coast has been entered upon by the rod and line fishermen of Asbury Park and vicinity. At a meeting on Wednesday of last week the New Jersey Amateur Anglers' Association was formed, with the expressed purpose of suppressing pound fishing along the coast resorts. Mr. C. S. Detre of Philadelphia was made president, and Mr. W. E. Bedell of Asbury Park, secretary. Just what measures will be adopted to secure the abolition of pounds has not yet been determined. There is nothing in the present law which in any way affects pound fishing in ocean waters unless it be that the prohibition against Sunday fishing might be applied. It is not clear that the chapter containing a prohibition of Sunday fishing would be held to apply to sea fishing, nor that the maintaining of the pounds in position on Sunday would be construed as fishing on that day within the intent of the statute. If New Jersey coast resorts are to be cleared of pounds, this must be accomplished by work at Trenton, and before anything can ever be done there the shore county members of the Legislature must have been pledged to the support of a statute against pound fishing. The new Asbury Park Association has taken upon itself no child's play. The pound fishermen have large capital invested; their interests are enormous; they may be depended upon to defend these interests; and the movement against them can be made successful only by the expenditure of time and effort, and untiring, persistent work.

One principle involved in this pound fishing discussion is that of State control of sea coast waters. This principle is clear and well defined. The State has territorial jurisdiction over its sea waters for a marine league from the shore. This has been recognized as the law of nations; and that the State control over such waters may apply to their fisheries has been decided by the courts. Massachusetts enacted a law prohibiting the use of any "drag, set or gill-net, or purse or sweep seine," in Buzzard's Bay. It was held by the Supreme Court of Massachusetts, and the decision was affirmed by the Supreme Court of the United States, that the State has control of its waters within a marine league of the shore; that Buzzard's Bay was properly included in such limits; that the State could control the fisheries therein; and that the law against nets was valid. The statute was directed against the menhaden fishermen. The law has been enforced; it is operative at this very moment. The press dispatches of July 31 reported that on the day before the fish and guano works of the Church Brothers at Portsmouth, R. I., had ceased operations; and their eight fishing schooners were idle. The shut-down, it was reported, was due to a scarcity of fish in waters where fishing is permitted, although there are great hosts of them in Buzzard's Bay where the Massachusetts prohibitory law is in force.

Ex-State Senator Donald McNaughton, of Rochester, N. Y., who died in Chicago last Sunday, belonged to that limited class of public men who take an intelligent, lively and patriotic interest in fish and game protection. Mr. McNaughton was an active member of the Cheaper Fish Food Association of Rochester; he did much to promote the international fish conferences of 1891 and 1892; when in the Senate at Albany his voice and his vote were always on the side of protection; and by his death those who are working in these fields have lost a respected and valued ally.

A suggestion that there was any relation between the silver question and the game supply might at first blush be considered fantastic, but it appears that the depreciation of silver and the shutting down of the silver mines are already affecting the game near the mining camps. A correspondent who writes us from Rico, Cal., reports that as the miners are absolutely idle they are going out in every direction in the mountains and hunting game to save expenses in the meat line. "I saw over twenty start out this morning," he says. "If the mines had not been closed not a man would now be after game. If this camp is representative of the others in the West then good-bye to the deer, elk and other game."

## The Sportsman Tourist.

DANVIS FOLKS.—X.

The Hunting of the Wolf.

THE morning sunlight had not touched the treetops of the crest of the western Danvis hills, when half of the arms-bearing population of the township were arriving at, or tending toward, the appointed gathering place, some in sleighs, some on foot, each bearing some sort of firearm. The morning was not far spent, when a formidable force had gathered about the premises of Joel Bartlett, a strangely warlike array to be mustered in those peaceful precincts, yet Joel beheld it with a kindly and approving eye as he stood in the doorway, with Jemimah peering timidly out behind him.

"It's a heavy weight on my mind to see so many men bearin' carnal weepens," she said with a very audible sigh; "it seems too much like the marshallin' of the hosts for battle."

"But thee sees, Jeminy, it haint for no puppus of shed-din' humern blood ner even for larnin' an' 'practysein' the weeked art o' war, but jest tu quell the ravenous beasts of the wilderness, which can't be wrought upon by the word nor by returnin' good for evil."

"Yes, I s'pose thee's right, Joel; but I can't help my mind a-dwellin' on what guns was mostly made for, in times former. Ah, me. But, Joel, won't thee tell these good folks to come in an' get some nut cakes and cheese if any on 'em has occasion. Some must have eat breakfast uncommon airly this mornin'."

Joel loosened the pucker of his lips, and loudly proclaimed the "invite," which was accepted with great alacrity by many who stood in no need of refreshment, and with more diffidence by some who already were reminded they had breakfasted at an unwonted hour.

"Wal, I guess about ev'rybody's got here 'at 's comin'." Sam Lovel said, after a careful survey of the roads and cross-lot bypaths, "an' we h'd better choose a captain an' be a-moggin'. I move we hev Captain Peck for aour captain. Half his comp'ny's here an' 'll foller his orders nat'rally."

"If they don't do better 'n they du tu trainin', it'll take a corp'ral tu ev'ry private tu keep 'em in line," said John Dart, struggling with a dry mouthful of doughnuts and cheese. "Then, agin, he haint no hunter. We want you, Lovel."

"No, it'll look better tu hev Captain Peck," Sam insisted, "you secont him, Dart."

"Wal, I don't care. I secont Cap'n Peck, wi' Sam Lovel for leftenant."

"You hear the nommertation," Solon Briggs said, taking upon himself the office of moderator, "As'el Peck for captin' of this hunt, wi' Samwel Lovel for leftenant, sort of aidycong to give advices and et cetera. You that's in favor, say 'aye,' contrary minded, say 'no.' The ayes have it an' you chose the above-mentioned to serve you as here to before stated."

Captain Peck, a brisk little man, somewhat swelled up with the importance of his dual offices, held a brief consultation with Sam, and then in his biggest military voice, usually reserved for trainings, gave the order, "Fall in, men," and, presently, "Forward, march," and the motley company, numbering fifty or more, went forward in disorderly ranks toward the objective point.

"You must stop your gab, men," Sam continually insisted, as he passed along the talkative line, "erless you'll skeer that aire wolf clear tu N' Hampshire. You haint got nothin' to say but what'll keep till we git a line around the cobbles, an' then you c'n shoot off your mauths as much as you're a min' ter."

A half hour's march brought them to the foot of a rocky hill densely clad with a black growth of spruce and fir, whose blue shadows deepened into a twilight obscurity, that the infrequent shafts of sunlight pierced but to make the deeper. Three sides abutted on partially cleared fields, the other swep up with a long curve to the steeper declivities of the mountain.

The triple column, now separated in two single files, one led by Captain Peck, the other by Sam, began to inclose the hillock. When the leaders met on the further side, without discovering the outgoing track of the wolf, word was passed that the circuit was completed, and the order given for the men to take proper distances and move toward the center. Gradually the circle narrowed. The gloomy depths of thicket after thicket invaded and passed. Each moment the more excitable hunters grew nervous with expectation, the cooler more steadily alert. To some, every moving shadow took on a wolfish semblance; steadfast rocks and stumps became endowed with grim, alert life; now, a gun was leveled to an unsteady aim and its useless discharge forestalled by the sharp, peremptory caution of some clear-eyed and cool-headed veteran, till at last the word came too late to prevent one careless shot, which was the signal for a scattered fusillade from various posts of the encircling line.

The random firing aroused the wolf from his lair and sent him sneaking from one border of his constricted limits to find another as effectually guarded against his passage. Then he swept around the circle, searching with eager eyes some vulnerable point, disclosing fleeting glimpses of himself that drew upon him occasional shots, which increased his long, regular lopes to a wild scurrying flight, now, bounding from side to side of the cordon, now, skirting it in an agony of fear, whimpering as he ran, now, halting, half cowering, while he looked in vain for some loophole of escape.

Once, as he thus crouched for an instant, Sam's quick eye caught sight of him and taking an instantaneous aim, he saw the sight shining in bright relief against the dark gray fur of the wolf's side. As he felt the trigger yield-

ing to the pressure of his finger, his heart filled with anticipated success, but with the click that was the only response to the fall of the striker, it collapsed and sank like a plummet.

"Cuss them caps o' Clapham's," he groaned wrathfully, "if one on 'em ever does go, I wish he might be shot with it."

A shot from Captain Peck's gun cut loose a shower of evergreen twigs above the wolf, who cringed beneath their light downfall and then sprang away, vanishing like the shadow of a wind-tossed branch in the gloom of the thicket.

Pelatah's post was on the valley side of the hill where he had caught sight of the wolf several times, and once had taken a hasty and ineffectual shot. It had all happened in a flash and he was confusedly trying to remember whether he fired at the wolf or into the treetops, and to formulate an excuse for his miss that should be satisfactory to himself as well as to others, when he was startled by a sudden crash of dry twigs on the crest of the ledge just above him, and almost at the same instant he saw the animal flying at full speed down the sharp declivity directly behind him, so close upon him that he could only think to shout lustily and brandish his gun to scare the brute back into the woods, but it only swerved a little from its course and rushed madly on.

Not many paces to Pelatah's left stood Beri Burton, as gaunt and grim as the wolf himself, and so transfixed with surprise at the sudden apparition that he stood stock still, his large jaws agape till the wolf was within his gun's length of him, and he stepped backward to make way. His heel caught a fallen branch and he fell sprawling on his back. The wolf, snapping and gnashing his white fangs, swept over his prostrate form, and clear at

A HALT FOR LUNCH.

FOREST AND STREAM AMATEUR PHOTOGRAPHS.

last of the perilous cordon, sped away toward the hills.

Pelatah vainly attempted to cover him with a pottering aim for a moment, then took the track and presently disappeared among the blue shadows and gray tree trunks.

Beri Burton slowly got upon his feet, sputtering and mumbling, till having come to as intelligible speech as was possible to him, he shouted loudly:

"Wolf gone. Wolf gone ter Jerooslum. Gol dumb sech er wolf." Then as one and another of the party came hastening up, he related again and again the incidents of the wolf's escape. "Gol dumb sech er wolf. Run kerschug right ergin me an' knocked me over, kerwolopp. Flopped one foot int' my mautth. Wisht I'd bit foot off. Yes, sir, flopped dumb foot right squeer in my mautth."

"Can't blame him as I knows an'," said John Dart. "He'd got tu put his foot somewheres."

"By the gre't horn spoon! we're a smart lot o' men," said Sam, joining the gathering group, "to let that wolf get away from us in that way. All Adams an' Pocock 'll be pokin' fun at us fer a year to come."

"Why didn't some o' you smarties shoot him then?" Beri growled, "hed chances 'nough, I reckon, by the bang-whangin'. Gol dumb sech shootin'."

"Don't seem's 'ough Adams an' Pocock hed no 'casion to laugh," said Joseph Hill. "It want't their wolf, leastways it haint got their ear-mark er brand o' any one o' the towns, fer 's I c'n see."

"Taint aour wolf nuther, fer's appears," said Sam, "But what way did he head? Where's Peltier? Someb'dy said he seen him last."

"Dumb fool's chasin' on him," Beri mumbled, "Spec he's goin' tu ketch him, prob'le."

"Peltier was mos' crazy in hees head," Antoine explained. "He was kanna he-widder, cos hees gal goin' leff him 'fore he'll got marree togedder."

"His head's straighter 'n aourn on this business," said Sam, "an' we might as well mog along arter him. The hunt is up for tu-day. But the critter may lay up on Hawg Back to-night an' give us a chance to-morrer."

And so the dejected and disappointed wolf hunters made their way into the clearing, each one loudly blaming every one else and himself, silently and less satisfactorily, for the barren result of the hunt.

On the morning of the great hunt there were at least two non-participants, who through being such were quite as heavy-hearted as were now any of the baffled hunters. Uncle Lisha sighed heavily as he returned to the shop

for the last of several tours of observation which he made into the back yard, where he could look across the fields to the rendezvous and see the men already clustering in knots in Joel Bartlett's yard, and hear the subdued jangle of arriving bells.

"Ho, hum, suzzy day! I'm tew short-winded and stiff-jinted tu keep within hollerin' distance of the oldest an' laziest on 'em, an' I might jest as well seddaown an' go to workin', but I wisht a feller's laigs wouldn't grow ol' no faster 'n his speerits. Ho, hum, suzzy day!" and settling himself into his seat, he picked up his board, leather and knife, and endeavored to lose sight of age and infirmities in the intricacies of his craft.

Aunt Jerusha looked in through the open kitchen door and saw his hands resting idly on the board, his eyes staring abstractedly out of the window, and she said in coaxing voice:

"What makes ye try to work, Lisher? I wouldn't ef was you. The' haint no men folks workin' to-day. Put on yer kwut an' hat an' mittens an' go over to Joel's. You c'n see 'em start an' git the fust news when they come back. 'Wouldn't you, Huld?'"

"Sartainly. It'll do you good an' I sh'd like to go myself," Huldah said encouragingly, as she looked in over Aunt Jerusha's shoulder, and the baby, pushing between their skirts, scrambled over to the old man, bearing one of his mittens in his milk teeth.

"Well, I swan, ef bubbly an' the hull kit on ye are sot on gittin' red on me, I guess I'll hafter." And so smiling down upon the cowering child, as he donned his outdoor gear, he trudged forth across the fields.

"It's mighty pooty idee 'at I aint a goin' tu turn aout along wi' the rest on 'em. Tew ol'? Haint so spry's I useter be? I'm younger an' spryer an' you be, Joe Hill, ef I be risin' eighty-seben." So Gran'ther Hill growled and roared as he stamped to and fro across the kitchen in his stocking feet, glowering at his son's abashed face as at each turn it was brought within range of his angry eyes.

"Don't seem's 'ough it 'ould be noways best, father," Joseph feebly argued, "it's tew exposin'; you'd get rheumatiz an' neurology."

"Rheumatiz an' ol' neurology more like. Ef I got 'em they wouldn't hurt me none. A man 'at's marched to Canady in the winter aint agoin' tu be skeered aouten a wolf hunt by a pain in his laigs er a tooth ache, 'specially when he haint got no teeth. Noaw, look a-here, Joseph," turning before his son and assuming a less aggressive tone, "I've got to go an' show 'em haow. The' haint a man jack on 'em 'at knows beans about wolf huntin', never see a wolf an' wouldn't know one if they did see him. 'Taint no ways likely the's a wolf, but ef there is, he'd orter be hunted as he'd ortu be."

"Jes' so, father," said Joseph, catching hopefully at the veteran's skepticism, "I don't b'lieve th' is no wolf, an' the' haint no need o' you er nob'dy else's goin', 'taint nothin' on'y dawgs."

"You must be a idjit, Jozeff Hill, tu think 'at dawgs 'ould kill sheep in the way them was killed. I tell yer it's a wolf, an' by the Lord Harry I'm goin' tu help kill the cussed varmint. Gi' me that aire gun."

"The' haint a ball er a spoo'ful o' shot in the haouse, father."

"That's almighty pooty haousekeepin'; no shot ner ball? You'd a tarnal

sight better be ketcht wi'out tea an' sugar, yes, or rum, an' wi'out ammeration. Bub, where's yer fish lines? Fetch me ev'y sinker you got."

The younger Josiah obeyed the order with an alacrity stimulated by a desire to further his grandfather's purposes, which, if carried out, might make him his necessary attendant.

"I wouldn't go if I was you, father," pleaded his daughter-in-law, "it's tew hard fer you, an' then again, I want you tu stay an' ta' care o' me."

"You don't need nob'dy. The wolf aint a-goin' tu come in the haouse an' eat you. Jozeff c'n stay."

"But you see, father, I sorter promised to go an' I've got tu."

"So hev I got tu. Gimme yer boots."

"Father," said the son, playing his last card, with an air of deep dejection, "I'm turrible sorry, but I took 'em over to Uncle Lisher's las' night tu git 'em mended, and he breathe'd a silent prayer, 'The Lord forgive me fer lyin' an' keep me from gettin' ketcht at it.'"

"You etamel, infernel, meddlin' idjit," his father roared, his voice shaken with anger, "haow dast ye send my boots to get mended? Haow'd you know I wanted 'em mended, say? It does beat hell amazingly, what tarnal luck I did hev, a bringin' on ye up. I don't wisht you was dead, but I swaar, I wisht I hadn't never hed ye. Clear aout. Go an' hunt yer tarnal wolf, but ye shan't take my gun. Not a step aouten this haouse does that aire gun go, w'thout me a kerryin' on't. You c'n take Bob's bow-arrier, it's good 'nough fer you. Er borry Joel Bartlett 'ol britch-burnt, hang-fire, Quaker gun. Yeon shoot a wolf, Lordermighty!"

Joseph fled in dismay from the rattling volley of his father's wrath, nor stayed his steps till they brought him to the meeting place, while his wife, with all the children but the eldest boy, retreated into the fastnesses of the pantry. Little Josiah, secure in his position as his grandfather's favorite, remained, the sole and undismayed spectator of the old man's rage.

"Blast 'em. Kerryin' off my boots," the veteran fumed, still pacing the rounds of the kitchen. "I'm a good mineter go in my stockin' feet, jes tu spite 'em. I hope the Lord it haint nothin' but a dawg. The idjits wouldn't know the diffence."

The boy held out two plummets of hammered lead and one half bullet. "What was you goin' to do wi' 'em?"

"Load this ere gun wi' 'em," was the hoarsely whispered reply. "I've made killin' shots at two-legged and four-legged varmints wi' wuss slugs an' these. Gimme a holt on

'em an' I'll load her jest fer the fun on 't." He took the big gun from its hooks and carefully measured in his palm a charge of powder from the great ox-horn, poured it into the barrel and wadded it with tow, dropped the slinkers in one by one, wadded them and primed the piece, while the boy's eyes closely followed every movement.

Maria heard the clang and thud of the iron ramrod and peered anxiously through the pantry door.

"Why, father, what be you a-doin'?"

"I'm gittin' ready tu ta' keer on ye agin the wolf tackles ye, M'rier," he chuckled scornfully. "Shet the door, M'rier, an' tend tu yer cookin'; me an' bub's stan'in' guard." He fondled the gun and wiped the dust from the barrel with his coat sleeve.

"Du ye wanter go awfle, gran'ther?" whispered Josiah. The old man nodded his head repeatedly without withdrawing his aim from the center of the clock face.

"Sh-h-h, I know where yer boots be. In the paoundin' berrel in the back shed. I'll fetch 'em when ma goes down sullen arter the taters."

The grandsire's slow, senile stare gradually gave way to a look of intelligence, and the two conspirators, in pantomime, enjoined secrecy.

Wondering at the sudden silence, Maria peeped through a cranny of the door and saw the old man quietly seated in his chair, and called to him as she bustled about her work:

"I'm turrible glad you gin it up so sensible, father."

"Sho, I hadn't no idee a-goin'. I was jest a-foolin' Jozeff. Ketch me a-goin' dawg huntin' along wi' that mess o' idjits," and he winked hard at his grandson, who, under cover of the stove, was growing red with smothered mirth.

"My sakes," said Maria, coming out and looking at the clock, "I mus' get the pertaters and put that fish a-fresh'nin'."

As her step was heard on the last cellar stair, Josiah stole out to the back shed and presently appeared with the boots, which his grandfather drew on in tremulous haste, while the boy, after driving the small children back into the pantry and closing the door upon them, brought the old man's hat and cane.

"Haint it lucky Ruby's over to Briggses? Hürry up, gran'ther. Ma 'll be up in a minute," he whispered as he hovered about the ancestral chair in a fever of excitement. Then he opened the door and the old man passed out as noiselessly as his stiff joints would let him, with his long gun trailed in careful avoidance of lintel and posts, just as the muffled thud of the last potato announced the filling of the pan.

"Can't I go with you, gran'ther?" Josiah asked eagerly; but his heart sank as he read refusal written in the stern yet half regretful face bent upon him:

"Couldn't, nobow, sonny; 'twouldn't dū ahy good an' might do hurt. Them idjits 'll shoot awful keerness an' might hit you. You gwup an' look outen the saouth garret winder, an' you c'n see Haidge Hawg Cobble where they say the wolf's lyin' up. Naow go an' tell 'em I've gone abut tu the barn, an' so I hev, an' mebbly, a leetle beyehd." He gave the boy an approving pat on the head that gave some comfort, though it drove the coarse seal-skin cap over his eyes.

The veteran's departure was covered by the barn, from the observation of the inmates of the house. As he plodded across the snowy fields his thoughts went back to the old days of humble, unrequited heroism; when he marched with Warner and his Green Mountain boys to Canada. In a misty day dream he saw the frozen level of Champlain stretching in lifeless loneliness behind the rangers' march, the wintry gloom and desolation of the forest opening to them the only path beyond. He heard again the click and swish of snowshoes, the low cautious word of command drifting back along the triple files. For a little space it quickened his pulse and face, and for a moment he was young again, till tired by climbing a high rail fence, he leaned against the nearest stump to rest, and realized that he was but a feeble old man, the superannuated, sole survivor of the band, to follow whom he lingered a little on the verge of the eternal mystery.

"A goo' fer nothin' ol' critter as orter stay tu hum wi' wome'n an' younguns," he sighed, half minded to turn back, when his eye was caught by a moving speck far away toward Hedge Hog Cobble. Something familiar in the movements of the distant object drew upon it the veteran's closest scrutiny.

"That haint no dawg, it's tew big fer a fox. By the Lord Harry, it's a wolf, an' he's a conin' stret tu me."

He sank stiffly behind the stump and cocked his gun while he steadfastly watched the beast's swift approach. Now he could see the wild, cunning eyes, now the red tongue hanging slaverling from the white-fanged jaws, and now he aimed, with all the skill that eye and nerve could command, just before the pointed nose, and with a prayer as devout as he ever uttered, pulled the trigger, as with swift, long lopes the wolf ran past, fifty yards away. With a snarling yelp, a long, floundering fall and a quicker recovery of his feet, with a broken foreleg helplessly dangling, the wolf charged wildly at the fence, clung a moment to the top rail, fell back, and then plunged at the nearest but too narrow interstice between the rails. The impetus of the leap drove him half way through, but there he was caught at the hips. He pushed desperately with the uninjured foreleg and clawed vainly with his hindfeet for a hold on the nether rail and was slowly worming his way through when Gran'ther Hill pounced upon him, seizing him by both hindlegs, and bracing his own feet against the fence he held on and shouted lustily for help at the top of his high-pitched, cracked voice.

The wolf writhed from side to side, and snapped his wicked jaws within two feet of his captor's hands, without being able to harm him, but his struggles were fast exhausting the strength of the old man, who, almost in despair, saw the prize slipping, inch by inch, through the fence.

Then he heard rapid steps, and turning his head he saw Pelatiah's lank figure close beside him.

"Ketch a holt here, quick," he gasped.

Pelatiah lent one strong hand to his relief and the old man loosed his hold, and snatching the gun from Pelatiah staggered to the fence, and with a cruelly deliberate aim at three feet range bored the wolf's skull with the heavy charge of buckshot. "There," he panted, as with a grim smile he regarded the last struggles of his victim when Pelatiah had drawn it forth from the fence, "he knows naow what he gets by runnin' agin a real ol'-fash-

ioned hunter. S'pose he cal'lated the' want none left an' the' haint on'y one. But I'm almighty glad you come, young Goove, fer I was nigh abaout tuckered, an' ef I hed tu let go, the critter might ha' flummixed along a good piece afore I c'd ha' loaded up. Good lord," he gasped aghast at the sudden recollection that he had no ammunition, "I hedn't another charge. Wal, I be glad you come, young Gove. Where's the rest of the idjits? Git up onter the fence an' holler like a loon."

Pelatiah's triumphant shouts soon brought in the foremost of the straggling pursuers, who, as they beheld the dead wolf and heard the story of his death were variously moved with admiration of his slayer's prowess and chagrin for their own lack of it.

"By the gre't horn spoon!" cried Sam, stroking the wolf's gaunt side almost tenderly and looking up at the old man's serenely happy face, "I'd ha' gi'n the ol' Ore Bed tu ha' shot the critter myself, but I do' know but I'm gladder you done it, Cap'n Hill."

"I reckon 'at my chances is gettin' a leetle scaser 'n yourn, Samm'y. But you might profit more by them 'at you git ef I'd hed the bringin' on you up. I consait you hed the makin' of a hunter in ye ef ye'd only hed me er even Peleg Sunderland tu edicate your nat'ral gifts."

"Hooray for Danvis!" roared John Dart as he came upon the scene. "Adams, ner Pocock, ner nary other town can twit us at losin' aotr wolf naow. Lovel. I was growin' shameder an' shameder tu meet any on 'em, an' was studyin' more lies tu tell 'em 'an I c'd ever ben forgive for under any circumstances. You've saved the credit of your town, Cap'n Hill, an' mebbly my soul."

"Gol dumb sech savin'," Beri Burton growled. "Danvis haint got much tu brag on when it's got tu ressureck the dead a'most, tu kill a wolf."

"Shet yer head," Dart growled, savagely.

"An' call aotr the infants," Beri persisted. "He wouldn't er shot et w'olf if that aire shimble-shanked Gove boy hedn't er hel' his laigs."

"He'd waounded him, so 't he couldn't but jest go, an' he'd got him e'en a'most killed when I come tip," Pelatiah magnanimously protested.

"It was some prooty good lucky, dat w'olf's ant be one lout garout. You'll can' keel dat kan o' wolfs 'less you'll shot it wid silver ball."

"Well, I swan that was lucky," said Dart, "I don't believe you could rake up a charge o' silver amongst the hull bilin' of us. I don't s'pose copper change 'll pass wi' them aire thingumbobs, would it, Antwine? Wal, le's stop off gab an' start aotr caravan. We've got tu show tu the village this afternoon. Where's Captain Peck?"

"Skinned it fer hūm, half an hour ago," some one answered.

"Wal, let him go. I was goin' tu propose 'at we fired a s'lute, but nev' mind. Who's got a gun's long's Cap'n Hill's? Fetch it here. Lay it daown 'longside o' his'n. Naow, lay the w'olf top on 'em. Naow, Cap'n Hill, you set up the w'olf."

"Yes, du." "Yes, du," other voices shouted with Dart. The hero of the day rather reluctantly complied.

"Ketch a holt o' the muzzles, Lovel, an' I'll take the butts. Up he goes," and the veteran hunter and his grim quarry were lifted aloft and borne forward, amid the chorus of the party.

"What's up?" Joseph Hill panted, breathless with his exertions to overtake his comrades.

"Your superannual ancient sire is, Jozeff," said Solon, "him an' the w'olf. Haint you hearn haow he slewed him?"

"Good Lord," Joseph groaned; recognizing the elevated countenance of his father, his eyes anxiously sought his feet.

Catching sight of him the old man bent upon him a frown, the severity of which was somewhat softened by the pride of his achievement, and laughed down at him scornfully, "You ondutiful leetle cuss; you hid my boots, did you? Did you s'pose a man 'at had took Ticonderogue an' it tu Ben'n't an' went tu Canady 'long wi' Seth Warner an' hunted Tories wi' Peleg Sunderland, couldn't smell aotr his own boots? You must be an almighty smart boy."

Though conscious that his artifice was justified by his headstrong father's infirmities, Joseph fell to the rear in confusion, and the procession continued its triumphal progress to Joel Bartlett's.

Uncle Lisha had waddled forth to meet it, roaring a welcome that was heard at every house in the neighborhood. When Joel beheld the grim trophy he was startled from his accustomed propriety by the whistle that escaped unwittingly from the long puckered lips.

"Friends," he said, chanting in the monotonous tone in which his sermons were set, "I feel to thank you, one an' all, for a-girdin' on your swords an' a-goin' forth tu battle against the beasts of the field which they ravage aotr folds, an' as it ware, spile our barnyards. I thank you, friends, for a-stretchin' forth your carnal weepens in behalf of a man whose ways has been more led unto the plowshare an' the prunin' hook 'an tu the sword an' the spear. There's suthin' due more 'n thanks tu mortal man, an' I feel it bore in on me to ask you, one an' all, to enter my haouse" (as he paused and ran his eye over the company, as if making a mental computation of its numbers and capacity, more than one hungry stomach yearned for the anticipated offering of doughnuts and cheese) "an' get into the quiet an' render silent thanks tu Him 'at has been pleased to reward your indovors with victory. Arter which," Joel continued after a solemn pause, "Jeminy, my wife, will provide some sustenance for your carnal bodies, tu which you will be most welcome."

Few were inclined to accept the invitation to a repast the first course whereof was likely to be long and unsatisfying to their present need, and so with thanks and excuses almost all hastened to avail themselves of the more exhilarating and substantial refreshments that were to be found at the tavern and store.

Gran'ther Hill's crown of laurels was further weighted with fresh contributions, some sprigs of which he generously permitted to adorn the youthful brow of Pelatiah, and was more content to enrobe himself in the misty glories of the past alone, than to share these present flimsy honors with another.

R. E. ROBINSON.

FOREST AND STREAM in its issue of June 29, records its high appreciation of Mr. Charles Hallock, the founder of that journal. Anglers throughout the land will heartily concur in this by no means too florid estimate of the exceptional gifts which have elevated Mr. Hallock to the distinguished position which he occupies in all that relates to piscatorial accomplishment, whether as skilled in the craft, or as a lucid and learned writer on topics pertaining thereto.—*New York Sun, July 9.*

# A STORM.

Out of the sky to the westward  
Came rolling the ordnance of God,  
Snow white, ink black,  
Like a demon pack,  
Leading a host of souls long lost  
Through a land no man hath trod.

Never a leaf in the treetops  
Stirred in the awful quiet,  
Nor voice of bird  
Or of beast was heard,  
But only the moan and the undertone  
Of heaven's great powers run riot.

Moved as by some dread foreseeing,  
A trembling falls on the forest,  
Then a nearer flash,  
A swift, sharp dash  
Of wind-tossed rain through the ripened grain,  
And the charge rushes breast to breast.

Trees hold up their arms in pleading,  
But the wind smites them down at a breath.  
No pity knows he  
For man or tree,  
In crazy revels with legions of devils  
He whirls in his fierce dance of death.

A horror sweeps over nature,  
And the heart is deep burdened with gloom;  
While the great gun crash  
And the wild lights flash,  
And a cry uprolls, like a shriek of souls  
At the sound of the trumpet of doom.

Out of that Stygian blackness,  
As swift as the fall of a star,  
Speeds down white hot  
One fatal shot,  
And a life all bright goes out with the light  
To stand at the judgment bar.

Grows silent the din of the battle,  
The smoke drifts away overhead,  
Sweet flowers look up,  
A gem in each cup,  
A bird song floats from a thousand throats—  
And I am here alone with my dead.

J. H. LA ROCHE.

## "PODGERS" TELLS A TALE OF WOE.

SAN FRANCISCO, July 6.—The only possible merit I can see in a noisy Fourth of July, with its nuisance of small boy and firecrackers, is the holiday it brings, and the possibilities of a fishing trip. This year we were particularly fortunate, Saturday being a half-holiday, then Sunday and the Fourth on Tuesday. Monday was declared a holiday also, thrown in as it were, giving four good square days for an outing. What a blessing to the hard-worked young men, although for that matter holidays are not scarce with us. What with the New Year, February 22, Labor Day, Decoration Day, July 4 and Christmas we are almost as bad as the Mexicans, who it is said use up about 260 out of the 365 days of the year in fiestas and saints' days. Their saints are very numerous, and are well remembered.

I always leave some one else behind me to celebrate. My patriotism oozed out years ago, having been slightly discouraged by the unparliamentary proceeding on the part of another youth of about my size dropping a portion of a lighted pack of firecrackers down the slack of a pair of rather loose-fitting trousers converted over from my older brother's. This, by the way, is, or was in my time, one of the trials of the soul of the small boy, and a perpetual burning indignity in his estimation, to be thus relegated to his older brother's outgrown clothes. In my opinion this being obliged to wear older brothers' clothes, warmed over as it were, has caused a great loss to the world of able men, who were thus nipped in the bud, and failed in the promise of greatness, caused by the depressing influence of made-over clothes upon the mind and character of the small boy. In these days of cheap clothing for boys there is less of that sort of thing, and boys are emancipated from this discouraging feature, and hence there is more manliness.

But pardon the digression. The trousers I wore on the occasion referred to had slack enough behind and around the waist to accommodate several packs of firecrackers. The chap that exhibited the dancing turkeys (a great wonder, until it was discovered that a hot stove top covered with sand caused the dancing) would have engaged me at a large salary if he had seen me dance. It requires but a dull imagination to see the effect naturally resulting. It was what might truly be called "a warmer," and the family cat had unlimited and undisputed possession of my special chair, for the next two weeks. I took no interest in chairs, and dined from the bottom of an inverted wash tub in the kitchen.

What of the small boy who struck out for an original exhibition of patriotism? Well, we will draw the curtain over events that followed immediately, while the subject was fresh in my mind and trousers. There was another boy missing from school for the next two weeks, during which time there was an unusual demand for raw beef and flaxseed poultices. I never see a small boy on the Fourth very industriously doing his level best to blow himself up and blind all those surrounding him that my mind does not run back to my juvenile experience, and I at once wish myself out of town, and generally get there, as I did on this occasion, which I am going to tell you all about as soon as I get to it, which you are hoping will be soon. I suppose so. There are two things that are ever a drawback on the inclination of scribblers to be garrulous, one is the everlasting nuisance of having to think how much space am I going to occupy and to be obliged to write to measure, as your clothes are made, and the other is the proneness of the leathery conscience of the editor, who cuts you down and cuts you up as if your article was a piece of cheese.

But to my story. Meeting a friend in the street a few days before the Fourth, we mutually deprecated the idea of remaining in town on that noisy day, and the conference finally resulted in an agreement to go for a raid on the trout. My friend had been told of a stream away back in the mountains in Sonoma county—far enough away we thought, to be out of reach of the pot-fishermen. So on Saturday two men whose fishing outfit proclaimed them Izaaks, could have been seen (had any one cared to

clock) duly ensconced in the smoking car of the North Pacific R.R. with a very boisterous crowd of those young men who try to show their manliness by getting drunk and noisy on the outset of a holiday. These cubs made it very unpleasant for half the journey, but finally left the train much to our relief.

It is a peculiarity of California to name places and towns from something that never existed on that particular spot. For instance, we have a Strawberry Valley up in the mountains, but no one ever heard of a strawberry within forty miles of the place. There is a legend, however, that it was named after a man who kept a roadside inn; he was named Berry, and advertised good spring beds, which proved to be of curled straw, hence Strawberry.

Cloverdale is charming, being surrounded by vineyards and fruit orchards in every variety. It is in a beautiful valley, or rather at the termination of the one through which the railroad runs, and here are villages with cottages hidden and almost buried from sight in rose bushes and every kind of flowers. In one of these lovely spots resides our correspondent "Marion," on whom I should have been greatly pleased to call, only that railroad trains are obdurate and like the tide wait for no man. I found in the train a resident of her village who knew her, and in that way heard late news of her.

Arriving at Cloverdale we secured our rooms at the neat little hostelry, ate our welcome supper, and then proceeded to a stable to engage our horses for our next morning's long ride over the hills and dales that intervened between us and our fishing ground.

We then settled down to the social comfort to be had out of an arm chair on the piazza and the little brier wood pipes, the solace of the sportsman, where we sat in the moonlight, smoked and planned our morning work, until that delightfully sleepy feeling that one feels only in the country sent us off to bed, and oh, how we did sleep. The next morning in good season we mounted our horses and set out. For four hours we climbed steep grades up and then steep grades down, generally dismounting and walking down the worst, though the roads were good, until we finally struck off from the main road into a private trail that took us down, down into one of the beautiful valleys so characteristic of California.

As neither my friend nor myself had ever peregrinated in the direction we were traveling, although familiar with the country in almost every other, we stopped every man we met to inquire our way to our rather obscure destination. The last wagon we overtook, in which two young men were driving, proved to contain the very parties we were in quest of, owners of the ranch where we hoped to stop. Our proposition was very heartily assented to by our to be hosts, and much to our relief, as otherwise we would have been obliged to camp for the night or return without having any chance at the trout. We arrived at the ranch about noon, and after a hearty lunch our two young hosts laid aside their ranch work and accompanied us to the creek we had such high hopes of. A walk of a mile brought us to the water, to be dreadfully disappointed, for it proved to be a mere rivulet, too low to promise good fishing, as proved to be the case. It was rough fishing, a muchness of big boulders and rocks, with a good deal of underbrush, that abomination and great annoyance in fly-fishing, and more especially unless one is using a very short rod. In the present case a six-footer would have been ample length. It is needless to say we found virtually no fishing. Those we caught were mere fingerlings, and all not injured were thrown back. We had a healthy tramp and returned with hearty appetites to supper, and after a smoke were tired enough to turn in early.

Our friends told us of another creek that emptied into the one we had tried, about two miles below our previous day's tramp; and they thought the additional waters of this creek would give the one we had tried sufficient water to furnish better fish. So mounting our horses, after an early breakfast the next morning, we started down, following a faint and by no means smooth trail along the creek, with many ups and downs, through brush and over fallen trees, which none but a California-bred horse could ever be persuaded to face; and we finally had to dismount and lead ours, not being able to ride under the obstructions. At one obstacle, a large tree that had fallen and extended entirely across the creek, we dismounted; and my friend essayed to lead his horse under, but made a miscalculation as to the height of horse and saddle. The pommel caught on the tree. The moment the horse felt the strain, he sprang forward, as California horses trained to the lasso are wont to do. As the California saddle never gives away, and a big tree is not likely to, the next thing was for the saddle to be carried back until the cinch came under the loins of the horse, and then there was music. The horse whirled and plunged down the steep bank and "bucked" as only a California horse can buck. In his first plunge he struck my friend, knocking him about ten feet, landing him in a pile of limbs and rubbish left by the freshet at the roots of an overturned tree; and followed on himself until brought up by the same obstruction, and pranced and kicked over the prostrate body of my friend, who lay flat on his back directly under the horse. I tried to drag him out, but that horse seemed to have a dozen legs, and all were in motion, flying in every direction. At last at the word "Whoa!" the animal subsided, all in a tremble. It was not viciousness, but pure and unadulterated fright that was the matter with him.

My friend crawled out from under the horse, and to my hurried inquiry how many legs and arms he had left in a sound state, he replied that he thought he had enough left to wag along with, and wonderful to relate, he had escaped any serious damage.

I offered a wager at odds that he could not do it again under same conditions and come out as well. He said it was not his betting day, and declined.

Having adjusted the saddle and gathered up the scattered impedimenta, we made a fresh start, but encountering another fallen tree which shut us off the trail, we essayed to cross the creek and scale the opposite bank to get around it. We did get part way up, but the undergrowth was too dense, and our horses having scarce a foothold we tried to get back again, but there was no room for the horses to turn around. They were getting excited and threatened a second catastrophe, but by soothing them we managed at the risk of all going down in a heap in the creek to extricate ourselves from the unpleasant predicament, and finding a level spot on the opposite side of the creek, we tied up the horses and hoofed it the remaining distance, to find the creek we were in quest of

at so low a stage as to add but little volume to the main creek, and the fish no larger. So we concluded to throw up the sponge and return to our horses, mount and retrace our steps to the ranch. After a light lunch we set out on our homeward ride, reaching our hotel at dark somewhat tired and sore after our experiences and long ride. We turned in, with a mutual agreement to take the early train home the next morning, which we did.

My last trouting had been in Canada, at the outlet of Lake Edward, where I dealt with two and three-pounders, and the contrast caused the painful consciousness that the good old days when I was wont to fill my basket with good-sized trout from Sulphur Creek and other California streams had passed; and I determined that my next essay would be next fall after Navara River salmon.

I had been spoiling like the Irishman for a fight, *i. e.*, a try at the trout, and I had it, with results as described; and as the Frenchman, who was also spoiling for a fight and got licked, "I am satisfied." I will have it out with the salmon next October though, to make amends. No fingerlings then, but ten and fifteen-pounders.

My yarn is not very interesting, I admit, but just you wait until I go up to Navara, and I will tell you of fishing that will make your mouth water, and will take out of mine the taste of this failure. But as for any more Fourth of July excursions after fingerlings—in the words of the poet, I am not in it.

PODGERS.

#### MICHIGAN, MY MICHIGAN.—II.

LANSING, July 20.—Like the summer girl, everybody in Michigan goes to the forest in hot weather. Some go camping, others go fishing for a day or two, other take a boating trip down some of the rivers to the Great Lakes, but as a rule everybody who can go is bound to go, and get into the outing swim in some way. A few days ago I had a pleasant visit with ex-Representative Watson, of Caro, Tuscola county. He had just returned from the upper lake region, brown as a berry, and tanned like an Indian. The skin on the back of his hands and wrists was peeling off in flakes an inch or two square, and his face was like well-tanned sheepskin. He had not got enough of it yet, and he and a friend were having a boat made at Grayling for a trip down the Sauble. They were to start Thursday last. I may, perhaps, find out some of their doings, and if I do I will give them to you in detail.

One of the jolliest, best feeling and all day sportsmen of Lansing is A. H. Whitehead. He is a hunter and fisherman "from 'way back." Just when, or where, his sporting days began, memory runneth to naught. He is a member of the Rod and Gun Club and active in its affairs. He can break a clay-pigeon with the best of men and as a field shot he gets the game every time. He is well to do and nicely fixed in worldly matters, and no man enjoys his friends to a greater extent than Mr. Whitehead. He has two nice cottages on Pine Lake, and owns entirely the only island in the lake. His cottages are nicely furnished throughout and they are kept in shipshape the year around. About every Saturday afternoon he takes the train for the lake and returns early Monday morning. He very seldom goes alone; more often he takes a few choice friends with him. He has ample accommodation for the entire party, and what he has goes free as water. He reads *FOREST AND STREAM* regularly and has done so for the past twenty years. His place of business is gaily decorated with pictures of animals which have come from time to time with *FOREST AND STREAM*, and one feels quite like being at Barnum's menagerie when inside of his sanctum.

Mr. Whitehead is the champion fisherman of Pine Lake, and he holds the post of honor against all comers. Last spring he invited Burt Robson, Dr. Dickson and Hart Farland to take a trip to the lake after frogs, and the story goes that they caught more frogs than a big wash boiler could hold; it was a great day for frogs, so they said. Mr. Whitehead has guns and tackle enough to equip a whole regiment of men, and few men can handle the goods to better advantage than he. To go hunting or fishing and not have Cornie along, is like Hamlet with Hamlet not in it.

Pension Examiner Maxwell is at Lansing for the summer. Maxwell is the kind of a fisherman who can go out with his rod almost anywhere, be gone a couple of hours and return with a half dozen nice fish. He is a born fisherman, and if there is a fish in the river he seems to understand when Maxwell is around, and to save all parties time and trouble the best fish in the neighborhood tumble into Maxwell's basket as promptly as good breeding will admit.

Mr. Frank E. Briggs, executive clerk in the office of the State Treasurer, and Mr. Chas. E. Baxter, Deputy State Treasurer, are arranging for a trouting excursion to northern Michigan. Last spring Mr. Briggs visited Mr. Frank Hershler at Alba, Mich., and while there he did nothing but catch trout. He was so delighted with his experience that he is fully determined to try it again. Frank has a fine outfit, and takes more comfort sorting his tackle and laying in supplies than most men can enjoy in a long lifetime of actual experience. Mr. Cliff Foster, of Pine Lake, is the sometime hunting partner of Mr. Briggs and it is pretty well understood in this section that what Cliff don't know about fishing and hunting is hardly worth knowing. Cliff and his great friend Hammond are a team hard to beat. Cliff has a fine farm on Pine Lake, and his home is open to his friends at all times. He is a prince of good fellows, and his good wife is never so happy as when assisting Cliff to entertain his sporting friends. A day at Foster's home is a pleasant one long to be remembered.

Mr. Bassett, of Chicago, and Mr. C. P. Downey, of Lansing, caught the largest and finest string of bass and pickerel at Pine Lake, one day last week, that ever was brought to our city. The string was at least ten feet long and it was all a strong man could do to take it out of the wagon. Mr. Bassett has fished in many of the lakes in the West, but he says that he never saw such a string of fish before. It was a great sight. The same day Mr. Rollo Fillmore and Frank Hollister caught at the same lake fourteen nice bass. The largest one weighed 4lbs. and 14oz. Jack Cary, Jim Price and Charles Clippinger are in camp in Clare county, about three miles from Dover. Mr. Cary, Mr. Price and their wives went overland by wagon, and sent their camp equipage by rail to Clare and from there by wagon to the camp ground. Mr. Clippinger went up by rail next day. They are after trout. The next morning after they went into camp they caught 47 fine trout before breakfast. They are having great luck. Mr. Howard Sweet and Mr. J. E.

Nichols are arranging to take a run out to Iowa in September and try their hands at chickens. These gentlemen are both great shots, and it is a good chicken that gets away from them when they once get located.

Capt. R. M. Fillmore, Dr. Dickson, Dr. Hyatt, Jim Edmonds and Will Grove, of Lansing, and Fred Hyne, Chas. Cushing, Peter Locke, Robt. Serteis, and two or three other gentlemen of Brighton, have been in camp at Oar Lake for about two weeks. They have just broken camp and returned home, and they report one of the most enjoyable outings that they ever had. Before leaving Lansing they laid in a good supply of eatables and fishing tackle, and necessities for camp life.

Oar Lake is a charming little body of water in Oakland county, about three miles southwest of Brighton. Suky Lake, Strawberry Lake, Bass Lake and several other small lakes are all connected with each other, and with Huron River, and they form a system of water communication in central Michigan which makes that section one of the finest camping regions in the State. People from Ann Arbor, Jackson, Ypsilanti and other near-by towns have built many cottages at the lakes, and many business men with their families spend the summer there. At Oar Lake the Brighton boys leased a tract of land some ten years ago of Luther Moon, and they have built a nice cottage 18x26, with a lean-to, for sleeping rooms. They have a good barn, ice house, three boat houses and plenty of boats and tackle. The house is comfortably furnished, has beds, tables, crockery and everything that is needed in camp life. If the number of campers is too great for the cottage to accommodate nicely, Mr. Moon opens his house, that all may be comfortable. The ten-year lease of the ground will expire next season, but the boys hope to be able to get another lease, and as Mr. Moon is one of the best of good fellows, and enjoys the visits of the campers quite as much as the campers like Mr. Moon, it would seem that there was nothing in the way to prevent the camp being a permanent one for some years to come. The fishing at Oar Lake is excellent, bass, pickerel, bluegills and perch abound.

If one tires of Oar Lake a little pull of a few miles will take him to any one of the half a dozen lakes which are joined together by little outlets, which empty into Huron River. Mr. Bilding, the Brighton livery man, in driving the luggage wagon, had the misfortune to lose the three loaves of bread which had been taken along as a base of supplies; so that the old-time staff of life was just a little scarce. A fine spring of water bubbles out of the ground near the camp, and makes a beautiful little brooklet, which is one of the attractive features of the camp. Peter Lake officiated as cook during the outing. Capt. Fillmore dressed the fish. The captain is quite an expert fish dresser. His method is to cut a deep cut along the back and belly, cutting well around the fins, and to strip off the skin from either side. He never scales a fish, and he claims that no one who will take the trouble to learn how to skin a fish will ever dress a fish in any other way.

I was amused at their story of float-fishing. They took a couple of dozen three-pound cans that had been used for canning corn, took the cans to a tinsmith and had him cut off one end of the can and solder a long funnel-shaped tin cup on the end, which made the entire arrangement air-tight. At the tip of the funnel part they set in a hook and swivel, and to the swivel tied about 10ft. of stout line, put on a large hook baited with a good big sunfish, and threw the entire rigging overboard and let it go. They had twenty or thirty of these arrangements floating around the lake most of the time. The cans were all painted white, and when a fish took the minnow and started away with the can, the can could be plainly seen and followed up and the fish captured. When a big pickerel takes a can it is said to be great fun to watch the can bob up and down. A fish soon tires out and gives up the fight much quicker when he gets hitched to a can than when he is caught by rod and line. Dr. Dickson and Charlie Cushing did the frog act and kept the camp well supplied with frogs. The mail came over every evening, so that the boys kept well up on World's Fair matters and the doings of the outside world. Mr. Prout and Will Grove took the largest fish, and a happier man never lived than Will Grove when he unloaded six pickerel that weighed 36lbs. and distributed them among his Lansing friends. The return of the campers has set the whole town almost wild on the camping way of taking an outing, and other jolly parties are sure to try their luck.

Some years ago Mr. E. W. Sparrow, of Lansing, with Peter White, John M. Longyear and Horatio Seymour, of Marquette, Mich., organized the Huron Mountain Hunting and Fishing Club. The new club house at the mouth of Pine River on Huron Bay was formally opened last Monday. The club house is built of selected Norway pine logs with a frontage of 104ft. and with walls 23ft. high. The club was incorporated in 1889 and own and control the hunting and fishing rights of over 10,000 acres of land. This property includes six lakes in the heart of the Huron Mountains, the most beautiful spot on the south shore of Lake Superior. These lakes are easily accessible from the waters of Lake Superior, and contain salmon trout, black bass, great northern pickerel and wall-eyed pike, while the streams have an abundant supply of brook trout. Deer and bear, also ruffed grouse, are found upon the lands of the club more plentifully than any other grounds within a number of miles.

It is proposed to make this region a hunting and fishing park, to build a club house and keep up the supply of fish by restocking the streams and lakes. The grounds of the club can be approached by water by Lake Superior, by road from Marquette, and also by a road which is about constructed from Huron Bay—the Iron Range & Huron Bay road—which will greatly shorten the distance by rail. This road will be completed from Champion, on the Duluth, South Shore & Atlantic Railroad, to the foot of Huron Bay during the present season.

The membership of this organization is limited to 100, and it is a stock corporation, the par value of the stock being \$100. No one is allowed to subscribe to more than five shares of stock. A number of shares of this corporation are for sale; \$50 to be paid upon the delivery of the stock and the balance when called for.

The club association is strictly a private one. The membership is limited to the immediate friends of the gentlemen who were instrumental in organizing the club. It is desired to make the club a homelike retreat, not open to the public, where the members can go for rest and to enjoy good shooting and fishing. The club is destined to be one of the most popular and influential clubs in Michigan.

## THE ARCHER FISH OF SIAM.

DWELLERS along the seashores have become familiar with several types of fishes which have the mouth and adjacent parts curiously modified to adapt them for some peculiar habits in obtaining food. The pipe fish, sea horse and flute-mouths will readily occur to mind in this connection.

An equally remarkable instance is recalled by Mr. Baldwin's accompanying illustration of the archer fish. In this genus the bones of the jaws are greatly elongated and are connected laterally by membrane, while the mouth opening is small. The result of this structure is a slender tube capable of being employed, and very effectively employed, as a blow pipe for the capture of insects by the discharge of globules of water. The jaws, moreover, are provided with fine brush-like teeth.

The archer fish, jaculator fish, or enceladus, inhabits the east coast of Africa and the seas of India, the Malay Archipelago and China. It appears from the published accounts that the fish is not confined exclusively to salt water but occurs also in brackish water and, probably, in fresh water ponds.

The same habit of ejecting drops of water from the mouth with sufficient force to dislodge insects and precipitate them into the water has been attributed to other Javanese fish, but, in the opinion of recent writers, the subject of our present sketch is the one to which this singular power is rightfully ascribed. Travelers have long known about this peculiar method of capturing insects, although observations have been comparatively infrequent and some doubts have arisen as to the identification of the actual archer. The following account is an abstract by Dr. Francis Day from Schlosser's article in the Philosophical Transactions of the Royal Society for 1764:

"The jaculator fish frequents shores and sides of rivers near the sea in Asia in search of food. When it sees a fly sitting on the plants which grow in shallow water, it swims to the distance of 4, 5, or 6 ft., and then, with surprising dexterity, it ejects out of its long and tubular mouth a single drop of water, which never fails striking the fly into the sea, when it becomes its prey. This aroused Governor Hommel's curiosity, and he had a large tub filled with sea water, in which he placed some of these fish. When they were reconciled to their situation a slender stick with a fly pinned on its end was placed in such a direction on the side of the vessel that the fish could strike it. It was with inexpressible delight that he daily saw these fish exercising their skill in shooting at a fly; and they never missed their mark. Pallas continued this account from Governor Hommel's letters two years subsequently, remarking that when the jaculator fish intends to catch a fly or any other insect which is seen at a distance, it approaches very slowly and cautiously, and comes as much as possible perpendicularly under the object; then the body being put in an oblique situation, and the mouth and eyes being near the surface of the water, the jaculator stays a moment quite immovable, having its eyes fixed directly on the insect, and then begins to shoot without ever showing its mouth above the surface of the water, out of which the single drop shot at the object seems to rise. With the closest attention, Governor Hommel never could see any part of the mouth out of water, though he has very often seen the jaculator fish shoot a great many drops one after another without leaving its place and fixed situation."

When about to leave Washington to install the Fish Commission exhibit at Chicago I learned that two officers of the U. S. Navy had seen the archer fish feeding in Siam and obtained from them a promise to lay before the readers of FOREST AND STREAM the recollection of their experience in this connection. The following letters were kindly sent me with permission to publish them:

"CIVIL ENGINEER'S OFFICE, United States Navy Yard, Washington, D. C., April 10, 1893.—Dr. Tarleton H. Bean: Dear Sir—Your favor of the 2d inst. asking for my experience with the archer fish in Siam was duly received. It gives me much pleasure to relate to you that in February, 1873, I was serving on board the U. S. S. Monocacy when we made a visit to Bangkok, the capital of Siam.

"While there we were invited by one who was then called the Second King of Siam to visit his palace. He took us into his private garden and stopped by a small fish pond. In a few moments a man appeared with a small twig which was completely covered with some kind of small insect. The butt of this twig or branch was stuck into the ground just at the edge of the pond and slightly inclined over the water.

"Immediately a small school of fish came to the surface near the twig and began shooting drops of water from their noses at the insects. As the insects were struck with a drop of water they fell into the pond and were devoured by the fish. In a very short time the twig was cleared of the insects, and, as I recollect, there seemed to be more than one hundred of them.

"I also noticed that when a fly tried to cross the pond it would be chased by the fish, all of them sending drops of water after it, and the fly was usually captured. The drop of water seemed to go about six feet.

"The fish looked, as I remember, something like our yellow perch, but darker, and about 5 in. long. The water they were in was, I think, fresh. The performance of these fish on that occasion was one of the most interesting things I have ever seen.

"I have told this incident occasionally, but it seems to be skeptically received, probably being considered a

sailor's yarn, but it is absolutely true. Very truly yours, F. W. DICKINS, Commander, U. S. Navy."

"UNITED STATES NATIONAL MUSEUM, Washington, April 7.—Dr. Tarleton H. Bean: Dear Sir—In reply to your letter of the 2d inst., I send you the following brief account of the archer fish. I regret I cannot give you a more definite description of the physical proportions and markings of this fish, but nineteen years has dulled my memory.

"The U. S. S. Monocacy was at Bangkok, the capitol of Siam, in February, 1874. During a reception given to the officers of the ship by the Second or Vice King, His Majesty conducted us through his palace and the extensive garden surrounding it. In this garden was a pool of clear water, but whether it was fresh, brackish or salt I am unable to say, and in the pool was a large number of the archer fish. When we arrived at the pool, one of the King's attendants brought a bushy limb, two feet or more long, and set one end of it in the ground so that the bushy portion overhung the water. Immediately from all parts of the pool came the fish, and on arriving near the bush they commenced to bombard it by ejecting each a drop of water among the branches. We soon discovered that this bombardment had a definite purpose, for the branch was peopled by a great number of small ants, and nearly every drop of water shot by the archer hit an ant and knocked it off the branch into the water where it was instantly snapped up by the expectant fish. As long as any ants remained on the limb the firing was incessant; but in a very few minutes all commotion ceased. The last ant had fallen with the last drop of water.

"To show that the fish were sharpshooters and not firing at random, the King caused some flies to be let loose over the pool. This was an affair of wing shooting with a bullet, and so well was it done that few of the flies reached the shore safely. I do not mean to say that every fish hit a fly every time he fired his drop, but he always came

THE ARCHER FISH.—NATURAL SIZE.

very near the mark, and as several were usually after the same fly the chance of escape for the latter were limited.

"The fish, as I remember it, was about 4 in. long, flat, and of brilliant coloring. When he ejected the liquid at his prey his mouth appeared to be slightly above the surface of the water. As the bush with the ants upon it was placed about a foot and a half above the surface of the pool, I judge that was about the distance at which effective shooting could be done by this fish, for if he were able to hit at longer range we would probably have had a further exhibition of his skill. The ease with which an ant was dislodged from the branch to which he was clinging suggests the possibility that the drop that disabled him might not be water, but a secretion from the mouth or throat of the fish and of a viscous character. From the personal interest taken by the King in giving us this exhibition, it is probable that the archer fish is rare in Siam. I have never seen it elsewhere. Very respectfully,

C. H. WHITE,  
Medical Inspector U. S. Navy.

There remains to be said about the archer fish that it is small, seldom exceeding 5 or 6 in. in length. It is brightly colored and bears five dark bands, one of which passes above and below the eye, while the soft dorsal fin is ornamented with an ocellated black spot encircled by a narrow white ring. Cantor states that the Malays consider its flesh excellent, and eat it both fresh and dried.

T. H. B.

## Mother Love.

WHAT seemed to our household a curious and beautiful thing happened one day last week. A tiny baby bird fell with piercing shrieks into our kitchen doorway, and without waiting for an invitation, hopped across the room and perched on the wash-tub.

Its cries, which never ceased, and which seemed marvelous coming from such a tiny throat, were so penetrating that soon the family were assembled in the kitchen. I put out my hand to the fluffy little creature, when to my surprise it hopped on my finger and perched there.

A cry from the cook made us turn, and in through the window flew a beautiful yellowbird. She circled round above our heads, all the time uttering the shrillest cries. We sat motionless, watching. All at once she darted toward me, alighted on my shoulder, ran down my arm, hopped to my hand and poked at squirming worm down the little one's throat. Then away she flew out of the window.

That was a week ago. Since then we have put the

baby bird into a cage, and at whatever window we place it the watchful parent quickly finds it. Day after day she comes, sometimes with a wriggling and unhappy worm or a buzzing horse-fly, then by way of dessert, as we say, dainty white moths or slender mosquitoes are brought.

When I take the little one from the cage, as I sometimes do, and let it perch on my hand, it seems quite fearless, and often tucks its head under its wing in apparent content. All night it is as quiet as a mouse, but early in the morning we hear sounds which tell us that parent and child are giving each other greeting. In fact, as day by day the faithful little ministrant flutters like a streak of sunshine at our window, we feel our hearts gladdened, and we remember that some have entertained angels unaware.

B. T.

## FOX AND DEER PETS.

I SAW the other day a statement that a certain person had a tame fox and a tame deer, and the writer said this was a remarkable fact, as these animals were the most difficult to be reduced to the dominion of man. Now, I have seen several foxes as gentle as kittens, though I think all were under the restraint of a chain.

While driving in Allegany county, N. Y., last summer, I saw two little boys playing with a fox which was fastened to a stake. The boys were clothed very much as the Lady Godiva, of fragrant memory, and were lying on their bellies literally, rubbing the belly of Reynard with their hands, just as one plays with a kitten. The fox lay on his back and permitted, and even invited, this human attention, showing signs of satisfaction, licking the boys' hands and nibbling their fingers and squirming about with all four legs limp in the air. He would then jump up and spring away to the length of his tether, but would shortly return to the boys, who had not moved, and the same performance would be repeated. It was a hot day

and the horse was permitted to enjoy the shade, standing in the cool stream, while the fox and the boys disported for my enjoyment.

When I was a boy of 12 living in western Pennsylvania, my elder brother caught a fawn about the time of wheat harvest. There were no game laws then, and precious little game in consequence.

Some one had killed a doe, and the little spotted daughter, deprived of the maternal font, came out of the woods into a wheat field, where our old dog, Rover, found and chased it.

Rover, I suppose, was a mongrel, but he was a close friend of mine, and I love his memory still. He would chase anything as long as it would run, but I don't think he ever bit a living thing except a flea or an unruly pig. Well, he found the poor fawn and chased it through the wheat, and perhaps you can surmise what the cradlers said on the morrow. There were no reaping machines in those days. My brother followed and found the dog lying down, with tongue out, guarding the corner of the fence, where the fawn had lain down from sheer exhaustion. The fence was too high to be jumped, and the space between the rails too narrow to be passed. When brother came up the fawn tried to do both alternately, but was caught by the tyrant man and brought home.

My brother's clothing was not worth mentioning when he got to the house, the sharp hoofs of the frightened fawn having stripped his raiment into ribbons.

She was put in the barn, and by my father's direction I went there, and opening the door very softly, stepped in and set down a basin containing half a pint of milk, and looked at the animal a few minutes without trying to approach her; but even then she was so frightened she tried to get through the cracks on the further side of the barn.

I came away quietly and in about an hour father told me to go out again with a little milk; to stand still and look at the deer a short time, and if she had drank the milk in the basin to replenish it and withdraw. Well, the milk was gone, but the deer was frightened at sight of me, though not so frantic as before. I poured in the milk and came away.

About an hour afterward father told me to repeat the feeding in same manner. When I opened the door this third time she came up and laid her little nose confidently in my hand, and that is all the taming she ever had. Thereafter she would follow me as faithfully as Rover did; and dog and deer became fast friends: I was very proud of her companionship, for she preferred mine to any other human society, doubtless remembering the hand that first fed her.

Father, who was an old deer slayer, said that a deer, especially a young one, could be very easily tamed by gentle kindness, and my limited experience shows that he was right.

I will not tell you of Fanny's tragic death, for even at this distance of time it is painful to recall.

AUGUSTA, ME. KENN E. BEC.

## Curious Cullings.

A run of salmon in the Nehalem River, Wash., last fall was so extensive that thousands were spared by the residents.

The climbing perch is a native of Asia and possesses the peculiar power of walking over dry land. The *Anabas* is another fish remarkable for this.

The sea horse, another monstrosity, is greatly like the quadruped from which it takes its name, and the likeness is heightened by two apparent ears that project from the sides of its head. And so on without limit from the wriggler in a mite of water to the mighty wriggler of the deep.

The depictions of form assumed by varieties of fish without any ascertained purpose being gained thereby seems wonderful. Instance the starfish, the pipefish, the dogfish, the eyed torpedo, the skate. The egg cases of the skate are popularly called skate barrows, being wonderfully formed like a common hand barrow.

FISBY.

## Game Bag and Gun.

Visitors to our Exhibit in the Angling Pavillon at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### GOLDEN DAYS IN NORTH DAKOTA.

CHICAGO, ILL.—On a golden autumn morning, with four others, I found myself pulling out of Grand Rapids, North Dakota, behind horse-flesh of well known qualities, and all of us hopefully bound for the Missouri at a point near Fort Yates. Our motto was "Missouri or bust;" and as we never reached our destination, self-convicted, we must have certainly been in that interesting state of "bust." We were a gay party as we started out that auspicious morning for the long line of hills which ever seemed just a little way ahead, but over which in reality we were traveling from the very start.

This part of Dakota—western part of La Moure, Logan and Emmons counties, is one continuous panorama of rolling land and low hills; the hills getting higher and rougher as you go west, being more or less covered with stones and boulders.

The first day was uneventful. We stopped at noon for dinner and a game of cards under the wagon. Our water was carried in a barrel in the wagon. We also carried a supply of wood and some oats for the horses. Our stove was a very simple affair. It consisted of a small square hole dug in the ground covered over with an iron grate. On this you can set your kettles and pots, and have dinner in no time. This arrangement takes very little wood—a big item where it has to be carried—and does not roast a person along with the victuals. After dinner we carefully replaced our utensils in the wagon, piled in ourselves and resumed our jolting, joyous journey; telling stories, smoking and reading, for we had not yet reached the game region. At night, however, we were beyond all signs of civilization and from then on we traveled by compass. Our tent was pitched at night on top a high knoll. We cut some grass in the slough for the horses, ate supper, put the horses in the tent (this was the idea of the owners, who owned most of the outfit, and who were anxious that the horses be saved from the carnivorous mosquitoes), and went to bed in and under the wagon, with a gentle breeze stirring the canvas and countless stars nodding us good-night. A tremendous crash awoke us all with a start; the stars had gone to bed and the cover which nature had drawn was belching forth torrents of water, while jagged lightning was playing everywhere. But I was so weary that I went into the tent and lay down on a pile of harness and was immediately in the land of nod.

The morning was bright and sunny, and the breeze was inexpressibly fresh and invigorating. After breakfast we threw our tent, wood, cooking utensils, ourselves, etc. into the wagon, and away we went westward. We shot some ducks and plover as we journeyed. The water for the horses had given out, and as we were desirous of a small guzzle we stopped at an inviting slough; waded in three abreast, with much noise, in order to drive the wigglers to other shores, and strained out a barrel of nice, yellow, warm water; and we could now look the horses in the face. Incidentally we drank a little ourselves.

As we journeyed we noticed long, winding, deep, parallel paths stretching far away across the hills. They were melancholy reminders of happy days long passed, made by countless buffalo, and all around lay bleached skulls and bones. The tops of the hills hereabouts were covered with small circles of stones. I was at a loss to account for this, but afterward learned that they were placed there by the Indians to hold down the bottom of their wigwags.

Night again found us at another encampment. We sat late around the camp-fire that night, conjuring up the past. We were in the heart of the past, as it were, and our group was no less silent than the spirits of those who were once encamped on the very spot occupied now by ourselves. I slept that night in the tent with the horses and dog, and my lullaby was the swish, swish of the horses' tails as they caressed the joyous mosquito.

After breakfast we put our guns in the wagon, carefully covered them with the tent, wood and cooking utensils, and jogged toward our destination. One of my colleagues was reading aloud for the edification of the horses, when our schooner came to a sudden halt. Right in front of us, on the opposite side of the knoll, there stood looking at us about twenty beautiful antelope. I carefully dug down into the bottom of the wagon, upset the barrel of water as gently as possible, sat down in the box of crackers, and at last found my rifle. Strange to relate, the curious creatures had not moved, but stood watching us with great calmness. The horses would not stand still enough for me to shoot from the wagon, and so I accommodated them by jumping out. Standing on the ground I could only see the heads of my poor victims. I selected a head with a nice pair of horns, and shot just to see if I could satisfy their curiosity, and I found myself entirely successful. Away they went. By this time my companions got out their long range shotguns, and after waiting until the antelope were far enough away to shoot without being too badly mangled, began a Fort Sumter bombardment. Meanwhile I was pumping the Winchester. I must have overshot. Let me advise whoever goes after antelope not to overshoot. It is also very bad not to shoot quick enough. The dog became disgusted and took a hand. He made a dive from the wagon, to which he was chained. Something gave way and away went the dog in hot pursuit. If he hadn't been distanced he would have been running yet. He was a Newfoundland, a fine dog on skunks, but a little rusty in this line. The same owner who owned the horses, tent, wood, cooking utensils, etc., owned the dog.

That night our camp was by a deep, wild-looking, wooded ravine. A most romantic spot. After dark I went a short distance from camp, and sat me down on a boulder to view the effect made by the tent, wagon, horses, camp-fire, moving figures and the dog, set off to good effect by the gloomy ravine as a background. Traditions and stories of frontier tales began to flit across my mind, and were made all the more real as I viewed our own camp.

In the morning I found an eagle's nest, and appropriated two young birds which I found in it. I was very

proud of them. We carefully put the dog in the wagon, threw in the tent, wood, eagles and cooking utensils, and toddled along. All day, ever and anon, deer and antelope were sighted on adjoining hills. We killed ducks, plover and snipe on this day, as we did on every day of our trip, but we did not exert ourselves sufficiently to kill any larger game. We preferred to loiter in the wagon and shoot what got in our way, rather than undergo the trouble of much walking. One member of our party, who rode the only saddle horse in the party, rode down into the bed of a slough prospecting for fresh water. As he got among the long grass up jumped a big buck not 10 ft. away. The deer removed to an adjacent knoll and looked the situation in the face. Charlie, who was the one looking for the water, did not have his gun with him. Of course not. What does a person, who is looking for water, want of a gun? O, no; his gun was in the wagon under the various paraphernalia. We were not far off in the wagon. I grabbed my rifle and the others their long-distance shotguns, and the skunk dog grabbed his voice and let out an unearthly howl. Forgetting that he was a captive he shut his eyes and jumped. His chain tightened and his hindlegs only touched the earth. He gave up another wail at this juncture. The disease was infectious, and the horses took a hand and stampeded, showing great speed. The dog dangled 'twixt heaven and earth. I sent up a fervent prayer that he would be strangled. Vain request. The devil was with him; his collar broke, and he was as free as Monte Cristo. In the meantime Charlie had run the horses down, and we were in running order again. One of us, Burt by name, a light, graceful youth, jumped lightly into the wagon and sat himself down on my young eagles. Their graves are near that spot.

I will not weary you any longer. The grain which we brought along for the horses finally gave out, and as the grass was too meager and dry to sustain them we were obliged to turn homeward. As it turned out one of the horses gave out just as we reached home; and it was only by an effort that he was saved. We only got about half-way across Emmons county. From a hunting standpoint so far as large game was concerned, the trip was a failure; from a healthful, happy, romantic standpoint it was a great success. The days were fresh and sunny; golden gems as they come to my memory now. This was five years ago. Game must be scarcer there now. But in those days that part of Dakota was a paradise. If we had made the effort, undoubtedly with the assistance of the dog, we would have killed much game. But as we had a destination in view, and a limited time to make the trip, I will leave those as my excuses.

We arrived home brown, healthy and with a wonderfully developed faculty for sleep. OLD AVALANCHE.

### DUCK SHOOTING IN NEBRASKA.

THE spring of 1892 was an exceptionally rainy one for Nebraska, causing numerous wet weather lakes in portions of the State, thereby making splendid lays for ducks and geese, more especially ducks. Purchasing a team of ponies, wagon, etc., the writer, in company with his brother Nate, loaded camping outfit and were off for a trial at ducks.

Having had very rainy weather for three weeks past we naturally figured on a let up soon. The roads were very heavy, nevertheless we pushed on en route for Boone Lake. Needless to recount in detail our flounder in a mire hole. Suffice it to state that we landed on the opposite side, mud and water being the principal part of our make-up. However, we were repaid shortly by running right into some fine jacksnipe shooting, and mud and water were soon forgotten. I scored some good shots which had a tendency to rattle Nate, but he redeemed his record on the outcome by returning to the wagon with a goodly number of jacksnipe.

Resuming our journey, a few miles further brought us to Boone Lake. A good-sized patch of timber, standing about 100 yds. from the lake afforded an excellent location to pitch camp, which we did in short order. Nate had caught sight of 200 or 300 ducks collected in good-sized flocks, quietly feeding here and there on the lake, but the agreement was that camp should be made before any hunting was allowed, as it was still early in the day, and we hoped to obtain even better shooting by waiting till toward evening and catch the ducks coming in for the night. Nevertheless the sight of those ducks gave Nate an impulse that I had never seen exhibited in him before (barring a movement he once readily assumed on a bear hunt with me), and the way things moved for a while would have done credit to a much more pretentious person than Nate. Tent up, a hasty meal, ponies hobbled and turned loose, a good supply of loaded shells, and our "waders" on and away we went.

Did the reader ever experience trying to hold an excited sportsman within bounds as you were making a sneak upon a bunch of ducks? If so, you can appreciate the part I played in covering that 100 yds. between timber and lake. Withal we made a very good sneak, and succeeded in emptying four shells of No. 4s at long range among a flock of mallards, six being secured. On the rise several good shots were scored by both.

The ducks began rising all around the lake, but kept circling, and seemed decided in staying for the night. The truly fine sport then opened. Wading out into the water, where I was partly concealed by the tall weeds and rushes, I had excellent shooting, which lasted about an hour; and for the gather I was obliged to make several trips into the lake, coming out loaded, while Nate put in a goodly portion of his time inventing excuses as to his position, action of his gun, etc.

Gathering our shoot, we returned to camp, had supper, enjoyed a smoke, built up a good fire in the tent stove, and lay around commenting on each other's shots of the evening's sport. Confidentially between the reader and myself, Nate is a better wing-shot than I myself; but it takes a dandy to beat me around the camp-fire. After making a programme for the morning's hunt, a game or two at cards to decide who would be elected to build fires and prepare breakfast, which as usual resulted in Nate's election, we turned in.

Five o'clock A. M. Rain, rain; will it never stop? Nevertheless as soon as breakfast is over, dishes washed (an unusual action in the average camp), we put off for the lake. Shooting similar to that of evening previous, except that Nate put the writer to shame by more than doubling his record. The score now stood two to one in Nate's favor. Something must be done on the morrow. How I worked and did close shooting, taking but few

chance shots. But the result of the previous day repeated itself. Before starting to gather what ducks I had shot I was careful to get the exact location of Nate, so as to allow him time to gather and start for camp and not come into contact with him, as I did not wish him to see what I had killed. Upon reaching camp with our game, we usually tied the ducks on a heavy cord and hung them on a tree near by. In relating this special part of the hunt, I am obliged to divulge a secret thus far kept to myself, which, should this come before the notice of Nate, will explain something which heretofore has been a mystery and a source of joking at his expense. As before stated, I had allowed time for Nate to gather his ducks and return to camp, then gathering what few belonged to my credit, I started for camp also. As expected, Nate was in the tent starting a fire in the tent stove. Upon coming up to the tree where hung the trophies of previous shooting, I quickly severed a string containing twenty or more ducks, and as it was raining and blowing, and Nate was busy at the fire, my movement was not noticed by him, and I had no difficulty in adding my morning's shoot to this string; and walking into the tent I indifferently remarked that we had had pretty good shooting. Nate said, "You must have had it then, because I did poor enough." About that time he caught sight of the string I had carelessly tossed on the floor. It was a stand off between his mouth and eyes as to which opened widest. A hasty count, a long breath, and then "You are the luckiest man that ever pulled trigger. Every duck that raised off of that lake kept circling until some stray shot from your gun accidentally hit him."

I took in the cot, and attempted no answer. That string of dead ducks filled the purpose. "Never mind, my boy," continued he, "I'll rub you on this evening's shooting." And I could readily see a determination, which would call for closer shooting on my part than I had done that morning. Often since have I listened (with secret delight) to Nate recounting this same duck hunt, with the result of the score (about ten in my favor), and have felt that he ought to be rightly informed. But fearing to spoil a good story have remained quiet until now. Should this come before him, as I expect it will, as he is a close reader of FOREST AND STREAM, I have a brother's trust that he will pardon me, even though he did come from Chicago to outshoot a Nebraskan. The following day we broke camp, being obliged to secure a large team of horses to pull us out of the mud; for the continuous rain had made extremely bad roads, which necessitated our giving up further hunting, although our intention was to travel northwest to be absent three weeks or more, as ducks and geese were very plentiful. I shall some time give an account of one or two of Nate's and my experiences in the Rockies of Colorado on a recent deer and bear hunt. If there is any one place where Nate does loom up it is on a bear hunt. J. S. O.

### FARMERS AND TOWN SPORTSMEN.

WILMINGTON, Delaware.—Having read your publication from its inception, and as a subscriber after the first and second year, and having had much pleasure from the perusal, as well as information, listening to the pros and cons, I feel it only fair to ventilate my views.

Your columns have been loaded with the views of city sportsmen and fly-fishers to such an extent that it might be inferred that it was a crime to live in the country, and own land and farm the same. City sportsmen legislate to pass certain laws prohibiting this, that and the other, upon lands they have no right or title upon, then haul up the son of a farmer and fine or imprison him for violation of law for killing or trapping, while they themselves propose to go scot free for trespass on property of farmers, regardless of breaking fences and other damage. To a fair-minded man this seems a little one-sided. As a fair man I see no reason why a farmer, owning or not owning the land, is compelled or stayed by the law from killing, taking or trapping any quail, pheasants, or rabbits (as they may become a nuisance) upon his property, or having such right, cannot delegate it to others.

The law as enacted says (virtually) you may not kill or destroy. Suppose quail become a plague, am I compelled to keep them to the extent of being driven from my farm (if I had one) for the benefit of others who have enacted a law for their benefit, leaving me in the cold?

Again, the law says that traps and snares are illegal. Suppose I owned 500 acres of land which belongs to myself and children. Quail, rabbit, pheasants, etc., are costing me in a year ten times their value. Am I debarred from getting them out of the way? Well, I would risk it with a game warden at my side and doubt whether he would not better be out of the way than in it. Suppose the farmer had children and was too poor to buy the boy or boys a gun. Farmer, wife and family like quail, pheasant, rabbit. Why should they who have fed the game not have it? They have fed the game; the game lived off of them. Suppose the farmer and family are not wealthy, have no time to learn to shoot on the wing, no \$50 dog and no gun. Why should they not trap and snare (as they like quail) upon their own premises? And if they did, who would know it but a trespasser, who is equally breaking the law by being upon premises he has no right upon?

Having upon the soil of New Jersey, Pennsylvania, New York, Delaware, Iowa, Colorado, New Mexico, Arizona, Kansas, Illinois, Oregon and Washington, and many other States, kicked and torn down snares set by the owners and inheritors of the soil upon which the snares were set for quail, pheasants, etc., I have often and frequently wondered whether I did right in so doing. Why, were I a farmer's boy, with no money to buy a gun, no money for cartridges, no dog to show the game, and no time to be an expert wing shot with a gun, yet liking game as well as my city brothers, why should I not have it? Surely the end justifies the means.

How many of us would starve to death in a deer country in a close season, close season or not? and where would the man come from to prosecute us?

I am aware that the above sentiment would, or will, open the flood gates of controversy, but to me it seems that the so-called city sportsman has laws passed too entirely for his own benefit and does not sufficiently look at the other end of the stick. Fairness and equity look at both sides. How many city sportsmen (gunners and fishermen) obtain permission to trespass? I will plainly say, with them I have broken (in climbing over) more panels of fence in one day than a mechanic's wages for a week would rebuild. Being modest and unassuming I

did not wait and ask for the bill. In Iowa once, when three of us were prairie chicken shooting, one man at each post pressing the wire fence down and the other driving over it, I have often wondered what in equity we owed for fence. In these parts there are many panels of fence down to my debt, and with the elastic conscience of the city sportsman, all I have so far to say is the fence was too weak (to carry a 180-pound man).

Now, I am not a growler, but, honestly, I have gunned with sportsmen who would let on that they would rather be shot than take any advantage of the birds. I have started with such but never returned with them, a few honorable exceptions excepted. I am a fisherman also. Fly-fishers nearly invariably use bait and catch the largest fish with it; so while I start with them I rarely return with the A1 fly-fisher. They become demoralized and when nothing else is effective use bait.

Should this be of sufficient importance it may be taken exception to, and as I do not desire controversy, I will say that I am not a country boy. I own no land except in a city. I am not sufficiently poor to be compelled to trap or snare game. I would, if the reverse were the case, upon my own place, and would fight any one who meddled. While blessed with more of this world's goods than the average country boy, I see no reason why you compel him and his parents to do without the toothsome quail, pheasant, rabbit and trout, which are as sweet to him even when not taken by your standards. Living in a city where the taxes are very high, as I do, how would I like the countryman and his family to step in and further increase our taxes, with no corresponding advantages to me? Is not the case parallel? Let us be a little more kind to those who feed the game. Ask for permission to hunt, and, like men, pay for broken fences and such damages as are committed. For years I have thought that the country boy and farmer, with a good taste and love of sport, have been living under the rule of hogs, by which title sportsmen designate all who do not agree with them, and just kill sufficient game to keep within the limit which each self-styled sportsman sets up for himself, outside of which one is a hog. Having lived over half a century, having dwelt in handsome civilization, and having camped out in the Rockies and southern California, Arizona and New Mexico for a year, having been hungry and thirsty, and as age creeps on, I hope, growing more charitable, I would speak for those who, as many of us, like game, but cannot, or, at least, can ill afford, to kill it by a standard which many of us have legislated for. I question whether our legislation or the farmer's boy is right.

M. U. SKRAT.

#### Quite Rightly Dubbed "Cattle."

SAGINAW, East Side, Mich., July 26. *Editor Forest and Stream:* When the Michigan Game Warden Bill was first passed a number of the sportsmen here in Saginaw raised a fund by private subscription to put a game warden in the field, as our board of supervisors would not pay for any services of this kind. We employed Henry Connor, who did good work for us as long as we were able to keep him in the field. Since then he has been on the police force, and still retained his interest in game protection matters. He is a thorough sportsman and a pot-hunter that violates the law is liable to get into trouble if Henry knows it. Last night he came to my house with a little box in which were the bills of five freshly killed woodcock. They had been sent him by some law-breaker who gloried in shooting out of season and took this means of rubbing it into the ex-deputy game warden. It is a shame that the guilty party cannot be ferreted out and given a dose of justice. Evidently was not hunting for the market or he would not have cut the bills off from them, neither did he know enough to have them properly cooked or he would not have mutilated them. He was probably one of the kind that took them home and had them boiled, and could not tell by the flavor whether he was eating blackbirds or pork. It is too bad that this kind of cattle exist and thrive on this green earth of ours, but they do just the same.

W. B. MERSHON.

#### A Miss and a Hit.

AMONG the most singular shots in the experience of the sportsman was that made by Edward Douthet of Huntington, W. Va. Near the Ches. and Ohio R. R. shops is a swampy ground, the resort of snipe in the spring and occasionally ducks. While hunting in this place a snipe rose before him, flying low. He fired and missed it. Immediately a number of teals flew out of the weeds and grass. He then heard splashing ahead, and going to the place from which the noise came he saw, to his great astonishment, that he had killed four of the ducks. His surprise was a double one, that he killed ducks of whose presence he was not aware, and missed a snipe in plain view; for our friend Douthet is a formidable competitor in the field of any of our wing shots.

N. D. ELTING.

#### Bad, but Funny.

It happened many years ago, but is worth relating. Some parties living near Highland, on the Hudson, were out sailing in a rowboat one night when they discovered a flock of ducks swimming in the mouth of a small stream that empties into the river. "Hal a prize." They had settled it in their minds that wild ducks would not fly by the light of the moon, and they accordingly tested their faith by their good works and killed every web-foot with their oars. The next morning, when doubtless one of the party was debating on the comparative utility of gun and oar as a "persuader" of ducks, he found that his call of "peely, peely," had not its usual effect, for no ducks responded; they laid dead in his own house.

#### Sheathing Paper for Camping.

LITTLE FALLS, N. Y.—"Up North" last week I ran across a new idea in the camping line. One of my customers takes in a roll of heavy sheathing paper, puts up a frame and covers with paper. The idea to me seems good and I would like, through the *FOREST AND STREAM*, some of the brethren's ideas and plans for frames for this, say a portable form.

L. S. S.

#### Cresson Springs on the Pennsylvania Railroad.

The Pennsylvania Railroad announces that all through trains will stop until further notice, at Cresson, on the Summit of the Allegheny Mountains. This will afford passengers to and from the World's Fair an opportunity to break the journey and enjoy a few days at this delightful resort.—*Advt.*

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### ANGLING NOTES.

#### Sunapee Lake.

RETURNING home after an absence of two weeks at Sunapee Lake, N. H., I very naturally looked over *FOREST AND STREAM* to see what had occurred while I had been away, and read Payson's letter in the issue of July 8. One sentence struck me with peculiar force, under the circumstances. It is this: "Lake Sunapee, the alleged home of the black bass, and Newfound Lake, where trout are said to abound, are extending less attraction to our fishermen at this time than they have in years gone by." The particular expression that caught me is that Sunapee is the "alleged home" of the black bass. Possibly I do not understand what constitutes really the home of this fish, but my experience has taught me that this is what Sunapee Lake actually is. It is not like waters that I have fished in Canada, where one could catch 200 lbs. of black bass per day and salt them down by the barrel if so inclined; nor like Glen Lake, in New York, where I have caught small-mouth black bass of 8 lbs. in weight; nor like Lake Champlain, where I have caught 50 lbs.; on occasion, before breakfast; nor like some other waters that I might mention where I have made large scores of bass, but it is a place where one can go out and by casting a fly take a dozen or two bass that will afford all the sport that a reasonable man should desire. I took with a fly, by casting, eighteen bass one day; they were not large, 2 lbs. being the largest, but they were more than could be used, so I put back all that could not be used at once. A man who fished nearly all one day in one place with live bait, said he caught forty bass. Why he did so I do not know, for he could not use them. I might have equalled this number, but I had no use for the fish and I never waste fish simply to make a score. I have been about the country quite a bit seeking fish, but I do not know of a pond or lake, large or small, that affords prettier fly-fishing for black bass than Sunapee Lake. I have never made a business of fishing for black bass at Sunapee for the reason given, but I have seen enough bass on the shores and shoals to know that they are very plentiful in the lake, and very much at home. Quoting from the journal of my first visit to Sunapee in 1890: "Monday and Tuesday while I was catching trout and hoping to catch a salmon, Mr. Cleveland devoted himself to black bass fishing. One could scarcely go amiss of good fishing grounds for bass of the small-mouth species, the only kind that Sunapee contains. Monday he brought to the hotel fourteen bass and returned far more than that number to the water. Tuesday he brought in twenty-three, and again returned many to the water to grow. The bass were not large, the largest being 2 lbs.; but every rocky point and every shoal furnished its quota of bass." This year I found young bass in large numbers along the shores, showing that they are breeding rapidly. Some of the bass that I caught the last of June had not spawned, but on July 1 I saw a brood of young bass just hatched. There has been one trouble with the bass fishing in Sunapee which is now corrected. The bass went down the outlet stream and escaped forever from the lake. A screen is now in position at the outlet which keep the bass in the lake, and the bass fishing must improve, although it is good enough now for splendid sport, and any fair fisherman can catch more than he can use.

#### Moths.

Every man who possesses a fly-book containing flies knows that moths are fatal to the well-being of the flies, and one must be constantly on guard to prevent the ravages of these pests. The moths, like Bill Arp's pills, work night and day, and if one has three or four fly-books and does not wish to put them in a bank vault behind a time lock, or in some other similar place, where they cannot be easily got at, they require as much care as so many babies in their second year.

I had a big chest made to hold my rods, with trays flush with the top of the chest for reels, fly-hooks, landing-nets and the thousand and one things that go to make up an angler's outfit. In one of the trays was a wooden box, the cover held down by a brass hook, and in it I kept a lot of spoon hooks. I opened the spoon box one day and found that moths had eaten the feathers of one of the spoons, and had left the skin of a moth larvæ on the feather. One feather only was eaten and nothing left of the moth but the skin of the case. Both the cover of the chest and the cover of the spoon box were fitted so closely that I did not think it possible for a moth miller to get even into the chest. I have held that instance up for several years as evidence of what moths can do when they try. I hold it up no longer. One evening this summer Mr. F. F. Gunn, of the faculty of Indiana University when Prof. Jordan was president, came in to see me. Mr. Gunn said he was going out bird hunting, not to kill them but to study them, and that his field glasses were not at hand. I offered him mine and went to a closet where they were hanging on a hook by the strap and got them. I remarked that I had not used them for a long time, but presumed they were in order, and at the same time took the glasses from the case, the cover being held down by a strap and buckle. I turned the glasses in my hand and noticed something which in the uncertain light appeared to be on one of the object glasses, but it was inside the lense. Unscrewing the object glass a dead moth miller was found inside the tube on the glass. Mr. Gunn and his wife and my wife were watching me as I unscrewed the glass and saw the dead miller as I have described. If any one will tell me how that miller got inside the tube of a pair of field glasses I will be greatly obliged.

#### Two Kings at Mechanicville.

The *Troy Times* of July 22 stated briefly that on the morning of that day a bald eagle was seen to fly down to the surface of the water at the salmon pool in Mechanicville, and then mount slowly as if wounded, and fly to the shore, where it was found that the eagle had taken a salmon from the pool. Mr. T. L. Pratt, of Mechanicville, vouches to me for the truth of the story, and gives the

details as follows: "It was not quite as stated in the paper. The eagle seized the salmon at the surface, and twice the fish carried the bird under water, the second time the eagle lost the salmon, but in a moment captured it again. The bird did not rise from the water, but kept up a rapid motion with its wings, and fairly towed the fish ashore, and dragged it up about 30 ft. on the beach of the first island below the bridge." The salmon weighed about 8 lbs. and was taken away from the bird by Rockwell Jewell. The question in my mind is, was it an eagle? Two kings and three pork-bait fishermen would be hard to beat.

Since my last letter the following salmon have been killed at Mechanicville:

July 22, E. A. Starks, Mechanicville.....1, 11½ lbs.  
July 22, D. Burk, Mechanicville.....1, 14 lbs.  
July 23, J. E. Bunce, Mechanicville.....1, 11½ lbs.

The rains of the past few days have raised the water in the Hudson to a pitch which has enabled the salmon to proceed up stream, which they did, passing through the fishway and leaving the pork pool deserted. Large numbers of salmon were seen at the mouth of the Hoosick River, at Mechanicville, leaping from the water. When the flood came down and the salmon started up the river the wheel pit at the pulp mill just below the fishway was literally filled with rushing, struggling salmon. If the fishway at Thomson's mills is in order, as I presume it is by this time, the salmon can now go up as far as Fort Edward, where there is a dam that they cannot pass. There are several branch streams of last resort that the fish will probably go into and spawn. Unless all signs fail there will be a big run of salmon next year, the result of planting 450,000 fry and 12,000 fingerlings in 1890.

A friend, a veteran salmon angler, who has killed salmon with the fly in Scotland, Canada and the United States, after reading the account of catching salmon with the pork bait, wrote me: "Had Dr. Johnson been alive to-day he probably would have amended his famous saying to read, 'Angling is a line with a piece of hog at one end and a whole hog at the other.' It is a grand thing to give the people free salmon fishing, at the same time it is a pity that the king of all game fishes should be made to suffer such an ignominious death."

A. N. CHENEY.

#### SALMON ANGLING AT MECHANICVILLE.

THE time has arrived when, to the satisfaction of every one, it has been proven that salmon can be taken in the Hudson on a fly. During the last week many salmon have been taken at this place, and though the catch has fallen off at present, the excitement still keeps up. The register of the Hotel Tallmadge, kept by J. H. Campbell, formerly chief detective of the city of Troy, shows that many fishermen arrive daily. As this is the first season that salmon have been taken with the rod, the fishermen are not yet acquainted with many pools where they may be taken. The best ones discovered so far are at the mouth of the creek that flows from Round Lake and discharges into the Hudson in the middle of this village, and another one directly in the rear of Hotel Tallmadge at lowest part of village. In the river bank in the rear of the hotel are many cold springs which overflow into the river, and in the cold water within twenty feet of the shore are salmon which no man can number. The river banks are lined morning and night with anxious fishermen with every description of tackle yet discovered. Others secure boats and cast their flies from them with more or less success. Among the lucky ones are the following. The list is not complete, but as far as given is correct. Louis Boucher has taken the greatest number, also the largest one, which was taken last Tuesday and weighed 17½ lbs. The same day T. H. Dutcher, of Troy, took one of 10½ lbs on a Jock-Scott; Dr. Richard Bloss, of Troy, one, 10½ lbs.; Thos. Pratt, of Mechanicville, one, 12½ lbs.; C. O. Barnes, of Mechanicville, one, 8½ lbs.; Louis Boucher, of Mechanicville, one, 8½ lbs.

After 8 o'clock in the evening one was hooked by Fred Shears and was not landed till after 9 o'clock, which was found to weigh 13½ lbs. On Wednesday John Burke and Oscar Barnes each took one weighing 8½ and 9½ lbs. On Friday morning a large salmon was hooked by E. A. Starks of this village, and after playing it for two hours broke loose and was lost. On Saturday Mr. Starks lost another, and hooked and landed another weighing 10 lbs. Mr. Starks is an experienced fly-fisherman. On Friday Wm. Vandenberg took one of about 10½ lbs., also Geo. Satterly one of 8½ lbs. It is expected that the fishing will be better after a smart shower. Dr. Bloss and family are registered at Hotel Tallmadge, to stay until the season closes. State Game Protector Barber takes a hand in fly-casting from time to time, and sees that the law is observed. While many of these fishermen cast the fly, and will take their fish in no other way, it is not true of all who have taken salmon. The daily papers all over the State have been full of accounts of salmon being taken on pork. The pork dodge is simply bosh and is worked in this manner: On the end of the line is a gang of three large hooks like those used on a spoon, and above them on the same line are strung from three to five hooks with or without flies, and on one or more are placed a small piece of salt pork. The salmon are so plentiful and so near to the river bank, that these persons fish from the banks, and by casting out and jerking the hooks in the water many salmon have been hooked, and in all parts of body, one being hooked in the tail.

The story has gone abroad that salmon are taken on pork, but I find that the hook which has the pork does not hook the fish. Sportsmen disdain this method and have taken several honestly on flies, either on the Jock-Scott or silver-doctor. Some who claim to be sportsmen, after casting the fly for a while without success, have worked the pork racket with the rest, and not being successful in that have bought them at from \$5 to \$8 each, and the next day their names would appear in some daily paper with a full account of the capture. It would hardly be fair to give their names to the public, but there are fish hogs at Mechanicville who should be served up for salmon bait. The true sportsmen are also known and respected and will always be welcomed to our village. If these practices above mentioned are continued by some of those who claim kinship with old Izaak, but who are a reproach to his name, they will be exposed in a manner which will pluck their pinions and cause them to "take a tumble."

MECHANICVILLE, N. Y.

JOCK-SCOTT.

#### Anglers' Association of the St. Lawrence.

THE tenth annual meeting of the Anglers' Association of the St. Lawrence River was held at the Walton House, Clayton, N. Y., last Wednesday.

## OLD CONNECTICUT SALMON SWIMS.

MY summer home is under the Hadley elms; old elms bending with the weight of two centuries, but still heavy with frondage, thanks to beneficent nature, and harboring innumerable birds which continually flit, chatter or sing, according to their moods and the time of day. It is within easy walking distance of what was once one of the most abounding salmon swims on the continent, none in Canada excepted, though now, alas! as bare and empty as a worn-out circus ring and twice as sad to contemplate. Few fish have been caught there since 1800.

That was the year when my father was born.

Of course he never wet a line or dipped a net at that epoch, but my grandfather, I dare say, often stopped on his evangelical circuit, in the latter part of the century, after the Revolutionary War was over and he had laid down his musket and bandoleer, to watch the fishing operations of the farmers and market netters during the height of the salmon run in May, gathering as they did from all parts of the Connecticut valley. The experience, therefore, is quite within my ancestral lines, and being only two removes back, genealogically, seems almost within my day—for I remember my grandfather very well; and when I pass my trailing fly over the familiar face of the pool I incontinently expect to move a fish. But, alack! it is like gazing into vacuous eyes from which the sight has departed, yearning for telepathic responses which never come. One may flail the empty air with equal chances of evoking a rise as to whip those tenantless waters for salmon now.

One morning last June I put a St. Lawrence skiff into the river at the north end of old Hadley street and took a six-mile pull around the great horseshoe bend which incloses the town site and meadow, and came out at the south end, rather less than a mile by land from the starting point. [There are three parallel streets in Hadley which cross the peninsula, each sixteen rods broad, lined with stately elms and maples, and carpeted with lawn, and there are no avenues to compare with them in all the land.] It was a phenomenal boat ride through a purely pastoral landscape, with no up-stream current, and capable of indefinite repetition by simply hauling the skiff across the neck back to the place of beginning—one of those few and fluent passages of a chequered life so often longed for but seldom realized. In the bucolic stretch of river there were at least three notable salmon swims in the olden time. One was below the mouth of Mill River, on the Hatfield side, and it is a reputable place even now for black bass and pickerel, and an occasional masacalouge. A still more important swim was a little east of the lower end of old Hadley street, at a period when the river flowed close up to the bank, instead of being separated by a wide alluvial flat as at present; and a third was in Hockanum Meadow, right under the brow of Mt. Holyoke, near the Northampton Ferry. All of these are long sweeping reaches with gently moving current, where the salmon loved to disport and rest after the ascent of the arduous falls below, an ascent so difficult, indeed, as to effectually bar the upward passage of shad. The depth of these swims varies from 6 to 20ft., and in no respect whatever do they resemble the tumultuous Laurentian pools, or even the Connecticut above Bellows Falls.

Looking off from the commanding summit of Mount Holyoke over the extended landscape which verges on four States, it is a grand sight to survey the expansive river plain, with its circumvallant mountain ridges, and, tracing out the sinuous course of the majestic stream, note the lackadaisical way it has of meandering through the meadow after it has chafed and elbowed its impetuous exit from the rugged gateway of the New Hampshire Notch. It is a vivid expression of the moods and vicissitudes of human life. The Indians called this region Norwottuk, signifying "the midst of the river," which is appropriate. Elbridge Kingsley, the inimitable artist who has his home and birth-place here, has transferred some wondrous sweeps of this grand scenery to broad canvases, every line of which, and bit of color, is full of inspiration. Kaleidoscopes the like of this do not offer themselves at every odd corner of the earth, and happy is the man who can revel in the phantasmagoria. Mr. Kingsley has made good use of his opportunities, and I commend his studies to such lovers of nature as are fortunate enough to have access to them. One may spend hours of pleasure in his quaint studio.

Sylvester Judd, the historian, of Hadley, says that Elihu Warner (who lived until 1850, or later) remembered when forty salmon were caught in a day near the lower end of old Hadley street, about the year 1773, the largest of which weighed between 30 and 40lbs. Josiah Pierce and six others operated a seine in Hadley in 1766, from which they derived considerable joint income, and Northampton men had fishing places on the river at Hockanum. In South Hadley there was a noted salmon stand near the mouth of Stony Brook, and another above Bachelor's Brook against Cook's Mill. Many salmon were taken at those places. Twenty-four were caught at one haul of a seine near Stony Brook which ran from 6 or 8 to 40lbs. in weight. Falls, wherever occurring, were always choice fishing stands for both Indians and settlers, who caught them in pens and scoop nets. South Hadley Falls, called Patucket in the aboriginal vernacular, was the favorite place of all. Dipping salmon was arduous but exciting work. I have seen it practiced on the Columbia and on the rivers of Nova Scotia. Men stood in mid-stream in boats and skiffs, or on the margin on eligible rocks, and with a down stream sweep of the deep, long-handled scoop bagged the salmonheaded up current. In like manner they dipped for shad in after years, when it had come to be no longer regarded as a disreputable fish; but up to the year 1700 those who dipped for salmon threw the shad away, when they happened into the meshes. So numerous were the fishermen along the Connecticut during the season that they and the lumbermen together sufficed to support a goodly inn kept for many years by one John Stickney, whose house, a brown, gambrel-roofed one-story building, stood near the mouth of Stony Brook for more than a century.

Quoting Sylvester Judd: "Salmon were seldom noticed in records of the seventeenth century. Salmon nets began to appear in 1700, and some salmon were salted in casks by families before and after 1700. They were seldom sold, and the price in Hartford in 1700 was less than one penny per pound. Fish were so plenty in the Connecticut and its branches that laws were not necessary to regulate fishing for a long time. There was a law in

Massachusetts against erecting weirs or fish dams in rivers without permission from the Court of Sessions. Petitions for liberty to erect weirs to catch fish in the Hampshire streams began in 1720, and there were several after 1760. In Northampton salmon were sold from 1730 to 1740 at one penny per pound 'in lawful money.' The price in 1742 was a penny ha'penny, and from 1750 to 1775 it was commonly two pence per pound. The price was from two to three pence in 1781 to 1787, four pence in 1794, and it advanced to seven or eight pence in 1798. The first dam at South Hadley, about 1795, impeded the salmon, and the dam at Montague was a much greater obstruction, and salmon soon ceased to ascend the river."

This curt record is enough to make anglers weep. Dammed for 100 years, the Connecticut has been a fruitless stream. Recently reports have become current that salmon have been taken in its upper waters. Let us pray that this noblest of New England rivers will be speedily rehabilitated, then we can all swing the two-handed rod, and perchance even dip, as our forefathers did. And what if the price of those regal fish would once more drop to a penny a pound! Wouldn't it be gay?

HADLEY, MASS.

CHARLES HALLOCK.

## BOSTON ANGLERS.

THE salmon fishermen are returning, some of them, while the more fortunate men of leisure will stay another month. The reports from the Canadian and New Brunswick waters are conflicting. Generally they mention poor fishing for the season, but of late these reports are better. More salmon have been taken, but the size runs rather small. Mr. H. M. Howes, of Boston, is back from the Southwest Branch of the Miramichi. He was absent but a few days, yet he took two salmon, one weighing 12lbs. and the other 10lbs. He also took a number of grilse. Mr. I. W. Adams and John Pottier, Jr., have been fishing the St. John, Caspé, as usual, and they have had good sport. Mr. Adams has been trying an experiment and keeping a careful note of the temperature of the water. He has fished almost altogether with the Jock-Scott, though using different sizes. He is convinced that any good fly will take a salmon, if of sufficient size, when the temperature of the water is between 40° and 60°. When the water is warmer, he concludes that it is of little use to fish. The salmon then seem to be sluggish and will not rise, no matter what the fly is. The largest salmon taken this year on the St. John weighed 28lbs. Mr. L. Stackpole has had good success on the Nepisquit.

Mr. Daniel Gunn, the veteran Boston printer, as well as lover of angling, has again made a trip down to the Provinces for sea trout. He is just back to business, and he says: "I have done it again." It must not be forgotten that it was Mr. Gunn who was making a speech before the Massachusetts House of Representatives on some fisheries subject, when the speech was so good that the old wooden codfish that has ornamented the house for so many years, "turned and winked his eye." This time he has been down to Prince Edward's Island, Landing at Summerside he tried the trout in that section for a day or two without much success; there were too many Americans there for the same purpose. He next went over to Souris. Here he found a number of American fishermen also and they were getting some good trout. But they were jiggling them and taking them with bait—any way to get them—and this Mr. Gunn did not like. The landlord at the hotel where he stopped suggested that he fish with the other guests, but when he objected he said that he had a boat and would go himself. So he rigged a boat on wheels, fixed a nice cushioned seat for Mr. Gunn, and they drove off each day where they pleased. They fished Eagle Lake and Black Pond, both arms of the sea—or regularly filled with tidewater. Mr. Gunn says he never saw better fishing, when the tide was right. The trout were particularly beautiful and silvery. He took up to over 3lbs. in weight, but generally they were smaller, from 1lbs. to 2lbs. The other sportsmen at the hotel became interested. Mr. Gunn was beating them, in spite of jigs and bait. The evening before he came away he took 36 trout—a most beautiful string. As he brought them to the hotel the sportsmen all gathered around, admiring the fish. They desired Mr. Gunn to give them the name of the fly he used, particularly as it was his last time fishing. But that gentleman is not naming his flies to jiggers and bait fishers, though I have not the slightest doubt but what it would give him pleasure to post any reader of the FOREST AND STREAM desiring to fish fairly.

Fishing for cod is popular at this time with Boston sportsmen who cannot get away for something better. The other day the employees of the Boston Chamber of Commerce chartered a tug and went over to the fishing grounds after cod. Mr. E. M. Gillam, commercial editor of the Boston Advertiser, and J. Carlton O'Brien, who holds the same position on the Boston Journal, were invited guests. They caught a number of fish. They made up a pool, each putting in a small sum, the man taking the largest fish taking the money. As usual, Mr. Gillam was high line, taking the greatest number of cod, with a sculpin or two, but the largest fish fell to the hook of Mr. Burgess, of the ship news department of the Chamber. Later in the day the wind blew a gale, with a shower, which put a stop to the fishing.

Mr. Harry B. Moore, already known to the readers of the FOREST AND STREAM for his good stories, and sometimes practical jokes, has just returned from a most enjoyable trip where codfishing came in as the chief incentive to him. He was the guest of Mr. Robert S. Gardiner, president of the Rand & Avery Supply Co., also the publishers of the Pathfinder, at the Algonquin Hotel, at St. Andrews, New Brunswick, of which hotel Mr. Gardiner is part owner. The entertainment was perfect, and among other features was fishing for cod from a little steamer in Passamaquoddy Bay. The bay is beautiful, with the finest of scenery. But Harry was scarcely pleased with the want of enthusiasm evinced by the other members of the party. They would sit and fish almost stupidly over the side of the boat with scarcely interest enough to occasionally draw up their lines to see whether their hooks were baited. Mr. Moore was getting about all the fish taken. He resolved that he would interest them in the scenery, if they did not care for fishing. "What a beautiful view!" he remarked, at the same time turning his head away from the fishing. The gentleman next to him turned around to look. Harry gave him a tremendous tug, but his hand was away before the owner could turn his head. "Goodness!" he exclaimed, jumping to his feet. "What a bite I

had!" Then he was interested and fished in good earnest. "What do you suppose it was? A whale, a big cod or a shark?" Harry did not know. All hands fished then in good earnest, bound to catch the big one. "Mr. Moore will please not call our attention to the view again," one gentleman remarked. But when he said view all eyes were turned voluntarily to look. The view was truly beautiful. That gentleman felt a sharp jerk at his line, but Harry was fishing earnestly. Again all hands tried for the big fish that had nearly jerked the line out of the hands of two of them. In the meantime Mr. Moore had caught 12 cod, a couple of haddock and a sculpin or two. He was high line, in fact the others had caught very few fish from sheer lack of interest till the big bites came. They wondered over and talked of the big bites till reaching the hotel. Mr. Moore explained that it was his own hand that had given their lines the jerks. SPECIAL.

## THOUGHTS ABOUT FISHING.

WALTON wrote: "We may say of angling as Boetler said of strawberries: 'Doubtless God could have made a better berry, but doubtless God never did;' and so, if I might be judge, God never did make a more calm, quiet, innocent recreation than angling." This in a mild way tells a plain truth, as many a humble disciple of its famous author will testify. Where would the angler look for the amusement now furnished by his search for the finny tribe? Where would he look for any apology of a substitute for it? How could he spend his day afield in mid-summer without it? Furnishing, as it does, enjoyment for all classes, rich and poor, high and low and intermediate, bait being the same, the man with his millions or the boy with his dimes, are on the same level, with the chances in favor of the boy getting the most fish, and both enjoying themselves equally well. There are numberless sports, such as baseball, tennis, target practice, horse racing and the like, all good in their places for certain classes, but no thoroughbred angler would agree to substitute either of them for his favorite sport for recreation, any more than the average man would visit country cousins for a month, or attend an ordinary church sociable and call it enjoyment, though he might enjoy either of them for a brief change—like castor oil, a little is good for a purpose, but that little will go a long way.

There are fishermen and fishermen, most of them good fellows, none of them angels, all of them with their own ideas of the sport and favorite ways of enjoying it; and a jealous set I have found them to be when plying their art, always afraid the other chap or party will get the first, most, or largest fish, yet generous to a fault when another has had bad luck, loses or lacks anything needed during his outing.

The ways of a fisherman as he applies them to sport, I have found a good criterion of his ways of doing business in the everyday walks of life. The man who has a day's sport arranged and agrees to be at a certain place at an appointed time for a start, and is late, it is safe to set down as a laggard and drone among his associates, and not to be depended upon in anything that requires promptness and nerve. The best company on an outing is he who is on time at the start, and will tell you if the start is an early one, that he has "looked at the clock every hour during the night," being afraid his alarm clock would not work and the start delayed. Such a man can be counted on as an enthusiast, and will not complain school-girl like, nor wish he had remained at home should the fish not bite the first hour, the sun prove a little warm, or the day be a trifle cold or wet. Of all the disagreeable company to encounter, the grumbler, the man never satisfied with the day's sport, continually reminding you that he is wasting his time, disliking to pay his share of the expense, etc., is the worst and most uncomfortable. Such are not sportsmen, and for the sake of peace of mind should be avoided. I well remember hearing an eminent sportsman say that "game is secured by being game yourself and staying till you win." As perseverance is necessary for success in hunting, business, or anything with a goal worth reaching, so it is essential in its fullest sense with the fisherman, supplemented with pluck and skill, if he would make a showing.

The fishing interests of the State are not all a matter of sport. As an investment by the State they pay handsomely. One of our best lawyers and legislators recently said: "We receive back ten dollars into the State to every dollar paid out. The first question a man looking for a place to spend a vacation nearly always is—What is the fishing in the locality?" Such being the fact it behooves the State to stock our waters so that they will teem with all desirable kinds of fish, particularly the streams with trout and other bodies with bass. Much is expected of our new Fish and Game Commissioner, W. H. Shurtleff, as with his known abilities and intense love for sport it is natural to expect a boom in this long neglected matter. Prolific, and cheaply handled as fish are, there is no excuse for poor fishing in any part of the State.

The largest string of brook trout brought into the city this season was by Frank Lamper and weighed 9lbs. He is a specialist in that line and stands without a peer.

The closing of the mills in the city and throwing the 15,000 people out of employment, I predict will increase the number of anglers here for a time and have a tendency to decrease the number of fish in this vicinity. PAYSON.

MANCHESTER, N. H., July.

## The Kingfishers in Camp.

THE Kingfishers have gone into camp again, "Old Hickory" writes, on Platte Lake, Michigan. They have laid out a programme of fishing, exploring and yarning, to last until Aug. 25.

## Monterey Salmon.

MONTEREY, Cal., July 20.—The largest salmon caught, mine, as mentioned in my article, was given at 30 or 31lbs. Since then I have caught one of 41lbs., and the total catch up to date is 85 salmon, weighing 1,418lbs. J. PARKER WHITNEY.

# SEA FISHING FOR SEA BASS.

FISHING for sea bass may be made a gentle art or a boisterous sport, as the angler chooses. He can fish for the dark, sharp-finned fellows in quiet channels and creeks, where the sweep of the sea wind is broken by lonely, peaceful stretches of sedge and grass, and where the waters lie still and glassy day after day; or he can pass the sandy gates that separate the bay from the big rollers of the open sea and cast his line in the Atlantic Ocean, where the fishing is a struggle not with the bass alone, but with every force of marine nature. Each method has its pleasures and its triumphs. But while the fishing in the open sea is invigorating and exhilarating fun, it does not require a knowledge of angling as an art; and it is of sea bass fishing as an art that this article will treat. In the quiet waters of the bays and creeks the sea bass are wily and sly, and as changeable in appetite and temper as a woman. Sometimes they will bite furiously at the most ordinary bait, however inartistically offered; again, they will scorn almost everything and evade the most cunning and tempting lure. Then the catching of the bass demands the exercise of every art learned in years of communion with the sea.

The sea bass is not a game fish like the gorgeous squeteague or the piratical bluefish. But he is a fighter from his bulldog head to his stout chunky tail, and when he feels the hook and the strain of the line he will test the tackle well before he is brought to the boat. The first rush of a hump-backed bass as he takes the hook is often so much like the savage strike of a weakfish or a bluefish that it deceives even practiced anglers. After that first rush, the bass does not run off or leap clear of the water as the game fish do, but he gives a good honest fight that makes him a prize to be proud of, providing he has been honestly caught with light rod and line that gave him a fair chance for his life.

The best rod for bass fishing is one about 10 or 12 ft. long, with a tip just stiff enough to support the lightest lead that can possibly be used. How light that lead may be depends, of course, on the varying strength of the currents in different localities. As a rule salt water anglers err by using leads that are much too heavy. With a thin line a surprisingly small amount of lead will suffice to hold bottom. A very slight decrease in the thickness of the line will make possible a remarkable decrease in the weight of the lead, for the thinner the line the less influence will the current have on it. For ordinary sea bass fishing the line used for black bass casting is just right. The hooks should be large, from 1-0 to 3-0, for the sea bass has a wide mouth and takes generous bites when he feeds. When live bait is used, the Aberdeen hooks, being thin and almost invisible in the water on account of their blue color, are perfection. But many anglers prefer a stouter hook and use sproats. Few hooks of other shapes are equal to these for sea bass fishing. For the smaller sea bass, like those that come in the spring, there is no need of gut leaders to fasten the hook to the line. But when the big yellow bass come late in the summer, the leaders will be found useful. A double-strand gut, 1 or 2 ft. long, is best.

There are three "runs" of sea bass. The first comes in the latter part of May or early in June. These fish are small, dark bass, rarely weighing more than a quarter of a pound. The best bait for them is hard clam or sand worm, but they are not very particular about their diet, and shrimp, big sea clams called skimmers, killies, the salt water minnows, and the little queer fiddler crabs will all prove killing baits at times. Sometimes when nothing else will tempt them, the soft part of that marine householder, the hermit crab, will catch them. But to all except experienced baymen the hermit crab is harder to find than bass, consequently — A tiny bit of red feather tied to the shank of the hook will often attract the early bass.

The first run lasts till well in July. Then a second run comes from the sea. It consists of larger bass, with deeper bodies, and instead of being dark brown the fish are of a deep bluish tinge. They bite sharply, as a rule, like their predecessors, but they are much more lively on the hook. They are a little different, also, in the matter of food. They still take all the baits that the early bass did, but they are often much more eager for live bait, and the killie will frequently entice them when they will touch nothing else. Toward the middle of August, perhaps later if the weather be very warm, these dark blue fellows disappear and go back to their mysterious homes in the ocean. There is a lull in sea bass fishing for a week or two. And then come the big sea bass that make bass fishing a joy. Great savage fellows they are, with sturdy shoulders and big humps that are armed with stout fins, sharp as a saw. They are different in every way from their predecessors. Instead of being dark in color, they are yellow and indigo, their heads are longer, their jaws larger and firmer, and the curious hump on their backs adds to their warrior-like appearance. Fresh run from the sea they are as savagely hungry as wolves and as supple and powerful as athletes. They are mostly old fellows, wary as a fox, quick as a flash, and experienced in all the wiles of an angler. They know a hook when they see it, and it is a well-concealed

hook that they can't see. That kind of bass is the only kind that a real angler ought to care for. And the right way to learn how to catch them is to consider the problem in a boat at the end of a rod with one of the sly old rascals stealing the fattest killies as fast as they can be put on the hook.

The proper way to put the killie on the hook is through the lips. That doesn't hurt the killie and allows it to swim around and look cheerful. When the bass are biting well they will always snap at the head of live bait. Then they usually hook themselves. But when they aren't biting well, and approach the hook in a critical mood, they dawdle along carelessly and approach the killie from behind and nose it rather gingerly, with their big tails bent, ready to flit them instantly out of harm's way. If they find nothing suspicious, they take the killie's tail end tenderly into their mouths and tug ever so gently. And now, if the angler is a fool, he will strike sharply, and that bass will let go in a hurry, or at the most, bite off the killie's tail and flee far away from the man's line. Then the man will go ashore and tell lies about the whopper that nearly pulled him out of the boat.

If the angler is not a fool he will let the old bass tug away, and instead of restraining him he will carefully, ever so carefully, give him inch after inch of line.

When the old fellow meets with this courtesy he appreciates it, and instead of taking alarm and spitting the killie out of his mouth, he will begin to gorge it slowly. First he works it around until he holds it crosswise in his big jaws. Then he gradually gets its head into his mouth, and about the time this happens he makes up his mind to move off. After a good many weeks of study with a rod an angler begins to tell by the "feel of it" when the bass does all these things, and he will learn to

shy as they are ordinarily, they are thoroughly reckless when they find something good to eat. So all that it is necessary to do is to put the net into the water, letting it lie flat on the bottom, care being taken that no part of it waves to and fro in the current. Then drop a broken clam into the center of the net. Let the shell adhere to the meat so that it will sink to the bottom. Soon one killie will swim slowly to the clam, smell of it, and dart off like lightning. Then he will come again. If he finds nothing suspicious he will attack the bait. As soon as he begins to pull at it all the killies in the neighborhood seem to find it out and they will swarm into the net, forgetting all shyness in their anxiety to share the feast. What the fool mentioned before now has to do, he ought to know without being told, unless old Johnson overestimated him.

Killies are generally kept in a bait car, a small wooden box with a perforated bottom, which is tied alongside of the boat. But when the tide runs very swiftly, it is better to haul the car in, for a swift current swirling through it will drown them.

In sea or bay fishing the sea bass is found almost always in deep water over rocky or "cinder" bottoms. The "cinders" particularly are favorite places, and where such bottom is found there is a fair chance for catching bass. "Cinders" are curious coral-like formations, of brittle material, and they are the homes of small marine worms. Small crustacea and minnows also frequent such bottom, offering inducements to all fish. In bay fishing the best bass grounds as a rule are in water from 15 to 30 ft. deep at mean low tide. Sea bass not being game fish, do not usually run into shallow water in pursuit of their prey, like weakfish and bluefish. They seek their food in the deeper water, and the best plan is to anchor just at the edge of a channel. Old wrecks, after they get covered

with barnacles and shellfish, are always famous places for sea bass, and wreck fishing is the kind most practiced by the fishermen who go out to the deep sea.

For bay fishing, Jamaica Bay has more good spots than any resort within a few miles of this city. There are the "Cellars," long reaches of cinder bottom, in Deep or Irish Creek, which connects the western part of Jamaica Bay with Sheepshead Bay. The fishing here is about 10 or 12 ft. of water, is done within 2 or 3 ft. of the bank and as there is little tide and no danger from storms in the creek, the fishing is delightful, though uncertain, as the bass sometimes forsake the place for weeks. A quarter of a mile from the Jamaica Bay outlet of the creek is another good place, in the Island Channel. Following this and approaching Barren Island, the angler will find water 40 and 50 ft. deep, about half a mile from that unsavory island, near the Slop Meadows. The crib dock at Barren Island is sometimes a good place for very big fish, but the smells and sights are nauseating. Across from Barren Island, and within

a quarter of a mile of the Life Saving Station, on Rockaway Beach, is the "Blockhouse wreck," a good place, though it is better for blackfish than bass.

Following the Beach Channel eastward, one may fish on the famous Neptune wreck, opposite the old Neptune House. Then comes Broad Channel, with its fishing along the spiles of the Long Island Railroad bridge. Further on come the Pot and Silver Hole. Following the railroad bridge northward are Goose Channel and Goose Creek, both excellent places. Thence the angler can move on into the deep, long channel called The Raunt. The Black Wall, Yellow Bar, Pumpkin Patch, Steamboat Channel and Canarsie Breakwater are all good places at times.

In Gravesend Bay there are two wrecks near Norton's Point in Coney Island which have furnished grand sport in past years. Off Norton's Point is a good place also.

Staten Island offers Prince's Bay and Huguenot as sea bass grounds. The numerous other resorts there are better for weakfish and bluefish, as a rule.

Sea fishing is done almost entirely by parties who hire a steamer, or preferably a sloop, with a captain who knows all the good places along the coast. Off Rockaway, the favorite place is the famous wreck of the old steamship Black Warrior, which was lost there many years ago. Southeast of this is the Spanish wreck. Then comes the "Stone Pile," a big granite breakwater in front of the Oriental Hotel on Manhattan Beach. Out toward Sandy Hook is the "Monument," a rock which bears a beacon at the tail of the Romer Shoals. Flynn's Knoll, just inside of the Horseshoe, is another favorite place. Then along the Jersey coast are innumerable places, where the Seabright fishermen fish for market. In another direction lie the Cholera Banks, where a fleet of fishing boats may be found daily.

For sea fishing the tackle must be very strong. There is no time, and the heavy swell of the ocean allows no chance, for playing the fish. When he is hooked he must be reeled in at once. The rod should be stout, stiff and short, the line thick and the hooks large and strong. Treble and quadruple gut should be on the hooks. The sinkers must be heavy enough to take the line to the bottom as swiftly as possible and to keep it there, no matter how the waves may roll or the winds may blow. When the fish bites, it is the hard pull and the strong pull that lands him. The fish are huge ones, and though it isn't true sport, it is very good fun, and a pleasant day of such fishing, almost or entirely out of sight of land, is worth remembering, if the angler doesn't get seasick, M.

AN AFTERNOON IN THE WOODS.

From the Boston Journal of Health. By courtesy of Dr. J. Frank Perry.

know that they tug and distinguish it from other tugs. When your bass thus begins to gorge the killie your hand is the stronger in the game, but you need not give up all hope of losing your fish. All you need do is to strike sharply and savagely. Then the hook will almost always be jerked out of the bass's mouth and you will escape catching him. If, on the contrary, you simply increase the tension of the line suddenly but gently, and only to a slight degree, you ought to hook your bass.

For these big bass there is only one bait, the live killie. Other baits they will take, but that is what they appreciate most, and that is the only bait that is worthy of the sturdy fish. It is not every killie either that will suit the big yellow bass. There are killies and killies. There is the big delusive night killie, white with black stripes, like a little striped bass. It is of no more use than a white and black rag, which it resembles after it is on the hook for a few minutes, for the night killies have a delicate constitution and cannot survive capture. No self-respecting fish would touch them. Even old hardened sea spiders, real old tramps of the sea, have been known to resent the offer of one of these killies as an insult. Better, from a bait collector's standpoint, is the beautiful little killie with a light green back, and fins and tail mottled with orange. If no other killie can be had these will often do very well. But the killie is the dark green, white-bellied fellow. That is the kind that the bass will take ravenously when they will take no other. It is the hardiest of salt water minnows and thrives on misfortune. It will live for hours with a hook through its upper lip, and apparently enjoys the experience. It can be kept out of water for half a day if it is kept in a cool shady place; and it is as plentiful, if not more so, as any other killie.

While in recent years the value of live bait has led most boatmen at fishing resorts to keep live killies for their patrons, still there are many places where they are not to be had unless the angler catches them himself. And as the necessary appliance for doing so is only a common minnow net with a long handle, it would pay the angler who goes to strange waters to take one along. The method of capture is so simple that even the fool who Johnson said is at one end of a fish line, can get the knack of it easily. He must only remember that the killies frequent shallow places only, preferring spots near overhanging banks. Also, as a rule, more are to be found under the windward shore, as they run to the bank that breaks the wind. They have a keen scent for food, and

## ANGLING TALK.

CHARLESTOWN, N. H., July 21.—Let me add my congratulations to those of many of your other readers on the change of date of going to press.

I got my copy of the dear old paper last week and this on Thursday morning instead of waiting, as I often have of late, till Saturday noon or evening. What numbers your late ones have been too! I can say as Shakespeare said of Cleopatra:

"Age cannot wither nor can custom stale, your infinite variety!"

My attention is caught this morning by your answer to "A. M. M.," as to the size of pike, which I indorse, 19lbs. being the heaviest I have ever seen, though the great Northwest may furnish larger ones.

I had been intending to refer before to the capital photo of fish from Black Lake, on page 516, of June 15, which shows the light, oblong spots of the true pike very clearly, and ought to help those who persist in calling them all pickeral.

The 47-pound pike from Lake Tschotagama, on page 519 of the same number, is to my eye an unquestionable mascalonge, though the photograph may deceive me. To be sure, they all belong to the pike family, but a little more accuracy in writing of them would render the reading less confusing. I would advise those of your correspondents who are ransacking the world for mascalonge to try that unspeakable Canadian lake.

The pleasant letter of your new correspondent "Payson" requires a little comment. I am inclined to agree with him on the whole as to the small danger from putting black bass in trout waters, but am not fully satisfied yet.

There were no salmon in Sunapee when the bass were put in, and none were introduced until ten years later, and the brook trout had been nearly exterminated by spearing, clubbing and shooting in the fall when on the way up Pike Brook, where the State hatchery now stands, to their spawning beds, and the Commissioners of that date, instead of trying to stop the destruction, put in black bass to help it!

It was not until 1876, when the board of which I was a member came into office, that measures were taken to stop this slaughter and restore the *Salmonidae*, for which the lake was admirably fitted, and I cannot help thinking that the great plants of brook and Loch Leven trout and "wininnish" which have been put in since then would have afforded still better fishing, if the bass had not been there. I was instrumental in getting the law passed prohibiting the introduction of bass in trout waters without the consent of the Fish Commissioners, and it was done thus. Commissioner Stilwell, of Maine, wrote me that a certain writer of guide books to the Rangeley Lakes had been refused permission to put bass in those lakes, and had defied the Maine Commissioners with a threat to put them in Umbagog Lake, the lowest of the chain, which is in New Hampshire, and I immediately "blocked his game" by getting that law passed, imposing a heavy penalty for any such act.

Although Dr. Quackenbos and Com. Hodge think the bass do not destroy the trout and salmon to any great extent from their different habitats, I am not fully convinced of the fact, and had rather see them kept out of the chance of danger. Still "Payson's" comments on the favorite food of the bass are decidedly sound.

I am very much disappointed that Commissioner (not Colonel) Hodge was not reappointed, for he has done more to carry out the fish and game laws than any man in the State ever did, unless it was the late A. H. Powers, who broke up the slaughter at Sunapee.

Still, with ten hatcheries to superintend, I think he must have his hands full, and if he had to give way to the favorite New Hampshire dogma, of "rotation in office," I know of no better man in the State for Commissioner than my good friend Judge Shurtleff, who is a true sportsman in every sense of the word, "with all that that implies." I should like to meet him at Diamond Ponds again. VON W.

## FISHING ON THE LONG ISLAND COAST.

In the ocean bordering Long Island fishing has been unusually good for the past week, and large catches of bluefish and weakfish have been taken by boats from Sayville, Islip, Babylon and points on Jamaica Bay. Capt. B. L. Dunbar's boat, from Oceanus, caught 36 weakfish July 24 ranging in weight from 3½ to 8lbs., and other boats have since reported even better catches. The method pursued in catching weakfish "outside" is to sail through a school and jig the fish by means of an adroitly thrown squid.

July 26 one boat from Rockaway brought in 64 bluefish of large size. Good luck is reported on all sides, and fishermen are able to substantiate their stories by the exhibition of chafed and bleeding hands, which bear good witness to struggles with the gamy blues.

A large school of bluefish are now in the Great South Bay. Large numbers of heavy fish were taken last week and the prospects are good for some days to come. One fish was taken weighing 12lbs., and several 8lbs. A few weakfish have been caught by squids. Monday large bluefish were caught off the inlet. Boats and men can be had at Sayville, Islip, Bay Shore and Babylon.

The following clipping is taken from a New York newspaper: "Spanish Mackerel on Tap Off Long Island's South Shore.—Immense schools of Spanish mackerel ruffle the waters off the south side of the Long Island coast from Fire Island to Montauk Point. Old fishermen say they have never before been so plentiful. Sunday a school of them ran into the breakers opposite Sayville, and for a time the beach resembled Fulton Market on fish day. Thousands were strewn along the sand, and a party out bluefishing gathered a two-horse wagon load before the stranded fish got to sea again on the high tide."

This note is wholly unreliable and misleading, and on a par with much of the so-called fishing news published in the New York dailies. The Sunday in question a gale was blowing ashore, and no boat could have lived to have landed through the surf as the bluefishing party is said to have done. The narrow strip of land opposite Sayville on which the ocean beats is composed of sand dunes, and if the clipping is taken to mean that the "two-horse wagon load" was carried off in a two-horse wagon, it is again

highly improbable. Probably no two-horse wagon was ever on this strip of land—certainly not last Sunday week.

The fishing in Jamaica Bay has been nothing to boast of lately. It will improve very much as the season advances, but good fishing can hardly be expected before the middle of August. A few nice blackfish and fluke have been caught in the neighborhood of the breakwater, and some fair catches of weakfish running from 2 to 4lbs. at other points in the bay. July 27 a party fishing off the Shell Bank caught fourteen. The upper part of the bay near Far Rockaway seems to be the best point at present for weakfish. For fluke the Point of Beach at the Inlet is perhaps the best. One boat from Seaside (Boerum's) caught twelve fluke July 27 at Ruffie Bar.

A great many bluefishing parties start from Canarsie, which is easily reached from New York or Brooklyn, and where there are a great number of fine fishing boats. These boats can be had for from \$8 to \$10 for ordinary days, and from \$12 to \$15 for holidays. The prices vary according to the style of boat and accommodation. The parties often sleep overnight on the boats so as to get an early start the following day. The hours just after sunrise are the best for bluefishing, and after 11 o'clock very little fishing is attempted. If the blues cannot be found the captain often takes the party to fluke pounds and drifting for the big flat fish is indulged in. As these boats will accommodate 8 to 10 persons easily the individual expense of such a trip is not great.

July 28 a party consisting among others of Hon. John Zeller, of Guttenberg; Lewis Braun, of Paterson, and Wm. Eckhardt, of West New York, N. J., fished outside off Rockaway. They made a large haul of fluke and caught also a few nice bluefish. They reported hundreds of weakfish to have been caught by jigging. Michael Hain of the Ronet captained their boat.

Mr. Eckhardt is the gentleman who holds the record for the largest black bass caught at Greenwood Lake this season. It was a large-mouth caught trolling with spoon early in June and weighed 8½lbs. It was caught in the evening near the island and opposite Cooper.

## THE WININNISH.

Editor Forest and Stream:

I want to smile a smile born of a letter printed in the FOREST AND STREAM, dated June 29, and written by Mr. Robert C. Lowry, in which he laments the deficiency of game qualities in the "much-written-about-and-largely-advertised" wininnish of Lake St. John. Mr. Lowry says "It makes me smile now when I read the high-flown accounts of the far-famed ouananiche."

*Imprimis* I do not propose to take up the battle on behalf of the wininnish, for a long and varied experience with the fish has convinced me that it is eminently fit to do so for itself, but I cannot conceive how an angler can begin to estimate the game qualities of any fish taken on the murderous spoon, as Mr. Lowry says he did. It is one of the deadliest and most merciless devices ever invented for destroying fish life, and its use is justified only in the case of the unprincipled mascalonge and its flat-nosed relatives.

However, in spite of a mouthful of relentless and sanguinary hooks, the fish made "one or two leaps out of the water," says Mr. Lowry. Well, under the conditions I think the fish did remarkably well, and like a chosen few of the angling fraternity, clearly exhibited a marked repugnance toward the treacherous spoon and its deadly gang of hooks.

Mr. Lowry says frankly that he was "curious to see this renowned fish," and without stopping to ask whence came its world-wide celebrity, I must confess I do not blame him, as it is well worth a week's journey to look upon this cross-bespangled salmon, with its glistening silvery back and sides, but he adds, "He had the head, the mouth and the shape of a trout."

Your correspondent adds that he killed a pickerel "of 3lbs. weight which gave us almost as much of a fight as the ouananiche." To this proposition I can add nothing because it all depends upon what one considers "a fight," yet it forces me to laugh right out loud when I read the comparison between such game fish.

After this Mr. Lowry went at them like a good, honest democrat, and cast flies, wasting his energies in the foam, and then, moving to a "large rock that jutted out from the shore, around the end of which a heavy current was flowing." Here, with a "silver-doctor" he hooked a 5lbs. wininnish that "came to the net in the most placid manner." You can fasten a dead weight of 5lbs. to a fly-rod and it will never come to the net "placidity" when drawn through a heavy current, more especially the powerful water at the Grande Discharge which I know so well. Furthermore, you can take the meekest and lowliest sucker extant, give him 5lbs. of weight, hitch him to a fly-rod and try to pull him through a heavy current "placidity," and the chances are that you will lose time, and possibly sucker and tackle. Question: Don't the wininnish fight a little bit harder than the Lake St. John sucker? Mr. Lowry states that he has killed the real landlocked salmon in Maine and it is "almost identical in appearance with the regular salmon that comes up from the sea." If this statement "goes" then the

pigeon and the grouse are twins, the poodle and the mastiff are "birds of a feather," and dragging 5-pounders with a fly-rod through a heavy current "placidity" becomes an undeniable fact, especially when that heavy current is like "the rush of the waters of the Niagara."

Mr. Lowry says that he would rather "kill a 3lbs. bass than an ouananiche of double that weight," and would get more fight and more sport out of him. Does he mean with the spoon or with the fly? KIT CLARKE.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

HELL GATE, New York, July 26.—Mr. George R. Bird and friend caught 12 striped bass yesterday while trolling about Hell Gate; none were under 1lb. and the largest weighed 9lbs. WM. H. ROCKWOOD.

CLAYTON, N. Y., July 27.—Mr. Lasselle, of Fine View, and Oarsman J. Nulty, caught 13 pickerel and 8 bass, the largest weighing 10lbs., within sight of Fine View Hotel, 40 being caught within two days. Fishing is good. GEO. W. BRUTSCH.

REDWOOD, N. Y., July 27.—The guests of the Dallinger Hotel have been fishing with these rewards: A. C. Salisbury and wife (Mr. S. is superintendent of the D. L. & W. R. R.), 45 bass, 16 pickerel. R. M. Smith (proprietor St. James Hotel) and John Pifferle, of Utica, 87 bass (largest 5½lbs.), 9 pike, 14 pickerel. F. L. Mould, of Sanquoit, and W. C. Truman, of Arizona, three days' fishing, 175 bass, 12 pike, 16 pickerel; last day's fishing, 55 bass, largest 6½lbs., smallest 2lbs. Dr. Laird, of Watertown, and Dr. Ryan, of Redwood, one day's fishing, 11 bass (largest 6½lbs.), 5 pike (largest 4lbs.) and 6 pickerel. Fishing is of the best; bait abundant. Z. S.

HIGHGATE, Vt., July 21.—So far fishing has been very poor here and at the springs. The seine fishing in the bay near the springs cleaned out the waters in that vicinity, and the sawdust has choked out the fish here in the river. It is fast making our once beautiful stream a stinking, reeking mass of filth. A few good bass and maskinonge are, however, caught here, but unless there is a change soon they will be extinct. We receive with pleasure the new variety of trout (*S. marstoni*). I was, I believe, the first to call attention to a fish that was in some of the Canadian lakes, which, while called the *fontinalis*, was a different variety (see page 193 in "Game and Fishing Resorts" of Hallock's "Sportsman's Gazetteer," which information was furnished by me). Yesterday, in company of Rev. Horace Jones, I visited an old fishing ground up the Black Creek bottoms through the Newton meadows, and had but indifferent sport. It was the old story. Persistent fishing in and out of season has nearly spoiled that once noted locality. The only way to save our game and fish is for the sportsmen in every town to form themselves into a club and then rent for preserves the best localities and then post and protect them thoroughly. STANSTEAD.

ATLANTIC CITY, N. J., July 29.—Under the guidance of the best boatmen obtainable, and over grounds which in days gone by have yielded abundant catches, I have fished in vain so far this season. True, a goodly number of drum and a few bluefish have been caught outside, but shrimp, crab, clam and minnows fail to lure weakfish, seabass or kingfish. Flounders are caught to some extent. Have all the others gone to Buzzards Bay? R. M. M.

LONG LAKE, N. Y., July 27.—Jas. Hammer caught in a half day, 33lbs. of lake trout. Harry Williams caught in a half day, 10lbs. of brook trout. Both of Long Lake, and both fished for me. ANDERSON AND MOYNEIAN.

TOTTENVILLE, Staten Island, July 29.—The weakfish have been running well this week, and were worthy of attention—from 16 in an hour and a half, to 20 for the tide to a boat. JOHN T. HAWKINS.

BARNEGAT, N. J., July 25.—The fishing is very poor in our bay yet. Not over 150 weakfish were caught last week, but sea fishing is good. Peterson, Cox, More and Bollers caught big lots of sea bass and porgies, etc., outside last week. Eight sheephead were caught in bay last week. WM. C. INMAN, JR.

FORT DODGE, Ia., July 26.—Fishing in the Des Moines River near this place is fair. The fish taken are black bass, wall-eyed pike, pickerel and blue or channel catfish. Messrs. Sackett, Burnham, Loomis, Robertson and Holm have just returned from a trip up the river. They were gone nine days and had a very nice trip. The camp was two cars side-tracked at the junction of the east and west forks of the Des Moines, at the bridge of the M. & St. L. R. R. over the east fork. Some very fine bass and pike were caught by the party, some of the pike weighing over 7lbs. Frogs proved to be the best bait for both pike and bass. The Des Moines River is one of the best streams in the country for small-mouthed black bass. But there is a lawless element who destroy the fish by dynamite, spears and such other devilish contrivances, that a fine bass stream is nearly spoiled by their infernal work. If—alas for the if—there were no fish taken from the Des Moines except those taken lawfully with hook and line, the fishermen of this vicinity would soon have a stream to be proud of. CONVIS.

## Bass of Dallas Club Lake.

MAYOR W. C. CONNOR, of Dallas, Tex., sends us a photograph of a catch of fine fish made by him at the Dallas Fishing and Hunting Club Lake, situated 12 miles from that city. The lake contains some 500 acres, is well stocked and owned by some thirty of the citizens of Dallas. The Mayor writes: "I left Dallas alone at 1.30 P. M. with a bucket of live minnows, reached the lake about 3.30 and was fishing by 4 o'clock. I fished until good dark and my catch up to that hour was 66. I went out after supper with a torch and fished for an hour and a half and landed 17. Next morning about 6 I was out again and by 3 P. M. my entire catch was 147 calico bass (or white perch) and big-mouth black bass. The calico bass would average 2lbs. each, and the black bass ranged from 4lb. to 7lbs., which is the largest ever landed out of

CHAINED TO BUSINESS?

Can't go fishing? Do the next best thing. Read about it in th. "Forest and Stream."

the lake. I caught them until my hands were sore, and when strung together they measured 10ft. long, and it was all that three men could do to put them in the wagon. I used a No. 11 Bristol steel-jointed rod, 8ft. 6in. in length, and 3-0 snell hooks. With a varied experience I can truthfully say it was the best angling I ever had. If any of the readers of the FOREST AND STREAM ever come down in this country 'out under the setting sun,' and will give me a call, I will arrange to spend a few days with them at the lake and promise good sport.

"W. C. CONNOR."

### WALTON TER-CENTENARY.

A CONGRESS of anglers will be held at Niagara-on-the-Lake, Canada, on Wednesday and Thursday, Aug. 9 and 10, 1893, to celebrate the three hundredth anniversary of the father of angling. It is proposed that the gathering should be of both a piscatorial and convivial character. The convenient situation of Niagara-on-the-Lake, its easy accessibility by railway or steamboat to cities on both sides of the border, the excellent accommodation furnished at the Queen's Royal Hotel, the high quality of the black bass at the mouth of the Niagara River, the historic nature of the fishing grounds, and the picturesque scenery of the surroundings, mark Niagara as a most appropriate place for the celebration of an occasion of this kind. A programme has been marked out as follows:

Wednesday, Aug. 9, the morning and afternoon will be devoted to fishing and to the other amusements afforded at the watering place. In the evening a fish dinner will be held in the ball room of the Queen's Royal Hotel, followed by a smoking concert. Fish stories will be asked for from the assembled anglers, and a committee will award a prize to the teller of the best story, without limitation as to its verity or originality.

Thursday, Aug. 10, a fly-casting competition will be held, for which valuable prizes have been kindly presented by Mr. Henry Winnett, of the Queen's Royal Hotel. Entries for the competition close on Aug. 9, at 9 P. M.

It is believed that a gathering of this kind, in addition to being attended with much enjoyment, will lead to a fruitful discussion on the best interests of the sport, and it is suggested that an anglers' association should be formed.

It is requested that those who intend to be present will send their names to the secretary of the committee of arrangements, who will also be glad to receive any suggestions.

All anglers are invited to attend. Reduced rates will be given to them and their families at the Queen's Royal Hotel. For those at a distance special rates to Niagara Falls are given by railway companies. The secretary may be addressed care of the Standard Life Assurance Company, Toronto, or Niagara-on-the-Lake, Canada.

CHARLES HUNTER, Sec'y.

### The Chicago Fly-Casting Club.

THERE was a fair attendance of members at the club's tournament held on Saturday, July 29, on the Lagoon, close by the Walton House, on the exposition grounds. Messrs. Strell and Goodsell judged the different events.

The first event was for accuracy and distance combined. Following are the scores: B. W. Goodsell 86%, F. Smith 73%, J. E. Isgrigg 89%, T. B. Davidson 87%, J. M. Clarke 80%, W. H. Babcock 89%, G. W. Murrell 84%, E. E. Wilkinson 86%. Ties at 53ft., 3 casts, J. E. Isgrigg 99%, W. H. Babcock 93%. Isgrigg won the medal.

The second event was long distance fly-casting. The scores are as follows: Goodsell 65ft., Smith 51, Isgrigg 68, Davidson 56, Clarke 61, Murrell 48, Wilkinson 63. Isgrigg won.

The third event was bait-casting for accuracy and distance. Following are the averages: Wilkinson 106, Babcock 105%. Mr. Babcock was a very close competitor in each event.

The open to the world tournament will be held in September between the 19th and 21st, while the sportsmen's convention is held in Chicago. Only a club tournament will be held on Aug. 9, when the Walton House is dedicated.

B. WATERS.

### EDWARD B. OSBORNE.

ANOTHER sincere lover of camp life passed quietly away on the morning of July 30, after having reached the ripe age of seventy-eight years and eleven months.

Few men in active business life have spent more time among the woods, lakes and streams of our diversified country than Hon. Edward B. Osborne, and none have more thoroughly enjoyed the lonely camp than did he.

He was kind and genial to all and a capital story teller, many tales being of incidents in his own experience in his various outings. He was also a good singer, and his songs often added much interest and helped to while away the hours spent around the cheerful evening blaze or the lonely, stormy days in camp. He was ever ready to take his full share of toil on the tramp, in the tent or bark shanty. In short, he was a most desirable outing companion, as all who have been with him will readily and cheerfully admit. It has passed into a proverb that "really to know a man's true character you must camp out with him." This test he bore admirably, as the writer has abundant reasons to remember.

His first visit to the North Woods—as they were then generally called—was in the fall of 1856, and very few years since then have passed that he did not visit some portion of them. He never stopped long at any of the numerous hotels on the more traveled routes, much preferring the lonely tent to the crowded places of more fashionable resort. Being owner and editor of a daily and weekly paper, he sent home occasional sketches for publication from his various tenting places, far and near, including the Adirondacks, St. Lawrence River, Upper Canada, eastern shore of Maryland, and a 400-mile canoe trip, with Indian guides, on the Michigan and Menominee rivers. Some of these letters, with humorous poetical articles, he has very recently put into book form at the request of personal friends—a fitting close to his varied life.

Thus, one by one the older devotees of rod and gun, and lovers of forest and stream and of camp life, are passing off the stage; but new ones are taking their places, who, although they will never have the rough paths of their predecessors, will reap health and real enjoyment from their more showy and fashionable outings.

Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

#### Express Charges on Dogs.

AMONG many good things so kindly, yet forcibly, presented by Dr. J. Frank Perry in his article entitled "The American Kennel Club," in FOREST AND STREAM of July 23, there is one in which all sportsmen should take special active interest at all times. Not that this one thing, the exorbitant express rate, is in respect to its consideration by the A. K. C., superior and more worthy of consideration than the other important matters which Dr. Perry wisely suggests for reform, but that it is a matter near and dear to the pocket of every dog owner, inasmuch as all shippers of dogs are required to pay the exorbitant charges of the express companies.

It is a matter affecting canine interests at large, and not as an A. K. C. measure, that I consider it most important. But being a matter of common interest, all sportsmen should give energetic support to any movement whose aim is relief from the unjust and unnecessary exactions of the express companies.

The plea made by the express companies many years ago, namely, that there were greater risks, greater troubles and annoyances in transporting dogs, was good at that time. Dogs were then presented for shipment in some rickety old box, which had already served its purpose in holding merchandise; or, more simple yet, the dog might be sent with an old rope or chain to his collar, which, when fastened to the car stove or a trunk handle, was a complete arrangement for shipment. Or an empty flour barrel, with chunks cut out of the side for ventilation, both heads in, was not infrequently used. In short, any makeshift, however flimsy or humble, was considered good enough to put a dog in for shipment, and there was little protection from death, injury or escape. With all the risks entailed by the shipper's careless and slovenly methods of shipment it is not surprising that express companies made their rates commensurate with the risks. If there was loss on one hand the high rate reimbursed them on the other.

But during many years the manner of shipping dogs has been greatly improved. They now are shipped in expensive crates, this being secure from any injury incident to proper handling in transit, nor can they escape. Arrangements are also made in the mechanical construction of the crate that the dog can be fed and watered without opening the crate door. Many crates have receptacles for carrying a supply of food sufficient for a journey. With all these modern perfections which insure as easy and rapid handling of the dog as any ordinary box of merchandise, impossibility of escape, etc., the old rates made for entirely different conditions, are still in force. The rates which were made to meet risky ventures years ago are in force now when there is comparatively no risk at all.

To illustrate this more fully, I present herewith a bona fide contract between myself and the Southern Express Co. The sum of \$6.50 was double first class rates, and also included a premium for insurance by said company, yet, notwithstanding their liability both as insurers and common carriers, they absolutely refused to accept the dogs unless the shipper signed that contract. It was not done at the shipper's request, but was a compulsory demand of the company. The dogs were in a good crate, but the agent refused to accept them unless the dog was securely chained within the crate. They were chained!

Of course, in law, such a contract is not good, for no company can release itself from the obligations it assumes to perform. This contract, however, will show the absurdity of the present tariff rates. It is as follows:

Agents will use this form for live stock, etc., in lieu of the regular form of freight receipts.

Agents will fill up two copies of these receipts, both of which must be signed by the agent and by the shipper.

One copy will be delivered to the shipper, and the other will be retained and filed away by the agent.

#### SOUTHERN EXPRESS COMPANY.

SPECIAL CONTRACT FOR THE TRANSPORTATION OF LIVE STOCK OR OTHER ANIMALS.

In consideration of \$6.50, which is a special rate, given at the shipper's request, the Southern Express Company has received the following articles, viz.: One box with two dogs, consigned to W. B. Stafford, at Trenton, Tenn.

"Valued by Shipper at three hundred dollars per head, it being understood and agreed between the parties hereto, that in no event is this company to be liable for a greater valuation per head, for the above property than is here by the shipper fixed." To be carried by the said express company at the exclusive risk of the owner, to its office or place of business nearest destination, and then forwarded by a connecting line of transportation to the above address.

In consideration of the above rate, it is expressly agreed that the owner of said property has insured the same elsewhere in a non-assignable policy of insurance for his indemnity alone, or has assumed as an insurer himself, in consideration of the above special rate, all the risk of loss or injury thereto, by death, escape, detention, accident, bruises or injuries of any kind, accident to, or occurring during transportation whatever, and the said Southern Express Company shall not be liable for any injury whatever occurring to said property. And the owner thereof hereby releases the said express company and the railroad companies over whose roads said property may be transported, from all liability for injuries, loss or damage to the same from any cause whatever. And the shipper and owner hereby severally agree that all the stipulations and conditions in this receipt contained, shall extend to and inure to the benefit of each and every company or person to whom the Southern Express Company may intrust or deliver the above-described property for transportation, and shall define and limit the liability thereof of such other company or person.

It is further agreed that the receipt in good order of a connecting line of carriers to which said property may be delivered to complete transportation, shall terminate the liability of this company, and estop

the owner of the same from making any demand upon this company for loss or injury occurring thereto thereafter.

Signed in duplicate at ) For the Southern Express Company,  
New Orleans this third ) ELLIS.  
day of February, 1893. ) B. WATERS, Shipper.

If any company could be induced to make a just tariff sportsmen throughout the country, by patronizing such company exclusively, could bring the other companies to a more reasonable view of the matter.

### The World's Fair Dog Show.

I venture on this subject with a feeling of reluctance. It in its way has been heard in season and out of season so much that it is almost as tiresome as "Ta-ra-ra Boom-de-ay" and other tunes one hears from early morn to dewy eve.

On Monday, the 24th inst., I asked Mr. Buchanan if the dates of the Exposition show would be changed so as not to conflict with the Rhode Island event, and in accordance with the prayer of the A. K. C. He said: "The World's Fair dog show will be held on the dates advertised, if it is held at all."

In regard to judges, Mr. Buchanan said he had no knowledge that there were any vacancies in the list selected—that is, no official knowledge. He had seen in the papers that some would not act, but they have not so informed him. He says entries are coming in. That is all the news of the World's Fair show at this end of the line, though World's Fair dog show news has about reached the thirtieth attenuation. I would not be at all surprised if there was a World's Fair show or if there was not.

#### Good Ideas.

The following is from an eminent trainer, of whose writings I have to complain that they are too short and too infrequent, they being founded on sound practical knowledge and presented in a clear, gracious manner. These are excerpts. He says:

"I was glad to see your remarks about the gentleman who wanted to select judges for the Northwestern trials. I believe with you that if trials are run perfectly fairly to all, and that more care is taken to have plenty of birds on the grounds, so that every dog shall have ample opportunities of showing how he can perform in finding and pointing, as well as how he can go at that killing pace (which no level-headed dog ever does go at except when chasing a rabbit), then will field trials increase in popularity.

"Can you tell me why the Eastern and other clubs' rules say, 'A dog should be thoroughly trained?' Why not 'must be?' I think that a thoroughly trained dog may misbehave once in a way, and the judges should make allowances for what may be called accidents; but it is unfair to let any dog, which does not show that he is thoroughly broken, beat one which is thoroughly broken; for who knows that he has not some shyness or fault in his disposition, that makes it impossible to break him without reducing his dash.

"From a letter in a contemporary, there seems to be an idea of having pointers, Irish setters and Gordons in one class. Now I don't think that would be a bad plan, because there are so few men who are breeding pointers fit for trials at present.

"I have had spaniels on the brain a little lately. After having read most of the letters on the subject which have recently been published, I am forced to the conclusion that the true specimens of the breed must be very scarce. The real use of a cocker is to do what a setter or pointer cannot do, certainly not with propriety, viz., worry out game in any kind of wet or rough ground. I believe that the introduction by dog show men of the black ones some years ago has had much to do with it. I know one, an imported one, which was sent to me to train, and he was quite as much terrier as spaniel in his ways; I could see an outcross in his appearance. I remember very well, when looking at a very handsome one at a show, making the remark that it did not look as if it could be any good, and a great dog show judge and fine sportsman replied, 'Of course not.'"

From all sides come earnest denunciation of McLin for his grievous cruelty. Mr. H. B. Anderson, well known as a gentleman and handler, writes me as follows on the matter. He says: "I did not suppose that there was a human being on earth who had so much brutality and such total depravity. His indeed must be a depraved nature, to starve and burn dogs who were his friends. Law is not severe enough for such a brute, nor is language comprehensive enough to express the loathing in which he ought to be held. I am sure that the conscientious handlers of the country will condemn such an act for its extreme inhumanity.

"However, it ought to teach a lesson to those owners who are always looking for a cheap trainer. There are handlers who haven't a particle of honesty in their dealings with their customers, and who do not care a rap for the customer so long as they get their money. Of course, there are many who are honest, conscientious and capable in every direction, who seek by hard work to give entire satisfaction. Such men deserve the confidence and patronage of owners. But such handlers cannot handle dogs cheaply, because they bring intelligence, experience and hard work to bear in their dog training."

Mr. C. W. Tway, Irwin, O., asks me for a good place to locate in Illinois or adjacent States for the purpose of giving his string of dogs some work on chickens. I do not know of such place. Perhaps some one of the large family of FOREST AND STREAM readers can give him the information he seeks, he being a most amiable and obliging gentleman himself, one who would gladly do as much for others. He writes that he has a fine string of dogs for the Manitoba trials and Northwestern trials, among which are Graphic's Juno and Graphic's Queen, and Mr. G. O. Smith's imported English setter Gambit.

In respect to the forthcoming trials of the new club in California, Mr. H. M. Tonner, proprietor of the Solana Kennels, North Ontario, Cal., writes as follows:

"The Southern California Field Trials Club recently organized in Los Angeles, it is hoped will prove an efficient factor in the developing of the field setter and pointer. With perfect grounds at its command and quail in almost unlimited numbers, coupled with the rapidly growing interest in sporting dogs, the outlook certainly is encouraging.

"The rules adopted by the club are practically the same as those of the E. F. T. Club and U. S. F. T. Club and others, and it is the intention to, as far as possible, have the best dogs put to the fore, regardless of the luck which is supposed to be inseparable from field competitions. It is possible that the judges may err, but the men selected to act in this capacity, Messrs. Pyle, Vandevort and Crenshaw, are men of known honesty of purpose, and there is no doubt but what the best dog will win. The officers of the club, who will act until our meeting in January, are: President, E. K. Benchley; Vice-President, J. H. Kiefer; Secretary, B. F. Hinnman. The membership, while not large, is composed of ardent sportsmen who will take a keen interest in the affairs of the club. The stakes, while not unusually large, will be sufficiently so as to offer good inducements to handlers to have their dogs under perfect control and to give them work enough to fit them for the trials.

"In adopting the spotting system we hope to save time consumed in running dogs that have no possible show to win, and who detract from the interest in the trials. This being an organization of sportsmen, we desire the typical sportsman's dog to win, or, in other words, the dog who does the best average work on covers, singles and retrieving. While some favor the abolishing of retrieving, a dog that will not retrieve will not win in the All-Age Stake."

### The Bulldog Pedestrian Match.

WHATEVER may be said to the contrary, there is no place on this earth where more interest is taken in the bulldog, his general properties and capabilities, than in London town, and Monday last, July 17, was a memorable day and will be never forgotten by those who had the pleasure of being present at the walking match between the celebrated Dockleaf, owned by Mr. S. Woodiwiss, of East Finchley, London, and the great-headed King Orry, the property of Mr. George Murrell, of Deptford.

I need hardly tell you across the water that several have objected to the manner in which the first mentioned has from time to time moved in the ring, and some have gone so far as to call him nothing more or less than a cripple. This Dockleaf's breeder and backer, Mr. J. S. Pybus-Sellon, resolved to contest, and obtaining the loan of the dog from the East Finchley Kennels he was matched to walk the heavier and leggier dog on Monday evening last from the Roebuck Inn, at Lewisham, to Bromley Town Hall and back, a distance of ten miles.

I have now been knocking about dog shows and matches in the neighborhood of London for some years and I confess I never knew such excitement over a competition as this. By 6 o'clock all sorts of vehicles were driven up to the Roebuck filled with dogmen who have made their names in the canine world. All were on pleasure bent, and as the start was not to take place till 7 o'clock they enjoyed themselves at the billiard tables in the capacious saloon of the Roebuck.

Lewisham, I ought to tell you, is just a few miles out of London and immediately on the outskirts of the country. At about half a mile from the starting place you enter a well kept quiet road, where you are comparatively free from the traffic.

A huge crowd had collected by 7 o'clock, and from what a policeman told me, I gathered that although they have from time to time all parts and sizes of matches and competitions down that way, never was more excitement than on the occasion of this first bulldog walking match on record. The referees agreed on were Messrs. George Krehl, the kennel editor of the *Stock-Keeper*, and Mr. Edgar Tarman, a well known owner of bulldogs and popular all round with his fellow club men, who by the way mustered on this evening as they never had before. The first to appear on the scene was King Orry, and he had been trained down to a nicety; and if ever a dog looked fit for a ten mile walk it was Mr. Murrell's representative. Although the writer, among others, had a bet on as soon as possible, I found that the odds were on King Orry—he started at 6 to 4 on—although there was a lot of money about for Dockleaf last week. But I confess I never had an idea that Dockleaf would win, and greedily got all that was offered, for knowing that one was longer in the leg, a superior mover and better trained than the other, I never but thought it was quite 10 to 1 on one, and that King Orry.

Punctually at seven o'clock they started, and with a cheer the men and dogs taking the center of the road, when the great crowd cleared away, and it was one of the most amusing sights that ever dogmen witnessed. Cheer after cheer arose from a large number of the Deptford water side men who had been attracted to the spot to give a good send off to their representative dog, for King Orry's owner resides at Deptford Green. These fellows cheered to the echo, but the Dockleaf party were not so encouraging in their cries, in fact they kept more or less quiet and being of a respectable turn of mind, they did not give way to their feelings. Away the bulldogs traveled along the road, but King Orry immediately showed to the front, and it was at once seen that Fred, Milledge, who had hold of him, was an athlete, and Jack Harrison, his kennelman, who carried the bottle and sponge, also knew his business.

As was expected, Dockleaf soon commenced to crouch, and I regret to say that before he had gone a mile the match was practically over, for Harry Smith and Tom Bundle, Mr. Woodiwiss's head kennelman and greyhound trainer respectively, did all they could to urge on the son of Dandelion, but the dog would not continue his journey. At a mile from the starting point the Deptford dog was out of sight, but Dockleaf, who seemed to be pulling away from his leader (who was on the near side) and going extremely lame on his off shoulder, was humanely picked up at Sloper's Island, between two and three miles out, and was sent back in a conveyance in attendance.

There were some dozen well-filled vehicles following King Orry, and the cheers that enlivened the air when the Deptford men heard that the other dog had failed must have been heard by the villagers and the people for miles around. As it was, at every cross road there congregated men, women and children with open mouths watching agog the peculiar sight of a man and dog walking as it were for dear life.

Soon we got to Bromley, rather a quaint old place, and here if the town hall had been on fire more excitement could not have been caused, for the fresh cheers of the Deptfordites had evidently awakened the inhabitants to a sense that something wonderful was on. From Lewisham to Bromley is five miles, and King Orry covered the ground in just one hour and a couple of minutes.

Bromley was emptied as quickly as it was filled, and like a snowball, the company swelled the further it went; we were not only waited on by ladies and cyclists, but the little gypsy boys from an encampment gave us an exhibition of their tumbling powers and greedily picked up and fought for the coppers that were thrown to them. A sort of half-way house was the Tiger's Head; here we stopped on the outward and homeward journeys, and every man Jack refreshed himself at this quaint old place. One bulldog went out with his owner for a run to see how he could manage the distance, took occasion at this trying place to make the acquaintance of a well-known dogman who resides at Westbourne Park. Although it is not very pleasing to have the jaws of a bulldog round your hand, the incident on Monday evening was the most laughable one I ever witnessed. If Mr. Hoppett carries to his grave the teeth marks of Baby Bacchus I am sure he will have no cause to forget the occasion on which it happened.

But this by the way, we were soon again on the road back to Lewisham, the weather holding up beautifully until we were just about a mile from home, when a slight shower fell which appeared to make the dog move faster than ever, and he kept up a continual gait of five miles per hour, and if he was wanted, I think he could have kept on at this pace for twenty miles. When at 9:24 P. M. a tremendous cheer arose, it was known that King Orry had passed the winning post outside the Roebuck, and here there was indescribable excitement, for although as soon as it was known Dockleaf had been picked up, it was a foregone conclusion. Yet very few thought King Orry would accomplish the distance in two hours and seven minutes, and appear as fresh as a daisy and as strong as a lion.

I do not wish to be harsh on any dog, but I really think that not only King Orry beat at this game twenty Dockleafs, but he could give a good start and a beating to any show dog of his weight.

At one time it was thought that that most active dog Guido, the property of Mr. Jack Ellis, would have started, but last week the Hackney Road dog cut his foot and was withdrawn from the contest.

After the walk on Monday night Mr. Murrell offered to give Guido one mile start in ten miles, but Mr. Ellis was not having any, and he as good as remarked that he knew what King Orry was, and that his number was a size too great to be taken down.

The utmost good feeling existed notwithstanding that

some money changed hands, and it did not go into the pockets of the Dockleaf party.

The only sad and regrettable incident about the whole matter was, that the breeder and backer of Mr. Woodiwiss's dog was unable to be present because of the death of his brother, Mr. Reggie Pybus-Sellon. The greatest sympathy was felt for Mr. John Pybus-Sellon, who has always done so much for the bulldog men of England, and is so greatly respected.

In conclusion I ought to say, many were the remarks in reference to the match, one being, "What is the use of such a match as this?" Well, I think it had its lessons. Firstly, it demonstrated conclusively that a leggy dog can travel better than a short-legged one; secondly, that the show bulldog can do his five miles an hour with ease, and, thirdly, that the formation of King Orry's shoulders is correct. That these three facts will be of the greatest benefit to bulldog breeders I have no doubt, and I am sure that the good-humored company who enjoyed themselves in the charming lanes of Kent on Monday evening will never regret being present at a match which caused far more excitement than any other that has been known to dog show men in my time.

The two chief items to remember in this competition are, that King Orry walked ten miles in two hours and seven minutes, and that he started at 6 to 4 on.

FREEMAN LLOYD.

LONDON, July 18.

### Appointment of Substitute Judges.

*Editor Forest and Stream:*

Regarding the question as to what action bench show committees shall take where an announced judge is unable to officiate, I would most strongly protest against canvassing among the exhibitors present as to who should fill the vacancy. It would open the way to too much junketing. Some folks have made a great hue and cry about bench show committees asking prominent exhibitors as to judges that would be acceptable to them. This I regard as all moonshine. I have been a constant exhibitor since 1879 and have won probably two hundred prizes, if not more, yet I do not recall ever having been asked in these fourteen years what judge would be acceptable to me. Where a judge is not able to act it strikes me very forcibly that the proper way is for the bench show committee to appoint another judge in his stead without consulting exhibitors or any one else, advise the exhibitors by telegram at their expense, if the time is short, that a change has been made, and what the change is. This enables the exhibitor to withdraw his dogs if he wishes to do so, or show them if it so pleases him. If the time be so short that they cannot write, a telegram as well as postponing the judging one day will overcome all difficulties. Canvassing among exhibitors is only opening a loophole by which a distasteful judge can be slipped in simply because some one large kennel knows his preference and so exerts its influence regardless of the others. Let the bench show committee appoint some one to fill the vacancy and the rest will take care of itself.

H. W. HUNTINGTON.

BROOKLYN, N. Y., July 24.

*Editor Forest and Stream:*

I think that most of Dr. Perry's amendments are desirable. Certainly the one giving exhibitors the right to choose a substitute when the advertised judge fails to appear, is just and reasonable. I cannot agree with Mr. H. W. Smith when he says that the committee choose their own judges in

FASCINATION AND TROUBLESOME.

the first place, make the classes and pay the prizes, and therefore should appoint substitutes in case of vacancies.

It is true they select their own judges, which is perfectly right and proper, and we can stay at home if we are not pleased with the judge, and nobody is hurt but the show committee, who lose entries. But, if the judge is acceptable and a large number of entries are made on that account, it is not right for the committee to substitute some one who is not acceptable to the exhibitors who have paid their entrance fees and express charges to the show. If the owners are not there themselves to vote, it can safely be left to the handler having the dogs in charge. I would be willing to have Ben Lewis, for instance, vote for me if he had my dogs in charge. He would not be likely to vote for Mills in preference to Mason, Mortimer and other good judges, while some committees would.

Ask a man to promise entries for your show. The first question he asks is, Who will judge my class? When he sends his entrance fee he expects the advertised judge to act, and it is as much a part of the contract as it is to pay the prize money, and when it is impossible to have him act, the exhibitors should choose a substitute.

A. W. SMITH.

BUFFALO, N. Y., July 28.

*Editor Forest and Stream:*

I wish to record myself as most emphatically against the proposed modification of the rule regarding the election of substitute judges. Firstly on the principle that the A. K. C. is now ruling too much and is becoming meddlesome; secondly because the rule is to no purpose, as long as the judge can be refused by the bench show committee. There is just as much propriety in the A. K. C. describing the manner of election of a substitute, as there would be in the appointment of the original judge. A bench show is a business undertaking, and the show committee will naturally strive to please, in order to make a success. By all means keep the A. K. C. out of the judge question. Let this thing regulate itself. If a rule must be made, then I would propose, that in the event of the substitute judge not being satisfactory to him, that the exhibitor is entitled to withdraw his dog and to get his entry fee back. That will make a bench show committee think twice before acting against the majority. In adopting the rule with the proviso that the bench show committee may approve or reject the elected judge (which by the way is a correct proviso), the rule will have no effect, except having drawn the A. K. C. into more trouble, and causing rows between an elected judge who is refused and the bench show committee.

A. H. HEPPNER.

*Editor Forest and Stream:*

In regard to Dr. Perry's resolutions, I believe that in case of an advertised judge failing to act, the exhibitors present should have the privilege of appointing a judge to fill the vacancy. Also an exhibitor should have the privilege of withdrawing his entries in case of the advertised judge no

acting. All exhibitors of any experience have their favorite judges, and I do not believe it is treating them fairly to compel them to show under a judge they do not fancy.

Mr. G. Muss-Arnolt's remarks on the jockeying of dogs from light weight to heavy weight classes and *vice versa*, are timely. Still I can hardly agree to his proposition, viz., "To compel a dog 18 months old or over to remain thereafter in his then declared class." As most of this jockeying is done at the show and just before judging, and after the expert handler has "sized up" the classes, I suggest that a dog should be shown in the class he is entered in. If the owner has made any mistake in making his entry let him stand or fall thereby.

WM. H. HYLAND.

NORTH TARRYTOWN, July 28.

*Editor Forest and Stream:*

I think Dr. Perry's suggestion a good one in some respects, still I am of the opinion that the calling together of the exhibitors for a meeting to get individual views in the matter an arduous and impracticable undertaking, fraught with delays and long discussions that, as a rule, will prove unprofitable and unsatisfactory both to the dog show committee and to the exhibitors themselves. Any live committee can see at once how matters stand in regard to the selection of a judge, and in five minutes can select a substitute for the absentee, whereas if a meeting is called and some of our doggy friends get possession of the floor, it will take five days, instead of five minutes, to place the other poor fellow in that privileged position where he can subsequently taste the sweets of getting his hair pulled.

A. CLINTON WILMERDING.

NEW YORK CITY, July 24.

*Editor Forest and Stream:*

The letter of Dr. Perry, published in your last issue, suggesting the modification of the rule governing the appointing of judges to fill vacancies at our dog shows I think is a very wise suggestion, and believe it would give perfect satisfaction to all exhibitors if adopted by the A. K. C. I also think the FOREST AND STREAM is deserving of the thanks of our breeders and exhibitors for the trouble they have taken to ascertain the opinions of their patrons on such an important subject.

MRS. J. M. NICHOLSON.

ALBANY, N. Y., July 24.

*Editor Forest and Stream:*

Referring to the rule regarding dog show judges, it appears to me that in case the judge advertised to judge a breed of dogs is not present that the exhibitors should by a two-third vote decide upon some one present.

RINADA POINTER KENNELS.

NEW YORK CITY, July 25.

*Editor Forest and Stream:*

Respecting the appointment of substitute judges, I think that in case a judge fails to keep his appointment the matter of selecting a substitute should be entirely left to the exhibitors or their representatives.

EDWARD BOOTH.

NEW YORK, July 30.

BOSTON, July 28.—*Editor Forest and Stream:* I am hardly in sympathy with my friend, Dr. Perry, on the question of filling vacancies in the list of judges at dog shows. I would rather suggest that the A. K. C. qualify a list of judges which they recommend to the various kennel clubs, and that each club from this list choose whom they want, with a secondary list or alternate judge in case of the inability of the first-named judge to serve. I would never for an instant take the authority or responsibility of the conduct of the dog show away from the committee and place it in other hands. Let us have judges qualified by the A. K. C. and let exhibitors show under them. If one cannot serve, take the next. The Doctor's scheme would, I am sure, lead to a wrangle among the exhibitors, and it provides for no one to straighten it out.

EDWARD BROOKS.

### Toronto Show.

*Editor Forest and Stream:*

Have just received notice that the Michigan Central Railroad will carry over their lines one dog free on chain, and when crated they can be checked and 150lbs. will be allowed free, all over will be charged at the same rate as excess baggage. This is a special rate granted to dogs going to and from the Toronto Industrial Dog Show. Mr. H. Brooks, of West Medford, Mass., donates the following specials for Scotch terriers: \$15 for best kennel of four, \$10 for best dog, American or Canadian bred, and \$10 for best bitch, American or Canadian bred.

C. A. STONE, Sec'y.

### Dog Gone.

*Editor Forest and Stream:*

Ten days ago my lemon and white setter dog Report, by Breeze Gladstone—List Noble, was stolen from Wallingford, Delaware county, Pa. The dog has an evenly-marked lemon and white head, dark eyes and nose, with a lemon patch on back, well feathered, cobby built, of about 40lbs. weight. Any information, concerning a dog answering the above description, from brother sportsmen that may aid me in recovering my dog will be thankfully received.

FRANCIS G. TAYLOR.

PHILADELPHIA, Pa.

### The Ohio Field Trials Club.

CANTON, O., July 26.—Persons who have made entries or received entry blanks will please notice that the Ohio field trials will commence Nov. 23, and the All-Age Stake entries will close Nov. 18; Derby Stake entries close Sept. 1.

G. V. L. MELLINGER, Sec.

### A Mitchell Club Meet.

MITCHELL, S. D., July 27.—*Editor Forest and Stream:* It has been suggested by several outside coursing men that the Mitchell Coursing Club should hold a meeting following the International at Huron. A move is now being made here to this effect, and doubtless a meeting will be held Oct. 10.

H. G. NICHOLS.

### Lexington (Ky.) Dog Show.

The Blue Grass Kennel Club is getting together numerous specials for their show that takes place the end of this month. For the best dog or bitch, owned in Louisville, Ky., \$10 is offered. The Collie Club of America offers the club medal for best collie in open classes, exhibited by a member of the club. The following additional classes have been added: Class A, novice R. C. St. Bernard dog or bitch, \$5, first; medal, second. Class B, Dandie Dinmonts, open class, dogs or bitches, \$5, first; medal, second. Class 129, challenge pug dogs, \$10, first. Class C, challenge pug bitches, \$10, first. Class D, black pugs, open class dogs or bitches, \$10, first; medal, second. Classes 111 to 114, inclusive, should read Irish terriers. The committee also say that present indications point to a very large entry. On the back of the entry form will be found a very good plan of the dog show building, showing rings, benching, etc. The ground floor is 300ft. by 100, and ventilation and light is said to be perfect. The exercising facilities are unsurpassed, as across the electric road there is a covered track and the inside space is two acres of grass.

The Type of Great Danes.

BY A. H. HEPPNER.

(Continued from page 35.)

FIRST we will take the Hatzrude—called in England boarhound, as indicated by the English name, to chasing and fighting a bear or a boar than to be the pet of a family; and his general make up corresponded with these facts. Standing on powerful legs, with well let down stifles, with a boundy-curved back, flank tucked up, deep, narrow chest, rather long, coarse coat, abundance of loose skin on all parts of the body, especially over the shoulders and under the throat; colored generally brindle and harlequin; weight, by virtue of bone and muscle, over 150lbs. The head of the Hatzrude is a peculiar characteristic; very wide and flat; skull round, cheeks prominent, eyes bulging, no chiseling whatever, as shown in the following illustrations:

This shows how far a Great Dane can go toward a mongrel and explains why there was once a movement to expell this breed from the show bench.

ULMER DOGGE.—This dog is rather more on the order of the German dogge only not as rascally built. There is a marked difference in texture of coat in favor of the Ulmer dogge, while at the same time the head may be big and the throat coarse. There was more character about them and it was this strain that guided the Germans in their taste for a modern great Dane. The head of the Ulmer, compared with the Hatzrude, was better chiseled and showed more breeding. This dog was more adapted as a pet than as a sporting dog, and was bred more for the eye than for usefulness.

DANISCHE DOGGE.—This showed the extreme to the other side, something we would call to-day "weedy," weighing possibly 100lbs; a nice, upstanding dog on the greyhound order; similar in feet and way of standing, and, like the greyhound, having an appearance of gracefulness and activity. This strain was generally of different shades of blue. Clean cut, well chiseled, narrow head, lacking depth of muzzle.

GERMAN DOGGE.—Mr. G. Lang, of Stuttgart, who acted as judge at Hamburg in 1880, then and there formed about himself a circle of doggy men and advocated the plan of taking the best qualities of these three strains and combine them in a whole under the above name. They took the gracefulness of the Danische dogge; with its fine breeding qualifications, and the Ulmer (of course, quality as to breeding and type at that time does not mean a Hannibal of eleven years later) and the substance and constitution principally of the coarse Hatzrude, and strove to breed in this combination a dog best described now as Hannibal the Great. If in the meantime some headstrong and one-sided breeder leaned toward one or the other strain in his breeding manipulations, of course, one cannot blame him, because tastes will differ. But this difference of object among breeders explains the differences among the representatives of our present German dogge, here called great Dane. The difference of type among them here or in Germany to-day, where it exists, means simply the fact that the particular strain has not been sufficiently and desirably blended, as it should be. We may get from Germany to-day, as well as we could in 1880, if we look for it, a Hatzrude, an Ulmer dogge, or a Danische dogge, just as you wish, and undoubtedly and very likely any one of these will come under the name of German dogge, and with explanations, affidavits and everything desirable in regard to proof of thorough breeding, pedigrees a yard long, consisting of a half a dozen Cesars, Paschas, Mincas and so forth. On receipt of which the American exhibitor swears high and low that his dog is right and typical, and that somebody else's is not.

Now, gentlemen of the fancy, decide what you wish to have—a Hatzrude (boarhound), an Ulmer dogge or a Danische dogge. I, for one, want a German dogge (great Dane), i. e., a combination of the better qualities of each of these strains, in a degree. The graceful movement of the Danische dogge in a measure, the substance of the Hatzrude to a degree and the breeding merits of the Ulmer in a dog like the illustration called "Ideal Great Dane Dog." If I were a professional breeder I would rather strive to get a larger and heavier ideal than a lighter one, but by all means a typical, finely bred dog.

Now we have incidentally arrived at the conclusion of this part of our article and have, I think, explained the existence of a Melac and a Wenzel, both under one name, that of great Dane. I do not believe Wenzel to be a representative of the medium between a mastiff and a greyhound. I think he was as much of the greyhound order (see Danische dogge) as Melac

HATZRUDE (EARLY PERIOD)

is of the mastiff (boarhound) order. Were we well supplied in this country with greyhound Danes, the selection of Wenzel as head of affairs in New York in a strong class of fair specimens would have been a serious mistake, but we are well supplied with dogs of the other extreme—boarhounds—and while we are in danger of going too far toward the boarhound, I think the decision of Mr. G. Muss-Arnolt was only justifiable as a protest against a wrong policy of breeding, though I should have liked to see a real great Dane and not a Danische dogge beat the boarhound-Ulmer combination which produced Melac.

[TO BE CONTINUED.]

Brunswick Fur Club.

The Brunswick Fur Club has issued a new edition of its constitution and running rules. The new rules are radically different from the old ones, the club having fallen into line and adopted the spotting system. This club now boasts of a membership of over eighty men interested in foxhunting, exclusive of a list of twenty-seven honorary members. The new rules were revised by vote of the club last April. We cannot print the new rules, but those interested are referred to the secretary, Mr. Bradford S. Turpin, Cottage street, Dorchester, Mass., who will forward a copy on request.

DOG CHAT.

The Rhode Island Show.

The Rhode Island Fair Association seems to be in touch with this progressive age. On the entry form is printed A. K. C. Rule XXVIII., referring to closing of entries and the pains and penalties which that body will inflict on the club that transgresses. This is a gentle hint to the intending exhibitor not to lead the Association into temptation by sending in late entries. It is a hint that might be embodied in every dog show entry form. On the back of the form, in addition to particulars relating to the coming show, the following sentence will strike exhibitors as particularly grateful and soothing: "It is the policy of the Association to make all entrance fees as low as practicable, believing that exhibitors' expenses are quite enough without their being obliged to form a sweepstake and compete for their own money." Those associations which charge a \$2 or \$3 entry fee for a \$5 prize, should frame that sentence and hang it up in a conspicuous place in the club room.

Death of Fascination.

Mr. George Bell has had such a phenomenal run of luck for some years past in showing dogs and picking up veritable bargains in cocker flesh that we almost thought he was impervious to the misfortunes that overtake kennel owners sooner or later. At Wissahickon show in the sudden death of Troublesome he realized how it feels, and now that he has

HATZRUDE (IMPROVED TYPE).

lost the apple of his kennel eye, Fascination, he experiences the full meaning of the dog man's term, "hard luck." Fascination died in the early part of last week, but from what cause we have not yet been informed. This handsome cocker has filled a conspicuous place on the bench lately and his winning career is too well known to the fancy to need repetition here. He was by Mr. Bell's Obadiah out of his well known bitch Amazement, and was whelped July 29, 1891. Mr. Bell has our sincere sympathy in his loss. The Toronto show is near at hand, but the Toronto man will scarcely be caught napping on his own doorstep.

"Dandies."

It is peculiar that the Dandie Dinmont does not become more popular over here. Game, not quarrelsome, a merry companion and one that can be depended on to take its part in almost any canine emergency, his merits should meet with more attention than is now the case. Our principal breeder, Mr. E. Brooks, feels quite discouraged that his efforts to bring the breed into prominence bear so little fruit. Still, we trust that he will keep the fight up and eventually prevail upon others to go into the fancy. Perhaps if more of the blue dogs were shown they would catch on quicker.

Foxhunt by Moonlight.

The secretary of the Brunswick Fur Club, Mr. B. S. Turpin, contrives to get a good deal of sport out of this life. He writes us that on the night of July 27 he with a number of friends went to Waltham, Mass. They took six hounds just outside the town and starting a fox had a fine run. The music could be heard most of the time, the fox not going more than a mile from the party, and frequently within a hundred yards. He sums it up this way, "Full moon, fine hounds, good company, perfect night, splendid lunch. What more do you want?" Nothing, unless it be the brush.

A Show at Newcastle, Pa.

The Lawrence County Agricultural Society, at Newcastle, Pa., will hold a dog show Aug. 29 to Sept. 1. Mr. W. L. Washington is the judge for sporting classes and Dr. A. Lewis for non-sporting. The prizes are \$3, \$2 and \$1. Entry fee, 50 cents. There are other "miscellaneous" classes provided, with prizes of \$1, entry to which is 25 cents. The show is given under the auspices of the Newcastle Kennel Club, organized last year.

The Rinada Kennels have issued a couple of very interesting catalogues of the breeding stock and the dogs for sale in these kennels. To a student of pointer form the one treating of the breeding stock is especially interesting, as Mr. Pickhardt, the owner, has set forth their merits of breeding in a manner that convinces any one who knows of the stock his dogs are bred from, that he is on the right track. Such well known sires as King of Kent, Duke of Hessen, Lad of Kent, Ridgeview Panic, Pontiac, etc. have been used. Among the stock for sale are some broken dogs that should find ready sale. A synopsis of the breeding is not the least important part of these neat catalogues. Mr. Pickhardt's kennels are at Massapequa, L. I.

The noted Scotch terriers Kilroy and Kilcree do not spend all their time "fettling" up for the bench. They have been taken to Brockton, Mass., where they will have some rough and tumbles with the woodchucks.

It does seem rather hard lines that a man cannot enjoy the society of his dog without being subject to loss of liberty on the mere word of any passer-by. An Englishman was sitting in the park, one day last week, with his St. Bernard, when two men came up and one claimed the dog as his property. Despite the protests of the Englishman that the dog was his and had been sent to him from Australia three years ago, and the growls of the animal when the men tried to coax him away, they complained to a policeman, and dog and owner were taken to the station house and locked up for the

night. Next morning when brought before the justice, the Englishman was able to prove by papers and letters received from the former owner in Australia who asked after the dog that the dog was really his, and was duly released. According to the published accounts of the affair there seems to have been considerable injustice done in the case and some ignorance of his rights on the young man's part.

We learn with regret that the well-known beagle breeder and late President of the Beagle Club, Mr. F. W. Chapman, has been seriously ill with rheumatism and is still confined to his home. We trust this enthusiastic beagle man will shortly be on his feet again. The beagle trials will soon be on and without the "Chapman lope" one half of the fun will be lost.

Mr. C. A. Loud, owner of the Shenandoah Kennels, in California, is selling out. He will locate at Antioch, Cal., and give up breeding as soon as his stock is disposed of. Mr. Loud is the setter man that Mr. Raper got into controversy with over the kennel prize award and the decisions at the late San Francisco show.

Mr. C. D. Bernheimer, part owner of the Hepburn Kennels of great Danes, having lost his father recently, finds his business responsibilities too great to admit of giving further attention to the kennel, and he reluctantly gives up his dog breeding interests for the present.

Nurse (as she puts Robert to bed)—And what would you say if your mamma should have a little baby brother or sister for you when you woke up in the morning?  
Robert—Tell her I'd rather have a dog.—Puck.

At the meeting of the Pointer Club of America, held July 31 at 44 Broadway, the following officers were elected: John S. Wise, president; Fred'k S. Webster, vice-president; Adrian C. Pickhardt, secretary and treasurer. Mr. George Jarvis was elected a delegate to the A. K. C. Messrs. Chas. Heath and B. F. Seiner were elected to the executive committee. Mr. R. A. de Russy and Mr. George W. La Rue were elected members of the club. Everything looks bright and prosperous for the club.

The Pacific Fox-Terrier Club, according to *Breeder and Sportsman*, must be in a flourishing state. They expect to have \$150 on hand for prizes at the next show. Two new members were elected at the last meeting.

Trivet—"Is this your advertisement in the paper for a lost dog?" Dicer—"Yes." Trivet—"Why you never had a dog to lose." Dicer—"I know; but I want one now, and I think I can make a satisfactory selection from the animals the advertisement will bring in."—Harper's Bazar.

The foxhounds of this country are being rapidly increased. Mr. J. W. Sloan, of Temple, Ind., now writes us that his American foxhound bitch Spark whelped July 23 16 living pups, sexes evenly divided, sired by Rowdy Frank.

Kitten (dancing and singing)—"Papa wouldn't buy me a bow-wow."

Old Cat (severely)—Stop, my child. Don't you know that a bow-wow is the very worst thing that you could have?—Harper's Young People.

In the "up to date" dictionary that Funk & Wagnalls will shortly publish, considerable space is given to the dog. Argoss will represent a Russian wolfhound, champion Spinaway, a greyhound, and Carney, a bull-terrier.

BICKNELL, Ind., Aug. 1.—[Special to Forest and Stream]: The preliminary hearing of Geo. McLin was set for to-day before the Mayor of Vincennes. He waived examination and was sent to jail in default of \$500 bail to wait action of grand jury which meets in September. J. M. FREEMAN.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Mirth and Glee. By F. B. Zimmer, Gloversville, N. Y., for white, black and tan beagle bitches, whelped June 10, 1893, by Stormy out of Myrtle the Mouse.

Sweet Fern. By F. B. Zimmer, Gloversville, N. Y., for black, white

DANISCHE DOGGE.

and tan beagle bitch, whelped June 16, 1893, by Ransack out of Gus-sie D.

Earl of Debonair, Songster, Trinket II., The Queen and Her Grace. By F. B. Zimmer, Gloversville, N. Y., for white, black and tan beagles, two dogs and three bitches, whelped June 3, 1893, by Ransack out of champion Twinkle.

BRED.

Prepared Blanks sent free on application.

Wee Millie—Frank Forest. F. B. Zimmer's (Gloversville, N. Y.) beagle bitch Wee Millie to Rockland Kennels' champion Frank Forest, July 19.

Bennett's Flirt—Duke of Kent II. Glenrock Kennels' (leased) pointer bitch Bennett's Flirt (Grande—Daisy) to their Duke of Kent II. (Tempest—Nadly of Naso), March 8.

Ridgeview Patch—Duke of Kent II. Glenrock Kennels' pointer bitch Ridgeview Patch (Beppo III.—Lady Norrish II.) to their Duke of Kent II., July 20.

Bessie Kakas—Dash. Glenrock Kennels' (leased) pointer bitch Bessie Kakas (Saucha of Auburn—Ino H.) to Dash (litter brother to Duke of Kent II.), March 25.

WHELPS.

Prepared Blanks sent free on application.

Hilda. H. F. de B. Cameron's (Detroit, Mich.) cocker spaniel bitch Hilda, July 24, six (four dogs), by C. F. Backus's Bendigo.

Little Girl. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Little Girl (Ben Butler—Veli), July 20, seven (four dogs), by his Murkland Ranger II. (Murkland Ranger—Beaulab). Blossom. C. T. Brownell's (New Bedford, Mass.) Gordon setter bite

Blossom (Ben Butler—Maud), July 18, ten (nine dogs), by his Murkland Ranger II. (Murkland Ranger—Beaulah).  
 Ruby, Dr. C. W. Dixie's (Worcester, Mass.) ruby spaniel bitch Ruby (Carter's Blenheim—Carter's Lady), July 30, three (two dogs), by Merryview Kennels' Philadelphia Boy).

## SALES.

## Prepared Blanks sent free on application.

Bob White. Silver fawn pug dog, whelped July 11, 1893, by Bradford Ruby II. out of Sara Bernhardt, by Eberhart Pug Kennels, Cincinnati, O., to M. M. White, same place.  
 Loria. Silver fawn pug dog, whelped May 5, 1893, by Happy Toby out of Midget Nellie, by Eberhart Pug Kennels, Cincinnati, O., to M. M. White, same place.

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

M. A. F.—Write to W. W. Titus, Waverley, Clay county, Miss. Also consult advertising columns.

W. S. B., Rochester, N. Y.—I have a Scotch terrier bitch who whelped two pups and both were dead. Since then she has been in more or less pain owing, I suppose, to her not being suckled. Her teats are caked and somewhat inflamed. What treatment would you recommend to relieve her? Will the milk dry up in her bag gradually and nature thus relieve her? Ans. Give a dose of castor oil and repeat in a few days. If teats are very hard, a little salve and pressure. Foment teats with hot water twice a day and rub with camphorated oil.

W. P. D.—Can a beagle be O. K. that is tan and white and ticked, but minus the black? 2. What should the spread of ears measure? 3. Should dew claws on pups be removed, and should they have them? 4. What should be limit of height of adult bitch? 5. How can I find out all about registering dogs? Ans. 1. Yes. 2. A good length of ear is to reach the tip of the nose when pulled forward; too long is not desirable for working beagle. 3. They are of no use and should be removed. 4. Fifteen inches. 5. Write the secretary of American Kennel Club, 44 Broadway, New York, for blanks. Fee \$1 each dog.

W. E. R., Reading, Pa.—Would you please tell me what is wrong with my dog, an English setter, 5 years old? Seems to be constipated all the time. I gave him a few worm lozenges to move his bowels and a few small worms came from him. He seems to have trouble in his throat, as if something was there. He makes a funny noise, as if he was hacking at his throat. Ans. Give a sharp purgative and then the following mixture:

R Morphia sulph. . . . . grs. ii  
 Tr. nucis vom. . . . . 3 i  
 Tr. rhel. . . . . 3 i  
 Aq. ad. . . . . 3 vi  
 Mix. Give one tablespoonful three times a day.

C. B., Providence, R. I.—What treatment is my dog in need of? The dog in question is an English setter, about 3 yrs. old, and for the past year or so has been troubled with an eruption on the skin which seems to shift from place to place, and is more apparent from time to time; sometimes going away almost entirely. It first appears in small bunches from 1/4 in. to 1/2 in. in diameter, which gradually mattinate and come to a head, causing more or less uneasiness and discomfort to the dog. I have given the dog Fowler's solution of arsenic and a low diet, but with little apparent effect. There is and has been a periodic discharge from the eyes, but I supposed this was due to a cold. Ans. Treat for worms. For a dressing, see mixture for "J. B.," issue of July 29.

G. L. S., East Foxboro, Mass.—Will you kindly tell me what ails my cocker spaniel, and how to treat him? He is six years old, has a distressing cough, each attack ending with an attempt to vomit. He raises a yellow colored phlegm which he cannot seem to eject from his mouth. If he runs any he falls over as if in a faint, which lasts about a minute. He has a breathing out on the flap of his ears and under his legs, has a good appetite and keeps in good condition; have treated for worms but without effect. Ans. Give a purgative and then the following mixture:

R Mag. sulph. . . . . 3 vi  
 Pot. bom. . . . . 3 ii  
 Morphia sulph. . . . . grs. ii  
 Aq. ad. . . . . 3 vi  
 Mix. Give one dessertspoonful three times a day.

J. H. G., Middletown, Orange county, N. Y.—A pointer puppy nine months old had a slight cough or rather a sneeze, moderate appetite, eyes and nose in good condition, would at times lie down on his belly as if distressed. This he kept up for about three or four weeks, then began to grow poor and became quite thin. Three weeks ago I took him for a walk, he seemed a little weak in hind quarters. During the walk of about one mile, while playing in a pond of shallow water, he gave a sudden cry and sprang in, and in a moment he was out, and he would pull over on his side and recover at once and repeat the same, falling over and over again. This continued five days, and he too died in a convulsion. If he had worms we could not discover any signs. These dogs had, as their breeder said, distemper while quite young. I had had them about five months. Please give your opinion as to the cause of their death. Ans. The convulsions (fits) which caused death may have been due to weakness and poverty of blood—anaemia, this could come on without worms.

H. B. N., Brooklyn, N. Y.—I have a St. Bernard bitch and two male whelps, of which she is the mother, each 3 mos. old. In the early part of June I had the bitch clipped, as she has a very rough coat, thinking to make her comfortable for the hot months. A day or two later she began to cough, a long wheezy, yet hoarse cough, followed by a guttural sound like the clearing of the throat of phlegm. As she was at the same time a little costive I gave her a dose of castor oil, buckthorn and white sugar, and she soon began to cough and spit out, and with a cough pill recommended by Dalziel. Also two or three outward applications of turpentine, etc. The cough left her about two weeks since, but almost immediately after one of the whelps began to cough in the same manner as the mother, the cough being accompanied by looseness of the bowels. I gave him cough pills, one in the morning, another in the evening, but while the bowels are now all right the cough remains. About a week ago the other whelp began to cough, and at the present time both cough. Will you kindly tell me whether this is simply a cold or a form of distemper, and what treatment would you recommend? None of the ordinary symptoms of distemper are present except that the dogs have lost flesh. Ans. From your description it looks like distemper. Keep the puppies quiet, continue the cough pills as long as necessary and also give them one grain of quinine three times a day.

J. H. M., Harrisburg, Pa.—What is the matter with my St. Bernard dog, smooth coat, 2 1/2 yrs. old? When I take him out for a walk and after going a square or two he gets so weak in the hindlegs that he can hardly drag them along. He becomes so tired that he falls down on his haunches and can go no further and must take him home. He can't stand any length of time, his legs get so weak, and has a dry cough as if something was in his throat. A horse doctor has been dressing him for the last week, but he does not seem to help him. Sunday I saw some sticky stuff on his back and found it came from a hole in the middle of his back, big enough to stick your finger in, and coming out of and around the hole were worms. I put some carbolic acid mixed with water on it, and the worms that were in the hole and near it went in and out of sight. The worms were as big as a rotten chestnut worm. Ans. It is very probable the dog has distemper and the loss of power in the hindlegs is the result. Give the following mixture:

R Syr. hypophos. co. . . . . 3 iv  
 Tr. nucis vom. . . . . 3 i  
 Liq. arsenicalis. . . . . 3 ss.  
 Aq. ad. . . . . 3 viii  
 Mix. Give one tablespoonful three times a day to the spine apply some stimulant ointment. The dog must have had to go to the back, in which the flies have deposited their eggs, which accounts for the maggots in it. The sore is "fly-blown." Syringe the wound out well with a strong solution of common salt and water, or a solution of creolin and water (1 to 30).

## A Necessary Visitor.

THE FOREST AND STREAM has reached and celebrated, by an appropriate issue, its twentieth anniversary. It has long since become a necessary visitor to every well-informed sportsman in this country, and as a reliable and able journal is highly prized by the entire body of sportsmen. It has recorded all of the more notable advancements made in field sports, and as a link between the old and new presents a fund of interest not to be found in any other publication in the entire country.—*Sacramento Record-Union.*

DURING the past week a good deal has been said about a recent alteration of that article of the New York Y. C. rules relating to the method of measurement, some claiming that the rule as now worded calls for the presence on board of the full crew of the yacht. We have not been favored with a look at the new year book of the club, but from all we can learn the old rule has not been altered in this particular, and the rule must be interpreted as it has been in the past, that those who may be on board must remain admidship while the measurement is being taken. The whole matter is a trifling one, and has received much more attention than it deserves.

COLONIA has gratified her owners and friends by a fast run from New York to Newport, leaving Bay Ridge at 8 A. M. and anchoring at Newport at 6 P. M., the distance being nearly 140 miles, naut. The run was made under favorable conditions, a strong breeze on the port quarter.

NOTHING has yet been done toward barring the fin-keel. It has raced without interruption in England for several years, and on this side yachtsmen generally are rejoicing over the fact that two large fins have been built to defend the America's Cup. The yachtsmen of St. John, N. B., have, however, taken alarm at a new fin-keel in their waters, and the proposal has been made to prohibit her entry in a race soon to take place.

It is quite possible that the New York Y. C. is taking too deeply to heart the possibility of Valkyrie defending the Cape May cup, as it now appears that she and Navahoe were certain to meet in the ordinary course of events. The question of superiority between them is likely to be settled within the coming week through their meetings in the ordinary races, and after that it makes very little difference whether they meet for the Cape May cup. It would of course be very hard on Mr. Carroll if he should win it from Valkyrie and then lose it through a later challenge from Britannia or Satanita, and we hope that should be lucky enough to win it on the merits of his yacht he will be allowed to bring it home with him unchallenged.

THE news of Navahoe's first performance in foreign waters, and also of her first race, is most gratifying, as she has sailed practically even with two yachts which have raced steadily since the end of May, and after thorough working up are presumably in first-class racing form. All things considered, the first race, in foreign waters and among a strange fleet, the performance was a remarkable one; and while no final conclusions can be based on it, the prospects of Navahoe's success are far more encouraging to-day than they have been since the yacht was launched.

THE present month has been marked by the unusual prevalence of strong westerly winds about New York and Boston, making it a pity that there has not been more racing. The conditions on Long Island Sound for the last three or four Saturdays have been of the finest for yacht racing, clear bright weather with whole sail or even single-reef breezes from the southwest. The Saturday races about Boston have also been favored in the same way. It is a curious question whether the same weather last year would have materially affected the performances of Alpha as compared with the fin-keels; and if so what the effect on designing in the small classes would have been.

ONE result of the strong and often squally winds is seen in the large

number of capsizes, many of them with fatal consequences, which have been reported in the daily papers. While some of these disasters are due to carelessness or ignorance in handling, the main cause lies in the type of boat which is used in all weather and by persons of only ordinary skill. Whatever good reasons may exist for the use of wide, shoal boats, partly decked, over canvassed and badly ballasted, such use should be confined to experienced hands, and for ordinary pleasure purposes, especially where women, children and landsmen are among the passengers, safety should be the first consideration, and speed should give way to it.

THE following advice, from the *Marine Journal*, is very timely in this connection: "There is just one practical caution for those in charge of pleasure craft that will prevent disaster if heeded; keep your eyes wide open, your head clear, hand steady and maintain a sharp lookout. If you can't tell by the look of the clouds and the sea when a squall is coming, and prepare to meet it, then you ought not to assume the responsibility of taking other people out in a boat. Disasters occur to sailing craft because the man in charge has been careless or negligent, or, not infrequently, because there is no one man in charge, and in the moment of emergency all hands get rattled. Keep one hand on your tiller, the other on your mainsheet and your eyes always on the lookout."

## Corinthian Y. C.—2d Championship Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 29.

THE second championship race of the Corinthian Y. C., on July 29, was sailed in connection with a special invitation race for the 21-footers, which, however, brought out only the two fins, Reaper and Freak. There was a strong S.W. wind in the morning, but by 2 P. M. it had fallen, and reefs were shaken out just after the start. The times were:

SECOND CLASS—21 to 25ft. W.L., START 2.10.		Elapsed.	Corrected.
Susie, Keith.	28 06	2 10 15	2 10 15
Ariel, Barrett.	28 10	2 11 33	2 11 33
THIRD CLASS—16 to 21ft. W.L., KEELS, START 2.15.		2 03 04	2 03 04
Freak, Cochran.	25 10	2 03 04	2 03 04
Reaper, Benson.	24 00	2 06 08	2 04 06
FOURTH CLASS—16 to 21ft. W.L., START 2.20.		2 19 40	2 19 40
Koorali, Robbins.	23 04	2 19 40	2 19 40
Bonita, Hood.	23 04	2 42 46	2 42 46
CRUISING CLASS A—21 to 35ft. W.L., START 2.21.		0 00 00	0 00 00
Keewaydin, Burnham.	08 00	1 20 15	1 12 15
Gladys, Fowle.	11 00	1 23 55	1 23 55
Marena, Taylor.	11 00	1 36 30	1 25 30
CRUISING CLASS B—16 to 21ft. W.L., START 2.30.		0 00 00	0 00 00
Carl, Foster.	07 00	1 37 52	1 30 52
Jane, Parker.	06 00	1 38 15	1 32 15
Otatsu, Nord.	06 00	1 31 50	1 25 50
Susan, Tangard.	06 00	1 28 30	1 28 30
Frances, Wheeler.	10 00	1 39 54	1 29 54
Edith, Wood.	08 00	1 41 02	1 33 02
Betsy, Jones.	06 00	1 39 32	1 33 32
Nina, E. Y. C.	08 00	1 42 42	1 34 42
Teal, Lee.	15 00	2 00 55	1 45 55
Kraken, Chase.	15 00	1 47 04	1 47 04

The winners were: Second class, Susie, first prize, \$10; third class, Freak, first prize, \$25; class A, Keewaydin, first prize, \$15. Class B, Knockabouts, Carl, first prize, \$10; Jane, second prize, \$7; Otatsu, third prize, \$5. Others, Edith, first prize, \$16; Teal, second prize, \$7.

Koorali, cat. wins a leg of the championship, Bonita, jib and mainsail, sailed with her.

## Great South Bay Y. C. Annual Regatta.

BAY SHORE—GREAT SOUTH BAY.

Saturday, July 29.

THE fifth annual regatta of the Great South Bay Y. C. was sailed in a heavy rain and a strong S.W. wind on July 29, a very good race resulting. The chief interest was in the sloop class, in which were entered, beside the new Bonnie Doon, the old sloop Berkley, a local boat renowned for her speed, and the Herreshoff 30-footer Edith M., built last year. Edith M. won but was disqualified as not being a cabin boat. Bonnie Doon defeated Berkley, but as neither was measured the corrected times are not known. The official times were:

ELAPSED.		Elapsed.	Corrected.
Edith M.	3 09 28	3 09 28	3 09 28
Berkley.	3 15 23	3 15 23	Not meas.
Bonnie Doon.	3 15 23	3 15 23	Not meas.
CATBOATS—CLASS 1.		2 12 23	2 12 23

## Barnstable Y. C., First Regatta.

BARNSTABLE, MASS.—CAPE COD BAY.

Saturday, July 29.

THE first regatta of the Barnstable Y. C. was sailed on July 29 in a variable breeze, the yachts carrying two reefs at times. The course was 9 miles. The times were:

FIRST CLASS.		Length.	Elapsed.	Corrected.
Eclipse, H. H. Sears.	25.11	1 50 06	1 50 06	1 50 06
SECOND CLASS.		21.03	1 22 35	1 20 16
Borgie, V. D. Bacon.	21.03	1 22 35	1 21 17	1 21 17

Banner, J. H. Real.	1 19 50	1 19 50	1 19 50	1 19 50

Banner captured, but rescued by another boat. The judges were E. B. Crocker, Freeman Taylor and W. Parker, Jr.

## Hull Corinthian Y. C. Club Race.

BULL—BOSTON HARBOR.

Saturday, July 29.

THE first race of the Hull Corinthian Y. C. for cash prizes, on July 29, had very few starters, and two classes sailed over for half money. The wind was strong S. W., the boats carrying two reefs. The times were:

FIRST CLASS—SIX MILES.		Length.	Elapsed.	Corrected.
Vanessa, Homer Bigelow.	24.08	1 55 00	1 55 00	1 55 00
THIRD CLASS—SIX MILES.		21.06	2 04 28	2 04 28
Helen, R. M. Sawtell.	21.06	2 04 28	2 04 28	2 04 28
Hegedorn, C. V. Souther.	20.05	2 04 28	2 04 28	2 04 28
Marjorie, G. W. Bouve.	20.07	2 04 28	2 04 28	2 04 28
FOURTH CLASS—SIX MILES.		18.06	2 23 00	2 23 00
Mab, John Shaw.	18.06	2 23 00	2 23 00	2 23 00
FIFTH CLASS—THREE MILES.		14.08	1 11 12	1 11 12
Marion, H. E. Yerxa.	14.08	1 11 12	1 11 12	1 11 12
No Name, J. R. Hooper.	14.11	1 11 12	1 11 12	1 11 12
Phyllis, W. A. Cooney.	12.09	1 23 02	1 23 02	1 23 02

The judges were H. O. Stetson, C. E. North and F. H. Smith, Jr.

**Owasco Y. C., Second Race.**  
AUBURN, N. Y.—OWASCO LAKE.  
Friday, July 23.  
The course was from Dolphin Club house to Edgewater, to Long Point and finish at Dolphin club house; distance  $\frac{3}{4}$  miles, weather clear, wind strong from north.

Length.	Start.	Elapsed.	Corrected.
Bee, N. B. Burr.....	17.4	3 06 07	1 55 24
Ideways, F. J. Allen.....	31.2	1 10 15	3 22 53
Mystery, H. B. Lewis.....	22.00	1 11 27	3 34 53
Asp, D. Beardsley.....	21.10 $\frac{1}{2}$	1 14 15	3 42 04
La Fiancee, J. Brainard.....	16.9	1 12 28	Did not finish.

The winners were: First prize, Bee; second, Ideways; third, Mystery. Out of fourteen boats in the club only five started. Part of the boats sailed with one reef, and the balance with two.  
Regatta committee: C. E. Thom, F. J. Allen, W. R. Hopkins, N. B. Burr, C. U. Chedell.  
Judge: W. P. Allen. Timekeeper: H. J. Case.

**International Racing.**  
The following letters settle the dates for the Cup races, and also the time when Valkyrie and her owner may be expected here. The time of crossing is considerably later than in the cases of previous challenges, but Lord Dunraven is naturally unwilling to throw away the very good chances of winning in the many important races of the Cowes week:

NEW YORK, July 27, 1893.  
DEAR MR. SMITH: I have a letter to-day from Lord Dunraven, in which he says that, as he has heard nothing from the Cup committee with regard to the date for the races, he is now assuming that they are definitely settled for Oct. 5, and that he intends to race the Valkyrie over there until Aug. 12, sailing her thence about Aug. 20 or 22, and leaving himself about the middle of September. I understood the desire of everybody, and if the date is not changed it will permit him to race the Valkyrie in England gives me the opportunity to say, in confirmation of our previous correspondence and to make the date positive, that the date for the races is definitely settled for Oct. 5 next, as per our agreement, unless changed by mutual consent, and I infer from your letter you will advise Lord Dunraven by cable. Yours sincerely,  
H. MAITLAND KERSEY.

To James D. Smith.  
Ex-Commodore Smith's reply was as follows:

NEW YORK, July 27, 1893.  
DEAR MR. KERSEY: I have yours of even date. It has been the desire of the America Cup committee to make the date earlier than Oct. 5 in compliance with the suggestion of Lord Dunraven, but they have been unable to make the arrangements to change the date. Your intimation that he desires to know at once the decision of the committee, and if the date is not changed it will permit him to race the Valkyrie in England gives me the opportunity to say, in confirmation of our previous correspondence and to make the date positive, that the date for the races is definitely settled for Oct. 5 next, as per our agreement, unless changed by mutual consent, and I infer from your letter you will advise Lord Dunraven by cable. Yours sincerely,  
JAMES D. SMITH.  
To H. Maitland Kersey.

Navahoe has been docked at Southampton and her bottom has been coated with Crumond's composition, the topsides being painted. The size of her spars and the lightness of her rigging have excited considerable comment among yachtsmen, and she has been compared to Satanita in appearance, while her bow is likened to Vendetta. Fay & Co. have done the painting and other work on the vessel, and her racing spars being shipped and everything put in complete order.

The Yachtsman describes Navahoe as follows:

"The chief yachting event of the week here has been the arrival of the American yacht Navahoe, which came up from Cowes on Wednesday afternoon, and dropped anchor at the Ichen buoys off Crosshouse. Here she at once commenced divesting herself of her jury rig, which consisted of a stump bowsprit and topmast and short boom, preparatory to shipping her huge racing spars, which have been waiting here for about three weeks, having been brought here from Boston to Cowes is reckoned to have been made in 18 days 19 hours. The Navahoe, which is built of steel, has of course been an object of great curiosity to Ichen-siders. Her huge mast is a marvel in the way of sticks. Standing on deck one cannot but be struck with her enormous beam, yet elegance of form, and a glance up her enormous mast to hounds is something to take one's breath away, and to lead to a feeling of wonder as to what the ship will look like when fully rigged. The saloon and cabins, access to which is gained by a mahogany brass-railed staircase—an ordinary companion ladder—are elegantly, but not expensively, fitted, white being the prevailing color, with delicate crettonne upholstery and electro-plated fittings. She has a bathroom which would do credit to a small ocean liner. Her main cabin is a noble apartment, and has ample headroom for even a tall man. The ladies' cabin, which is on the starboard side, is also a fine room. She has staterooms right aft, and these were crum-full of canvas in the voyage across the Atlantic. Her forecabin makes up sixteen berths, and looked at from a short distance, Navahoe appears above the waterline perhaps more like Satanita than any other of the English quartette. On her arrival at Ichen, Navahoe was once joined by Captain T. Diaper, who will be her pilot in English waters."

Mr. Carroll has taken a house at Cowes, the "Rosetta," for four months.

The first race of the Cowes meeting was sailed on Monday, the regatta of the Royal London Y. C., the course being from off Cowes, eastward along the north shore of the Isle of Wight past Ryde, and around the Warner Lighthouse, then back to Cowes and to the waterline. The course was a crescent of moderate curvature, and with the wind N.W., the first leg to the Warner was free, the second to Lepe buoy was to windward for about 8 miles, with a reach of 4 miles, then nearly before the wind back to the Warner. The starters were Valkyrie, Britannia, Navahoe, Iverna, Satanita and Calluna. The wind was fresh and puffy from the N.W., all carrying club topsails. The start was made at 10 A. M. The order over the line was Valkyrie, Iverna, Britannia, Satanita, Navahoe and Calluna. Britannia ran ahead, but a little later spinakers were set and both Navahoe and Valkyrie passed her. Valkyrie was first around the Warner, but with the other two very close. Navahoe, though not standing as straight as the others, made a good showing in the windward work, taking the lead in the final reach, which followed the time at Lepe buoy being Navahoe 12:34.43, Valkyrie 12:35:12, Britannia 12:35:22. With spinakers set the fleet ran past Cowes, the first round being timed:

Navahoe.....	12 48 34	Satanita.....	12 55 35
Valkyrie.....	12 48 42	Calluna.....	12 59 50
Britannia.....	12 49 36	Iverna.....	1 00 58

Navahoe held first place to the Warner, where the times were: Navahoe 2:04.30, Satanita 2:04.48, and Satanita 2:09.45. In the windward work Valkyrie soon passed Navahoe, and then Britannia worked by the two, making a lead of about 1 mi. before the reaching began, and holding it to the finish, where the times were: Britannia.....3 46 16 Navahoe.....3 47 12 Valkyrie.....3 47 19 Iverna gave up and the times of Satanita and Calluna were not reported. During the race the German Emperor was out on Meteor,

though she did not enter. On Tuesday the race of the Royal Yacht Squadron, for the Queen's Cup, was sailed, Navahoe not being allowed to start, as she is not enrolled in the squadron.

YACHT NEWS NOTES.

Iroquois, schr., has been chartered again by Mr. Ellis, and has fitted out at Winttingham's yard.

Nirvana, steam yacht, designed and built by Dr. C. D. Miller for W. R. Sands, of New Hamburg, was successfully launched at Poughkeepsie on July 23. She is 106ft. over all, 80ft. l.w.l., 16ft. beam and 5ft. 6in. draft.

The regular meeting of the New York Y. C. on July 20 was held in the large hall of the Equitable Building, Vice-Com. W. Butler Duncan presiding in the absence of Com. Morgan. The most important business transacted was the election of the following members: James R. Whiting, W. E. Duryea, G. B. French, Thos. Perry, U. S. N.; George H. Maier, Casper F. Goodrich, U. S. N.; M. Ogden Jones, J. Hayward Ford, John H. Hall, John L. Purcell, U. S. N.; Henry W. Lamb, Otis C. Tiffany, U. S. N.; John Hubbard, U. S. N.; Arthur B. Speyers, U. S. N.; N. James De Blois, Adam W. C. Cochran, Bradford B. McGregory, F. M. Smith, J. Andrew Swan, William H. Everett, U. S. N.; Leonard J. Busby, Charles Gould, Francis G. Lane, William Hester, T. Bailey Myers Mason, U. S. N.; William Trenholm, James Laughlin, Jr., Harrison B. Moore, Thomas W. Pearsall, Jr., Edward H. Harri-

soné the other. On this account the officials in charge of the race reserved their decision until to-day, but it is altogether probable that they will decide that it shall be sailed over again.—Toronto Empire, July 24.

The new book of the Seawanhaka Corinthian Y. C., is decidedly the finest book of the kind yet published, the work of the Vinna Press. It is very handsomely printed on a thin paper, the cover being of Union silk, such as is used for light sails, with the club emblem in gold. The club has a membership of 413, and a fleet of 190 yachts; 51 steamers, 31 schooners, 66 cutters, sloops and yawls, and 42 open yachts.

We have received a very neat programme of the season from the Tacoma Y. C., of Tacoma, Wash. This young club is now well established and in a flourishing condition.

The challenge of Zelma for the Fisher cup, held by Onward, of Rochester, was accepted some time ago, and Saturday was fixed as the date of the race. Mr. N. B. Dick of Zelma is now informed by Onward's owners that the sloop will be away cruising and he is invited to cross the lake and sail over the course for the cup. Mr. Dick wants the trophy, but he wants to win it in a race, and he has offered to alter the date to suit the convenience of Onward's owners.—Toronto Globe, July 26.

Columbia, schr., has been chartered by J. T. Perkins to Mr. Sloane, of New York.

The Watertown (N. Y.) Times is responsible for the statement that a flash of lightning struck the "sail pole" of a yacht.

Almy, steam yacht, Frederic Gallatin, sails this week from New York on a cruise to Greenland, calling first at Quebec and Montreal.

The rumor of a new steel yacht for Wm. A. Slater, former owner of the steam yacht Sagamore, has taken definite form, and for Bath Iron Works is credited with an order for a steam yacht 27ft. over all and fitted for ocean cruising.

Mr. Sears's 21-footer (?) Romance was measured last evening by the official measurer of the Dorchester Y. C. and was found to be 22ft. 8in. on the waterline. She therefore had a right to sail in the class for boats over 22ft. in the regatta last Saturday. Perhaps there are some other pretty long 21-footers in this harbor.—Boston Herald.

The cruise of the New York Y. R. A. has failed to come up to expectations, only about twenty yachts taking part. The fleet sailed from New Rochelle to the Thimble Islands, where the cruise ended.

Carmita, fin-keel, has been put in shape at Lawley's, and is now complete, with all her new sails. Harpoon has been laid up, Gloriana is still tied up at Beverly Bridges, and her yawl has been decked and rigged for Mr. Hopkins's use about Newport, so that only Wasp is left in the 46ft. class, and neither she nor Carmita will start in the Golet cup race.

The regatta committee of the Seawanhaka Corinthian Y. C., is actively at work over the race for the \$1,000 cup offered for the four cup defenders. The question of a date is somewhat difficult, there being so many events already scheduled, while more or less will be required for docking and preparation for the trial races. Two very good courses have been laid out on the Sound between Lloyds Neck, Penfield Reef and Crane Neck, each buoy a minimum depth of nearly 10 fathoms.

From the latest reports, the Herreshoff 24-rater Meneen, is doing better than at first, taking a number of first prizes. The Yachtsman reports that her boom and gaff mainsail has been replaced by an English lug-sail with good results. Momena is doing very well.

One of the features of Cowes week is the yachting exhibition on board the schooner yacht Daphne, under the management of West & Son, the yacht photographers. The yacht will cruise from port to port during August and September, with an exhibit of yachting goods, models, photos, books and all kinds of boats, instruments, etc.

Emperor William is at Cowes this week with the imperial yacht Hohenzollern and Meteor (Thistle). The latter will enter against Navahoe and the British cutters.

The report is current that the Eastern Y. C. proposes to establish a club station similar to those of the New York Y. C., the location being on Long Neck, Great Harbor, Vineyard Sound.

Vashti, cutter, built by Lawley in 1888 for Chas. A. Welch, Jr., has just been repurchased by that gentleman from John A. Stetson, who has owned her for some time. Fleur de Lys schr., C. A. Trotter, arrived at Plymouth, Eng., on July 22, having sailed from New York on July 2.

The catboat Gypsy, of the Audubon Y. C., when on her way to Sandy Hook on a fishing trip late on July 22, was struck by a heavy squall off Bay Ridge, and John Drexler was knocked overboard by the boom in jibing. In spite of every effort his companions were unable to pick him up. The young man was carpenter, living in Harlem, and a member of the club.

Indra, cutter, was reported ashore on the morning of July 23 at the mouth of Edgartown Harbor, Martha's Vineyard, but was hauled off with little damage. There is no yacht of the name in the American Yacht List, and the yacht is probably the Indra, formerly Melusina.

Palmer, schr., is fitting out, her owner, Mr. Rutherford Stuyvesant, having returned from Europe last week. Drusilla, owned by Mr. Louis Rutherford, is still laid up at Winttingham's yard.

The regatta of the Indian Harbor Y. C. was sailed on July 20 in a strong wind and rather choppy sea. Little Captain's Island before the start, and laid there until hauled off by the Chapman Wrecking Co. She very luckily sustained little damage.

Ballymena, steam yacht, built in 1888 by the Herreshoff Mfg. Co. for the late George S. Brown, of Baltimore, has been sold by Alexander Brown to J. N. Brown, of Providence, R. I., for \$55,000. She was the first steel yacht built by the firm.

Aida, steam yacht, Messrs. F. A. and George Homer, of New Bedford, went aground in a fog on Cedar Tree Neck, Vineyard Sound, on July 19, and was holed and sunk. She was raised and taken to Vineyard Haven on July 24. She is not the well known Aida, formerly the Permelia, owned by W. P. Douglas.

Embla, steam yacht, designed and built by Seabury & Co., for J. H. Hanna, made a very successful trial trip on July 21, making, as reported, 18 $\frac{1}{2}$  miles in one hour's run and 36 miles in two hours. Her contract speed was 17 miles.

Marguerite, schr., will be eligible to sail again in the New York Y. C. fleet, her new owner, Henry W. Lamb, having been elected a member of the club at the last meeting.

The sailing committee of the Royal Hamilton Y. C., has decided that the race for the 21-footers, in connection with the L. Y. R. A. regatta, on July 8, will have to be re-sailed early in August, over a course in the bay.

The capsizing of the Eastern Shore canoe in Lake Michigan, by which four lives were lost, has created a prejudice in some quarters against one of the fleetest and most seaworthy of crafts. This canoe, known as the Chesapeake, was built for the World's Fair at St. Michael's, Talbot county. The boat was out in the Lake and a storm arose. As it approached, the navigator furled the sail around the mast. The violent wind loosened and filled the sail and upset the boat. If the boat had been managed by an Eastern Shoreman, as one of our Eastern Shore contemporaries points out, the disaster would not have happened, because he would have taken the mast down or "lapped" it, as it is termed. The canoe was "killed" as it is popularly known on the Eastern Shore, is, as we have already said, a

"CALLUNA," CUTTER.—DESIGNED BY WM. FIFE, JR., 1893.

From a photo by West & Son.

man, John Nichols Brown, Marcus L. Miller, U. S. N.; R. F. Fletcher, U. S. N., and Edward S. Caldwell. Treasurer F. W. J. Hurst reported that the club's assets were \$40,477.10 in cash and registered bonds. Mr. Frank T. Robinson reported that the silver cup for the cruiser New York, purchased by the club at a cost of \$1,000, was ready for presentation. A letter from Lord Dunraven was not read, as the America's Cup committee was not present.

We are indebted to the Lake Champlain Y. C. for a copy of the new club book for 1893.

Although St. John, N. B., has no yacht club, it boasts quite a fleet of yachts, and the aldermen of the city have presented a very handsome cup to be sailed for on Aug. 8, at which time the cruiser Blake is expected in port. The racing fleet includes some fifteen yachts from 19 to 31ft. l.w.l., mostly of local build, though two, Fingra and Irex, were designed by Mr. Burgess. Messrs. Temple and others have just completed a very handsome steam yacht, 56ft. long and 9ft. beam. She is fitted with a Roberts boiler and a triple expansion engine of 160 horse power, and on her trip made some very fast miles. Messrs. Fairweather and others have also launched their new steam launch, 45ft. long, 7ft. 6in. beam. She is also fitted with Roberts boiler and compound engines.

On Saturday afternoon, during a thunder storm, the yacht Gooseberry, containing a party of Utica and Syracuse young people from Thousand Island Park, was struck by lightning and its occupants prostrated by the shock. The boat is rowed and sailed by Edward P. Lyon, son of Captain Lyon, of Odgensburg, and in the boat were also Miss Grace Butterworth, of Utica, and Miss Lina Atwell and Frank Andrews of Syracuse. Mr. Andrews was rendered unconscious by the shock and so remained until energetic measures were taken for his relief. All the occupants of the boat were partially paralyzed by the lightning and were unable to manage their vessel. A fishing skiff near at hand went to their relief. All have now recovered.—Rome (N. Y.) Sentinel, July 24.

In the 21ft. race of the R. C. Y. C. on Saturday the Thistle-down, with a good breeze, again demonstrated her ability to walk away from the others of her class. Mr. Emilus Jarvis's fin-keel was in the lead right from the start. The starting buoy was unfortunately displaced shortly after the start and another was put in its position. The two buoys, however, confused the yachts, some of them rounding one and

most seaworthy craft. But it must be handled by those who understand it. Under the management of an inexperienced person it is dangerous and liable to capsize in the most sudden and unexpected manner. It is as liable to turn over as a bicycle ridden by one who has had no practice. But under the command of an Eastern Shoreman they can weather almost any ordinary storm in the Chesapeake. They can sail "close to the wind" and glide through the water at an astonishing speed. The Eastern Shore waterman takes to his "kunker" as the duck takes to the water. It comes next after the cradle and lasts through life. It is his carriage and horses, his pleasure yacht, his workshop, his farm. The fleet of canoes coming in at evening to a Chesapeake fishing town is as beautiful a sight as one can hope to witness.—*Baltimore Sun*, July 22.

A new steam yacht, named Claymore, was launched at the Seabury works at Nyack, on July 26, in the presence of the owner, Mr. J. Kennedy Todd and a party of his friends. Mrs. Todd christened the yacht. The Claymore is intended for daily service between the city and Mr. Todd's home at South Beach, Conn., and is of the torpedo boat type, with a flush deck and turtle back sides, her speed being 19 miles. She is 80ft. over all, 10ft. beam, 3ft. 6in. draft, and has Seabury engines and boiler, the former being triple compound. The working pressure is 27½ lbs. The frame is of oak, the planking of yellow pine, two thickness, and she is copper fastened and rivetted throughout. On deck is a mahogany cabin, a galley, a toilet room, and below she has a large cabin, state room, dining room, toilet room and quarters for crew.

The Herreshoff Mfg. Co. has received an order for a steel steam yacht for F. L. Osmond, of New London, owner of Cosette, steam yacht. The new craft will be 180ft. over all, with a speed of 18 miles.

Nokomis, schr., has been sold by H. Putnam, Jr., to G. W. Hunt.

Corra, steam yacht, owned by J. A. Morris, was in collision with a working sloop off the Battery, New York. The yacht had her owner and a party on board, bound from Throgg's Neck to the races at Monmouth Park. The sloop struck her on the quarter, but did no serious damage to the hull.

Shearwater, steam yacht, Henry R. Wolcott, rescued the captain and crew of a capsized vessel in Long Island Sound, off Saybrook, on July 23, landing the ship and crew at Westbrook, Conn., after supplying them with clothes and money.

Britannia has been selected by the Royal Victoria Y. C. to defend its gold cup, and the races will take place the second week in September.

It is possible that Valkyrie may not defend the Cape May cup, as Navahoe will be in the Royal Southampton regatta on Aug. 5, the day suggested by Lord Dunraven. In this event there is some talk of Satanita being chosen, but the great difference in length of the two would make the race less interesting, Satanita being 98ft. 1½ in. or 13ft. longer than Navahoe. Calluna now holds the Brenton's Reef cup, but nothing has been decided about the race.

Colonia has been at Newport for a week, making a very fast run from New York, but she has returned to Bay Ridge. Her new hollow boom has not yet arrived, and she is now in the shop. In preparation for the cruise next week, on Tuesday she was docked at Downing & Lawrence's railway, next to Poillon's yard. Vigilant has been sailing about the Sound, but on Tuesday she was hauled out on Piegrass' railway, City Island.

Pilgrim has been sailing regularly of late and is now in very good shape. Secretary Herbert has given Messrs. Stewart & Binney permission to use the drydock of the Boston Navy Yard, and the yacht was to go out there on Friday of this week in place of coming to the Erie Basin as at first proposed. It is still doubtful whether she will be allowed to join the New York Y. C. fleet on the cruise. Jubilee is nearly ready for the cruise, though her sails are not yet in good shape. She will haul out at Simpson's drydock, East Boston, this week. In any event neither she nor Pilgrim will come west of Newport, and the first real race of the class will be for the Golet cup on Aug. 11.

## American and British Models on the Pacific.

Editor Forest and Stream:

In your issue of June 29 a correspondent speaks of the yachting enthusiasm which exists in the extreme Northwest, and of the rivalry between the British and the American cutters. I am referring to the cutter of English design as being the prevailing type of British Columbia yacht, a type which has proved unsuccessful in racing against the American centerboarders. The fact is that the spirit of enthusiasm he speaks of is so lacking among my fellow countrymen that the Victoria Y. C., young, small and not remarkable for wealthy members, is the only club belonging to the International Association. The enthusiasm of this small body does not sufficiently extend to the lack of capital to enable it to build the cutters spoken of. The reason of our boats being beaten by the American centerboarders is easily explained. The boat of British Columbia is the common or garden sloop. The only cutter (not counting a little toy of 19ft.) which has taken part in the international regattas was designed here in Victoria for a cruiser, and had neither form, rigging nor sails suitable for racing. The only racing machine of our class is of our smaller class, and belongs to the bulb-fin tribe. She was designed for the English Y. R. A. rule of rating, which we use in our club, and could hardly be expected to compete successfully with sandbaggers of unlimited sail spread. Our rule—Length multiplied by Sail Area, divided by 6,000—is a bad one, but not so bad as the remarkable rule under which the international races are sailed—1½ in. plus half overhang, divided by 3—when shifting ballast in all but the A class. This method of measurement for time allowance was recommended to the association by the committee formed to report, as having afforded great satisfaction about New York and in the East generally. The result of this formula is called "corrected length." I have heard of corrected length rules, but never of corrected length arrived at in this way, as being in use by yacht clubs of note. Moreover, the type of boat which has proved, as your correspondent says, most successful under it, cannot properly be called a yacht.

Fortunately for the cutter, which if she be slow is also safe, a resolution was adopted at a meeting of international delegates at Port Townsend creating a class below the A class for boats with fixed ballast, so that when we can afford to do so we may build a boat which will not turn turtle, and still have a chance of prize winning. Our seas are deep, cold and apt to be turbulent, whereas our American friends sail most of their races in comparatively smooth, landlocked waters, and are welcome to the agile skimmer.

H. HARDEY SIMPSON.  
[Mean length and shifting ballast, so far from giving general satisfaction about New York, have almost entirely disappeared, nearly all clubs racing under the length and sail area rule.]

## Quincy Y. C. Pennant Race.

QUINCY—BOSTON HARBOR.

Thursday, July 20.

The Quincy Y. C. sailed a pennant race on July 20, in a fresh S.W. wind and with a good lot of boats in each of the three classes. Since last season the old Secret has received a new shovel bow and other alterations, and made her first appearance in this race. The little Herreshoff cat Mah sailed a nice race, beating her class easily. She is lightly canvassed, but the wind was strong enough to bring her down to a single reef. The times were:

FIRST CLASS.		
Vanessa, A. Bigelow, Jr.	22.11	1 31 15
Beatrice, J. Cavanaugh.	26.00	1 29 01
Hiladee, J. P. Small.	24.10	1 33 45
Moodyne, A. J. Shaver.	24.10	1 35 30
Gipsy, H. R. Drinkwater.	24.07	1 36 00
Adolph, H. Moebis.	22.05	1 39 55
SECOND CLASS.		
Magpie, H. G. Otis.	19.08	1 38 15
Opechee, W. P. Barker.	19.08	1 30 20
Aurora, H. M. Faxon.	19.08	1 31 55
Secret, E. F. Linton.	19.08	1 38 30
THIRD CLASS.		
Mab, John Shaw.	17.05	1 28 30
Imp, G. Maybury.	16.03	1 33 13
Primrose, H. M. Faxon.	17.11	1 32 45
Dandelion, A. Adams.	17.06	1 37 30
Sunbeam, H. P. Faxon.	18.02	1 38 40
Flora Lee, C. D. Lanning.		1 37 30

## Mattapoisett Y. C.

The Mattapoisett Y. C. sailed a sweepstake race on July 26, the times being:

THIRD CLASS.		
Start.	Finish.	
Algul, J. R. Bullard, Jr.	2 05 06	4 41 38
Nobska, A. A. Beebe.	2 03 05	disabled
Tycoon, J. L. Stackpole.	2 02 25	4 48 20
Hermine, R. L. Barstow.	2 31 10	withdraw
FIFTH CLASS.		
Raccoon, J. L. Stackpole, Jr.	2 13 56	3 14 06
Nameless, none given.	2 14 32	3 52 06
Axe, Lewis D. Bacon.	2 13 05	3 12 00

The winners are Algul and Raccoon.

## Capsizes.

On July 23, a 20ft. sloop owned by Thomas W. Johnson was capsized in a squall off Fawn Bar, and sank, her ballast shifting. Of the five persons on board three were drowned, Joseph Murphy, Albert T. Scott and a boy, J. W. Johnston. The other two, T. W. Johnston and Mr. C. R. Schumacher, had on to the masthead, which was above the water, until rescued by the sloop Wren, Chas. N. Anderson. Young Johnson held on for a time, but was washed away finally, the sea being bad during the squall.

The sloop yacht Allie commanded by Captain Nathaniel Price, with a party numbering eight, of which three were women, was capsized yesterday just at the point of the inlet of Far Rockaway. Those on board were thrown into the water. Fortunately all the men could swim, and at once went to the aid of their companions. The women were placed alongside the upturned yacht, where they remained holding on until relief came from shore. Several rowboats put off to the place of the accident, and soon had the unfortunate people safe on land. The accident was caused by the sail jibing.—*Tribune*, July 18.

Ellis Atwood, Otto Kallusch, Ned Alling, Mr. McKay and Miss Stevenson started from Forest Lawn Saturday afternoon in a yacht for Charlotte, and their craft was upset by the wind a long distance out. The lookout at the life-saving station saw the accident, gave an alarm and Captain Doyle and his men reached the party in time to save them. They were clinging to the boat.—*Post-Express*, Rochester, July 17.

Saturday, William Goggins of this city, accompanied by his son Miles, a young man named Noble and two boys, started in a sailboat for Quabaug Bay for a Sunday outing. While between Pumpkin Knob and Long Island a gale struck them, and every minute the occupants of the boat expected she would be capsized. All control of the craft was lost, and the anchor was thrown overboard. The rope attached to the anchor parted, and one of the boys jumped overboard and secured it; the craft being aground on the ledge. They stayed on the ledge all Saturday night, and had a narrow escape from death.—*Boston Herald*, July 25.

The schooner Lizzie Raymond, of Port Jefferson, N. J., owned and commanded by Captain D. S. Davis and loaded with shells for oyster beds off Norwalk, was struck by a squall off Westbrook this afternoon and capsized. The cook, William Phillips, was lost. The schooner is still afloat and will be towed into this port. (New London.)—*New York Herald*, July 24.

The high wind which prevailed yesterday afternoon played havoc with numerous small craft which were so unfortunate as to get caught in it. Five different capsizes and several narrow escapes were reported in Jamaica Bay. The large sloop yacht Lucile, Captain James Ruland, of Canarsie, left shore early in the morning with a party of twelve on board. The day was spent fishing in the ocean. About 5 o'clock the yacht started for home. She was under a double reefed mainsail and just off the breakerwater opposite the Canarsie landing, when a squall struck her, and in a second the boat capsized. The entire party were thrown overboard. Captain Charles Cuddy, who had witnessed the accident, put out from the shore in his yacht Grover Cleveland, and rescued all. The small catboat, owned and sailed by Edward Masters, of Canarsie, was capsized. After anchoring the boat Masters swam to the shore. The yacht Happy Thought, Capt. John McAdam, of Bay Ridge, left the Old Mill Creek early in the morning with five, including the captain, on board. While at anchor in the Pumpkin Patch the heavy sea caused a leak. The sail was hastily hoisted to take the yacht into shallow water, but the wind caught it and the little boat capsized. The party were rescued and taken to Canarsie. Two little boys, Samuel Avery, twelve years old, and Edward McAvoy, fourteen years old, were sailing around the bay in a small skiff late in the afternoon. The boat was capsized and the boys thrown into the water. McAvoy could swim, but his companion couldn't, and was in danger of drowning when Captain Alfred Posey, of Canarsie, put out from the shore in a rowboat and rescued him.—*World*, July 24.

BRIDGEPORT, Conn., July 23.—The tug Zouave, of New York, Captain J. S. Williams, towed into this harbor this evening the 30-ton sloop Agent, which was capsized off Penfield Reef, four miles from this city a quarter to 12 o'clock this morning. The Agent was towed from Branford, Conn., to South Amboy, N. J., and had reached the reef when she was struck by a squall which overturned her. Captain J. C. Prout and two hands were nearly drowned, but Prout succeeded in keeping afloat by clinging to the edge of the boat, which showed above the water. At the expiration of three-quarters of an hour the Zouave was hailed, and Captain Williams anchored his tow barges at the reef and brought the small craft to the shore. The boat was a mile the Agent dragged on the hard bottom, and the loss will be a large part of the cost of the boat. Captain Prout fears a chest in the cabin containing \$500 has gone to the bottom. The Agent will be righted to-morrow morning.—*New York Herald*, July 24.

BUZZARDS BAY, Mass., July 24.—A report was received here this morning that a large cat-boat, painted black, was capsized in Buzzards Bay, off West Falmouth, yesterday afternoon, with several men and women on board. The boat was seen some distance from the shore, when a violent squall came up and capsized her. Mr. Dennison, a tag manufacturer of Boston, who is summering there, immediately put out in his steam launch, and another boat put out from Cotuit, but nothing could be seen of the boat or its occupants. Word has been received from West Falmouth practically confirming the report, but the identity of the boat and those on board cannot be ascertained.—*Evening Post*, July 24.

A catboat sailed by Dr. N. Kenney, of New York, was capsized in a squall on Niantic River, off the Oswego River House, yesterday. Dr. Kenney was rescued by a boatman.—*New York Herald*, July 25.

SALEM, Mass., July 24.—There is little doubt that the men reported drowned in Salem Harbor by the capsizing of a yacht yesterday were Anton Liebsch, about fifty years old; Andria Liebsch, his sixteen-year-old son, and James E. Dixon, foreman of the Salem Gazette office, about thirty years old. An oar and a hat found have been identified as belonging to Liebsch, and they were in a boat answering a description of the one known to have capsized and sunk.—*Tribune*, July 25. The yacht has since been raised with the bodies aboard.

A small boat in which a man was sailing off Revere Beach, near the Narrows Canal, about 5 o'clock yesterday afternoon, was capsized and the man was drowned. The accident was observed by persons from the shore, but there were no means at hand for rendering assistance. The police were notified and an effort was made by them to recover the body by grappling, which proved successful about 11:30 o'clock last night. From the description given by Fred Locke, who rented the boat, the man is supposed to be Mr. E. C. Dickey, a building contractor of Maplewood.—*Boston Herald*, July 22.

## Minnetonka Y. C.

A RACE was sailed on July 15, in which Onawa was again victorious, beating Katie; Alpha did not start. The times were:

FIRST CLASS SLOOPS.		
Onawa, Ward Burton.	1 52 05	Corrected.
Kite, Wm. Peet.	2 01 05	1 40 03
C. L. C., Cook, Champion and Long.	2 03 21	1 56 54
Waterwitch, Anson and Gillette.	2 13 39	2 01 30
Aurelia, C. S. Langdon.	2 08 54	2 05 51
Ida, George Brackett.	2 10 23	2 06 32

Cogina, W. G. Hollis.	2 52 23	2 27 15
Hermes, M. D. Ridgeway.	2 57 43	2 32 35

## Oak Point Y. C.

The Oak Point Y. C. sailed a sweepstake race for jib and mainsail boats on July 23, the course being from off Oak Point across the Stepping Stones 12 miles. The wind was strong N.W. and Paula capsized, Mignon lost her mast and Laura lost her jib, which blew out of the boltropes, leaving Fanny to finish alone as follows:

Finish.	Elapsed.	
Fanny, James Grant.	2 45 00	3 45 00
Laura, Freeman, Frazer & Roz.	3 07 00	4 07 00
Mignon, George, Went.		Withdraw.
Paula, Otto Buschow.		Capsized.

## Steam Yacht Racing.

The owners of the new Yankee Doodle are out with a challenge to the other high speed steam yachts for a race, the course to be from one to thirty miles, on smooth or rough water, for \$1,000 per side. The

following letter has resulted from a meeting between Vamoose and Javelin some short time since, in which both claimed the victory:

Tedo's Dock, South Brooklyn, July 20, 1893.  
Capt. Brady, Steam Yacht Javelin:  
Dear Sir—I understand four people are not satisfied that the Vamoose can beat the Javelin in a speed contest. I am authorized by Mr. Follansbee, who is now using the Vamoose, to make a match race with the Javelin for eighty knots, giving you five knots start, for fun or for any part of \$15,000 a side. Hoping for an early reply, I remain sincerely yours,  
THEODORE HEILBRON.  
A good deal has appeared in the New York papers of late about another new steam yacht, the Rex, but so far from being a new yacht she is the old Dandy lengthened and rebuilt.

## Riverside Y. C. Annual Regatta.

RIVERSIDE, CONN.—LONG ISLAND SOUND.

Saturday, July 22.

The Riverside Y. C. was unfortunate in its annual pennant regatta on July 22 in having few entries, and those of all sizes, so that out of eight classes seven sailed over. The Sound was in perfect condition for racing, as has been the case very frequently during the present month, with a strong S.W. wind. The times were:

SCHOONERS—70FT. CLASS.		
Nirvana, G. L. Tyson	Elapsed.	Corrected.
	1 44 56	1 44 56
SLOOPS—60FT. CLASS.		
Whitby, H. H. Tyson	1 51 01	1 51 01
SLOOPS—50FT. CLASS.		
Alecco, W. A. Hamilton	2 10 03	2 10 03
SLOOPS—35FT. CLASS.		
Vorant, G. G. Tysn	2 10 03	2 10 03
SLOOPS—25FT. CLASS.		
Alma, C. E. Diefenthalen	1 57 54	1 57 54
30FT. CATS.		
Almira, H. W. Hanan	2 01 46	2 01 46
35FT. CATS.		
Pearl, Gilbert Potter	2 12 54	2 12 54
Nahma, Walter Luke	Withdraw.	
White Cap, John B. Lord	2 18 07	2 18 07
20FT. OPEN CATS.		
Chippie, H. R. Hatfield	Withdraw.	

## Greenville Y. C.

The Greenville Y. C. sailed the first of a series of championship races in a strong westerly wind on July 22, the course being around Oyster Island, three turns. The times were:

FINISH.		
Elapsed.	Corrected.	
Alida	2 54 00	Disabled.
Yankee Boy	2 55 60	5 27 47
Lizzie B.	2 52 10	Upset.
Arrow	2 53 45	Cracked her mast.
Eureka	Withdraw.	
Maggie F.	2 54 10	Disabled.
Torment	2 53 40	5 29 28

## Canoeing.

### FIXTURES.

AUGUST.

11-12. N.W.A.R.A., Canoe Races, 11-26. A. C. A. Meet, St. Lawrence River.

SEPTEMBER.

2. Orange An., Arlington, N. J. 4. Holyoke, Fall, Holyoke, Mass.

1. Ianthe, An., Passaic River. 16. Red Dragon, Delaware River.

Our Western correspondent has ventured to criticise the recent meet of the Western Canoe Association, and from our experience in similar cases we can sympathize in advance with him over the reception which his comments are likely to meet with from some canoeists. So far as we have been able to learn, his criticism is fair, unprejudiced and honest, but there are not a few who contend that in a case of this kind, where the officers are not paid for their services, all faults and blunders should be ignored, and only a delightful *coulour de rose* should pervade all reports.

As a rule it is best in reporting events of this kind to show only the bright side, making the best of everything, perfection being seldom attained in this world, and the most perfect plans being liable to derangement. There are, however, cases, and we believe this to be one, where the blunders and mistakes are all perfectly avoidable, and where it is the duty of the honest writer to report things as they are, and not as he and all friends of the parties would have them. In the present case, as our correspondent points out, the trouble is due to several causes, most of them being involved in the issue of Ballast Island as a new camp, which was decided last winter in deference to the wishes, or rather the threat, of a few members.

ONE cause of the failure of the meet appears to be the apathy of the officers, only one of whom was present during the entire time. It has been repeatedly urged by some of our correspondents that as the officers are not paid in any way they should not be held to account for their mistakes or omissions, but however much there may be in this view, there is another side to the question. The officers, in accepting a nomination and election, assume certain obligations toward the members, and are bound to exercise all diligence in providing for the wants of those visiting the camp. The questions of just what the members may rightly expect, and whether they do not often expect too much, have nothing to do with this phase of the case; the officers and committees assume office with the understanding that these are to perform certain work necessary to the successful carrying out of a meet, and when this work is neglected, or even badly done, they must expect to shoulder the blame.

EASTERN canoeists will be interested in knowing that the new canoe Fleetra, which figures so prominently in the W. C. A. races, is the well-known Gleadow, sailed so well by Mr. Oxholm last year at the A. C. A. meet.

## The Columbian Regatta at Lake Geneva.

The Chicago Navy, which includes the rowing clubs of Chicago, is now preparing for a grand Columbian international regatta, to take place at Lake Geneva, Wis., on Aug. 14, 15, 16, 17, 18, 19. A special feature of the racing will be the canoe races, as given in the programme. Very handsome medals have been prepared for all the events, and the committee of the navy is desirous of securing good entries from members of the American Canoe Association, both from the States and Canada. Invitations have been sent to the A. C. A. and the Atlantic Division. The canoeing portion of the programme is as follows:

Canoe Events.—Single paddling, half mile straightaway; upset canoe race; tandem paddling, half mile straightaway; water polo; tub race; swimming race, for oarsmen only.

Entry Fees.—Single shells \$3, pair oars \$10, double shells \$10, four oars \$10, six oars \$10, eight oars \$15, ten oars \$15, single paddle \$5, tandem paddle \$10, water polo \$10.

Regatta Rules.—All races 1½ miles with a turn, excepting the eight-oared shell races and "special event" races. Two or more entries required in each class to insure a race. Entrance fee must be in every case accompany the original entry. Same will be returned after crews entered participate in their respective races. No entry will be accepted unless signed by an officer of the club.

There shall be sent to the secretary in all cases of entries for eights, a list of not more than twelve names; for fours not more than six names; for double sculls not more than four names; for single sculls not more than one name; and from these the actual crews shall be selected.

Races at this regatta are to be rowed under the rules of the National Association of Amateur Oarsmen.

Entries close Aug. 7. Entries mailed on Aug. 7, bearing that postmark, will be received. All entries must be addressed to B. V. Johnson, 508 Chamber of Commerce, Chicago, Ill., U. S. A.

## A. C. A. Prize Flag Fund.

The regatta committee beg to acknowledge the receipt of \$5 from the Mykian C. C. and flags from C. V. Winne and Miss Mackerras.

## Rifle Range and Gallery.

### New Jersey State Rifle Association.

The programme of the third annual meeting at Sea Girt, N. J., Aug. 14 to 19, is as follows:

No. 1. Members' Match.—200yds., open only to members of the New Jersey State Rifle Association. Rounds, five. Position, standing. Weapon, any military rifle. Entrance fee \$1; re-entries allowed. Prize, the members' championship gold badge, shot for annually and held by the winner during the year, to be shot at any time during the meeting.

No. 2. The Kuser Match.—Seven shots at 500yds. Position, prone, head toward target. Rifle, any military. Open to all comers. Entries \$4 each, or three for \$2, if taken at one time; re-entries allowed.

No. 3. All Comers' Military Match.—Open to everybody. Distances, 200 and 500yds. Position, standing at 200; prone with head toward target at 500. Five shots at each distance. Entrance fee \$1, or three tickets for \$2, if taken at one time.

No. 4. The Schuetzen Match.—All comers' continuous match. Distance 200yds. Position, standing. Number of shots, seven on the standard American target, with 11in. bullseye (the bullseye including the 7 ring). Any weight rifle with any trigger pull, palm or rest allowed. When firing the muzzle of the rifle must be kept outside the loophole of the shelter. The allowance for military rifles will be 4 points on each string. Cleaning allowed between shots. The aggregate of three scores to count for all prizes.

No. 5. New Jersey National Guard Match.—Open to teams of six from each regiment of the National Guard of New Jersey. (As fully provided for in circular, Department of Rifle Practice, dated July 11, 1898.)

No. 6. Regimental Team Match.—Open to teams of six from the regimental, battalion and separate company organizations of the following States: New York, Pennsylvania, Connecticut, Delaware, Maryland, Maine, Massachusetts, District of Columbia, New Jersey. (As fully provided for in circular, Department of Rifle Practice, dated July 11, 1898.)

No. 7. The Columbia Trophy Match.—Presented by the District of Columbia National Guard to the National Guard of New Jersey. The competition therefor will be between teams of six men each from the regiments of the National Guard of New Jersey.

No. 8. The Perrine Memorial Match.—Open to officers and enlisted men, National Guard of New Jersey. Distances, 200 and 500yds., five shots at each distance. Position, standing at 200yds.; prone, with head toward target, at 500yds. Entrance fee 50 cents, re-entries allowed. To be shot at any time during the meeting. Rifles, those in use by the National Guard.

Matches of the National Rifle Association, under the following terms and conditions imposed by the N. R. A.:

No. 9. Wimbledon Cup Match.—Open to all citizens and residents of the United States; distance, 100yds.; 30 shots; weapon, any rifle within the rules; cleaning allowed; position, any without artificial rest; entrance fee, \$2. First prize is the Wimbledon cup; presented by the National Rifle Association of Great Britain to the National Rifle Association of America, to be competed for on conditions to be decided upon by the National Rifle Association of America, and to be held by the winner till the next fall meeting, when it will be shot for on the same conditions. Issued Aug. 15, 1898.

No. 10. Hilton Trophy Match.—Open to teams of twelve from the following: 1. The United States of America. A—The Army of the United States, one team from the troops stationed within each of the three military divisions—Atlantic, Pacific and Missouri (three teams in all). B—The United States Navy one team. C—The National Guard, or unorganized militia of the several States and Territories, including the District of Columbia, one team from any State or Territory. 2. Other countries, England, Ireland, Scotland and each of the Provinces of Great Britain, and all other countries, one team each from the following: A—The regular army. B—The militia. C—The volunteers. D—The navy of any country. Distances, 200, 500 and 600yds.; rounds, 7 at each distance; position, standing at 200yds. and any at 500 and 600yds.; weapons, any military rifle which has been adopted, authorized or issued as an official arm by any State or Government; ammunition, any; entrance fee, \$2 each man. Prize.—A trophy presented by Hon. Henry Hilton, of New York, to be shot for annually at Creedmoor or such other range as the National Rifle Association of America shall select, to be held during the year by the head of the corps or organization whose team may win it, to be returned to the N. R. A. at the expiration thereof; value \$3,000. Also a medal to each member of the winning team.

No. 11. Inter-State Military Match.—Open to one team from each State or Territory in the United States consisting of twelve members of the regularly organized and uniformed national guard or militia of such State or Territory, including the District of Columbia, chosen in such manner as shall be prescribed by the military authorities thereof. They shall appear in the uniform of their corps. Distances, 200 and 500yds. Position at 200yds., standing; at 500yds., prone. Weapon, any military rifle which has been adopted, authorized or issued as an official arm by any State or government. Ammunition, any. In cases where the State has adopted no particular model (which must be certified to by the adjutant-general), the team will be allowed to use the rifle in use by the regular army of the United States, or by the uniformed militia of any other State. Rounds, ten at each distance. Entrance fee, \$2 each man. Prize.—To the team making the highest aggregate score, a large bronze "Soldier of Marathon," presented by the Commander-in-Chief, on behalf of the State of New York, to be shot for annually, and to be held during the year by the adjutant-general of the State whose team may win it; value \$350. Also a medal to each member of the winning team.

Bullseye Targets.—1. Bullseye target will be open all the time during the annual meeting. 2. Tickets, entitling the holder to one shot at any bullseye target; range, 10 cents each, or 12 for \$1. 3. Each competitor making a bullseye will receive a bullseye ticket, provided he fires in the position authorized at that range. 4. At the close of the firing each evening, the pool receipts (less one-half retained for expenses) will be divided pro rata among the makers of bullseyes, on presentation of their tickets. 5. No person will be allowed to fire more than three shots consecutively at any bullseye target, provided others are waiting to fire.

The State of New Jersey will supply tents, coats and blankets to all teams. Restaurant on camp grounds—Gleason & Co., of Newark.

### International Columbian Tournament.

SHARPSHOOTERS' PARK, WEST PULLMAN, Chicago, July 23, 24.—The Columbian medal was awarded to the following: Edward Rugger, Monroe, Wis.; Martin J. Wallich, Chicago; J. Kretschmer, Detroit; Charles J. Wallich, Detroit; Julius Helmsold, Chicago; Rudolph Grim, Chicago; Albert Boese, Chicago.

Bullseye target.—L. J. Kretschmer 15 out of 100 shots. Ed. Rugger, Monroe 13. Chas. J. Wallich 12.

Columbia.—Chas. J. Wallich 48. L. J. Kretschmer 38. Edward Rugger 47.

People's target.—Edward Rugger 68. Fr. Toggensburger 63. Dr. H. Merkel 63. M. Grau 57. L. J. Kretschmer 53. Chas. Wallich 52. A. Rensch, Toledo, 50.

Standard.—Wm. Ehrenpfort, San Francisco, 39. Dr. H. Merkel 35. Edw. Rugger 32. Chas. Wallich 31. L. J. Kretschmer 26. F. Toggensburger 27.

King target.—Chas. J. Wallich 165. L. J. Kretschmer 185. Edw. Rugger 186.

Man target.—Dr. H. Merkel 82. F. Toggensburger 80. A. Rensch, Toledo, 80. L. F. Ingensoll 72. M. Grau 76. E. Rugger 70. Wm. Ehrenpfort 57.

### South New England Riflemen.

The twenty-fourth annual festival of the united shooting societies of southern New England, known as the South New England Bunt, was held on Monday and Tuesday of last week in Union Grove Park, Hartford, Conn. The early morning trains running into Hartford on Monday brought a legions of riflemen accompanied by their families and invited guests. Germania Hall was the headquarters of the Bunt, and it was at this point that all the societies rendezvoused for the opening ceremonies preceding the parade to the park.

The ladies' committee of the Hartford Shooting Society prepared a substantial lunch for the visitors. That their efforts were appreciated goes without saying. At the close of the lunch Mayor Hyde addressed the visitors and extended to them the freedom of the city during the festival.

It was expected that there would be a large delegation of New York riflemen present to take part in the festival, but only six representatives from the Empire City put in an appearance. These were Messrs. F. C. Ross, B. Zettler, H. Holges, G. W. Plaisted, M. Krummick and F. Trappin. Among the others whose names were on the list was to be seen T. J. Lyon, Collinsville, Conn.; Geo. State, New Haven; Capt. Bucholtz, Springfield; Capt. Molter, Providence; Z. C. Talbot, Springfield; H. F. Bardwell, Amherst. Of the Hartford folk there were Geo. Schiller, chairman of the general committee of the Hartford Society; Herr Staub, the State Comptroller, a member of the society; Capt. Julius Huebner, Cuno Helfricht, Chas. Groenke, F. K. Rand and H. M. Pope, and a host of others whose names we could not catch.

The Bunt was represented by societies from Andover, Middlebury, New Haven, New Britain, B. Adgeport and Rockville, Conn.; Holyoke and Springfield, Mass.; and Providence, R. I. The honor of kingship on

the king or honor target fell to the home society (Hartford) in the person of Harry M. Pope, with a score of 69 out of a possible 75.

The second prize over the honor target was also captured by one of the Hartford society members, Mr. F. K. Rand, with a score of 62 points. The premium for the best three tickets shot on Monday was contested for by Messrs. H. M. Pope, F. C. Ross and T. J. Lyon, and Messrs. Ross and Lyon, with the last shot was in the tie between

With the opening of the range on Tuesday morning came a renewal of the struggle for first place on the prize list between the above mentioned shooters. By good holding and a little element of luck Mr. Pope succeeded in putting up a score of 73, this score with 71 and 66 gave him a good comfortable lead for first place.

From this point on to the close Messrs. Ross and Lyon had a nip and tuck race for the second place, and when the last shot was in the target and the shoot brought to a close, the two contestants found themselves a tie, with scores of 71 and 70—41 points.

The scores on the prize target are appended, best three tickets to count for first prize, two best tickets for next three prizes and best single ticket for remainder of prizes:

H M Pope.....	73	71	69	Hy Holges.....	68	W W Tucker.....	63
F C Ross.....	71	70	G Stelzle.....	67	W Lieberman.....	63	
T J Lyon.....	71	70	F Eichel.....	66	A Jannekin.....	62	
A F Bardwell.....	70	69	G W Plaisted.....	66	F C Winnisswiler.....	62	
F K Rand.....	69	B Jahn.....	64	J Glassnapp.....	61		
E T Stevens.....	69	J M Foot.....	64				
B Zettler.....	68	S Steele.....	64				

Premium for most hags, first, F. Eichel; second, F. K. Rand.

Premium for most dogs, first, F. Eichel; second, F. K. Rand.

### The Zettler Club Bi-Monthly Shoot.

The usual quota of regulars from the ranks of the Zettler Rifle Club met in Wissel's Cypress Hills Park, on July 30, for competition in the season practice shoot. A bright sun and a cool north west wind made the day a most enjoyable one for outdoor sport. The scores will be found appended, 10-shot scores, German target:

J A Boyken.....	22	18	19	23	21	23	25	22	22	20	215
F C Ross.....	16	23	20	22	25	21	24	24	21	22	220
R Hamann.....	24	24	24	22	19	23	21	25	12	22	215

### Greenville Rifle Club.

At the weekly gallery shoot of the Greenville Club for class medals, at headquarters on Friday, July 29, the following appended scores were made, 10 shots, possible 350, distance 25yds.: Geo. Purkess 242, C. Boag 240, Plaisted 239, J. Boag 238, Robidoux 237, Collins 237, Spohn 236, Gotthardt 234, Chavart 235.

GREENVILLE, N. J., July 29.—The members of the Greenville Rifle Club had their usual Saturday outing at Schuetzen Park this afternoon. Messrs. Mahlenbrock and Brown, of the Hudson Rifle Club, were the guests of the Greenville Club. The scores are appended, 10 shots, German target: W. C. Collins 210, C. H. Chavart 210, G. W. Plaisted 208, H. Brown 204, J. Spohn 200, H. Mahlenbrock 200, George Purkess 191.

### New York City Corps.

The monthly shoot of the New York City Schuetzen Corps, in Washington Park, on Friday, July 29, had its usual attendance of club members. Messrs. Zettler and Busse tied with 208 on the ring target. J. Facklam carried off the honors on the man target with a score of 58. The scores on the ring target are appended, 10 shots, German target:

Ring Target.—C. G. Zettler 203, R. Busse 203, H. Radloff 180, Otto Uhllein 169, Wm. Sternkopf 158, H. Munz 152, John Facklam 152, Otto Urstein 152.
Man Target.—3 shots, possible 60: John Facklam 58, R. Busse 55, Otto Uhllein 50, Christ Rehm 52, H. Radloff 48, C. G. Zettler 48.
Bullseye.—R. Busse 5, H. Radloff 2, Wm. Sternkopf 2, C. G. Zettler 1, A. Range 1, H. Munz 1, John F. Gerdes 1, Christ Rehm 1, Adam Keller 1.
Flags.—John Facklam 6, H. Radloff 4, R. Busse 3, C. G. Zettler 1.

### Excelsior Rifle Club.

The weekly shoot of the Excelsior Club of Jersey City at Armbruster's Park on Friday, July 28, had more than its usual attendance. Messrs. He and Buchanan, of the Portchester (N. Y.) Rifle Club, visited the park during the afternoon. C. Thomas, the "Juvenile," of the Excelsior, is developing good shooting qualities. The scores are appended, 10 shots, German target: L. P. Hansen 219, J. Spicher 214, C. Thomas 212, O. C. Boyce 204, C. Ward 194, Wm. Weber 180.

### Hartford Notes.

Among the many interesting features of the Hartford shoot was the shooting of Mr. A. F. Bardwell, of the Amherst (Mass.) Gun Club. This gentleman shot a 45-70 Marlin with 70 grains of powder and a 40-grain Remington-Union bullet. We witnessed his making the scores of 69 and 70 on the prize target, which gave him fourth position on the prize list. That such shooting could be done with this style of a rifle fired with amazement, which was followed by a desire to interview the shooter and examine his gun and ammunition. Upon introducing himself and expressing a desire to examine his rifle and ammunition, the worthy shooter met our advances with the best of grace, and proceeded to give us all the information desired both as to his rifle and himself. Mr. Bardwell is an ex-member of the Massachusetts National Guard, with a record for two years as champion in individual marksmanship. He also holds the record for the best 10 shot (off-hand) score on the standard American target at 200yds., viz.: 10 10 10 10 10 10 10 9—89. Mr. Bardwell informs us that the above score was shot on the Amherst Gun Club range on Decoration Day of the present year, using repeating rifle and ammunition mentioned.

Hartford is a city of cyclists. The Hartford shooters have adopted the bicycle as a means of conveyance to and from their range. Even the farmers from the outlying districts seem to have adopted this mode of conveyance to and from the city.

W. W. Tucker, one of the old timers of the days of Hans Becker and others of his class, was a prominent figure in the shooting house during the festival. While his holding ability is not as it used to be, his wit is as keen as ever.

H. M. Pope, of shooting and cycle fame, set out from Hartford on Thursday of last week to take in the World's Fair, and incidentally the International Shooting Festival.

A snap shot in the direction of the Nathan Hale monument at an early hour on Tuesday morning, would have caught two of the New York riflemen in the act of drawing inspiration from the shades of Connecticut's heroic son.

Miss host W. E. Smith, in his new uniform, was just immense. The dinners gotten up by his better half were so.

The individual who got away with our gun cover in the shooting house on Tuesday afternoon was considerate in not taking the whole outfit.

It would be well for the Hartford Rifle Club to enlarge their shooting house in order to give better accommodations to visiting rifle

men. It is a loss to the society and a matter of much annoyance to the shooter to have to while away his time in idleness waiting for an opportunity to get his turn at the target.

### RIFLE NOTES.

W. MITRON FARROW's letter in last week's issue, in which he betrays the fact that the American soldier must submit to a rifle with a foreign made rifle is all right from a patriotic point of view. But the soldier in active service cares but little where his gun comes from so long as it is as good or better than that in the hands of the mail on the other picket line. To find your rifle action choked with sand and unit for use after a long and tedious maneuver over a series of sand hills, for an advantageous position, plays havoc with one's sentiment.

An old shooter, of German extraction, informs us that the German ring target of the past consisted of 2in. center and tin. rings, but that the improvement in the shooting ability of the riflemen, led to the reducing of the rings to 1/2 and 3/4in. This being a fact, W. Milton Farrow need not submit to the monopoly of a copyright.

The future success of John H. Brown, and his wire gin, is a matter of much interest to the many friends of this old time rifleman.

The shooting of Emil Berg at the Columbia International Festival at Chicago is proof that this old veteran of the butts is in the swim yet.

Thos. Maier, a San Francisco rifeman, was a guest of the New York City Corps, at Washington Park, on Friday last.

We hear that experiments are to be made by some of our local riflemen, with smokeless powder in the near future. The results will be a matter of interest to our rifle shooting patrons.

Don't forget the prize shoot of the New York Central Corps in Washington Park on Wednesday and Thursday of this week. There will be \$400 in cash prizes for those who make the best scores.

At a practice shoot of the Hoboken, N. J., riflemen at Union Hill Park last week, 10 shot scores, German target, the following good scores were made: F. Simon 225, Emil Berckman 214.

## Trap-Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

- Aug. 7-8.—Pier Gun Club tournament, at Atlantic City, N. J.
- Aug. 7-12.—Arkansas State Sportsmen's Association tournament, at Little Rock, Ark.
- Aug. 9-11.—Missouri State Amateur Shooting Association, at Paris, Mo.
- Aug. 16-18.—Coney Island tournament at Cincinnati, Ohio.
- Aug. 18.—Interstate Manufacturers' and Dealers' Association's fifth tournament, at Charlotte, N. C.
- Aug. 22-25.—Third international live bird and target tournament, at Des-chree-shos-ka Island, Detroit, Mich.
- August.—Manufacturers' Trap-Shooting Association tournament, at Wheeling, W. Va.
- August.—Keystone Target Company, seventh annual tournament, at New London, Conn.
- Sept. 4.—Frankfort (N. Y.) Game and Fish Protective Association tournament.
- Sept. 4.—Endeavor Gun Club tournament, on Al Heritage's grounds, Marion, N. J.
- Sept. 6-8.—The Veteran Tournament, Indianapolis, Ind., during National G. A. R. encampment, under the management of the officers of the North End Shooting Club, H. S. Humphrey, President.
- Sept. 14-15.—Riverside Gun Club's second annual tournament, at Red Bank, N. J. John P. Cooper, Sec'y.
- Sept. 26-29.—Pennsylvania State Sportsmen's Association tournament at Harrisburg, Pa. H. M. F. Worden, Cor. Sec'y.
- September.—Manufacturers' Trap Shooting Association tournament, at Columbus, Ohio.
- October.—Manufacturers' Trap-Shooting Association tournament, at Allentown and Bethlehem, Pa. (combined).
- Oct. 19-20.—West Newburg Gun and Rifle Association fall tournament, at Newburg.

1894.

April 4-6.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap at Dexter Park, Long Island.

### DRIVERS AND TWISTERS.

THE Arkansas State Sportsmen's Association is out with a fine programme for its third annual tournament to be held at Little Rock, Ark. The guaranteed money is estimated at \$4,000, and the contests are open to the world. On the first day there will be contests for Herman Kahn Co.'s, Little & Carter's, Charles S. Still's, George Little's, Mutual Life, Dickinson Arms Co.'s and Wolf & Bro.'s gold medals, six medals in all, these being the only contests open only to members of the association. On the third day there will be a contest for the State Association medal, open to club teams of four men each, \$25 target each, \$10 entry per team. On the fourth day a 3-men team race will occur, open to all clubs in the State, 15 singles per man, \$3 entry per team, for the Keeley silver cup and three money. The main attraction on the fifth day will be a 50-target race, \$25 entry, \$50 added by the Capital Gun Club. There will also be four live bird contests during the week, one at 5 birds, \$3 entry, \$20 added; one at 7 birds, \$4 entry, \$30 added; one at 10 birds, \$6 entry, \$35 added; and one at 15 birds, \$8 entry, \$40 added. One-and-one-third single and one-and-one-half single will be secured for round trips on all railroads entering the city. The officers of the club are J. A. Woodson, president; J. W. Irwin, vice-president; E. L. Reaves, treasurer, and W. H. Croxson, secretary.

The Richmond & Danville railroad has granted a special rate of one and one-third single fares for the round trip between Washington and Charlotte, N. C., for the benefit of those who attend the shoot of the Interstate Manufacturers' and Dealers' Association to be held on Aug. 16, 17 and 18, and the shoot of the Charlotte Gun Club. This shoot is likely to be one of the most successful of the year. The sportsmen who constitute the membership of the Charlotte Gun Club are well and favorably known wherever there are trapshooters. We can personally vouch for their hospitality, having been the guest of the club during their May tournament. They should receive no support from Knoxville, Baltimore, Altoona and other places where their club has been well represented at past tournaments. It is almost sure that the entire shooting strength of the Greensboro Gun Club will be present. New Jersey will send a jury contingent comprising Noel Money, Enoch Miller, Eddie Collins, Ferd. Van Dyke, Tom Morley, John Hoffman, Neaf Aagar, "Dutchy" Smith and several others. They will leave home together on Aug. 15, and while there will endeavor to make the most of the novelty rule so as to make big records at New London the following week.

The sixth annual tournament of the Standard Keystone Target and Trap Co., to be held at New London, Conn., on Aug. 21 and following days, will attract all the boys who can possibly get away from home, and some great work may be looked for. Every alternate event on the regular programme will be shot under the novelty rule, which is becoming immensely popular. The first day will be known as Standard Keystone day, the second as L. C. Smith day, third as Peters Cartridge Co. day. Thursday as championship day. If the championships are not ended on Friday the shoot will be continued on Saturday. Over \$1,200 in prizes and \$575 in guaranteed purses will be the incentives. In addition to the popular match between teams from the East and West and the one between New Jersey and Connecticut there will be a contest for teams of six men from any State. The Pequot house on Long Island Sound, will be the headquarters for shooters. Buses will run to the grounds every half hour. New London may be reached either by the Norwich Line of steamers or by the Shore Line trains from the Grand Central Depot, Forty-second street, New York.

The Atlantic Trap Shooting Association's grand tournament, open to the world, no handicap, American Association rules adopted, will be held on the association grounds at Lynnhurst, Mass., Aug. 18 and 19. Shooting will commence at 9 A. M. Shooting on the regular programme will commence promptly at 10 o'clock. Secretaries will please notify W. F. Brown, 48 Arlington street, Lynn, Mass., as soon as possible the number of men they expect to send.

The summer tournament of the Reading Shooting Association, at Harry Matz's Three-Mile House on Aug. 15, 16, 17 and 18, is sure to attract a big turnout.

Don't forget that during the tournament at Charlotte, N. C., the Charlotte Gun Club will add \$100 to each day's purses.

The Endeavor Gun Club, of Jersey City, will hold a tournament on its grounds at Marion on Sept. 4.

C. H. TOWNSEND.

### Coney Island Athletic Club Tourney.

THE NEW UTRCHT ROD AND GUN CLUB WIN THE KINGS COUNTY CHAMPIONSHIP CUP.

The seventh and last shoot for the championship cup given by the Coney Island Athletic Club for competition by the Kings County Gun Club was held at the Atlantic Rod and Gun Club's grounds at West End, Coney Island, on Tuesday, July 25. Only four of the original eight clubs entered put in an appearance for the final contest. At the start it was generally conceded that the New Utrecht would win the \$500 trophy, they having a lead of 7 birds on the aggregate total score, with the Atlantics next and the Coney Island third. On the third round of 15 birds the Atlantics caught up and made a tie, with the New Utrechts having a case of rattles. This was soon changed, the two best shots on the Atlantic team, W. F. Quimby and H. Balzer, failing to be on hand at the stipulated time, and the captain having put in two substitutes, they lost the cup by 7 birds, the Coney Island team being third and the Parkways fourth. The latter team led the day's score with 66 out of 75, the New Utrechts and Atlantics with 64, and the Coney Islands with 63. The following table gives the standing of the teams at the close:

#### STANDING OF TEAMS.

Referee, Mr. Hugh Goodwin. Scorer, C. A. Deller. An impromptu shooting match between two amateurs with the shot gun took place at Coney Island on Tuesday after the team shoot. The condition were 10 birds each for \$35 and the birds, the loser also to pay for a basket of wine. The score: J Armstrong.....0002010120-4 Kid Benson.....1121010110-7 Sweep; 5 birds. 24yds rise. 22 entry: C. Furgueson, Jr., 5, C. M. Meyer 4, C. E. Morris 3, G. W. Cropsey 3, E. Helgans 5, C. Detlefsen 4, C. A. Sykes 4, P. Hegeman 5, A. Botty 3.

### Hell Gate Gun Club.

TWENTY-FIVE members of the Hell Gate Gun Club were present at Dexter Park, Long Island on Tuesday, July 25. It was the regular monthly shoot for the best percentage of scores under club and class handicap, ten birds each, association rules. E Doenick was the only straight shooter with ten. The birds were a good lot and fast. The members of this young club are rapidly improving and making fair scores at such good birds. The score of shoot:

### Linden Grove Gun Club.

The regular monthly shoot of the Linden Grove Gun Club was held at Dexter Park on Friday, July 23. Only four shot at 10 birds each for the club's gold medal. P. J. Eppig, the president of the club, shot in good form, winning the medal and three matches with Frank Ibert. He also shot 22 out of 25 picked birds. The score:

J Bermal.....	1023012121-8	H Wisman.....	1210101112-8
P Eppig.....	1222012121-9	F Ibert.....	1001220101-6
Shooting matches. \$10 each and birds:

	8 10 10		7 8 7

### Atlantic Rod and Gun Club.

The regular monthly shoot of the Atlantic Rod and Gun Club was poorly attended on Thursday at Coney Island, only six entering for the club's two cups. A. A. Hegeman won the first, and H Knebel, Jr., the second. A good match followed at fifty birds each, which T. B. Langcake won. The scores:

M Van Brunt.....	111121021-9	H Knebel, Jr.....	2212121010-8
A A Hegeman.....	1121201212-9	Ira McKane.....	02002222-6
J B Voorhees.....	011212121-9	M Bonder.....	0200210020-4
Sweepstakes, \$1 entry, 3 birds: M Van Brunt 2, A. A. Hegeman 3, J. B. Voorhees 2.			
Shooting match, \$50 each and the birds:			
J B Collins.....	1211101112101010101010111111100101002122-38		
T B Langcake.....	1211101111210010112111021010111021111101111-41		

### Glenwood Rod and Gun Club.

OWING to the death of the wife of Assistant District Attorney McGuire, of King county, the Glenmore Rod and Gun Club, of which is a member, had a very small attendance at their regular monthly shoot at Dexter Park, on Wednesday, July 26, only eight members competing for the three monthly prizes at 7 birds each. Two small matches followed for \$10 each and the birds, between J. Gastieger and T. Edgerton. Honors were about even. The score:

W Levens.....	2121222-7	H Knowlton.....	111121-7
T T Edgerton.....	101111-6	W Sinnington.....	212121-6
E Vroomer.....	1101122-7	J Gastieger.....	1012021-5
R Woods.....	211122-6	J Schlitzner.....	1001020-3

### Charlotte Interstate.

The programme of the Interstate Manufacturers' and Dealers' Association tournament, of Charlotte, N. C., Aug. 16-18, will be as follows: Aug. 16.—Event No. 1, 15 targets, entrance \$2; No. 2, 15 targets, \$2, \$10 added; No. 3, 15 targets, \$2, \$10 added; No. 4, 15 targets, \$2, \$10 added; No. 5, 25 targets, \$2, \$10 added; No. 6, 20 targets, \$2, \$10 added; No. 7, 20 targets, \$2, \$10 added; No. 8, 20 targets, \$2, \$10 added; No. 9, 15 targets, \$2, \$10 added; No. 10, 15 targets, \$2, \$10 added; No. 11, 15 targets, \$2, \$10 added; No. 12, 15 targets, \$2, \$10 added; No. 13, 15 targets, \$2, \$10 added; No. 14, 15 targets, \$2, \$10 added; No. 15, 15 targets, \$2, \$10 added; No. 16, 15 targets, \$2, \$10 added; No. 17, 15 targets, \$2, \$10 added; No. 18, 15 targets, \$2, \$10 added; No. 19, 15 targets, \$2, \$10 added; No. 20, 15 targets, \$2, \$10 added; No. 21, 15 targets, \$2, \$10 added; No. 22, 15 targets, \$2, \$10 added; No. 23, 15 targets, \$2, \$10 added; No. 24, 15 targets, \$2, \$10 added; No. 25, 15 targets, \$2, \$10 added; No. 26, 15 targets, \$2, \$10 added; No. 27, 15 targets, \$2, \$10 added; No. 28, 15 targets, \$2, \$10 added; No. 29, 15 targets, \$2, \$10 added; Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel). Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For ouananiche trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For masalouge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, masalouge, pike.

MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Warton, Sarala in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

Opening of the Chicoutimi Extension.

The New Route to the Far-Famed Saguenay and the only rail route to the delightful summer resorts north of Quebec, through the

CANADIAN ADIRONDACKS. Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate. Hotel Roberval, Lake St. John, has first-class accommodation for 300 guests, and is run in connection with the "Island House" at Grand Ducher of Lake St. John, in the center of the "Ouananiche" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels. Trains connect daily at Chicoutimi with Saguenay steamers for Quebec. Daylight trip. A beautifully illustrated guide book free on application. For information as to hotels, apply to hotel managers; for guides and guide books to ticket agents of all principal cities.

Property For Sale.

FOR SALE.  
Camp Ground,  
SARANAC LAKE,  
Adirondack Mountains.

Point of land just north of Sweeney Carry and Hotel Wawbeek, well wooded, high elevation, large water front, with a superb view of the country to the north, east and south, easy of access, and one of the finest camping spots in this whole country, containing about 45 acres. Address P. O. Box 1,980, Boston, Mass., for further particulars.

TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address DR. J. DE V. MOORE, 157 Park avenue, Utica, N. Y.

ALBEMARLE AND PAMPLICO CRUISING AND A Hunting Association.—Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing; Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 30. One more subscriber wanted. H. A. Weeks, 74 Murray st., N. Y.

## ATTEAN CAMPS.

MAINE, July 7, 1893.

On and after this date all persons not guests of Attean Camps will be excluded from fishing or hunting in the territory leased by me, which includes the townships of Attean, Dennis, Number Four and Number Five, also Haleb, Spencer and Attean Falls, Moose River. Any person trespassing on the above territory will be prosecuted to the full extent of the law.

ITHAMAR HOWE,

P. O. Jackman, Me Lessee and Proprietor.

**BIG GAME AND TROUT IN WASHINGTON.**—A sportsman's camp in a new country, near Mt. St. Helens, Wash. Fly-fishing on lake, open season May 1. Elk, mountain goat, deer and bear open Aug. 15. Good guides.

LOUIS B. AKIN, Etna, Wash.

Long Island.

## THE PAVILION HOTEL,

Islip, L. I. (on Great South Bay).

Open until Oct. 1. Accommodates 250. South Bay is now the best fishing resort on Long Island for bluefish, weakfish, bass and flounders. After 15 years' experience at Elberon, N. J., it is sufficient to say that the best of care will be taken of families and guests. I solicit the patronage of former patrons.

C. T. JONES.

## THE BAY SIDE HOUSE,

Amityville, L. I.

Situated on Great South Bay. Capacity 200 guests. Bluefish, bass and other sea fish abundant.

GEORGE W. HUSSEY, Proprietor.

## SHERMAN HOUSE, Babylon, L. I.

Sea food a specialty. Splendid fishing, bathing and boating. Permanent and transient guests accommodated. Special rates by the week.

SHERMAN TWELVEDY, Prop.

**PROSPECT HOUSE.**—Penataquit Hall and cottages, Bay Shore, Long Island, one hour from New York. Beautifully situated, overlooking the Great South Bay, opposite the inlet and famous fishing grounds; excellent bathing, safe bathing, interesting drive; first-class orchestra; incandescent, electric lights, electric bells; baths, etc.

JOHN M. ROGERS &amp; SON.

Staten Island, N. Y.

## Beasley's Fishermen's Retreat,

HITCHECOCK, S. I.

Boating, bathing and fishing. Parties desiring to remain over night will receive every attention. Stage at station for conveyance of guests to hotel. Boats to let for fishing or pleasure.

ANDREW BEASLEY, Prop.

Greenwood Lake.

## WINDERMERE HOTEL,

Greenwood Lake, Orange Co., N. Y.

For bass fishing why not try Greenwood Lake before going elsewhere. The best grounds are near the above hotel, where you will find boats, bait and first class guides, with good accommodations for sportsmen and families. Try the bass during June with a fly. Watch fishing postal column for records. For particulars, address

JOHN HAZEN, Proprietor.

## VALLEY HOUSE—CH TEN EYCK, Prop.

Greenwood Lake, N. Y. Open all the year. Large and comfortable rooms, generous table, purest water. This house is surrounded by 100 acres of land, garden and lawn, well shaded and extending to and fronting 2,500 ft. on handsomest part of the lake and best fishing grounds. Oswego and small-mouth bass, pickerel, perch, etc. Largest boat livery on the lake, and fast and staunch steam launch the Ten Eyck connects with all trails. Greenwood Lake is about 3 miles in length and one of the most beautiful and picturesque as well as the most noted black bass lakes on the continent. For circular, address

C. H. TEN EYCK, Proprietor.

## Waterstone Cottage.

Open throughout the year. Good bass fishing, boats and guides. For particulars, address

J. E. WATERSTONE, Proprietor.

Greenwood Lake, Orange County, N. Y.

## BRANDON HOUSE,

Greenwood Lake, N. Y.

2 1/2 hours from New York City. Excellent accommodation. Good bass fishing.

Lake Hopatcong, N. J.
